There may, perhaps, be half-a-dozen printers at work in this remote Central African district, the most important establishment of the kind being the Government Printing Office at the capital, Zoruba. It is, of course, only on a small scale, and before the war the expenses of operating it were well under £3,000 a year, two-thirds of which was absorbed by salaries. The office is in process of enlargement, a new engine-room being the latest addition. The post of Government Printer (occupied by Mr. P. W. Fyson) is worth £300 a year, but in addition to this there is the usual "personal allowance," and sundry smaller sums by way of remuneration for the Government Printer also acting as Controller of Stationery, and manager of the Government Gazttte, of which about 400 copies a month are printed. The Nyasaland Times, one of the two newspapers published in the the Protectorate, circulates rather more than the same number of copies each week. At Livingstonia, at the southern extremity of the lake, there is a bi-weekly, the Livingstonia News, with a circulation of like extent. The Livingstonia Mission has a press there at which instruction in printing and bookbinding is given to a few native native apprentices. The same course is pursued at the University Mission Press at Likoma, so that when the country gets more settled and calls for more printers and newspapers, a limited number of trained printers will be available. A local planter also runs a small printing establishment, but the requirements of all these places are very limited, the imports of paper and stationery into the Protectorate being of the value of only about £4,500 a

North of this district is the territory lately forming German East Africa, beyond which, still to the north and with a long frontage to the Indian Ocean, is the

BRITISH EAST AFRICA PROTECTORATE.

which is more than twice the size of Great Britain, and has about 4,000 whites to twoand three quarter millions of natives. The Southern part of it is traversed by the Uganda railway, nearly 600 miles long, extending from Mombasa, on the coast, to Kisumu on Lake Victoria Nyanza, and along its course most of the Europeans live. The administrative centre of the Protectorate is Nairobi, 327 miles from the coast, with a population of about 20,000, ten per cent. of whom are Europeans. Here is the Government printing office, which costs about £5,000 a year to run. Mr. E. W. Trim, who has been in official employ here since 1908, is the Government Printer, and the various emoluments of his office amount to well over £350 a year. There are two linotype machines in operation, the purchase and erection of the last (a No. 14) costing the Government £ 1,075. A linotype operator at Nairobi gets £200 per annum, plus £40 for "house allowance." The office produces the official Gazette, which has a circulation of about 1,000 a week. There are two or three other printing establishments in the town (two of them issuing daily

and weekly papers) and each of them, we believe, operates a linotype machine. There are a large number of Indians employed in various capacities in the Colony, and for them a special periodical is issued, printed in Gujarati. Newspapers, by the way, have to be officially registered, and a fee of Rs. 3.75 paid. In 1915, a Press Censorship ordinance was passed, for use in case of emergency.

At Mombasa, the coast end of the railway, there are three or four printing firms, and the Uganda Railway has its own printery. The imports of paper and stationery into the Protectorate are of the value of about £13,000 a year, more than twice that of the books and printed matter. The latter are admitted free of duty, but the general customs tax on other goods is 10 per cent. ad val. Four-fiths of the imports in paper and print lines come from the United Kingdom, and most of the rest from India, for the use of the Indian immigrants.

A hundred miles or so south of Mombasa, and a few miles from the mainland, are the large islands of

ZANZIBAR and PEMBA

(area 1,020 square miles, population 200,000, of whom only 250 or so are whites), which together form a Protectorate under the general rule of the Government of British East Africa. Zanzibar was formerly the seat of an independent Mussulman Sultanate, which nominally still exists, and its inhabitants are a very mixed lot, Arabs, Hindus, African natives, etc. Hence, in addition to the weekly official Gazette, edited at a cost of £50 a year, there are two native weeklies, one in Gujarati, for the Indians—as well as one printed in English and Gujarati-and the other in Arabic and Swahili, for the balance of the few literates, but the combined circulation of all four is only about 1,500 copies. There is a small Government printing office at Zanzibar, but its scale is a very low one, as although the Government printer or manager, as he is termed (Mr. J. T. Riches, appointed three years ago), receives 3,000 rupees per annum and a house allowance of 600 rupees, the native rank and file of the office are content The head comwith very modest salaries. positor gets about 30s. a week, whilst his nine or ten subordinates start at just over £40 a year, and progress thence to the dizzy heights of £72; a binder gets £60, and pressmen £50 to £70. Most of the appointments to posts in the office are made by the First Minister, but those of the manager and one or two others are in the gift of the High Commissioner. The annual expenses of the establishment are under £3,000 a year, salaries (about £1,400) absorbing half. Before the war it was only just over £2,000, but the purchase since of extra plant, added to the increased cost of stationery, accounts for the difference. The imports of paper and print items are so small as not to warrant their separate enumeration in the Government returns. The general in the Government returns. customs duty is 7½ per cent. ad val., but printed matter is admitted free. Large numbers of the natives wear huge coloured paper ornaments fixed in their ears, but other uses for paper they have none, and so, in the meantime, there is not a very prosperous market for papermakers in that territory.

Rapid Paper Destruction.

A British patent has been granted to Sir Cecil R. Harrison, printer, St. Martin's-lane, London, W.C., and Mr. Wm. Bacon, consulting chemist, Oxford-court, Cannon-street, E.C., in respect of improvements in the manufacture of paper. The object of the invention is to meet the need for the rapid destruction of documents in certain circumstances by applying a light, though the paper so produced will not be more susceptible to spontaneous combustion than ordinary paper. With this object the inventors incorporate with the ordinary beaten fibre stuff, a proportion of nitro-cellulose, gun cotton, nitrostarch or the like, the proportion of which is varied in accordance with the increased amount of combustability required. In some cases the paper may be made with nitrocellulose as the base.

Difficulty is experienced in the burning of a considerable quantity of paper when the sheets are laid close together, or when the same are folded into bulk, and in order to secure a more ready combustion, there may be added to the paper prepared with nitro-cellulose a quantity of insoluble lime or magnesium salts, such as calcium or magnesium carbonate, which may be introduced into the beaten pulp, preferably after the addition of size and alum, the effect of which serves to convey oxygen of the air to the mass to support the combustion. The proportion of such salts may be varied, but about onetwentieth by weight to the beaten pulp gives satisfactory results. Likewise, the inventors state that they may employ or introduce into the manufacture the nitrates of metals, as for example sodium nitrate, in conjunction with the nitro-cellulose or the like, in order to increase the burning effect. The introduction of such salts, it is added, is more conveniently effected by impregnating the finished paper, employing a strength of nitrate which would give the desired result, that is to say, the paper could be passed through a bath containing a 1 per cent. solution of sodium nitrate.

AN AUSTRALIAN EXHIBITION.—It is intended to hold an All-Australian Exhibition in Adelaide from March 26th to May 22nd, 1920. The exhibition will consist of works of artists, manufacturers, producers, mechanics, and all other sections of industries in which the Commonwealth is engaged. While the exhibition is confined to Australian manufactures, the committee would, from an educational point of view, be prepared to make provision for the display of new inventions, etc., from the United Kingdom.

Some Pictorial Calendars.

Messrs. Taylor Brothers' New Samples.

During the continuance of the war we have had very few pictorial calendars to notice, the shortage of paper and scarcity of labour combining to almost put a stop to this popular form of colour printing. It is therefore with much pleasure that we have examined a number of examples of new calendars for 1920, issued by Messrs. Taylor Brothers, of Leeds, a firm whose colour printing holds a high place, and whose calendars in pre-war days were among the most popular offered to buyers. Among the specimens there are a few large pictures, about 20 by 30, most excellently executed in colours, and amongst these may be specially noticed "The Squire's Daughter," in which a young girl is fondling a handsome horse, while a small doggie is claiming a share of attention. "Going Home with Daddy" is a fine rustic subject depicting a farmer's man leading home his horses on one of which is seated his little girl; an oldfashioned cottage gives strength to the picture, and the charming background of the landscape aids to the making of a fine calendar subject. In this size, also, is a "A Welcome Arrival," an interior scene with a lady as the principal figure; the casement window is open and outside is seen a youth on horseback whose arrival is evidently welcome to the lady.

In a smaller size, 22½ by 17½, there are many fine calendars. "The Challenge," pourtraying a stag and doe in a fine winter landscape setting. "Other Refuge Have I None" is, as the title implies, a religious subject, in which a lady clinging to a rock in a wild sea holds up a hand to the advancing form of the Saviour; this picture is a fine bit of colouring and will doubtless be a popular one with the public. In "A Slip of the Tongue" we have a humorous picture, in which one of the guests at a dinner table has made a lapsus linguithat has caused consternation in the company. Well worked out and nicely coloured, this should take the taste of those who like

lively subjects.

In a still smaller size we have "The Belle of the Links," a damsel with golf clubs, and a pretty picture of "Gathering Lilies," in which children in a punt are enjoying themselves among the water flowers; while in "Feeding Time" we have a farmyard scene well worked out. In "Eileen" there is a fine bit of brilliant colouring in the red cloak of the lovely colleen who stands by a stile with a spray of shamrock in her hand. The same subject is produced in monochrome, and very fine the picture looks in both processes.

There are some most artistic pictures got up as long upright panels. Of these there are a few in black and white having all the appearance of steel engravings. Good examples of this class of picture are seen in some fine

figure studies; "Poor Birdie," "The Deserted Nest," "Springtime," and "Rose Bands" being good examples, and their size, so by 11, favours their striking appearance. Coloured panels of the same size are seen in "Home of the Peasants," a fine woodland scene, "In Sunny Climes" is an Italian picture, and in "Loch Fyne" we have a beautiful High land landscape, the fine printing of which and rich colouring places it in a very high class.

Naturally the war has given motif s for many of the new calendars, and one fine portrait of "Admiral Sir David Beatty," in black and white, is well reproduced. In the * Exploits of H.M.S. Broke and Swift "the re is a large central picture surrounded by smaller ones, each depicting an inciderat in the fighting of these two famous vessels of the Dover Patrol. "Where No Help Can Co me shows the torpedoing of a passenger 1 iner, with the crew and passengers taking to the boats, while the dastardly Hun is she I ling them from the submarine that has perpet = ated the foul deed. As an antidote to this subject, "A Good Shot" shows the gunner of a sailing ship smashing a submarine with a fair hit, the latter picture is a long panel and is the latter picture is a long panel and is coloured. Another good subject is the " Last of the Breslau." A number of pictures de pict the homecoming of wounded soldiers, a 11 of which are of a popular character.

The foregoing pictures are all what may be termed wall calendars, and besides there are a number of card calendars in various sizes, 15 by 9, 12 by 9, and of varying character. Some of these have ornate designs in gold and colours, others have pictures of scenery, figure studies, etc., and all are very attractively produced and finished, the delicate colouring of the smaller pictures being very fine. Now that the war is over, pictorial calendars should become popular, and buyers should

see Messrs. Taylor Brothers' selection.

SOCIETE DES ANCIENS ETABLISSEMENTS MARINONI - A French company in process of formation, in Paris. Amongst other important objects the company proposes (1) the construction, sale and commerce of apparatus or machines, especially of presses and Printing machines and all material accessory to printing, and, in a general way, of all machines, materials and accessories used in the industry of the graphic arts; (2), the creation, acquisition, and exploitation of industrial establishments and products, and of patents, processes, inventions, licences, etc., ne Cessary to the business of the company. The duration of the company is fixed at 99 years, and the share capital at 6,500,000 francs (£260,000), divided into 65,000 shares of 100 francs each, of which 20,000 fully paid up are allo 1 ted to Messieurs Thénard and Simon, founders, the liquidators of the Société des Etablissements Marinoni, who are giving to the new corribany besides the promise of a lease at the annual rental of 125 000 france. rental of 125,000 francs, the property, installations and material of the original company.

PRINTERS' troubles are like babies ; grow larger by nursing.

What is the Good

of spending large sums on paper, composition and machining, and then spoiling the job by using cheap ink?

Make certain of perfect results by using only *Kidd's Inks*. They are produced to enable you to do full justice to your work.

Is it worth while to print with inferior inks when the extra cost of the best is but an infinitesimal fraction of the total expense?

Australian Notes.

(By Our Special Correspondent.)

TECHNICAL education is receiving a deal of attention at present in Australia, and much is being done for the furtherance of the training of youths in various trades. Correspondence classes have been successfully conducted by the Sydney Technical College for some years in printing and composing, and for the present session an advanced syllabus has been issued. Correspondence classes have been established by the College so that those who live at too great a distance to attend in person may receive instruction in the particular trade they may have chosen to follow.

In Melbourne, too, good work is being carried on at the technical school in the Working Men's College. The classes in printing deal with composing, machining, blending of colour, freehand drawing, etc., and there are also classes for lithography, processengraving and other branches of the allied trades. The Melbourne College has the advantage of possessing a fine building of its own with commodious class-rooms and every facility for students who desire to master their craft. The prospectus is a bulky book of over 220 8vo. pages, well produced and illustrated.

PROBATE has been applied for of the estate of the late Edward William Cole, of Cole's Book Arcade. Deceased's estate is sworn as of the gross value of £163,094, of which £73,290 is realty and £89 804 personal property. By his will Mr. Cole left his two sons £2.000 each, and the residue of his estate to his five children, including the two sons.

WAGES are increasing in Australia, as elsewhere, and the Paper Bag Trade Board, Melbourne, has granted employees in that trade increases ranging from 5s. to 12s. per week.

PAPER money is in use since the war and people are complaining of the dirty state into which the notes have got from their careless handling while in circulation. A correspondent writing to a Sydney morning paper suggests that steps should be taken to ensure a tolerable degree of cleanliness. He refers to the dangers of spreading contagious diseases by these means. No doubt there are many filthy notes in circulation, and the Governnotes in their place. But the public in their part. In place of crumpling But the public also wallets, in which they are kept clean. Also they are not so liable to be lost as when carried loose.

At the Adelaide Police Court, two men, employes for 17 and 15 years respectively, of

the South Australian Paper Bag Co., were each fined £50 for the larceny of 91 bumdles of paper. It was stated in evidence that the men during the absence of one of the partners in Melbourne, superintended the order and cash sales departments, the other was a driver in the employ of the com pany.

In the Arbitration Court, at Well ington, N.Z., a widow brought an action against a newspaper proprietor, for damages on account of the death of her husband, who committed suicide after being injured in the machine-room. The Court found that decease d committed suicide while insane, that insara ity was the result of the accident, and award d £500 damages.

MR. JUSTICE ROOTH officiated at Perth as president of the Arbitration Court in the case of the Female Printing Employees' against several Perth firms. The girls demanded a minimum of £3, a 44-hour week and 10 minutes "smoke ho" for tea in the forenoon. The court adjourned to visit the Government and other printing works and make inquiries as to the conditions the re.

A case that came before the In castrial Court, at Sydney, was an application by the Process Engravers' Union for an interpretation in the award governing the industry which read, "providing that a journeyman who is continuously or mainly employed on night staff work, not being overtime, shall receive 5s. extra," the object being to sake it apply to a workman who was employed at the Daily Telegraph newspaper from 2 p.m. to It was submitted that it was the custom of the trade to call the work from 2 pm. to 10 p.m. night staff work, but there was no definition of the term in the award. After evidence, the Judge said he could not accept the argument that the work from 2 p.m. to 10 p.m. was known as night staff work, simply because it was so termed on one paper that worked in rotatory shiftsdid not make it a custom of the trade. If it were a fair thing to make a variation have award he would make it; but it would have The matter was allowed to stand over for further evidence upon the question of the meaning of a "night staff" to be shown by evidence. staff."

THE Letterpress Machinists' Union applied for an award in connection with the Printing Trades Group, No. 5 Board. When the application came before Judge Curlewis for an award, the union asked that the adult male platen machinist (a minimum wage class) platen machinist (a minimum wage class) should receive not less than £3 4s. Per week, being an amount it was contended that would secure to the employee an effective rate of £3 per week. It was also claimed that the minimum wage of £3 fixed by the Board of worker was only on the assumption that the thereof, throughout the year, and that anything he lost by way of holidays not paid for must be

added to the £3, or otherwise he was getting less than the living wage.

IT was contended on behalf of the employers that the £3 rate was fixed by the Board of Trade with the knowledge of and the intention to cover the worker for his ordinary losses of time, such as the public holidays referred to, and that nothing should be added for those days particularly as they were claimed as holidays by the union. His Honour Judge Curlewis referred the matter to the Full Industrial Court, which reserved its decision.

Papermaking in Australia.

The Search for Raw Material.

The efforts made in Australia to find suitable raw material for papermaking are discussed in a Bulletin written by Mr. Gerald Lightfoot, and published by the Commonwealth Institute of Science and Industry.

The only thorough investigation into the suitability of Australian timbers for pulping purposes of which the results have so far been completed and published is that made by Mr. H. E. Surface, consulting engineer at the U.S. America Forest Products Laboratory, for the Government of Tasmania, in 1915 The investigation was limited to four species, viz., myrtle (or beech), swamp gum, blue gum, and stringy-bark. Mr. Surface concluded that the utilisation of these trees for pulping purposes in Tasmania is not a feasible business proposition. He has, however, informed the Institute of Science and Industry that he considers that there is quite a possibility of building up the wood pulp industry in Australia through the use of native woods other than those reported on by him, and he urges that a thorough survey be made of Australia's papermaking resources. If suitable native woods are not forthcoming, he considers that attention should be given to the question of planting suitable trees.

Both the New South Wales and Victoria Governments have sent samples of native trees to paper mills abroad for tests as to their pulping qualities. Mountain gum was sent from New South Wales to Canada, but the results of the test are not yet available. Samples of both mountain ash and silver-top were sent from Victoria to Norway, but they were tested only for mechanical pulp, for which purpose they were found unsuitable.

Results are given in the Bulletin of some very interesting experiments carried out in France on the pulping qualities of young Australian eucalyptus, some of which give excellent results in the manufacture of paper pulp. If the reports received are confirmed, the cultivation of pure forests of certain species of eucalyptus for pulping purposes may prove to be practicable commercially, while there may already be in existence

forests of immature trees which could be used commercially for paper pulp.

Results of much interest and value, says the Sydney correspondent of The Times (Trade Supplement) have been obtained from experiments which are being carried out by Mr. I. H. Boas, Technical School, Perth, W.A., on the pulping qualities of karri trees. The experiments show that the yield of pulp is satisfactory, the best results being obtained from trees about eight years old. It is not improbable that even mature karri can be used to make a satisfactory paper, and this may offer a partial solution of the problem of utilising the enormous quantities of waste karri at the saw mills in Western Australia.

Reports received from experts regarding the possibility of cultivating spruce as a crop in Australia indicate that that tree does not grow rapidly under Australian conditions. It is possible, however, that spruce might be profitably grown for pulping in the mountainous parts of Victoria and Tasmania. The Victoria Forests Department intends to plant experimental trees on the high plains.

experimental trees on the high plains.

Tests on the pulping qualities of a number of Australian grasses, rushes, sedges and other plants have been carried out for the Institute of Science and Industry through the kindness of the Australian Paper Mills Co., Ltd., Melbourne, by the company's chemist, Mr. A. E. Clarke. The following were found to be unsuitable for papermaking: Button bog rush, awned saw sedge, Queensland hemp saltbush, spinifex grass, and the inner parts of the stems of the yamia palm.

Blady grass, or lalang, which is one of the commonest grasses in Northern Australia, and which also occurs in Papua, Java, and the Malay Archipelago, is favourably reported on, and is being used for pulping purposes on a small scale at Cairns, Queensland. Marram grass, which has been planted on about 5,700 acres of coastal land in Australia, chiefly at Port Fairy, Victoria, has also been reported on favourably by British authorities. The Australian Paper Mills Co. has, however, found that the grass suffers from various disadvantages. It is doubtful whether, under Australian conditions, the harvesting of the grass could be effected sufficiently cheaply to enable it to be used profitably for pulping purposes. Prickly pear has been investigated for its pulping qualities by authorities both in England and Australia. The results show clearly that this material cannot be profitably converted into paper pulp.

H.M. Consul at Syra states that a paper manufacturer in that island desires to get into touch with United Kingdom manufacturers of lithographic machinery, machinery for the manufacture of envelopes, account books, exercise books, cardboard boxes, etc, in order to purchase machines, accessories, and materials for the above work. He also wishes to import stationery in general. (Reference No. 1189). Further particulars may be had at the Board of Trade Department, 73, Basinghall-street, E.C.

West and North-West London Master PRINTERS' ASSOCIATION.

The Apprenticeship Question.

A meeting of this Association was held at Westbourne Park Institute on Monday evening, June 16th, the president (Mr. F. A. Perry) in the chair. Mr. E. Unwin in opening a discussion on "The Apprenticeship Question," said "The question of apprenticeship is occupying the attention of many minds. our profession unlike some other trades, we have always retained the custom, and for various obvious reasons. The employer—to obtain the questionable advantage of a lower paid labour. The workman-to restrict the too great flow of competition in his particular trade. The theory is that only through such a preliminary course can an efficient workman be turned out. In practice however the product is often far from satisfactory. Nevertheless, if the custom needs advocacy to-day

I am unhesitatingly in its favour. Without the incentive to learn a business blind alley occupations too often result; and on the other hand without some incentive which will retain a lad in service for a period of years, an employer will not care to be bothered with the training and the risk of losing the lad. If we are to have a succession of capable workmen, we must train, and as a sequitur, we must apprentice.

But I suggest to you that the system that has prevailed need not, must not, continue if we are to secure the best results. Why should Take my own experience. In 1855 I entered my father's business, just after his death. Bound apprentice to the overseer at case, I was placed under the charge of the senior compositor, occupying the next frame, and during the whole three years I was cared for, coached thoroughly and kept out of mischief, being then under 15 years old. That custom was carried on with others, and in order to stimulate the effort of the man selected, he became entitled to £5 for teaching his lad. In later years that custom was altered to one by which all apprentices were in a 'ship by themselves, and, as someone has

put it, to muddle "through."

In recent years, when complaint has been made as to inefficient workmen, the union officials have been able, with some truth, to retort as to the lack of training during the period of apprenticeship. The reason is largely due to the altered methods of business; the more rapid requirements of the present day, but especially to the severance of the former close connection which once existed between the employer and his lad.

A partial remedy for this state of things has been found by the introduction of evening classes which have been largely attended and with good results. More recently, too, daytime classes have been started, and the advantage gained has been so marked as to justify the employer in sparing his lad for the necessary time.

Before attempting to suggest an alteration of the system, let us consider the essential qualities which are necessary to constitute a good printer:—I. Sterling character; 2. Good education; 3. Technical knowledge; 4. Practical experience.

1. I put character first because it is in these early years of young manhood that seeds are sown which will bear fruit, and while I would bear testimony to examples of splendid character in workmen with whom I had to do, I must frankly testify to many others who for want of the restraining hand in their youth have gone woefully astray as men. A high ideal should be inculcated; the dignity of labour and especially of our own; the value of the material used in our work; the importance of every minute, etc., and above all, a recognition of the responsibility and loyalty to a trust.

2. In good education I include not only that which can be obtained by further scholastic years, but that specialised knowledge which peculiarly fits a printer for his trade. The lack of this is painfully evident too often in dirty proofs." A knowledge of men and things; of history; of commerce; and as Mr. Riddell has put it in a word of "citizenship."

3. Technical knowledge.—More important in some branches than in others, but it is of a character which cannot be learned in the workroom or while at work, and is supple-

mentary to the workshop training.

4. Practical experience.—It is said that in a printing office you never cease learning, and while that is true, too many of our workers have served their time under conditions which have cramped their energies and contributed to dull any initiative which they

might have developed.

How shall we best attain these objects? First, let us be thankful that our Government by the Education Act of 1918 has at last come to our aid, not only by preventing the too early exploiting of young labour, but by ensuring a compulsory continuation of education to the age of 16, and, eventually, to 18. With a knowledge of this, let us endeavour as a beginning to seek out in the school a better class of lad, interest him in our business, as is done by other trades, and, with parents consent, secure him, before he leaves the elementary school, as a probationer. In the continuation school I should hope that arrangements could be made for such specialised education as would best fit the lad for his The time spent here should rank avocation. as part of the apprenticeship period.

I look for teaching, which, while incidentally ensuring better workmen in the future, will develop character, open the way to a higher ideal of life, surround the lad with good influences, and thus lead him to think of something better than spending his leisure at the "pictures." Then we have in our technical schools, already referred to, such as St. Bride, just the opportunity of learning that which will fill all the practical work of the printing office. The Act provides that

this compulsory attendance is to be in the employers time and at his expense. When this idea was advocated three years ago it was scouted at as impracticable. It will soon be the law of the land.

That we may take up this new departure with courage, let me ask you to reflect on the cost your apprentices have been to you. The time wasted in the early, do-nothing period. The time of the workman in addition, the waste and destruction of material, pied or otherwise. These and other items mount up to a considerable sum, during the course of apprenticeship. Set against that, a lad trained for several years; and although you have paid for that period, you have as a product one who will at once take his place as a valuable workman and considerable time-

So much for the training side. I think we want also a standard indenture, altered to the new circumstances of the time, and I thoroughly believe in the suggestion of a fourth party—an apprenticeship board, whose special duty it should be to see fair play between the parties and oversee the education proper of the apprentice during the entire period. It is at present nobody's business to look after this. The employer may rarely see the lad; parents know nothing of the business. Left to himself, the lad can drift and become one of the very ordinary rank and file. Our aim should be rather to secure for our profession the most intelligent and highly skilled workmen possible. I should like to see one or two members of the Court of the Stationers' Company members of the apprenticeship board, so that the Company might thus be brought into closer association with the craft. The Stationers' Company indenture might still be used with the standard as supplementary.

The changes I have foreshadowed were the subject of much wordy discussion in 1916, nothing has been done by us as a body, although several other trades have adopted it (the standard indenture). I therefore hail the coming of the "appointed day," mentioned in the act, as one which will do much to put the printer apprentice into his rightful place and give him a fair chance of becoming a really skilled workman in the future. We must look to him to conserve the best interests of our craft. I believe that he, thus encouraged, will aspire to do his best to uphold the honour and deserved recognition of one of the noblest of professions.

Mr. Unwin's address was followed by an interesting discussion in which the president, Mr. J. R. Burt, Mr. G. A. Chambers, Mr. Whyte and others took part, and the keen interest taken by the members present was evidenced by the numerous questions which were addressed to Mr. Unwin.

Mr. A. Bennett then opened a debate on "A National Flat Rate of Wages for Printers with its bearing on Competitive Prices." The speaker traced the rise in wages and the fall in the number of hours worked, and showed how these conditions were approaching standardisation and uniformity. The control of wages followed the control of commodities to

which we had become accustomed, and tended towards uniformity in prices. It was gradually eliminating the estimate and making quality instead of price the determining factor when awarding contracts.

Mr. G. A. Chambers followed, pointing out that in the bad old days wages were determined by the amount necessary for bare subsistence, but there was now growing up a recognition that they should be determined with some consideration of the value of the article produced. Variations in different parts of the country were necessary as the value of printing varied, and the amenities of life in suburban and country areas offered adequate compensations for the fact that the prevailing rate of wages in those districts were lower than those prevailing in London and the larger towns.

Mr. A. Langley thought that the advantages of country life should not be taken into account in determining a man's wages, but such wages should be solely determined by the value of the services rendered.

Mr. W. J. Pollock pointed out that the real question was the purchasing power of the wages obtained.

The president said that he knew several cases where men had left suburban situations for a higher wage in the city, and after a time had returned to the suburb, finding that the higher city wage was not sufficient compensation for the time occupied in travelling to and from their work, and the loss and discomfort of having to take their meals away from home.

Several other speakers joined in the discussion, the consensus of opinion being on the side that there were compensating advantages for a lower suburban and country scale, and the meeting closed with a hearty vote of thanks to Mr. Unwin, Mr. Bennett and Mr. Chambers for their addresses.

AT a meeting of the Melbourne Master Process Engravers' Association, the following motion was unanimously adopted:—"That the members of the Master Process Engravers' Association of Victoria individually and collectively undertake not to buy any machinery, zinc, copper or process material of German or Austrian manufacture for a period of 10 years' from the date of signing of peace."

"PRTIT JOURNAL."—The accounts of December 31st last show, after paying off a sum of 531,000 francs for material and plant, a net profit of 1,425,261 francs, as against 648,736 francs in 1917. Including the amount brought over from the preceding year, the sum available amounts to 1,671,700 francs, as against 1,004,104 francs. The dividend proposed at the meeting of April 28th last was 16 francs, as against 7.50 francs in 1917. Liabilities represent 4.143,642 francs, with assets 8,166,559 francs. In the latter figure is included a sum of 2,519,000 francs, the value of the merchandise in warehouse, which covers the supply of paper (2,173,680 francs), valued at the average price of 90 francs for the hundred kilos.

The Borough Printing Classes.

The Last Book of Specimens.

The "Book of the Boro' Printing Classes," just issued, is the twenty sixth annual collection of examples of printing composed and printed by the students at the Borough Printing Classes during the session recently closed. The quality of the work in design and execution is up to the high standard set for many years at this school of printing and the specimens stand as a testimonial to the excellence of the teaching under Mr. W. H. Slater and his staff. It has always been a pleasure to us to notice these annual specimen books and we much regret that this is the last which we will have the pleasure to inspect, as, in accordance with the wish of the London County Council, the Borough Polytechnic Printing Classes were closed at the end of the session, and so this collection of specimens will be the last to be turned out.

The school has been of great value during the course of its existence, and had the honour of producing the first displayed job executed by any printing school in the country, an artistic circular, which on account of its historic value, is reproduced as the frontispiece

to the present collection of work. The success of the school during its career was gratifying, for four years the Borough classes won the highest award at the City and Guilds Examinations, the total number of medals won was 22, 11 silver and 11 bronze, with £48 prize money, 483 first class and 478 second class certificates. There were also on record nearly 600 preliminary passes and 50 L.C.C. evening exhibitions or scholarships.

It is with an excellent record that the teaching staff of the Borough Printing Classes retire from their duties, and they deserve the best thanks of the trade for the good work they have been doing for over a quarter-of-acentury.

The Labour Market

According to the Labour Gazette the state of employment in the printing and allied trades during May showed a slight improvement, but with bookbinders employment remained slack. Compared with a year ago, employment in the printing and allied trades generally showed a decline.

In London employment with letterpress printers was good, and showed an improvement, but in the provinces the state of employment on the whole remained about the same as for the previous month. With lithographic printers there was practically no change from April, employment being fair in London, but quiet or slack in the provinces. Little short time was reported among letterpress and lithographic printers. There was

also little overtime, except in London, where the usual amount was worked by letterpress printers.

In the bookbinding trades employment remained slack, and in some districts was reported to be worse than in April. Short time was worked in London, Edinburgh, Leeds and Manchester; several firms reported a difficulty in obtaining strawboards, millboards and paper for binding.

The state of employment in the paper trade varied considerably in the different districts, and a certain amount of short time was worked, but generally speaking there was some improvement. A shortage of pulp was reported in a few instances.

The number of workpeople employed in the printing and bookbinding trades in 1913, based on information from those employers who furnished returns for both years, was 8 170 males and 6,268 females, and in 1919 was 7,166 males and 6,178 females. In the paper trade in 1913 there were 9,328 males and 3,324 females employed, while in 1919 there were 8,093 males and 3,539 females.

IMPORTS and EXPORTS OF Paper, elg.

The imports of paper, etc., into the United States, and exports therefrom, during the periods mentioned, included the following:—

Imports.									
March.	1918.	1919.

HE who never changes any of his opinions never corrects any of his mistakes.

To the

BOARD BUYERS of the EMPIRE.

ONCE again we beg to call attention to the fact that there is no need to go outside the Empire for Paper Board.

You have here in Britain—a few miles from the Metropolis—one of the largest mills of its kind in the World,

Here is made all day and every day Board—and nothing but Board. Board for the Boxmaker, the Printer, the Bookbinder, and other manufacturers.

If you use Paper Board—especially if you use large quantities—write us. We are able and waiting to supply you.

THAMES PAPER CO, LTD.,

PURFLEET, ESSEX,

ENGLAND.

Telegrams: "BOARDS, PURFLEET."

Trade Notes.

THE Lisbon printers having refused to print newspapers, the Government has closed the trades union headquarters.

A NEW journal has appeared with the title of Commercial Aviation. It is devoted to promoting commercial flying, is well produced, and the matter is of a practical character.

The late Mr. John Marsant Butler, J.P., chemist and druggist, printer and publisher, for many years proprietor of the Bucks Free Press, has left estate of the value of £8,717.

THE death is announced of Mr. Joseph Ellis, managing director of Messrs. James Galt and Co., Ltd., stationers and booksellers, John Dalton-street, Manchester. Mr. Ellis was 58 years of age.

THE Vancouver printers' strike is not settled yet, but on the order of the International Headquarters, the members of the Typographical Union have returned to work on all newspapers, and the attempt at censorship is abandoned.

SYDNEY, N.S.W.—The death has occurred of Mr. John Henderson Co:hran, who was for about 45 years employed in the composing-room of the Evening News and Town and Country Journal. Mr. Cochran, who was in his 65th year, was born in Paisley, Scotland.

THE members of the Darwen branch of the Typographical Association had a ramble, the other day, in the Ribble Valley. They walked from Wilpshire to Ribchester Bridge, and then to Hacking Boat. Tea was served at the Shireburn Arms, Hurst Green. Mr. J. R. Unsworth conducted the party.

THE Sydney mail brings the news of the death, in his 55th year, of Mr. Joseph Holdsworth Sands, youngest son of the late Mr. John Sands, founder of the firm of John Sands, l.td. The deceased gentleman was a director of John Sands, l.td., printers and stationers, of Sydney.

AMERICAN PRINTERS' ENGINEERS are losing no time in pushing foreign trade, and Messrs. Walter Scott and Co., of Plainfield, New Jersey, have received an order from La Nacion, of Buenos Ayres, for a five-deck press and two octuple presses, and El Mundo, of Havana, Cuba, has contracted with the same company for a large sextuple colour press.

Messrs. Smith Bros. and Co. (Printers), Ltd, has been registered to acquire the business of law printers, carried on for 25 years under the first part of this title. The capital is £70,000, and the whole of the allotted shares are taken by the original partners (Messrs. J. W. Smith and G. Hill), who will be the first directors of the company. The company will devote themselves to the development of their special feature of law and company printing and lithography.

By a fire that broke out, last week, at Sydney, the premises of Messrs. Marchants,

printers, were completely gutted. The fire began with an explosion, and afterwards a portion of a four-inch shell was found among the debris.

JULY'S Royal Magazine is a capital number in which fiction and articles of information and interest are well blended. The illustrations are excellent and the issue forms good summer reading.

New editions of "The Black Tulip," by Alexandre Dumas, "The Red Shirts," by Paul Gaulot, and "The Poison Dealer," by Georges Ohnet, have been issued by Messrs. Greening and Co., in their Lotus Library.

TENDERS are wanted for a supply of text books, exercise books, kindergarten materials, drawing materials, stationery and sewing materials, for the Fife Education Authority; form of tender from Mr. J. Mitchell, 12, County Buildings, Cupar, Fife.

At the annual meeting of the Canterbury (New Zealand) Printers, Machinists, and Bookbinders' Union, the following resolution was passed unanimously:—"This meeting records its strong dissatisfaction at the action of the Court of Arbitration in recently granting printers, a skilled occupation, an hourly wage amounting to only 18. 7½d., while providing other skilled trades with a wage of 18. 10d. an hour."

THE June issue of The Industrial League Journal is interesting reading, covering as it does articles ranging from "International Labour Conditions," by Mr. G. J. Wardle, C. H., M.P. (Parliamentary Secretary, Ministry of Labour), to one on "Workers and Cösting," by Lieutenant C. Latham. The issue includes an interesting verbatim report of a "Workmen and Shop Stewards' meeting addressed by the Right Hon. J. R. Clynnes, M.P., and the Right Hon. G. H. Roberts, M.P.

A REMARKABLY fine number of our American contemporary, the Editor and Publisher, is to hand. It is beautifully produced and contains a deal of interesting matter about British newspapers together with portraits of the leading newspaper proprietors. The number runs to 172 folio pages and has a cover worked in colours, flags of the United States, Britain and France being on the front. Copies of this special issue may be had in London from the Rolls House Publishing Co., Ltd, Bream's Buildings, E.C.4., at a cost of one shilling, plus threepence for postage.

The death took place, last week, at Gosforth. Newcastle-on-Tyne, of Mr. Richard Welford at the age of 83 years. In his younger days Mr. Welford was well known in journalistic circles, he began his career at the age of sixteen years on the Bucks Advertiser, and two years later went to Newcastle and became a reporter on the Chronicle, becoming the editor of that paper when it became a daily journal. In 1864 Mr. Welford transferred his services to the Tyne Steam Shipping Co., and since then has been closely associated with the prosperity of that concern of which latterly he was managing director and vice-chairman.

BRITISH & COLONIAL PRINTER & STATIONER

The Pulitzer prize of \$1,000" for the American novel published during the year which shall best present the wholesome atmosphere of American life and the highest standard of American manners and manhood" has been awarded to "The Magnificent Ambersons," by Booth Tarkington. The award was made by a jury composed of Robert Grant (chairman), William Morton Payne and William Lyon Phelps.

"Office Organisation for Printers." London: Costing Committee of the Federation of Master Printers, 24, Holborn, E.C.1. 5s.

Another valuable contribution to the costing literature of print is provided by "Office Organisation for Printers," which is issued by the Federation of Master Printers. It is written by Mr. W. Howard Hazell, who is so well able to deal with the subject from the really practical point of view. The object of the publication is to suggest on broad lines various ways by which the organisation of an office may be systematised, wasteful methods eliminated, and reasonable checks and safeguards introduced. Of late there have been many signs that printing offices as a rule are far from being models of system, but progress is being made in remedying this defect, and the publication of the work under notice should help in this direction. Mr. Hazell starts with suggestions for the principal of the firm himself, and proceeds through various departments, giving valuable hints, and dealing with such matters as the cash book and ledgers, travellers, estimates for work, order sheets or work tickets, day books, delivery books, etc., and purchasing goods. The letterpress is rendered more illuminating by the illustrations of the various forms and tickets used, and the value of the book is enhanced by an index. "Office Organisation for Printers" is another service by Mr. Howard Hazell and the Federation to the craft in general.

THE "Annuaire de l'Imprimerie," the French printers' year book, has just been issued for 1919, and not having appeared since 1915 it also includes the 1916-17-18 items of information. The book, which contains 400 pages, deals with all matters affecting the printers of France and is also a complete directory to the various printing houses in that country. It is illustrated with portraits of French statesmen and military leaders, well produced in platinogravure, and is bound in cloth covers. The price is three francs. A work on "Costing for Printers," by Arnold Muller, accompanies the "Annuaire," and is entitled "Méthode Rationnelle Pour l'Etablissement des devis et Prix de Revient dans L'Imprimerie." The price of this book is two francs. Both books may be obtained from M. Arnold Muller, 79, Rue Dareau, Paris XIV.

Printers' Managers and Overseers

MANCHESTER & DISTRICT CENTRE.

On Saturday last there was great enthusiasm amongst the group of "mere men" who had the courage to take upon themselves the exploration of the hills of Yorkshire which border the city of Cottonopolis. Amongst some of the old familiar faces present were those of Messrs. Thos. Rignall (vice-president), A. Hellewell, F. E. Robinson, R. F. Singleton, F. Liddiard, Chas. N. Knowles, Fred. W. Seeley, L. J. Taylor, G. W. W. Paterson, E. C. Balls, J. Ball, H. Walton, D. Horrox, Sapper A. W. Barltrop (late hon. secretary Brisbane Overseers' Association), W. C. Foster (British and Colonial Printer and Stationer), F. J. Hughes (secretary) and others.

Entraining at Exchange Station they, after a forty-five minutes run, detrained at Greenfield, when Mr. G. W. W. Paterson commenced his duties as guide and historical delineator. A stiff climb up the hills to the Druidical remains, called "Pots and Pans," gave the ramblers an opportunity of seeing the junctions of four counties, namely, Lancashire, Yorkshire, Cheshire and Derbyshire.

After many exciting experiences the "Old Moor Cock" (familiarly known as "Bills o' Jacks") was reached. Whilst waiting the laying of the cloths Mr. W. C. Foster transfixed the whole party. Everyone did ample justice to the edibles, and recommencing the journey, the climb out of the valley was higher, and higher, and still higher, until the habitations in the valleys appeared about the size of the Ark of Noah in which we used to store our painted toy animals. Crossing the moor, a halt was made to find out who had gone astray. Five were unaccounted for and then a volunteer search party was sent off.. After half an hour's wandering Mr. Liddiard and another family man were found in a belt of cotton grass, and half-a-mile further on Messrs. Hellewell, Robinson and a friend were seen. All being re-assembled some visited Saddleworth Church and listened to an organ recital. Another three miles tramp down hill and up hill to Scout Head, then a welcome rest in the company of an old lady who had seen some seventy summers, a native of the county of broad acres where, whenever they "did owt for nout, they always did it gradely an' weel for thersen." This old lady entertained the party for half-an-hour, after which the order came for dispersal, each being well tired out although delighted with the ramble arranged by the enthusiastic G. W. W.

WEE MAC.

MR. CYRUS H. K. CURTIS, owner of the Philadelphia *Public Ledger*, and head of the Curtis Publishing Co. of America, is at present in London.

FORTUNATE is the printer who possesses a full set of good habits.

FORTY-FIRST YEAR.

Current Topics.

Our Colonial Issue.

ALTHOUGH week by week we endeavour to make the contents of the British and Colonial Printer and Stationer of use and interest to our Colonial readers, yet in the special issues which we publish from time to time, and of which this is one, we address ourselves more particularly to our friends abroad, both in their interest and the interests of our advertisers, who support us by inserting their business announcements. To this end we endeavour to reach every good house connected with printing, stationery, or fancy goods, throughout the widely-spread British Colonies; our well-kept and carefully compiled lists, the result of over forty years' experience enabling us to do so in a manner that cannot be attempted by less experienced contemporaries. Buying judiciously is the secret of half the success so much desired in business, and a careful study of the advertisements in this issue will be found advantageous to the distant buyer, who will find in them something to suit all branches of the trades we represent in the pages of business announcements that we this week send forth to our readers. Our aim, and we may hope that is a successful one, is to bring together the right people at home and the right people abroad for mutual advantage and for mutual service, and our success in bringing together the Colonial buyer and the Home producer has more than justified our action in issuing these special export numbers. Our great object is to promote as much as possible a mutuality of interests, and our chief wish isto be useful to our clientele both at home and abroad.

Loyal Canadian Printers.

THERE is considerable industrial unrest in the Dominion of Canada, and many strikeshave occurred, to the great disorganisation of trade in general. In the midst of these upheavals it is pleasing to note that the members of the International Typographical Union have shown their loyalty in refusing toviolate their agreements with their employers. and strike in sympathy with what is termed organised labour. While the stereotypers and pressmen struck in Winnipeg, the printers stood by their agreements, and in other centres they took the same attitude. A significant development has taken place in Hamilton, where the newspapers have voluntarily given their printers an increase of 20 per cent. although the agreements have still three years to run. It was agreed "That in the event of a general or sympathetic strike being called, in recognition of the press as the best channel for reflection of public opinion, the Union agrees to recognise the freedom of the press and so far as the Union is concerned, there will be no interruption of publication." Canadian publishers have not been slow to recognise and fittingly acknowledge this loyalty. A case somewhat similar to that in Hamilton is Ottawa. Publishers in the Canadian capital some months ago granted employees increases beyond what the agreements called for, and this applied to both mechanical and editorial staffs.

Why Work for Nothing?

NOTWITHSTANDING the high prices of all materials used in the printing office, the in-

> 300gle Digitized by

BRITISH & COLONIAL PRINTER & STATIONER

creased wages paid, and the greater cost of paper, there are many printers who have not yet risen to the occasion and who persist in giving their customers a handsome share of the profits which should accrue to themselves. Price cutting is still in evidence, and the printing profession is not getting a fair return upon the capital and brains that are employed in the business. Almost every industrial enterprise depends to a greater or less extent upon the products of the printing office to advertise, increase, and keep its business going, and to increase its profits, but the printer who provides the facilities for enriching others is generally a very poor man himself. His product is not disposed of in a way · to bring him in a competence, but is sold on the basis of how cheaply it can be produced, and the customer has got so used to this way of doing business that the house which offers the lowest price is the one that gets the job. This is an old story, but it is time that every printer made up his mind to charge a price that will give him not only a "living wage" but an opportunity to amass a competence that will relieve him of anxiety in the future.

American State Printing Economy.

ECONOMY in Government printing is being exercised by the United States authorities, and a decided change in the methods of handling the printing in some of the departments of the State Printing Office at Washington is expected to result from the inclusion in the Appropriation Bill of a section designed to regulate Government printing. This section provides for the cutting down, if need be, and of preventing waste in the work of the office. It stops all independent action on the part of Government employees in giving out orders for printed matter, and provides that no journal, magazine, periodical or similar publication shall be printed and issued by any branch or officer of the Government service unless specifically authorised by congress. In response to a statement by Public Printer Ford that his plant is large enough to handle all Government routine printing, and should do that work, this section further provides that after July 1st all printing, binding and blankbook work for Congress, the executive office, the judiciary and executive departments, independent offices and establishments of the Government shall be done at the Government printing office. The war saw a great increase in the number of publications issued by the Government. The emergency also necessitated the printing of much of the stationery, etc., for war bureaus outside of the Government printing office, but with the passing of the rush it is desired that as much as possible of this work be confined to the Government's printing plant.

Paper Outlook.

THE paper trade appears now to be getting definitely on the move, and from all over the country reports indicate that the mills are now fairly well occupied. Employment is better, and machines which have been closed down on account of the recent slump are now starting up again. The prospects for papermakers are in the direction of a larger flow of business, provided there is nothing to disturb normal industrial development. While the home trade is picking up in a manner which may be regarded as satisfactory, the export trade is not in quite so favourable a position. In regard to envelopes and bags, matters are not moving at all well, and in comparison with a year ago the position is quite unfavourable. Last year envelopes were exported to the extent of 100 tons a month. This year the export figure has gradually declined until it is now only about 70 tons-The figure pre-war was 150 tons a month. Paper bags are even in a worse case. As against an export of 70 tons a month a year ago, the figure is now 30 tons a month, whereas, preceding the war bags were exported to the extent of 200 tons a month. These facts indicate the extent of competition from America and Japan. This loss of export trade is not irretrievable, however, and while for the moment the outlook appears to be rather disheartening, there is every hope that British goods will again find favour abroad.

Interesting Figures.

THE extent to which the paper trade was hit by the war is revealed by a glance at the export figures. Before the war the total amount of exports of paper for the first five months of the year was 11 million tons, whereas for the corresponding period of this year the quantity exported is only 255,000 cwts., or one sixth of the pre-war amount. There is thus a very heavy leeway to make up. It is hoped, however, that the June figures will indicate a turn in the tide, because during May papermakers were still operating upon pulp which was subject to restrictions during April. It was only last month that there was anything approaching a free import of pulp, and the effect of this ought to be shown in the figures for June when they become available.

Smith and G. Hill. Private company. Directors, J. W. Smith and G. Hill. Registered office, 30, Lawrence-lane, E.C.

HATCH PINNER AND Co., LTD.—Registered with a capital of £3,000, in £1 shares, to ac-

quire the business carried on at 7, Hatton-yard, Hatton-garden, E.C., as "S. Hatch and Co.," and the business carried on at 108, Shoelane, E.C., as "E. Pinner and Co.," and to carry on the business of bookbinders and manufacturing stationers. The subscribers are H. W. North and R. W. Pearse. Private company. Directors, H. W. North, R. W. Pearse, and H. W. W. North. Registered office, 7, Hatton-yard, E.C.I.

CONTAINERS, LTD. — Registered with a capital of £120,000, in £1 shares, as makers of fibre, corrugated and other containers, etc. The subscribers are R. H. Moyes, H. Howes, H. M. Cordrey, M. Pakeman, A. W. Read, J. Rawson, and E. Goodman. Private company. First directors to be appointed by the subscribers.

CASH WALL-PAPER Co., LTD.—Registered with a capital of £3,000, in £1 shares, as paper-hangers, decorators, dealers in wall-papers, etc. Permanent directors, H. P. Glover, J. J. G. Page and R. Bowers. Private company. Registered office, 16, The Walk, Norwich.

ABBOT PRESS, LTD.—Registered with a capital of £5,000, in £1 shares (1,000 preference). Agreement with A. J. B. Abbot and P. H. Abbot, and to acquire the business carried on at Vicarage-street, Yeovil, under a similar title. The subscribers are A. J. B. Abbot, P. H. Abbot, F. Clothier, and T. E. Abbot. Private company. The first directors are A. J. B. Abbot, P. H. Abbot, F. Clothier, and T. E. Abbot. E. Abbot.

COMPANY NOTICES, etc.

BARWAY PRESS, LTD.—At a meeting of the company, held at 176, Wardour-street, on May 15th, the following resolution was passed; and at a subsequent meeting on June 11th, was duly confirmed:—"That the company be wound up voluntarily; and that William H. Terry, Wharf-road, Latimer road, W., be appointed liquidator for the purposes of such winding-up." A meeting of creditors of the company will be held at London on June 27th.

P.L. Publishing Co., LTD.—At a meeting of the company held at London, on May 2 and, the subjoined resolution was passed; and at a subsequent meeting on June 6th was duly confirmed, viz.:—"That it is advisable to wind up the company, and accordingly that the company be wound up voluntarily, and that Mr. Basil Hallett. 2, Snow-hill, E.C.1, be appointed liquidator for the purposes of such winding up."

CENTURY PRESS, LTD.—Notice is given that the creditors of the company, which is being voluntarily wound up, are required, on or before July 14th, to send the particulars of their debts or claims to Alfred H. Moon, Old Serjeant's-inn, 5, Chancery-lane, London, the liquidator of the company. A meeting of the company will be held at Old Serjeant's-inn, London, on July 22nd, 1919, at 12 noon, for the

purpose of having an account laid before them, showing the manner in which the winding up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

BANKRUPTCIES, etc.

RE WILLIAM JESSOP MANSELL (trading as W. J. Mansell and Co), bookbinder, lately trading at 5 and 8. Crown-court, Chancery-lane, W.C. The bankrupt, who failed in March, 1914, applied at the London Bank-ruptcy Court on June 20th for an order of discharge. The official receiver reported that the liabilities amounted to £308 11s. 5d., and the only asset realised was £13 received under the will of a relative. The applicant traded as above from 1894 till 1910 when he executed a deed of assignment, under which a dividend of is. 6d. in the £ was paid on liabilities of £765 158. 3d. Subsequently he acted as manager for his wife in a similar business for the purpose of which he contracted these debts of £308 11s. 5d. in his own name. The discharge was suspended for two years on statutory grounds.

HE that will not reason is a bigot: he that cannot reason is a fool; and he that dares not reason is a slave.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

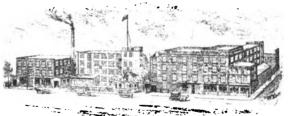

PARTNERSHIP DISSOLVED.

The partnership between Arthur Samuel Knibb and Horace Walter Cherry, carrying on business as bookbinders, at 111, Shoe-lane, E.C.4, under the style of A. Knibb and Co., has been dissolved by mutual consent as from March 31st, 1919. All debts due to and owing by the late firm will be received and paid by Arthur Samuel Knibb.

THE BANKRUPTCY ACT, 1914. NOTICE OF INTENDED DIVIDEND.

Gentry, Alfred George (described in the re-ceiving order as Ernest Esdaile), journalist, 7, Carlton-parade, Herne-hill, London. Last day for receiving proofs, July 5th, 1919. Trustee, E. L. Hough, official receiver, Bankruptcy-buildings, Carey-street, London, W.C.

AMUEL JONES & Co.,

CAMBERWELL, SURREY.

BRIDEWELL PLACE. LONDON. E.C.4.

GENERAL W. WRIGHT BEMROSE, past-president of the Federation of Master Printers, will give the address at the monthly lunch of the L. M. P. A., on July 5th. As the originator of the new scheme of alliances, his address on organisation will be of special interest.

MR. J. J. Keliher, president of the London Master Printers' Association, has recovered from his recent indisposition.

MR. G. REYNOLDS, printer, of Stepney, has been seriously ill, but has so far recovered as to be able to leave the nursing home.

Mr. E. R. ALEXANDER presided on Tuesday night at the monthly meeting of the East and North-East London Master Printers' Associa-

Mr. GILLARD gave an interesting address on "How to Popularise the Association," the whimsical hon. secretary (Mr. A. D. Phelp), however, in his notice of the meeting, altering the word "popularise ' to "pulverise."

VISITORS of the evening were Mr. J. J. Harding and Mr. G. W. Grinyer, who are taking over the printing and stationery business of Mr. Filmer, Barking.

A FULL report of the meeting will appear in our next issue.

The Genile Cuiter Cuiteth.

Australian printers are faced by the competition of the cutter as well as those in this country, and the Bulletin of the Queensland Master Printers and Allied Trades Association gives the following examples of recent esti-mates:—The following authentic cases were disclosed and prices verified at a meeting of the general committee of the Association. They reveal an appalling lack of business acumen, which, to say the least of it, points to the perpetrators as unfit to conduct the affairs of a peanut barrow.

No. 1.-A weekly publication, which at the Association price of £25 per issue, would not show a profit of 10 per cent., taken at £17 per

No. 2.—Folding statement envelope forms, open face.—Association price, 5,000, £13 5s.; 10,000, £23 os. 6d. Outside price, 5,000, £9 5s.; 10,000, £14 tos. When it is stated that the paper for the 10,000 lot, which was ordered, cost £10 15s., and considering the number of operations of an intricate nature in the manufacture, what must be said?

No. 3 -50 duplicate invoice books, for which the Association price was 3s. per book, were done at 1s. 6d. per book. This was barely the cost of the paper.

No. 4.—Six account books, for which the Association price was £11 17s. 6d., were done by an outside house for £8 5s. These were done previously by an Association honse, and cost to produce £ 10 7s. 6d.

It is very safe to say that the members of the Association know at least as much of the details of manufacture as those outside, and soit cannot be from lack of knowledge that Association rates are so much higher. In fact, Association members are so keen that the hour charges, under the system the Association has introduced, compare very favourably with charges in other countries where they might reasonably be expected to be lower. The only explanation is that given at the head of this -lack of business knowledge. There are none so ignorant as those who won't learn, and it seems as though some legislative action will have to be taken to make sure that such people are not allowed to "dump," either through ignorance or ulterior motives.

Egyptian Paper Imports.

Statistics of paper imports into Egypt specify four distinct categories:—Wall-paper, wrapping paper, writing-and printing paper, and paper of other grades. In 1917 the value of wall-paper imports was £18,600. A total quantity of wrapping paper amounting to 90,204 cwt. was imported, the bulk of which came from Italy. Writing and printing paper imports totalled 97,200 cwt., and came in the largest quantities from England, Italy and Norway. The United States furnished 246 cwt. The value of all other grades of paper imports amounted to £18,083, England's share being £11,661, and that of the United States only £85.

Previous to the war Austria furnished about 43 per cent. of the total importations of all grades of paper, while the shares of Germany, Italy and France were about equal. Austria and England led in the importation of writing and printing papers. Austria furnished over 70 per cent. of the cigarette paper, in which category Italy has now taken its place in the market. Paste and cardboard emanated chiefly from Germany and Austria before the war. The United Kingdom and Sweden are the largest exporters of cardboards at the present time.

There is no local competition from Egyptian mills. Practically the entire paper supply of Egypt comes from abroad and the demand is practically limited to the European population. There is but one small paper mill located in Alexandria. Its weekly capacity is only 30 tons of paper and 12 tons of cardboard.

Since the war and the withdrawal of Germany and Austria from the local market, Great Britain, France, Italy and Sweden have been the chief exporters of paper to Egypt. There is an 8½ per cent. ad valorem tax on paper imported into Egypt. Paper, like other manufactured articles, must be placed through agents and commission houses.

Colonial Notes and News.

VICTORIA.

The editor of the Melbourne Age recently completed the fortieth year of his association with that newspaper, and was entertained at dinner by the staff, the chair being taken by Mr. J. Herbert Syme, one of the proprietors. Mr. Schuler's health was proposed in felicitous terms by the chairman, who later in the evening made presentations, which included souvenirs for Mrs. and Miss Schuler. speeches abounded in amusing and interesting reminiscences of the early days of the Age, and some of the editors and writers who for over half-a century contributed to its power. Mr Schuler, when responding, expressed his keen appreciation of the compliment paid him, and the tokens of good feeling which the gifts represented. An excellent musical pro-gramme, arranged by Messrs. Earl and Rodda, diversified the proceedings.

At the invitation of Messrs D. Syme and Co., the heads of the various departments of the Age and the Leader assembled at the Café Français, Melbourne, to bid farewell to Mr. Harry Clarke, the printer of the Age, who retired from the firm's employ after 48 years service. Before Mr. Clarke's health was drunk with enthusiasm and musical honours, a presentation for Mrs. Clark was made by the chairman, on behalf of the proprietors. Mr. Clarke made a feeling response, appreciative of the gathering and the kindness extended to him by the firm.

A new weekly journal has made its appearance in Melbourne under the title of Voce d'Italia. It is published in the interests of the Italian community in Australia and consists of eight pages, well produced. The paper is printed in both Italian and English.

The Chamber of Commerce at Geelong, after a long discussion, has commended the action of those Australian firms which have declined the invitations recently extended to them to trade with Germany. Some of the members expressed the opinion that trade would be done with Germany in the near future unless the Government actually prohibited it.

NEW SOUTH WALES.

Sydney newspaper men mourn for the death of Sir James Fairfax, the father of journalism in New South Wales, and senior director of the Sydney Morning Herald and Sydney Mail. The late Sir James Fairlax was in his 84th year, having been born on October 17th, 1835, at Learnington, England, a year before the accession of Queen Victoria. He was the second son of the late Mr. John Fairfax, M.L.C., a pioneer of Australian journalism. He had been connected with journalism since

his youth, and as far back as 1857 was admitted to the proprietary of the Herald. He was connected with many public and philanthropic institutions in the State, and was created Knight Bachelor in 1898. The funeral took place at the South Head Cemetery, Sydney, in the presence of a very large gathering of people, embracing representatives of the State Governor, the State Government and Parliament, Sydney municipal council, the Federal and State judiciary, the church, the press the civil service, Commonwealth and private banks and all sections of the business community.

The New South Wales Lithographic Association applied for an award in connection with the Lithographic Workers, etc., Males (Cumberland and Newcastle), Board. The minimum rate of pay claimed for all journey-men was £4 125 6d. It was further claimed that 44 hours should constitute a week's work, and should be worked eight hours per day from Monday to Friday, and four hours on Saturday. The Court made an award in terms of the last award for the industry, and formally decided that the rates should be increased by adding 7s. 6d. a week to the award of 1916, The award was made for three years on the understanding that no variation was to be made for that period on account of the increased or decreased cost of living, except with regard to those who would be receiving less than the living wage. The Court granted leave to both sides to apply to vary the award on the ground that the award was made on a wrong basis. Leave was also given to the employees to apply on the ground that apprentices over 21 years of age should receive at least £3 per week. Apprentices are to receive proportionate increases.

In the Sydney Industrial Court reserved judgment was delivered on the appeal by the Minister for Labour and Industry against the decision of the Chief Industrial Magistrate refusing to make an order against Messrs. Robert Dey, Son and Co., printers, of Clarence-street, Sydney, with £11 14s. costs, against the complainant, in an information alleging that the company had committed a breach of the award of the Printing Trades, Group No.1 (Compositors and Machine Operators') Board, in not paying one Edgar Frecker, an empl yee, double time for work done on Sunday night. Frecker was working on the night staff at the respondent's business premises, apparently doing six shifts a week. The night staff compositors, for some considerable time past, and it was said to be the general custom, preferred to cut out the Saturday night shift and work it on the Sunday night. The information against the respondents was that because Frecker had not been

Important Notice.

It will interest the Printing Trade to know that the English Branch of Ch. Lorilleux & Co. has been amalgamated with the firm of Morris & Bolton, Ltd., as from March 31st, 1919, and that the business will in future be carried on under the title of LORILLBUX & BOLTON, Ltd.

The principal object of the amalgamation is to gain additional strength to meet the inevitable Foreign competition in the future, and to endeavour to secure the premier position in the world's markets.

The fusion of these two progressive businesses will enable many improvements to be effected, and the combined resources and experience of the two houses will enable LORILLEUX & BOLTON, Ltd., to offer the trade adequate supplies of all kinds of Printing lnks of exceptional quality and value.

Ch. Lorilleux & Co and Morris and Bolton Ltd. thank their customers for past favours, and trust that the confidence and support extended to them in the past will be continued to

It Pays to Advertise in this Journal!

paid double time for Sunday night work, the respondents had committed a breach of clause 52 of the award. The magistrate held that it was the general custom to cut out the Saturday night shift and work it on the Sunday night. The Court held that the magistrate was right in his decision, and dismissed the appeal, with costs.

The Court also gave judgment on the reference by Judge Curlewis in respect of an application by the Letterpress Printers' Machinists' Union for an award in connection with the Printing Trades, Group No. 5 Board. The union had asked that no adult male platen machinist should receive less than £3 4s. a week, being the amount which would secure to the worker an effective wage of £3 a week. His Honour thought the matter was one that ought to be considered by the full Court, to whom he referred it. The union claimed that the minimum wage of £3 fixed by the Board of Trade was on the assumption that a worker would get a full £3, or at the rate thereof, a week throughout the year, and that anything he lost by way of holidays not paid for must be added, so as to make up the £3, otherwise he would get less than the living wage. Mr. Thom, on behalf of the employers, contended that the £3 per week was fixed by the Board of Trade with the knowledge of and intention to cover the worker for his minor losses of time, such as public holidays, and that nothing should be added for those days, particularly as they were claimed as holidays by the union. The questions for the Court to determine were whether the £3 fixed by the Board of Trade should be the minimum wage for the minimum class of work in the industry, or whether it should be £3 4s. as claimed by the union, the extra 4s. being claimed to make up for the usual holidays not paid for. Court held that the matter was one for the Board of Trade, and that as the Board had calculated the living wage at £3, the Court could not say that it had wrongly calculated it, and should add something further for ordinary loss of time, such as ordinary holidays not paid for.

WESTERN AUSTRALIA.

In the Arbitration Court at Perth, Western Australia, Mr. Justice Booth heard the proposal in the award in the female printing employees' case, fixing the minimum adult wage at 40s. a week. It was stated that such a rate would probably cause a number of dismissals. Mr. M'Callum, Labour Federation secretary, declared that if the girls were thus victimised the force of the unions throughout the State and Commonwealth would be used. The Judge said he had been satisfied by the evidence of the employers' own witnesses that the minimum wage for adult girls should be 40s.

NEW ZEALAND.

At the annual meeting of the New Zealand Master Printers' Association, held at Welling.

ton, the chairman expressed gratification that the war had come to a conclusion during the year, and referred to the great difficulties that had been experienced in conducting the printing business during the continuance of hostilities. He also briefly referred to the matter of apprenticeship and technical training and other matters of interest to the trade. The following resolutions were passed unan-mously: "That this annual meeting of the New Zealand Master Printers' Association desires to express its deep sympathy with all connected with the printing trade in the Dominion of New Zealand who have lost relatives in the great war which was concluded with complete victory for our Empire and its allies on November 11th, 1918. "That this association thankfully records its gratification at the triumphant conclusion of the war by Divine Providence, and trusts that the menace to civilisation, which was threatened by the onrush of aggressive militarism, has been fully and permanently checked." The following officers were elected for the ensuing year: — President, Mr. J. Gamble, Christchurch; vice-president, Mr. T. Cooke, Dunedin; members of the council, Messrs. W. F. Topper (Christchurch), A. Spencer (Auckland), S. Craig (Southland), L. I. Watkins and T. Jones (Wellington); district council representatives, Messrs. F. Bond (Auckland country), H. J. Bushnell (Gisborne), H. V. Duigan (Wanganui), T. Avery (Taranaki), G. W. Venables (Hawke's Bay), F. Pirani (Feilding), P. Bond (Nelson), C. East (South Canterbury), and E. H. Waddington (Wairarapa); auditor, Mr. E. Kellow.

The recent typographical agreement was considered at a special meeting of the Wellington Typographical Union, 78 members being present. The following resolution was carried:-"That this meeting representing about half the number of members affiliated to the New Zealand Federated Typographical Association, having read the report of the conference with the employers in the recent industrial dispute and considered the agreement signed in consequence, affirms as follows: -(1) That some of those claiming to represent the employees had no right or authority to attend any conference on our behalf, the dispute having been given over to managers with instructions to go to the Court for a decision; (2) That all of those having authority from the typographers of New Zealand to represent them contravened and exceeded such authority in entering into any agreement that did not contain a concession of the full demands made on the employers. or some equivalent improvement in conditions, without first consulting the members of the unions of the Federation; (3) In consequence of which disregard of instructions by the employees' representatives all persons occupying any representative position in unions of employees connected with the typographical trade who took part in the negotiations with the employers' representatives be requested to resign such positions forthwith, and the secretary of the Wellington

Typographical Union is instructed to communicate the text of this motion at the earliest convenient date to other unions comprising the Federation, urging that any still acting as representatives of affiliated unions have their authority cancelled; (4) The agreement having been signed without consultation with the members of unions of employees to the knowledge of the employers and in contravention of the expressed instructions of the constituent unions of the Federation, is hereby repudiated, and the incoming executive of the Federation is urged to approach the Court of Arbitration, employing competent counsel, to ask whether, in the peculiar circumstances, it is not possible for the dispute to be reinstated, heard and determined by the Court.

The following are the terms of the award: -"The amendment of the typographers' award, fixed by the Arbitration Court, increases the war bonus by 7s. 6d. a week to all journeymen, except piece-workers, but the increase is not subject to condition in reference to output of linotype operators. From January next the hours of men in the hand section, and those now working 48 hours in the machine section, shall be reduced to 45 hours per week. Work on Saturday night special editions shall be paid at the rate of 3s. 6d. per hour on time, or at piece rates with a minimum of 7s. 6d. Hand piece-workers will be paid 3d. a thousand ens additional. In the lithographic and letterpress printers' machinists' award, the war bonus is increased by 78. 6d. per week, and from January next the hours of work are to be reduced to 45. In the New Zealand book binders paper rulers and cutters' award (except Wellington) the war bonus is increased by 7s. 6d. per week to all journeymen, except piece-workers, and the hours are reduced from next January to 45 per week."

INDIA.

The action of the Government of India in declaring forfeited to his Majesty all copies found in India of Dr. S. M. Zwemer's "Islam—A Challenge to Faith," is somewhat extraordinary, the book having been published as long ago as 1907. The representative Council of Missions for Bengal and Assam, a body that speaks on behalf of the principal Protestant missions in these provinces, has passed a series of resolutions protesting against the action of the Government. The resolutions urge that the employment of the Indian Press Act in this case is opposed to the purpose for which the Act was passed and to the principles of religious neutrality and good government.

The Government of Bengal have doubtless acted under instructions received from Delhi. Everyone understands that it is the desire of the Government of India to exercise the utmost vigilance in preventing the publication of anything which can reasonably be regarded as offensive to the Moslem community, especially at the present time, but

when one considers the case from the fact that the book in question was published twelve years ago, it is difficult to see the reason for the action the Government have now taken.

It is with much regret that we have to record the passing away of Babu Woopendra Nath Mukerji, on March 30th last. He was the proprietor of the Basumati, one of the most influential of Bengali papers, and a man who had a career of wonderful activity. He began life as a humble business man, and had not the advantage of what people call a liberal university education, nor had he any financial backing. His business instinct was keen, and early in life he started a publishing house, which grew and extended, and then culminated in the establishment of the Basumati. He was essentially a self-made man, who was the carver of his own career and fortune.

About three-hundred workmen employed in the printing department of Messrs. Addison and Co., Madras, went on strike recently, on the ground that they were not given an increase of pay to enable them to meet the high prices of foodstuffs. After negotiations, the management agreed to certain concessions, including the continuation of the payment of the war allowance on the old scale and an increase in wages all-round of ten per cent. The men then returned to work.

A portion of the Methodist Printing Press in Mount-road, Madras, caught fire early on the morning of May 20th, and was completely burnt down. The damage is estimated at 50,000 supees. The cause of the fire is at present unknown, but it is surmised that it was due to the fusing of electric wires.

Utilising Paper.—Under a patent by Mr. F. J. Commin, sheets for making boxes, cisterns, doors, bottle caps, and other articles are made from finished or unfinished paper by sprinkling finely ground or powdered pitch to the required thickness on damp unfinished paper or on paper which has been coated with size or other glutinous matter, superimposing the sheets, pressing them together, passing through an oven at such a rate as to liquefy the pitch, then subjecting to considerable pressure in an hydraulic press. The articles produced may be rendered fire resisting by using asbestos paper, paper treated with alum, or papers made with fillers of magnesite, chalk, silica, cement, clay, or the With paper made from straw, wood pulp, rags, or the like, pitch of low melting-point is used. The sheets or articles may be coloured with brick dust or the like, or they may be covered with coloured papers or powders before the final pressing in moulds. In making boxes, cisterns, and the like, the material may be pressed flat, cut, and subsequently re-heated and re-pressed, the parts of the material being jointed together by the second pressing operation.

Italian Paper Figures.

For the year 1918, paper and books imported into Italy represented, according to the Customs returns, a sum of 73,400,555 lira; in 1917 the value was 91,202,525 lira, and in

1916, 83,209,795 lira.

It is of interest to make comparison with the figures for the years preceding the war, says L'Industria della Carta. Two articles merit special attention, cellulose and white unruled paper. The import of the latter and their value, from the year 1911 to 1914 inclusive, were as follows:—1911, 33,831 quintals, value 2,193,015 lira; 1912, 33,776 quintals, value 2,262,992 lira; 1913, 35,615 quintals, value 2,386,071 lira; 1914, 36,806 quintals, value 2,576,420 lira. In 1918 the imports of white unruled paper were 26,471 quintals, with a value of 4,764,780 lira. From this it will be seen that for a smaller quantity imported, the money value was greatly enhanced. These figures will show conclusively the grave crisis which the war has inflicted upon the industry and commerce of paper.

Let us now consider the imports of cellulose, which in the years 1911 to 1914 were as follows:—1911, 712,946 quintals, value 17,110,704 lira; 1912, 832,812 quintals, value 20,820,300 lira; 1913, 861,023 quintals, value 21,525,575 lira; 1914, 750,907 quintals, value 19,523,582 lira. In 1918 the importation of cellulose was 174,996 quintals value 36,749,160 lira. In the matter of cellulose the relation between the quantity imported and the price which had to be paid for

it is even more striking.

It would be idle to-day to endeavour to ascertain if the causes of such disparity were all to be ascribed to the war, or whether they were not also due to a great lack of practical common sense on the part of the Government which helped to render still more sterile their policy of monopolies, undertaken from beginning to end with the most complete inexperience and incapacity. It is sufficient to observe and establish the fact that in its principal lines the paper trade, of all the industries of Italy, was destined to endure the hardest struggles.

Turning to the figures for exports, the same paper states that these for the years 1911 to 1914 were as follows (values): — 1911, 22,137,539 liras; 1912, 20,092,292 liras; 1913, 22,137,539 liras; 1914, 17,168,246 liras. In 1918 the value of exports attained 28 637,500 liras. This figure was far exceeded in 1917 and 1916, the values for these two years being 42,104,185 liras and 45,158,109 liras respectively.

Coming to the details of certain lines, the following figures may be reproduced:—Fine rateen paper in loose-leafs—1913, 14,428 quintals, 2,308,480 liras; 1914, 9,290 quintals, 1,579,300 liras. White unruled paper—1911, 45,134 quintals, 4,287,780 liras; 1912, 48,452 quintals, 4,845,000 liras; 1913, 38,880 quintals, 2,209,200 liras; 1914, 33,838 quintals, 2,199,470 liras.

In 1918 the exportation of fine rateen paper

amounted to 17,490 quintals, of a value of 10,494,000 liras. In the same year the exportation of white unruled paper totalled but 3,861 quintals, of a value of 772,200 liras, whilst in 1916 the exports of this article were 90,958 quintals, valued at 11,823,880 liras.

Under the heading, "ruled white paper," the figures for 1911-14 are as follows:—1911, 31,923 quintals, 2,713,455 liras; 1912, 21,123 quintals, 1,795,455 liras; 1913, 29,998 quintals, 2,541,330 liras; 1914, 17,486 quintals, 1,486,310 liars. In 1918 the exportation of this paper was 996 quintals, of a value of 280,140 liras,

These extraordinary jumps are easily understood when we consider the regime enforced upon the production and commerce of paper. It might also be remembered that the Government at one time threatened to commander the paper works and run them on their own

account.

There is one line which is of great importance in regard to exports, and that is wrappings. These may be divided into many types, but the most common are the straw wrappings not coloured and not on reels, and all the coarser grades. Figures for these lines are as follows:—1911, 18,364 quintals, 312,188 liras; 1912, 19,514 quintals, 292,710 liras; 1913, 35,101 quintals, 526,515 liras; 1914, 25,344 quintals, 320,160 liras. In 1918 the export of this article attained 71,762 quintals, with a value of 5,740,060 liras.

The following figures relate to wrapping papers of the coarser kinds:—1911, 24,916 quintals, 672,732 kiras; 1912, 14,082 quintals, 352,050 kiras; 1913, 6,515 quintals, 162,875 kiras; 1914, 5,833 quintals, 145,825 kiras.

In 1918 the exportation of this type of paper amounted to the meagre total of 413 quintals, of the insignificant value of a little over 51,000 liras. On the other hand, there was in 1918 a large export of yellow straw wrappings, not coloured, which amounted to 10,410 quintals, of the value of 937,440 liras.

These figures are sufficient to give an idea of the sad vicissitudes traversed by the paper industry, which during the war has been the mark for so many unjust and violent attacks by the journalistic and printing industries.

British papermakers can sympathise with their Italian confreres.

Reinforced Paper.

Mr. Edward H. Angier, Framingham, Mass., and Mr. Lawrence G. Miller, Cambridge, Mass., have patented a process for reinforcing paper by strands which extend, in whole or in part, transversely. The paper is coated on one face of one sheet by a suitable adhesive, preferably one which is waterproof, asphalt or bitumen being particularly suitable. Two sheets are then pressed together by being run between rollers, with the coated side of the one sheet inside, so that the two sheets adhere firmly together. At the same time threads or strands from spools spaced at suitable intervals are fed into the bite between the squeez-

ing rolls, so that the threads are incorporated into the two-ply sheet, being held in the asphalt coating between the two sheets. The sheets are run between the rollers in such a way that the two edges of the webs do not coincide, but instead are offset by about the width of the spacing between the threads. After forming the long strip in this way, sections are cut off and placed together. The offset edges of one piece overlap the next piece, and are pressed together in such a manner that the adhesive will unite the two There is thus provided a web of indefinite length, which is transversely reinforced; and this web may be made wide or narrow, accordingly to the lengths of the sections which are cut and joined to make the web. If desired, such a transversely reinforced web may be combined with one or more other thicknesses of paper, which preferably take the form of true or continuous webs, and with longitudinal reinforcements, if desired.

Printing in Japan.

In an articles by the business manager of the Japan Advertiser that appeared in a recent issue of our American contemporary, the Editor and Publisher, the following amusing account of the vagaries of the Japanese printer is given:—

"The advertising manager of a paper in the United States may have trouble in getting his advertisements set just as he wishes and placed just where he wishes, but he can talk and swear in a language understood by his printers. But in Japan your talk and swear is wasted on the Oriental air, poetically and practically speaking.

"Japanese printers cannot speak or understand English, but they know the alphabet and can follow typewritten copy. But if their copy is disturbed they go ahead and set whatever is in sight; sometimes the results make the American advertising manager laugh, but

more often they make him swear.

"Recently a business firm in Japan sent us copy for advertising corsets. I laid out the copy and in the display used a cut of a lady dressed in only a corset. The editorial room sent down a story of an American lady who had just reached Japan. The printer who was working on the advertisement got his hands on the story.

"When the proof of the advertisement was brought to me I was surprised to find my lady of the corset bearing a two-deck headline: 'Miss Mary Brown arrives on Tenyo.' And it doesn't pay to mix news and advertising to

that extent even in Japan.

"A few days later I sent two advertisements to the composing-room, one for new millinery and the other for a book which answers all questions a child can ask. When the millinery proof reached my desk I read in part, 'Spring hats from Paris, London and New York. Will the sun ever cool down? What is a ship's water line? From Monday,

March 3rd, Phipps and Dahlia models. What makes our hearts beat? What is an element?'

"We started a woman's page a short time ago and are running two columns of advertisements on it. I told the head printer, who is supposed to understand English, to run advertisements that would be appropriate for

that page.

"I did not see the make up until the issue was off the press—and every whisky and beer advertisement we have was on the woman's page. Served us right for accepting such advertisements, but advertising in Japan has not evolved so far as it has in America and some papers even run patent medicine advertisements.

"To counteract these difficulties Japan offers some joys to the newspaper man. Advertising contracts are often paid one year in advance. An American firm with offices here bought one half-page for four insertions. One of our Japanese clerks in the business office made out statement for full amount and sent it to the firm before even the copy was furnished. I was horrified when I was told the account had been sent, imagine my surprise when cheque in full reached me by the next mail.

"The American firm had made inquiries of their Japanese assistants, who advised them that it was quite proper to pay in advance for advertising, so, being in Japan, they did like the Japanese."

- apanese.

The Stationers' Association.

The report of the Stationers' Association of the United Kingdom, which was presented at the fourteenth annual meeting, records that the membership has been increased by a further 260, the number for the previous year having been 1,000. It is announced that the policy of" the protected list" is to be taken up again at once. "Considerable pains have been taken to get together a comprehensive list, but it has required a great deal of consideration on the part of manufacturers to arrive at a figure which will hold good for any length of time. In instances where prices are likely to vary, consequent upon a falling market, makers have listed their goods at 'current prices net.' The list, when it is issued, may not appear as voluminous as of yore, although it will be in effect more extensive; many makers have listed items in complete series, this time without enumerating each.

The unremitting attention of the Association has been devoted to the retail trading in, and free distribution of, stationery by the Post Office. The Association has succeeded in proving that stationery when sold by the department was a loss and that free material was an injustice to the stationer; as a competitor the Postmaster-General has retired from the field—for the present at any rate.

The report comments on the activity of the president (Mr. Percy Barringer) in connection with various committees and conferences arising out of Government restrictions.

The Minimum Price List.

Discussion by City Master Printers.

Mr. J. D. McAra (McAra Printing Co., Ltd.), presided on Wednesday of last week at the meeting of the Central Districts Branch of the London Master Printers' Association, an interesting discussion taking place on the proposed minimum jobbing price list. Before this subject was reached, however, Mr. W. H. Burchell, the hon. sec., reported on the progress of the branch. He mentioned the receipt of just over £70 for the organising campaign, and added that there was ground work to be done yet, seeing that something like 200 firms in the E.C. and W.C. districts were still outside the Association. The membership was now over 400, of whom 138 had joined since the inauguration of the branch. Of the total members he had ascertained that 157 were society houses and 189 were non-society.

The chairman attributed a great deal of the gratifying result to the spade work of Mr. Burchell, who was very enterprising and energetic, and, as he knew to his cost, was often at the other end of the telephone. (Laughter.) Mr. McAra then introduced Mr. R. A. Austen-Leigh (Messrs. Spottiswoode, Ballantyne and Co., Ltd.), to whose initiative, he said, the proposed minimum price list was largely due.

Advantages of the List.

Mr. Austen-Leigh, speaking with regard to the price list which had been drawn up by the Organisation Committee, said some of the advantages of such a list were these:—It would save printers a great deal of time, it would obviate the risk of leaving out some item of profit, it would give the printer much moral support, and it would convince the customer that the price was right. It was particularly emphasised that the price-list

concerned small jobs, and the speaker saw noreason why they should not have a list for bigger and better work in districts where wages, prices of paper and machinery were the same. Some people said the prices in the list were too high, others said they were too low, and those varying opinions proved, he thought, that they were reasonable, especially as they found people were experiencing no difficulty in getting them. He thought the scheme would be of assistance to the small printer, because he was not one of those who thought that the larger houses worked at greater cost on jobbing. With regard to the percentage for handling paper, Mr. Austen-Leigh did not think that was too much for small jobs, because there was no reason why they should give away the small work. Other District Associations had had the list under consideration, and had blessed it. The Organisation Committee, however, would deliberate upon the criticisms offered and would eventually produce a revised list for which they would have to make a charge to meet the cost of production. He thought the completed list, which would be brought up to date, bearing in mind the lower cost of paper and the higher rates of wages, would be ready when the master printers returned from their holidays. Whilst they could not promise that everyone would abide by the list, he believed the result would be generally to raise the level of prices. (Hear, hear.) Gradually people would adopt it and eventually it would become the standard.

In reply to Mr. Pocock (Messrs. Edward W. Pocock and Co.), the chairman mentioned the amount of work involved in unbanding envelopes, printing them one at a time, boxing them and delivering them; therefore the percentage on the small quantity was not an

outside figure. Those who took the trouble to find out what a small job cost them would

be surprised.

Mr. Burchell thought the list at all events would be a very useful guide, when they were charging out. With regard to the hourly rate for machines, he pointed to the difficulty of the varying speeds.

Mr. Boyle (Messrs. Boyle, Son and Watchurst, Ltd.), agreed that the percentage for handling was not too much. Mr. Austen-Leigh informed Mr. Hooper that everything was included in the hourly cost, departmental charges as well,

Mr. Wm. Ede (Ede and Townsend, Ltd), said that the percentage on paper seemed rather large at first sight, until they remembered that on broken reams they paid 10 per cent. Then they had to allow for what was taken away from reams, what was spoilt, and the fact that the warehousemen were gener-

ally very generous.

Mr. Alfred Harris (The Romney Press, Ltd.), spoke of his recent visit to America and his attendance at the meeting of the Buffalo Master Printers' Association, where he spent a very interesting evening. This handling percentage came up there, although not in quite the same form, and it appeared that the wholesalers had got their heads together and were holding up the printers for the 10 per ceut. for any amount of paper they took less than a ream. He thought that was a reminder to British printers that they had been paying this 10 per cent. to the wholesale stationers and had not been passing it on to customers when they had broken the reams. As to varying speeds of machines, there was no reason why they should give all the advantage to the customer. The speaker was glad to see British machines being operated during his visit to America

Mr. Boyle pointed out that the committee in drawing up the list took the average plant of the average printer in London. If any printer had got a machine which was twice as fast as another and gave all the benefit to the customer, he was doing his brother printers

some harm.

Referring to a suggestion that the word minimum should be struck out of the description of the list, the chairman said that they wanted to arrive at a minimum figure below which no one would go. Printing was the only trade which had not secured a proper remuneration during the war in spite of the brains, the capital and the plant involved.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, described the extended use of standard price lists in the provinces. He mentioned that the percentage added to paper included not only the physical effort, but a percentage of the cost of selling, management and the general expenses of the business. In Lancashire they adopted a varying percentage, such as 50 per cent. on jobs taking is, worth of paper, 20 per cent. on orders over £5 worth of material, and 10 per cent. as the minimum on larger jobs. The same principle had been adopted in Bristol, and that was the idea they wanted to work to in London, al-

though it might take a little time. Mr. Goodwin added that they were seeking to establish a fair standard of value right throughout the country, and lists were being circulated and considered with this object in view. He urged that the list before the meeting should be regarded as a minimum, and that the prices should be looked upon as figures which could be got because they were reasonable.

The chairman at this stage moved that the meeting approve of the principle of a minimum jobbing price list, a final settlement of the details to be left with the Organisation

Committee.

Mr. Pocock seconded, and the resolution

was carried unanimously.

Mr. Harris suggested that each member present should act as a missionary to a definite firm in his immediate neighbourhood in

order to increase the membership.

On the motion of Mr. Boyle, seconded by Mr. O. G. Poulson (Messrs. Warrington and Co.), a hearty vote of thanks was passed to Mr. Austen Leigh for his address, and that gentleman, responding, remarked that he felt the minimum price list would be the salvation of the small printer.

Mr. Vincent Brooks asked if it was to be a voluntary or a compulsory list, and the chairman replied that in the meantime all they could do was to put the master printers on their honour to use the list in their own

interests.

Mr. Brooks suggested that there should be a scale for larger printing, so that a lithographer, like himself, would know what they

could get their printing done for.

Mr. Whyte replied that there was already a scale for book printing and the imprint arrangement covered the general work between jobbing and book printing.

The chairman remarked that the last interrogator was aiming at the millenium, but it was necessary before that could be reached

to make a start somewhere.

Last Thursday evening the American Luncheon Club entertained Mr. Cyrus H. K. Curtis, owner of the Public Ledger of Philadelphia, and head of the Curtis Publishing Co. of America, which publishes the Saturday Evening Post, Ladies' Home Journal, and the Country Gentleman. The function was held at the Savoy Hotel, Mr. Francis Powell pre-In answer to the toast of "Our siding. In answer to the toast of "Our Guest," Mr. Curtis said that he had been told that he would find London very much changed. The only change he had found was that he needed far more pounds, shillings, and pence than he had started his visit with. Discussing trade relations with this country and the United States, the speaker said that there was no need for any anxiety on either side of the Atlantic. Both countries were good "sports," and there was no need to fear about the effect of trade competition between them.

A FOOL printer takes things as they come, but the wise one lets a good many of them pass on.

THE

London Master Printers' Association

Suggestions for Improvements made to the East London Association.

An omnibus discussion marked the meeting on Tuesday, June 24th, of the East and North-East London Master Printers' Association, Mr. E. R. Alexander, president, was in the chair and after tea members settled themselves to consider various matters affecting the craft.

The president mentioned that Mr. Filmer was giving up his business and his successors, Messrs. J. J. Harding and G. W. Grinyer, who were present, were welcomed by Mr. Alexander. and later in the evening acknowledged

the greeting in arresting speeches.

Mr. Filmer, in the course of a few observations, speke of the evils of cutting, and how the practice benefitted no one, not even the person who indulged in it, whereas by maintaining fair prices, the master printer not only provided for himself a fair living, but was of assistance to his fellows.

Mr. J. Johnson, organiser from headquarters, reported on his visit to the district during the day and mentioned a number of prospective

members.

A member mentioned the pressure which was being exerted by the L.S.C. with the object of forcing a master printer who does not employ a compositor for six months to take up a card himself, otherwise he would not be on the fair list.

In the course of the discussion which ensued, it was stated that the L.S.C. list by itself was incomplete and the view was expressed that there should be no coercion, but that a good article at a fair price should be the appeal to

a customer.

The president mentioned the matter of the minimum price list and the recent concession of higher wages in London. He expressed his gratification at the conclusion of the National Wage Basis Agreement, which would have

some beneficial result ultimately.

The secretary, Mr. A. D. Phelp, mentioned that Mr. A. G. Reynolds had so far recovered as to be able to return home from a nursing establishment, and it was decided that the best wishes of the members for his speedy recovery should be forwarded to Mr. Reynolds.

Suggestions for Improvement.

Mr. Gillard then offered a few suggestions for improving the Association. He took it that the Association existed to improve the condition and status of its members and the printing trade in general. It seemed to him that they could not popularise the Association in the usual sense of the word, but they could make it indispensable to every master printer. There was no doubt that a great deal had already been done, but it must be remembered that quite a number of young men were entering their father's businesses, and if the Association showed itself alive,

these men would be more likely to join, because this was the age for combination in the manufacturing trade. One of the efforts of the Association was to keep a list of financially weak firms, and Mr. Gillard asked why they should not run a legal department for collecting debts and making inquiries on the lines of existing credit organisations. The Association might also retain an expert who would advise on the improvement and efficiency of members' plant. They might then be able to obtain the 4s. 6d. an hour, if their plant was up-todate. He mentioned that a compositor from the provinces expressed the opinion that London printers were 20 years behind the times. There were numbers of firms who, if a few pounds were spent on the advice of an expert, would be able to increase their output. Then the Association should run job-setting competitions and award prizes and certificates, and it should conduct examinations and issue certificates to clerks and managers for proficiency in costing. Again, as the Association existed to make members better acquainted. the social side should be developed, and why should they not have an outing in the summer and an occasional concert in the winter? It might also advertise by means of circulars the advantages of membership among master printers who were not already enrolled. Mr. Gillard also suggested the limitation of all advantages to members only. By such a policy, he believed, the membership of the Association would before long include 90 per cent. of the printing trade, because a man would join a "live" Association that was doing something, but not one which hid its light under a bushel.

In the course of the discussion which ensued, Mr. Whyte suggested that the work of the Association could be very greatly expanded with advantage to the members of the trade. Speaking of the higher cost of printing, he thought that it would be followed up by a demand from the customer for better work, which would be good for the

craf

Mr. Sparks mentioned the dependence of printers upon the advertising agent's layout. If it was done by a man who knew his work, it was of assistance, because although they might not have the particular type required. they could follow the plan with the series of founts on their premises. He added that customers could well do with the assistance of the Association in discriminating in the choice of a printer for different classes of work.

The president thought that in some cases the advertising agents in their layout had run riot, but the printer could always tell whether the scheme was practical or not.

Mr. Whyte thought printers should get into closer touch with the advertising agents, cooperation with whom would create more business. He had made the suggestion some time ago that the Association should go in for a systematic advertising campaign with the object of increasing the demand for good printing.

DRITISH & COLONIAL DEFINITER & STATIONER

The president spoke of the necessity of having men of intelligence and taste on their staffs; they wanted a compositor to know in advance what the job would be like when

it was printed.

Mr. Gillard agreed with the statement that had been made, that the Association followed the trade, rather than led it, and suggested that the competitions mentioned should be extended, so as to include rulers, bookbinders and publishers.

Mr. Sparks thought that Mr. Gillard's paper had brought out the advantages of membership of the Association, and Mr. Ridler mentioned that he had received good legal advice

from headquarters.

Mr. Gillard was cordially thanked for his

paper.
The advantages of sub-district meetings as organised by Mr. Perry in the West and North-West were referred to, and a similar scheme was approved for the East London Mr. Ridler and Mr. Norman agreed district. to get in touch with their neighbours in East Ham and arrange for an informal trade meet-. ing there.

Joint Industrial Council.

Representatives of the Printing and Allied Trades Meet.

After months of preliminary deliberations, the first meeting of the Joint Industrial Council of the Printing and Allied Trades of the United Kingdom was held on Tuesday at the Holborn Restaurant, and it is hoped that the outcome will be a more settled state of affairs in the industry. Mr. G. J. Wardle, M.P., C.H., Parliamentary Secretary, Ministry of Labour, opened the proceedings, and there was a full attendance of representatives from the Federation of Master Printers and Allied Trades, and the Printing and Kindred Trades' Societies.

The employers' delegates to the Joint In-dustrial Council are as follow —London Alliance—Messrs. C. A. Bates, A. F. Blades, W. A. Clowes, F. Grey, J. J. Keliher, E. L. Waterlow. North-Eastern Alliance-Messrs. C. F. Bowes, W. H. Thomas. North-Western Alliance-Mr. T. Moss. Yorkshire Alliance-Messrs. E. G. Arnold, H. Cooke, E. W. Hum-Lancashire and Cheshire Alliance-Messrs. J. C. Coppock, J. Sever, C. O. Vicary. North and South Wales Alliances-Mr. Frank Murrell. Midland Alliance — General W. Bemrose, Messrs. R. Hudson, C. H. Lee, W. Wykes. East Anglian Alliance – Messrs. H. Hanson and W. T. F. Jarrold. South-Western Alliance - Messrs. C. E. Brendon and Foster G. Robinson. Home Counties Alliance—Messrs. A. Bennett and T. J. S. Guilford. Scottish Alliance-Messrs. J. Patterson and J. S. Waterston. Ireland-Mr. R. H. H. Baird. Secretaries-Messrs. Reginald J. Lake and E. Goodwin.

The representatives of the Printing and Kindred Trades' Societies were: National Society of Electrotypers, Stereotypers and Assistants—Mr. W. C. Warren. Amalgamated Society of Lithographic Printers-Mr. T. Sproat. London Society of Compositors—Messrs. T. Timberlake, C. E. Mason, and T. E. Navlor. Amalgamated Lithographic Artists, Designers, Engravers, etc.-Mr. R. Kneale. Platen Printing Machine Minders—Mr. H. Rolfe. London Society of Machine Rulers— Mr. H. Morter. Society of Women Employed in the Bookbinding and Kindred Trades— Miss I. Forsyth. National Union of Printing and Paper Workers-Messrs. R. H. Swift, G. F. Larcy, T. G. Newland, Mrs. A. Bridge, Miss E. A. Scott, Miss Eales, and Mr. G C. Jones. Association of Correctors of the Press-Mr. S. F. Crampin. Printing Machine Managers' Trade Society—Messrs. W. E. Baulch and H. W. Howes. Scottish Typographical Association—Mr. J. Watt. Typographical Association—Messrs. J. D. French, C. Powis, T. Roberts, J. Clarke, H. Skinner. National Society of Operative Printers and Assistants— Messrs. C. Hollis, G. A. Isaacs, and Miss F. Printing and Kindred Trades' Federation of the United Kingdom-Messrs. C. W. Bowerman and A. E. Holmes.

The agenda for the meeting included the

adoption of the constitution, which has already been published, the election of officers, the appointment of an Administrative Committee, the formation of district committees, finance, offices, and other details.

Mr. Wardle, in an interesting address, mentioned that the Printing Trades Industrial Council was the fortieth which had been established. The following officers were appointed by the Council:—Chairman, Mr. A. F. Blades; vice chairman, the Right Houourable C. W. Bowerman, M.P.; joint secretaries (employers), Mr. A. E. Goodwin; (workpeople), Mr. A. E. Holmes. Following the morning session, the dele-

gates and others assembled for lunch at the invitation of the president of the Federation of Master Printers (Mr. Alfred F. Blades), who conceived this happy and generous method of celebrating the first meeting of the Council

A finely designed menu card had been printed for the occasion, embodying the Union Jack and the words "United we stand, divided we fall."

Mr. A. F. Blades was in the chair, and there were present, in addition to the members of the council, Sir Rowland Blades, Sir William Waterlow, Sir Cecil Harrison, Mr. E. Waterlow, Mr. H. McCorquodale. Mr. E. C. Austen-Leigh, Mr. R. A. Austen-Leigh, Mr. Howard Hazell, Mr. G. Eaton Hart, Mr. J. Hill, Mr. Basil Cahusac, Mr. C. T. Jacobi, Mr. J. H. Williams, Mr. J. R. Burt, et c.

Mr. Wardle's Speech.

Following the toast of "The King," which was royally honoured, Mr. G. J. Wardle proposed "Success to the Industrial Council of the Printing and Allied Trades." He was quite sure that all who were gathered there realised that it was no use his proposing success to the Industrial Council, which they

had formed that morning, unless those who formed the Council were determined themselves to make it a success. Good wishes would not bring success, but hard work, a tolerant disposition, a capacity to see that there were always two sides to a question (hear, hear,) and sometimes a good many more. He had had the honour of inaugurating a good many industrial councils, and the more he saw of the movement the more he was convinced that it represented one of the most striking features of the last few years and one of the finest products of the war. They had learned the value of co-operation and of sweeping away those minor dis-tinctions which had too long separated man from man and woman from woman. The success of industrial councils and of that particular council depended first of all upon themselves, and when success was achieved it would be one of those influences for good spreading far beyond their own order and affecting not alone their own trade. Though the ship had been a long time in coming to port, it had arrived there safely at last, and he hoped the voyage now as a full industrial council would bring prosperity to their trade. (Applause.) In wishing success to the Industrial Council, he desired to include the printing and allied trades. To some extent the success of the Industrial Council would mean success to the printing and allied trades. There were difficulties ahead. Trade was not so simple a matter as some people seemed to think. There were such things as orders to be got as well as orders to be executed, and there was such a thing even as export trade, and upon the prosperity of the trade depended the success of the workers and their wives and families. (Hear, hear.) Wardle mentioned that there were some 300,000 or 500,000 peoplé directly dependent for their livelihood upon that particular trade, and therefore he wished the Industrial Council might suggest things that would be of advantage to the trade. He hoped all that mystery which had for too long kept the workers in ignorance of the details of industry would be swept away and that they would get rid of a good deal of that suspicion which mystery always brought in its train. (Applause.)

The First President.

Mr. Alfred Blades was received with cheers on rising to respond to the toast as president of the first Industrial Council. Referring to the constitution of the Council he recognised the spade-work of Mr. E. G. Arnold, General Bemrose, and Mr. G. A. Isaacs. Proceeding, Mr. Blades expressed the hope that the National Wage Basis scheme would con-They would all agree solidate the trade. that was a perfect scheme, though it was not yet an accomplished fact. They had, however, to call upon both sides to exercise diplomacy, generosity and clear-headedness in order to bring about the result they desired. As Mr. Wardle had said earlier in the day, the printing trade was a pioneer in promoting the question of an Industrial Council, even before Mr. Whitley came upon the scene; and although they were the 40th Council to be formed, he thought they had taken their share of the burden in settling the destinies of the country by bringing forward the National Wage Basis Scheme, which has been agreed to by certain trades throughout the country Mr. Blades expressed the hope that they would see the binders round the same table in a They desired all to work toshort time. gether, and if some of them had to pay a bit more than others, well, he thought they should sink their individual mercenary ideas within the limits of making a profit. Mr. Blades extended a special welcome to the lady visitors, who, he said, would help them still further to make an equal division between capital and labour, so that industry might flourish and pay proper wages. If they could only get the two agreed principles mentioned in the constitution of the Industrial Council working honourably and properly, then he thought they were going to have a very fine industry in the future. (Applause.) In conclusion, Mr. Blades returned thanks for his election as president of the first Industrial Council.

Future of the Council.

The Right Hon. C. W. Bowerman, M.P., also responded to the toast, and referred to the work of the late Mr. Walter Hazell and Mr. Allen in connection with the establishment of the Industrial Council. Both those gentlemen were strenuous workers, as were all those present, and their desire was to see the Industrial Council in being. He (Mr. Bowerman) believed the Council, which had now started on its journey, would achieve all its promoters wished if the same excellent spirit that had prevailed that morning, and which had animated all the discussions leading up to the formation of the Council, remained. Speaking frankly, he said there was a time when the relationship between the workers side of the printing trade and the employers' side was greatly strained. that was a thing of the past. (Hear, hear.) If their efforts meant anything—and the machinery had been set up and would shortly be in motion—they indicated that they were starting upon a new era. They might not mean less prosperity to the employers; but he knew one thing they would mean - they would mean more contentment so far as the working side of the trade was concerned, and the feeling that the employees were being brought into consultation with the employers across the table. He was a great believer in meeting across the table. The men were now feeling that they were being recognised in a manner they had never been recognised before. That in itself was going to give the working side of the Council immense satisfaction. It was not that they wanted to make anything special out of it more that the employers, but they wanted to bring about a better state of feeling, and they had arrived at that stage. Although they had had some warm discussions—and Mr. Lake would agree with him there—they had always ended in a friendly manner; and so long as that spirit governed the discussions of the Council, so long as each side was prepared to trust the

other side, they need have no misgivings as to the success of the Council. So far as the workmen's side was concerned, their desire would be to make the machine absolutely smooth in its working and successful in its results, and at the end of the first year they would find that the trade had not suffered in the slightest degree, bearing in mind that they were all out for one common purpose—to do the best they could, not in their individual interests, but in the interests of the trade to which they belonged. (Applause.) The printing industry was one in which they could all take a pride, and he was confident that the Industrial Council was going to make the trade more prosperous than it had ever been in the past. (Applause).

Mr. Edgar Waterlow proposed the toast of "The President of the Federation," and thanked Mr. Blades for the generous enter-tainment he had provided. They all highly respected their president, and had the greatest confidence in him, and they were honoured that he had accepted the chairmanship of the

Industrial Council in its first year.

The toast was accorded musical honours. Mr. Blades, in reply, said his chief endeavour in all negotiations he undertook was to put his cards on the table-(hear, hear)-and if possible he would like to go trumps every time. (Laughter.) He hoped they had made history that day, and that they would make history in the future.

The Industrial Council then went into ses-

sion for the afternoon.

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

A distinct tone of cheerfulness-doubtless the effect of the signing of the Peace Treaty -marked the proceedings at the monthly general meeting of the above Association held on Tuesday evening last, at the headquarters, St. Bride Institute, Bride lane, E.C.4. The president of the Association, Mr. A. J. Daines, occupied the chair, and the vicechairman, Mr. A. W. Hunt ably supported him. The subject of discussion bore the somewhat cryptic title of "What is an Overseer?" nevertheless a good debate was elicited from the members present.

After the secretary, Mr. Geo. A. Eden, had read the minutes of the last general meeting. which were duly confirmed, some correspondence was submitted. Among the letters was one received from Mr. John Dean, general secretary of the National Amalgamated Society of Foremen, which organisation the Association was invited to join or to form a branch. The matter was not put to the vote, and was therefore left to lie on the table.

The members next proceeded to the election of the following new member: Mr. Thos. P. Griffiths—bookbinding—(A. White and Co.), to whom the president extended a hearty welcome on behalf of the Association.

The next item on the agenda was balance-sheet of the annual dinner, which showed a deficit of £17 os. 6d. Severa 1 members expressed the opinion that this seemed a big deficit, but all were agreed that considering the high quality of the dinner, etc., there was no cause for complaint, and it was unanimously decided to make a grant from the entertainment fund to meet the deficit.

Mr. Eden said he was responsible for subject of "What is an Overseer?" be ing put on the agenda, although he did not want to enter the discussion himself, rather he wanted to hear the views of members on the question. The matter had often cropped up at their executive meetings, and he said that alt hough there was a certain amount of levity in regard to the question, it also had its serious side. He was sure the discussion would have the

effect of widening their views

Mr. C. W. Atkins, in continuing the sion, said a celebrated Lord Chief Just ice once remarked that in choosing a Justice Peace, always choose a gentleman, an da man who knows a little about law. If he was asked his opinion of what constituted an overseer. he would say a thoroughly practice 1 man who had come from the ranks, and one that knows the technique of his trade. Mr _ Atkins went on to say that they as binding o verseers were looked upon as somewhat lower than other branches in the trade, and he was afraid they had not been as audacious as they might have been. Speaking of the relative merits of the different branches of the trade he thought the binding overseer's work as responsible, if not more so, than the compositors machine-minders,

A member: Is it customary in the trade for the binder or the compositor to pass proofs

for correctness of imposition?

Mr. Atkins replied that it was customary .

for the binder to see to that.

Mr. W. Archer, speaking from the compositors' point of view, said he always passed his own sheets. In regard to the statement made by one of the binding members that the conposing department did not pay, he, of course, had to admit the truth of that; it never did, and never would, taken as a separate

Mr. Hunt opened the subject of whether a binding overseer should undertake the dif ha of buying for his firm, and thought that if he did he should have a free hand and not be interfered with from the counting-housethought the Association was doing good service in bringing factors vice in bringing forward such a subject as this, as their intercourse month by month helped them to make the her's helped them to understand one another's position in regard to their various duties as

Mr. Dixon said with regard to the binder doing his own buying it was usual in shops for the firm to have their own representatives who did that work, and not at all wise for the binder to open his mouth in the matter. If the question was put forward only for the reason that the management wanted to be sure they were allowing genuine overseers to become members, he could only say that

must trust the proposers and seconders of new members.

A few further remarks were made by Messrs. J. Lee and F. J. Ibbott, after which Mr. Eden wound up the discussion by stating that their Association combined all sections of the trade, and their purpose was to promote closer ideals of fraternity and goodwill.

The proceedings then terminated, the secretary expressing the wish that he hoped to see a big turn out at the annual outing on Satur-

day next.

Openings for Trade

The Board of Trade Journal gives the following openings for trade in its current issue:—

A firm in Calcutta, with branches at Bombay, Madras and Rangoon, who state that they carry large stocks and are well known to the printing trade throughout the country, desire the sole agency for United Kingdom manufacturers and exporters of printing and boxmaking machinery, and products of allied trades. (Reference No. 1,204.)

A retail firm of booksellers, stationers, and printers in Calcutta, claiming to deal in a large variety effoods, and who do not at present hold any exclusive agencies, are desirous of accepting an agency for paper and stationery goods, and printers' requisites and

materials. (Reference No. 1,211.)

A firm of agents in Drammen desire to obtain agencies for United Kingdom manufacturers of stationery, office requisites, books, etc., private and commercial letter heads, typewriters, school requisites, files, etc. (Re-

ference No. 1,256.)

A firm at Sona wish to get into touch with United Kingdom firms dealing in paper, etc., who are in a position to supply the following goods:—22,000 tons of printing paper of various kinds and colours, 16,000,000 railway tickets (3rd class, 10,000,000, 2nd class, 4,000,000, 1st class, 2,000,000), various kinds of book binding cloth, wire lacing, leather, cords, gum arabic, printing ink, printing dyes, etc. (Reference No. 1,245.)

Further particulars may be had on application at the inquiry office of the Department of Overseas Trade, 73, Basinghall-street, E.C.2

Among the subscribers to the Victory War Loan are the following:—Messrs Raphael Tuck and Sons, £20,000; Sir Adolph Tuck, £10,000; Mr. Gustave Tuck, £5,000.

The Canton Home.—Messrs. Williams, Lea and Co., of Clifton House, Worship-street, E.C., have generously donated £100 for the purpose of naming a bed in the Canton Home, Limpsfield. This announcement was made by Mr. J. H. Williams, on the occasion of the unveiling of a tablet over a bed, which had been subscribed for by the staff and employees of the firm, on Saturday last. The ceremony was performed by Mrs. William in the presence of nearly 100 employees of the firm, who spent an enjoyable afternoon in the Home and grounds.

Personal

SIR JOSEPH LAWRENCE, BART., of Linotype and Machinery, Limited, is announced to preside at a meeting at Cannon-street Hotel, on the 10th inst., of patent owners and manufacturers. It is proposed to form an association which will probably be known as the Imperial Institute of Patentees, Inc.

The RIGHT Hon. C. W. Bowerman, last week, addressed the Industrial Reconstruction Council on "Some Industrial Problems." Mr. Bowerman spoke mainly of the progress of adoption of the Whitley scheme in the printing trade, and said that the future outlook as regarded the relationship between employer and employed was never brighter or better than at the present time.

MESSRS. R. F. WHITE AND SON, of 33. Fleet-street, E.C 4, have taken into partnership Mr. T. F. Clarke, who has for some years past been connected with this old-established firm of advertising agents.

THE Weekly Newspaper and Periodical Proprietors' Association will give a dinner at the Royal Automobile Club on Tuesday next, on the occasion of a presentation to Sir George Riddell.

MISS MARIE CORELLI has at last broken her rule of not sending out her writings for review, and her latest production, "My Little Bit of Record," has been submitted to the newspapers for review.

Two young Danish journalists, Messrs L. B. Hendil and F. Nygaard, are making a tour through Great Britain in order to write their impressions in Danish and Scandinavian newspapers. They made a trip over London in the air, and visited the office and printing works of the *Times*.

MR. CYRUS CURTIS, of Philadelphia, owner of the Public Ledger and other papers, was the guest at a luncheon given in his honour by the Times, at Printing House-square, on Friday.

MR. JOHN WALTER presided, and among the guests were Lord Burnham, Sir Henry Dalziell, Sir W. Robertson Nicoll, and others.

MR. A. E. GOODWIN, secretary of the Federation of Master Printers, and Mr. F. C. Shardlow secretary of the Midland Alliance, attended a conference of the Peterborough Master Printers' Association, the other day, and addressed the members on various important matters relating to the trade.

THE best philosophy consists in not wanting the things you can't get.

Trade Notes.

MR. THOMAS SMITH, editor and manager of the Barnet Press for the past 30 years, died last week at the age of fifty-nine years.

According to the latest returns the number of letterpress printing establishments in Paris is 551, and of lithographic offices 240. Copperplate printers number 38.

The death took place last week of Mr. Nathan Nightingale, newsagent and stationer, Redearth road, Darwen, after a month's illness, at the age of 57 years.

MR. HARRY SMALLWOOD, one of the oldest journalists in Birmingham, for many years correspondent of *The Times* and the Press Association, died last week, after undergoing an operation.

FIVE-HUNDRED printers left work in Dublin, last week, in consequence of a disagreement between the men's union and the employers regarding working hours and conditions of employment.

MR. AUSTIN BRERETON, having completed a fifteen year engagement with the Gordon Hotels, Ltd., as manager of the Press department, has rejoined the firm of Spiers and Pond, Ltd., in a similar capacity.

The effect of the war on the reading tastes of the Liverpool public may be gauged from the fact that the total issue of books from the reference and branch libraries were fewer by 186,541 in 1918, the last year of the war, than in 1914, the last year of peace.

A NEW publication, entitled the Bookplate Magazine, is announced to make its appearance this month from the Morland Press, Ltd., 190, Ebury-street, S.W. As its name implies, it will be devoted to the subject of bookplates, and will be the official organ of the English Bookplate Society. The subscription is 10s. 6d. per annum; single copies, 2s. 8d., post paid.

THE first issue of a weekly edition of the Manchester Guardian is to appear on Friday next, July 4th. It will contain a selection of the features of more permanent interest in the daily Guardian, and all sections of news will be covered, where necessary, by specially written summaries. Judging from the specimen number that we have seen, the new weekly should prove successful.

The death occurred on the 26th ult.. after a short illness, of Mr. William Martin Murphy, the proprietor of the Independent newspapers, which under his management passed from financial distress into established prosperity. The Irish Independent was the first morning newspaper in that country to be published at a halfpenny, though it has been sold at a penny during the war. Mr. Murphy, who was born 75 years ago at Bantry, was chairman of the Dublin United Tramways Co., and a director of several railway companies and other undertakings.

On Sunday damage to the value of £10,000 was caused by a fire at the paper mills of Messrs. Thos. Owen and Co., Ltd., at Ely. Glamorganshire.

An evening paper was on sale in a North Wales town on Saturday night with the following brief but startling announcement stamped in its stop-press column:—"PEAGE SINGED."

The death has occurred at Belfast, of Mr. Alexander M'Monagle, one of the best-known Irish journalists, in his 71st year. He had been connected with the Ulster Press since 1863, and for the past 44 years had been editor of the Witness.

The report of the Wholesale Co-operative Society, Ltd., shows that during the past three months the output of the three printing departments was £108,317, an advance of 29 per cent. on the output of the corresponding period last year.

The annual outing of the South Wales News chapel took place on Saturday last. The party went to Weston by boat, and from there to Banwell and Cheddar by brake. Luncheon and dinner were, through the hospitality of Messrs. David Duncan and Sons, Ltd., partaken of at the Bell Hotel, Banwell.

The annual outing of the Printing, Bookbinding and Kindred Trades Overseers' Association is fixed for Saturday next, July 5th, to Headley, Surrey. Meet at Waterloo (L.S.W. Railway) No. 2 platform at 1.45 p.m. Train at 2 o'clock for Ashtead and via byeways and footpaths to "The Cock," Headley, where a meat tea will be served. Fare and tea, 6s. 6d. per head.

The death has taken place of Mr. James Nicol Dunn, a well-known journalist. He gained his first experience on the staff of the Dundee Advertiser and the Scotsman, and was afterwards associated with Henley on the National Observer. Mr. Dunn afterwards became editor of Black and White. He was appointed editor of the Morning Post in 1897, and retained that position until 1905. For some years he edited the Johannesburg Star. and on his return to England acted as London editor of the Glasgow Evening News.

PAPER FOR STYLE WRITING .- In a communication read before the Sydney branch of the Society of Chemical Industry recently, W. J. Kirchner, B.Sc., described experiments made with metal styles on paper previously coated with solutions of glue in water, containing various metallic oxides, and then dried. Most of the oxides tried (alkaline earths, aluminium, zinc, tin, arsenic, antimony), and most of the styles, of copper, brass. tin, zinc, lead, silver, gold, platinum, magnesium, aluminium, gave suitable marks; of the common oxides only zinc hydroxide failed in this respect, being faintly marked only by the softer metals; the oxides of antimony and arsenic did not answer with certain styles (copper, brass, zinc, platinum, iron). The solutions of glue could be replaced by

gum arabic but solutions of glue or of gum arabic alone did not show markings on paper when written on with metallic styles. Fifty years ago metallic styles were in general use for writing purposes, and the older generation will remember the pocket "metallic note books," as they were called, in which the writing pencil was a wooden stem with a piece of metallic lead as the writing point.

Some Paper Topics.

Without exception, every paper man with whom we have recently conversed has expressed similar views as to present and future business prospects. Business is good, orders are coming round very nicely, and the second half of the year is full of fair promise. are not hesitating now to consider making orders of regular lines based on pre-war standards. Stability appears to be established as a general rule, but there are still examples of irregular values, more especially from the dealers' and wholesalers' quarters. The abnormal price is dying a very slow death, but, however hard it may be found to establish relative value in the case of papers bought earlier at speculative prices, the fact remains that such paper can never be sold otherwise than at normal market value. Practically every paper buyer now holds in correct perspective the market values of all grades of paper made or imported. Consequently the dealer who still holds out for something above relative value stands in the position of receiving very little business.

Within the last week or two we have had the opportunity of seeing samples of new makings in both writings and printings which are notable as reproducing all the quality features of pre-war makings. It is perhaps not everywhere realised the extent to which our standards had depreciated during the war. The decline began gradually after the first year of war and towards the fourth year assumed an accelerated speed. Even the very highest class papers shared in the general decay, and it is practically safe to say that a perfect sheet of paper was not produced in this country during 1918. Even after the termination of hostilities there remained stocks of inferior material to be worked off, and it is only within the last month or two that mills have commenced their makings with the advantages of good material and adequate equipment. To our mind, as we have expressed ourselves before, many paper buyers have been witholding their stock orders, not merely on account of price, but equally against the resumption of normal quality. For this reason the advent of clean and bright **coloured**, good bulking paper is especially welcomed as an augury of resumed normal ordering for stock.

It is extremely unfortunate that standardisation should still be hanging in the air whilst new makings are being put into work

on every hand. This means that after five years suspension of normal standards and an unique opportunity for a clean new start on commonsense and economic principles, we are definitely committed to missing the opportunity and taking up the threads exactly as we left off. Fortunately we cannot blame the Government, for our own trade leaders have the matter in hand, but conjecture would incline us to suppose that, had such a matter been a Government measure or a subject for investigation by commission, the popular comment would have been levelled against supineness, red tape, lack of. business efficiency, and other features commonly associated with governments general. Here is a scheme designed to effect economy, efficiency, business speed, better production, and innumerable other requirements for the progress of paper and print, approved by almost all interests, and recognised in every thinking quarter to embody the principles of sound sense, held up at the critical period until its ultimate inauguration is rendered a thousand times more difficult. Evidently it has got into wrong hands, or if the hands are right, the heads are not up to the post-war standard of efficiency. But one thing is certain: if academic minds are setting out to discuss and settle a scheme which is essentially practical, and which only practical men who make and handle paper can properly appreciate and understand, the ultimate outcome can only reflect the unwisdom of a large body of practical men who trust their basis of business and system to the noncomprehensive mercy of such minds. It may be said that the practical detail of the scheme is framed, and, therefore, the practical men have done their work. To this we agree, but the fact remains that delay has already almost neutralised the work already done, and the delay is the contribution of committee to the conception of the scheme of standardisation.

Our recent notes on a substitute for kraft wrapping produced by a Scottish mill brought along a number of inquiries from interested readers, some among whom were desirous of getting into contact with the maker. We are informed, however, that the mill in question has no ambition to enter the kraft arena, being more than fully occupied turning out its recognised goods of stock. The wrapping was made for own use in packing, and found its genesis in the exorbitant war-price of kraft papers. However this may be, the maker has infused a character into his product which would be well copied by others whose reputations are based on wrapping papers only. Mainly, our purpose here is to make clear the position for the benefit of those readers who displayed an interest in our original comments.

H. A. M.

When the nurse announced to the wealthy printer, who much desired a son and heir, that it was a girl, the man of types told her to mark it "w.f.," and send it back to the foundry.

The Printer and the Paper.

WHY is it that so many printers charge little or no profit on the paper they use for their customers' jobs? It is a very common practice to charge moderate profits on the composing and machine room costs, but to let the customer have the paper, and the other stock, at a fraction over the actual cost. Why should not the paper be charged with the full legitimate profit? and why thus give away money that ought to find its way to the printers' pocket. When one buys boots or clothes the maker charges as much profit on the leather or cloth as he does on the manufacturing cost of the article. Yet the printer continues to give away his paper for to benefit his customer. When he buys type from the founder he does not find that gentleman present him with the paper it is wrapped in, that paper is charged up at the same weight per pound as the type it encloses, and a very handsome profit is made on it. In short all manufacturing businesses make a profit out of the materials they use, the printer being almost the only exception. It is bad enough business when a printer allows his customer to supply his own paper, but it is worse to supply the customer with the paper for his job at a profit that does not pay for the handling of it.

The Failure of the Logotype.

At the luncheon given at The Times office to Mr. Cyrus Curtis, Mr. John Walter, who presided, in replying to the toast of "The Chairman," referred to the attempted introduction of logotypes into hand composition by the founder of The Times, and reminded his hearers that the first John Walter invented a method of printing called the "logographic "system, which consisted of casting whole words on one type, instead of individual types. The first thing he did after he invented this was to enlist the sympathies and support of Benjamin Franklin. "Benjamin Franklin," said Mr. Walter, "was, I believe, the founder of one of the papers owned by Mr. Curtis to-day, the Saturday Evening Post. John Walter tried to enlist the patronage of King George III. for that same invention, but that the King refused on the ground that his great enemy, Benjamia Franklin, figured on the list of patrons. Perhaps, if the invention had been of any value, the patronage of George III. might have outweighed even the patronage of Benjamin Franklin in its use to the proprietor, but, unfortunately, that invention was short-lived. and never had the slightest chance of success. It was a dismal failure." And yet the linotype of to day is but an elaboration of John Walter's idea in casting many letters on one solid body.

An Optimistic View.

SPEAKING on Saturday at a "Victory Dinner" of the staff and visitors at an excursion of the firm of Jordan and Sons, Ltd., at Egham, Mr. Herbert W. Jordan deprecated the pessimistic views regarding the trade of this country to which some eminent persons have lately given expression. The unrest in the industrial world was, he considered, on the whole an encouraging sign, and to those gift with sympathetic insight it was not the occasion for such alarm as those pessimists

apparently felt. The desire in the minds of all to see a newer and brighter England was one that could only be realised through a revolution—although it may be of a mild and bloodless type—and if the people maintain their accustomed tolerance and restraint England will pass through the present ordeal as successfully as she passed through the war. The lingering mutual distrust between capital and labour arrests this country's commercial development more than all the other causes in the aggregate; and if, by means of Whitley Councils, co-partnerships, profitsharing or any other schemes, it can be replaced by mutual goodwill, we need have no cause to fear the impending competition of Central Europe or any other country. One of the most hopeful signs that England is alive to her opportunities, and is quietly organising her resources in preparation for the time when trading can again be freely resumed, is the large number of new companies being formed. Since the armistice was agreed upon the number of registrations has steadily increased, a claim the speaker supported by saying that whereas in May, 1918, the number of companies registered in the United Kingdom numbered 296, the aggregate capital being nearly £8,000,000. during last month the registrations totalled over 1,000, and the capital amounted to approximately £38,000,000. The public companies numbered 11, and 61 respectively, the remainder being private ones. The striking increase, he asserted, is in a large measure due to the removal of the Treasury restrictions on issues of capital, which hampered and discouraged business men very seriously. Although the bulk of companies now being formed are private ones, the increase in the number of public companies is no less remarkable. As many companies with a capital of a million pounds are now registered in a month as were registered hitherto in the course of a year. With few exceptions, all these are perfectly sound, "wild-cat" flotations forming a very insignificant proportion of the total. Preparations for the flotation of many new companies of magnitude are well advanced, and some notable registrations will follow the disclosure of our future commercial policy by the opening of the Government's "mystery bex."

The Enormous Profits of the Printing Trade.

ACCORDING to an article in the Financial Report, a paper published at Manchester, the profits to be made in the printing business are "enormous," and in drawing attention to

the formation of a new company for printing, binding, and boxmaking it says: "Just as if a stone is thrown into a placid pond, the inner circle around where the stone impinges extends and widens into outer circles, so the boom in printing which is now on hand was preceded by a boom in its chief raw material -paper. For some time past the makers of printing paper have reaped enormous profits, and to quote a few cases will be sufficient to prove our point. John Dickinson and Co. made in the last financial year a profit of £213,361, as against one of £195,802 in the previous year. This in itself is remarkable. but as an achievement it fades (in proportion) into insignificance as compared with the 280 per cent. dividend paid to the shareholders of the Ramsbottom Paper Co. and the 125 per cent. dividend of the Star Paper Mills. The phenomenal rise in profits, in wages paid, and in the output of our British paper manufacturers is in the main due to the enormous demand existing for paper, following upon the famine in that commodity created by the war and to the strict limitations on imports from abroad. These same factors will now in their turn affect printing as they did paper, and the reason why the latter took precedence of the former is because in order to be able to print, the printer must have paper to print upon, and until there was an adequate stock of the latter the press was unable to revolve, and commercial organisation had to wait. We have now entered upon the second stage and with ample stocks of raw material to work upon the boom in the printing trade. itself has commenced. Every established printer in the country is working to-day at high pressure, skilled labour has been entirely absorbed, there being literally no unemployment problem, wages are high, but profits are still higher, and for the reasons which we will detail it is well nigh next to impossible for new printing enterprises to be created because machinery is practically obtainable." There is a lot more in the same same strain, and the coming boom is to put much money into the pockets of those who become shareholders of the company in question, and, as an example. it is quoted that Lord Northcliffe has for many years been drawing 40 per cent. in annual dividends from the Amalgamated Press. Surely this is too flowery a forecast of the success of a new printing company, and we believe that most printers are thankful just now if they can pay their way and have a small balance at the end of the financial year-Still, a man of wisdom has postulated that it is better to be an optimist than a pessimist. and here we have a remarkable example of optimism.

DIVIDENDS AND REPORTS.

The profits of Kelly's Directories for the year ended March 31st, 1919, were £76,426, against £32,470. The directors recommend the payment of a final dividend on the ordinary shares, making 10 per cent. for the year, together with a bonus of $2\frac{1}{2}$ per cent. The sum of £20,000, against £10,000, is placed to reserve, and £19,914, against £17,636 is carried forward.

Edinburgh Evening News.—The report of the Edinburgh Evening News states that profits for the year ended May 31st, 1919, after charging excess profit duty to May 31st, 1918, have been £20,537; add balance brought forward £30.657, less gift to employees (war bonds, etc.) £1,079, together £50,115; deduct dividend on 5 per cent. preference shares £3,500, interim dividend on ordinary shares £2,500, balance £42,615. The directors recommend addition to machinery replacement fund £10,000; dividend on ordinary shares at 6 per cent., less interim dividend paid, £13,500, leaving to be carried forward £29,115.

NEW COMPANIES.

PHOTOGRAVURE Co., LTD.—Registered with a capital of £1,000, in £1 shares (750 preference), to carry on the business indicated by the title, and that of printers, stationers, publishers, advertising agents. etc. The subscribers are F. C. Corkett and P. Lacroix. Private company. Directors, F. C. Corkett, P. Lacroix, and C. H. Crabtree. Registered office, 21, Farringdon avenue, E.C.4.

BADGER BROS. AND Co., LTD.—Registered with a capital of £5,000, in £1 shares, as merchants and manufacturers of paper packing materials and vegetable fibres and textile, cotton spinners, doublers, etc. The subscribers are H. H. Brock and F. C. Brock. Private company. Directors, H. H. Brock and

F. C. Brock. Registered office, 18, Dick = wison-street, Manchester.

LEWIS AND Co., LTD.—Registered with a capital of £100, in £1 shares, to acquire the business of wholesale stationers, printers and paper merchants, carried on by L.G.A. Lewis, at Shaftesbury-avenue, W.I., under similar style. The subscribers are L.G.A. Lewis and Mrs. R. Lewis Private company. The subscribers are to appoint the first directors—

BRITISH & COLONIAL PRINTER & STATIONER

Revised Hourty Cost Rates.

The Costing Committee of the London Master Printers' Association has investigated the figures of a number of printing offices in London as to the hour costs, after allowing for the recent increases in wages, the extra wages or bonuses paid to those employees not included in the unions, and the increase in costs caused by the reduction in working hours and payment for holidays. The hourly rates in each section cover the whole costs of that department in the business, including wages, rent, rates and taxes, interest on capital, depreciation, proportion of proprietor's salary, and the general administrative and selling expenses.

The following are the rates as thus revised:

COMPOSING ROOM.

Averag Cost Rat Per Hou Hand composition — chargeable time for composing, imposing, pulling and correcting first proof. (This rate covers the cost of non- chargeable processes, such as reading, distribution, clearing,

IMPORTANT

Union among Swedish Stationers.

Just recently a remarkable union of almost all the Swedish stationers of importance has taken place. The name of the new company is the Swedish Stationers' Trading Co. (Svenska Pappershandlares Handels Aktiebolag) and the seat of the company is to be in Stockholm. We hear that the concern is desirous of getting into touch with manufacturers and wholesale dealers in the stationery line—a fact which the corresponding British manufacturers ought to remember. Evidently here is an opportunity of securing a market of importance. The company will sell all articles which may be found in a well furnished stationer's shop, writing and artist's materials, together with all kinds of outfitting for the writing desk, also office machines and typewriters.

The man who doesn't advertise must wonder why the largest businesses waste so much money.

"No Standard in Paper."

Views of an American Papermaker.

In connection with the allegations of "misbranding" in U.S.A., papermakers, jobbers and wholesalers attended before the Federal

Trade Commission at Washington.

Mr. S. L. Willson, of the Graham Paper Co., St. Louis, Mo., made an interesting statement in answer to the allegations He declared that papermaking, primarily, is an art, and is dependent upon the skill of the individual papermaker, and as there is no standard of individual skill, there is no standard in paper. Science is as yet unable to produce a chemical or combination of chemicals that is always the same strength. Nature does not produce fibres of the same length or strength; the varying ages of the fibres produce changes; the conditions under which they grow affect them; therefore, there can be no absolute standard for papers. The art of papermaking started with the hand-made process of felting vegetable fibres. Like all other commodities, there have been developments and evolutions, resulting in the use of a great variety of materials and processes as the necessity for different classes of papers was created.

Taking up three alleged improper uses of names and terms, to which the Commission had called attention, Mr. Willson said: It is our opinion that Clause No. 1, which refers to the use of foreign and geographical names, such as Japan, Holland, Scotch, French, etc., used as part of the same, is not in any way deceptive, because it really adds no intrinsic or collateral value to the paper that has been hyphenated with a foreign name. We are not willing to admit that any country on the face of the globe can make better papers than are

made in the United States.

"In the section, 'Improper Use of Names,' mentioned by the Commission, where words are used indicating that paper is made of some textile fibre, or other specific material, when such is not the case, the first word mentioned is 'linen,' which we would like to consider in conjunction with complaint No. 3, referring to bond. So far as the words Madras, nainsook, vellum, parchment are concerned, to our minds this only implies a particular finish or its suitability for a particular use and that papers so named are simply descriptive of the uses or for duplication purposes and used with absolutely no attempt to deceive."

Getting down to the question of the use of the word "bond," the speaker gave it as his opinion that this word, as applied to papermaking, means nothing, though originally it applied to a particular paper of a particular finish specially suitable for the printing of bonds, and, like all other papers, manufactured from all-rag stock. There was no need now for bond paper, any more than any other paper, to be all-rag, and changes in the material used do not make it any the less bond paper. Into the modern bond paper the maker introduced a variation by reproducing

the impression of a wire rule, and the effect being somewhat like a magnified piece of linen, an idea occurred to someone to name it "linen," and the distinction then arose that bond paper was a wove sheet, while linen paper was a laid sheet resembling linen. However, the custom prevailed for several years of designating as bond a wove sheet of rag paper, and the more general application of this word was not broadened to include other papers (not rag) as early as the word linen But today the word bond and the word linen do not mean that certain specified materials enter into the composition of the paper. Bond and linen papers do still keep a character of their own, however, "stiff, strong and low finish" being necessary qualifications of these two sorts, differing thereby from the kind known as writings. The bond and linen being nearly always used for printing, it followed that when the typewriter first came into use it was found that a paper resembling these two was the suitable material for use on the machine, and the papers made for the typewriter were called bond, thus still further broadening the use of the term.

The example of the use of these two names serves to illustrate the argument that foo much attention must not be directed to the naming of a special kind of paper, as, after all, the user goes not by the name but by the actual appearance of the product and by the application of certain tests necessary for his purpose, and not to please the whims of the hypercritical or faddists obsessed with the super-value of certain acid tests or analyses, for two chemists studying samples of the same paper will generally each give a different analysis.

Mr. Willson contended that paper is purchased upon the basis of satisfactory results from its use that cannot be concealed, coupled with the price, and added: "The original purchase is selected from samples. It is not hought on a photograph, nor because of a high sounding name. The name is of of a high sounding name. minor consideration, it must be suitable in colour, finish and strength for some specific purpose and unless it proves satisfactory, no matter upon what specifications it was bought, no matter by what process it was manufactured, the purchaser will seek another paper, but if satisfactory, even though it is purchased under a misrepresentation of its place of birth, or its Christian or surname, why should any of us attempt to create dissatisfaction, or attempt to educate the trade to become hypercritical, and to purchase paper only upon an acid test or upon In conclusion, we wish to an analysis. present this thought. The paper industry today is going through one of its most critical stages. We have all been attempting to sit steady in the boat with heavy waves on all sides. This has been difficult. Unnecessary disturbance of business at this time by reason of investigations, like the one under consideration, is unfortunate and is destructive, rather than constructive in character, and retards the adjustment which is now taking place."

The London Master Printers' Association.

General Bemrose Describes the New Alliance Scheme.

General W. Wright Bemrose, who is the author of the Alliance Scheme of re-organisation for the Federation of Master Printers, gave an interesting account of that scheme to the members of the London Master Printers' Association, at their monthly luncheon on

Thursday last week.

Mr. J. J. Keliher, who presided, described
General Bemrose as the parent of the new movement and mentioned his various activities on behalf of the printing trade. The fame of the General's house and personality, he said, had spread to every town and village where printing was carried on. After mentioning that his uncle, Sir Henry Bemrose, was one of the pioneers of the Federation and its treasurer for several years, Mr. Keliher described the work of General Bemrose as a volunteer and territorial officer since 1880, eventually attaining the rank of Brigadier-Describing him as a tower of strength in whatever he had taken up for the Federation, Mr. Keliher particularly remarked upon the assistance the General had given as a pioneer in the Costing Movement, also having presided at the first Cost Congress in 1913.

General Bemrose described the genesis of the organisation movement, stating that. by a strange coincidence, both Mr. R. A. Austen-Leigh and he suggested a scheme at the same

Federation Council meeting.

He thought that they would all feel that reconstruction was of the utmost importance to them as business men. They had spent much time and money in the direction of their individual businesses, but they had not done sufficient for the industry as a whole. The movement had been brought to a head by the desire of the Government that the trades of the country should be more completely organised, by the formation of the Whitley Councils, and by a similar movement on the part of the trade unions. The new scheme, which was prepared by a special committee and approved by the Federation Council, aimed particularly at co-ordinating the various Associations throughout the country; and by uniting the Associations into Alliances which will duly elect their own representatives to the Federation Council in London. they sought to set up a complete chain of responsibility and knowledge.

Self-Government.

In future they were to be governed by themselves, which necessarily meant by the majority. They had entered into certain obligations one with the other which would strengthen their hands, and those who were representing them in future would have full powers to act, with, of course, certain reservations. The whole thing had been laid down upon business-like lines, and the result would be, he hoped, of immense advantage to the trade. They had now got the machinery and it was up to the master printers to apply the necessary steam to put it into operation. What they wanted to do was to put life into the small associations and give them some interest in what was going on. The scheme comprised eleven alliances, or districts, built up geographically and being largely in accord with the districts of the Typographical Association.

The associations, from which were appointed the representatives to the district alliances, were to deal with purely local matters, leaving national and general questions to the consideration of the Federation Council. The greaf point was that in future the Federation Council would be nominated by and responsible to those whom they represented. It was the same old council, but it would be elected from outside, rather than from inside, and would have greater powers than it had before.

A Simpler Proposition.

The General pointed out that it would be a simpler matter to deal with these eleven alliances than with some 200 associations. Each alliance would be responsible for keeping the Federation Council acquainted with the views of its constituents on all matters that had to be dealt with. If carried out in practice, the scheme would relieve 24, Holborn, of much unnecessary work and enable it to devote itself to more important matters concerning the trade, whilst the district committees would be given something to do in managing their own affairs, which he thought they could do quite as well as, if not better than, the Council in London. The scheme entailed very close co-operation, increasing confidence in one another, and unity of action. They realised that London was the largest of the alliances, and, as in the past, they would look to it for guidance in many matters. Under the scheme Scotland would be drawn into closer association with them and they had an advantageous understanding with the provincial newspapers.

National Wage Basis.

General Bemrose went on to speak of the National Wage Basis Movement, which was part of the original scheme of re-organisation. Although some of them thought they had paid heavily for this scheme, he thought the new arrangement was worth what it had cost, provided they used the machinery they had now secured in a broad spirit and for the benefit of the industry as a whole.

Stating that the rules and regulations for the Federation and the alliances would shortly be placed before the members of the associations, General Bemrose urged the advantage of a whole-time paid secretary for all of the alliances. These secretaries would watch continually the interests of the trade and be at the beck and call of their associations, which would be a great advantage to the Federation Council. General Bemrose went on to indicate the development of the social side of the activities, pointing out that it was the intention of the alliances to hold luncheon meetings in various parts of their districts.

Finance

The new financial arrangements were then described, it being proposed that subscriptions required would be \(\frac{1}{2} \)d. in the \(\xi \) wages for local Association expenses, possibly \(\frac{1}{2} \)d. in the \(\xi \) for the alliances, and \(\frac{1}{2} \)d. in the \(\xi \) for the Federation, making id. in the \(\xi \) in all. Each unit would assess its own amount. This subscription compared with is. 5d. to is. 8d. per member which the T.A. member paid to his union, is really very small for all the advan-

tages which the new scheme would provide. The amounts suggested would be reduced if experience showed that was possible. General Bemrose then touched upon the advantages to be gained by the scheme—the maintainence of reasonable and profit-producing prices, the adoption of a price list for well-defined articles, the furtherance of costing installations and the observance of the imprint. From the whole scheme they anticipated some really good results, but it would necessitate loyalty from all parts of the country. They were not out for profiteering, but for a reasonable return, which they had not had in the past, for the time and money expended on their craft.

Another feature of the alliances is that they will, within their respective areas, nominate the employers' side of the Joint District Committees which will be formed under the Joint Industrial Council, this he thought would form a most useful connecting link—all over the country—between the employers and those they employed, with annual local conference tables, where matters affecting the trade of a constructive nature could be discussed and sent forward to the Joint Industrial Council for adoption or otherwise.

It is known that this reorganisation of the employers' associations is in accord with the wishes of the various trade unions, the mutual expectations being, that good results will be obtained from both sides being well and strongly organised and in close association with one another. Success will however largely depend on both sides realising that their joint councils are not intended as an arena for fighting their own ends only, but as a meeting ground where the general interests of all concerned—the industry as a whole —will be considered, and where possible improved.

Mr. R. A. Austen-Leigh, in proposing a vote of thanks to General Bemrose, mentioned that the question of organisation in London was different from that in the provinces. London was practically an alliance already. There was a little hesitancy, however, about changing the name. Mentioning the six district associations which had been formed in London, with happy results, he mentioned that they would have more power in the new scheme in electing the London Alliance Council.

Recollections.

Mr. Reginald J. Lake, in seconding the resolution, said he was reminded of his first introduction to the trade on July 3rd, 38 years ago, at a wayzgoose. He mentioned his first acquaiftance with General Bemrose in Ireland in 1904, when he Mr. Lake, had the honour of being president elect of the Federation. From that time General Bemrose came to the front in the counsels of the trade. Mr. Lake recalled how the General disobeyed the doctor's orders and rose from a sick bed to preside at the first cost congress. Now they were indebted to him for the admirable craftsmanship of the alliance scheme and for the efforts he made to promote better relations between employers and em-

ployed in the printing trade. The resolution

was cordially carried.

In answer to a question by Mr. Townson, General Bemrose said it was hoped to make the alliance scheme so useful and necessary to the trade that everybody would see the advisability for coming into line by joining it.

Printers' Managers and Overseers association.

Parent Association.

mportant Clatters Debated at the July Cleeting.

Mr. E. H. Berryman presided at the monthly meeting of the parent Association on July 1st, at the "Old Bell," Holborn. In spite of an important agenda, there was only a small gathering of members, due, perhaps to the weather and many members being on holiday.

After the adoption of the minutes, the following new members were elected: Mr. H. J. Billington (Herald Press, Bath, overseer—composing); Mr. F. J. Bray (Messrs. J. G. Hammond and Co., letterpress—machine); Mr. D. E. Chittenden (Carlton Press, Chesham, Bucks, overseer—composing); Mr. T. Heptonstall (Messrs. Fosh and Cross, Ltd., works manager—litho); and Mr. F. Willard (Messrs. Metcalfe and Cooper, Ltd., overseer—composing).

The Council having agreed to accept the proposal of the West of England centre, Mr. Phillips moved that this centre be affiliated to the Association in accordance with the rules. He mentioned that he had visited Bristol in connection with this matter, and stated that the new branch would start with at least 23 members. There were, he added, some members of the Parent Association residing in Bristol, and some of these gentlemen acted as a committee on the occasion of his visit when many candidates were interviewed and subsequently approved.

Mr. Pugh seconded the resolution, pointing out that all who had joined gave assurances on the question of a month's notice either

wav

It was explained by the president, that the new centre included Gloucestershire and South Wales, and the resolution approving of affiliation was carried.

Annual Report.

The report of the Parent Association for 1918-19, was then submitted. It opened with a suitable reference to the return of Peace, and went on to show that the membership of the whole Association was now 1,071, a net gain of 54 on the year. The Parent Association led the way with 624 members, the next being Manchester and Yorkshire, who had 75 each. It was mentioned that there was an increased balance on the general fund of £184

odd, as compared with the previous year. Three cases had been assisted out of the benevolent fund, which had a balance of £108 odd, while the death benefit fund showed a balance of £1,519, an increase of £160 on the year. Although 16 deaths had taken place, levies had been made in only 10 instances during the year. The council increased the holding in the war loan by the purchase of £500 war savings certificates at a cost of £387 ios. On the capital account, the total value of the finances was shown as £2,508, an increase of £338 odd on the assets of the year, a position which was regarded as satisfactory. Reference was made to the Joint Industrial Council and the negotiations undertaken with a view to the Association obtaining representation thereon.

In a reference to the retirement of Mr. E. C. Moyce, the report said his tenure of office had covered a period in which all the provincial centres were formed. While regretting his retirement, the council congratulated Mr. Moyce upon the fact that he had relinquished his office with personal popularity and effi-ciency unimpaired. In conclusion the report stated: - "The council desire to congratulate the members generally upon the successful result of the year's work. The strength of the Association has suffered no eclipse through the exceptional conditions that have now, fortunately been passed, Our sphere of influence has been enlarged, rather than restricted, during the period under review. As to the future, we shall doubtless have to face other difficulties, but we look forward with

coufidence to the continued progress of the Association."

The president, in introducing the report and balance-sheet, mentioned that they were duly considered by the recent Conference and passed practically without any comment. The report showed steady progress, and the only regrettable feature in it was that they had lost 16 members by death during the year. Some of them were well-known members in that room, such as Mr. Ramsden and Mr. Cole.

On the motion of Mr. Gallon, seconded by Mr. Smith, the report and balance-sheet were

unanimously adopted.

The Notice Question.

The report of the annual delegate meeting was then considered.

Mr. Pugh, at the request of the president, introduced the matter as one of the delegates. and remarked upon the small attendance that night in view of the consideration of so important a report. The impression he gained at the conference was that London had to wake up to their responsibilities. He referred particularly to the discussion on the notice question, the proposals before the conference only having been defeated after a hard struggle. In this matter he held that they had to raise the status of the manager and overseer. The resort to a poll was mentioned, after which the provincial members attending the conference seemed to lose interest. In this connection he (Mr. Pugh) had mentioned the preponderating membership of the Parent

Association, but he now insisted that it was necessary that the members should take an interest in the affairs of the Association. With regard to the conference, Mr. Pugh complained of the same business being dealt with year after year, adding that the cost of the meeting would not be less than £150, although the expenses of the London delegates were nil.

Mr. Freeman referred to the wages question, and wished to know what support the Association would give to a member who took action with the circular which had been issued. He complained that some overseers were not receiving the pro rata increases, but only the same advances as the men were get-

ting, some even not that.
Mr. Phillips said, acting on instructions, he had sent a letter to the London Master Printers' Association, asking for increases to managers and overseers in proportion to the advances given to the men. A similar letter had been sent forward from every Centre to the local Master Printers' Association.

Mr. Blackwell suggested that a letter should be sent to the Newspaper Proprietors' Association. He added that the association should act with more determination, as a number of people were not receiving proper salaries in comparison with the ordinary journeyman.

Mr. Pugh mentioned that a letter similar to that sent to the Master Printers' Association had been forwarded to each member, so

that he could act on his own behalf.

Mr. Bateman was strongly in favour of pro rata increases, which would be a good thing not only for the managers and overseers, but

for the trade generally.

The president, in answer to Mr. Freeman, said it was not thought advisable to circularise firms, because some had already given increases. It was thought that the member was the best judge as to whether the circular should be submitted to his employers.

With regard to the conference itself, Mr. Berryman thought that the association could not have been better represented than it was by Mr. Pugh and Mr. Moyce. The "atmosphere" of the conference was quite correct, and there was no unpleasantness at all. He agreed that there was a good deal of time wasted at the conferences owing to the fact that matters were being dealt with year after The delegates, however, appreciated the social side of the arrangement, and, looking back on that night, the president thought they could say they never had a better night in the history of the association.

Mr. Whittle said the council were alive to the salaries question, but he thought it was advisable to get some idea as to a candidate's salary when applying for membership.

Mr. Phillips congratulated the Parent Association upon its delegates to the conference, they having carried out instructions almost to the letter. The president, he said, had had a very difficult task on that occasion, but he had held the balance fairly, and at the end the applause given him by the delegates was as unanimous as his appointment to the chair at the opening of the proceedings.

Mr. Riddell made a strong appeal on behalf

of the provincial members, whose position, he said, required to be understood. He suggested that the conference should be open for any member to attend, without taking part in the discussion.

Mr. Gallon suggested that the master printers, when they decided to increase their charges, took into acount the overseers, and they should do so when increasing salaries.

Mr. Blackwell spoke against the idea of making the notice question permissive, and urged that the association should take up a strong attitude on the matter of salaries and wages. They ought to be in a position to do something more than merely recommend a certain line of action.

Mr. Freeman argued that if a member had not got 100 per cent. increase on his pre-war salary, he did not get the pro rata increase.

The president remarked that many members would not wish the notice to be sent to their employers, and it was thought that the matter should be left to the discretion of the member himself.

Mr. Pugh explained that this matter had nothing to do with the London Council, the circular on the subject having been ordered to be sent out by the conference to each individual member to use as he deemed fit.

The general secretary explained that the object of the circular was to assist a member who cared to use it to go to his employers in a friendly way, and discuss his position with them. He felt sure that the employers generally were quite reasonable, and would not refuse any reasonable request in these

The report of the delegate meeting was then adopted unanimously, and before the members parted the president wished them them all a very pleasant holiday, as the next meeting would not take place until September.

Trade Notes.

STOCKHOLM printers have decided to request the Swedish Government not to allow foreign printers to enter Sweden until the strike is settled.

ON Saturday, the Chatham, Rochester, and Gillingham News entered on its 61st year. There have been only two editors since the newspaper was started.

A NEW weekly journal called the Chemicâl Age has appeared. It is published by Messrs. Benn Brothers, and the first issue has articles by a number of notable men.

AT a dinner given to the staff of Messrs. Benn Brothers, Ltd., recently, all members of the staff who were on fixed salaries received bonus cheques for 5 per cent. on the amount of their salaries.

THE Local Government Board have approved the suggestion of the Libraries Committee of Manchester that in future threepence in the pound take the place of twopence for library purposes, and have made an order accordingly.

THE Government, through H.M. Stationery Office, is putting on sale at a price within the reach of the general public the complete conditions of peace. The volume contains 208 pages and numerous maps, which mark the new boundaries of Germany.

The Vale Paper Co., Vale Paper Works, Denny, Stirlingshire, have arranged to open offices in London for the sale of theirproducts and have secured premises at 29, Ludgate, hill, E.C. (Rooms 30 to 33). The office will be under the management of Mr. A. Waldron, who has been associated with the sale of the firm's papers in London for some years past.

In the House of Lords, last Thursday, the appeal of Messrs. E. Hulton and Co., Ltd., newspaper proprietors, of Manchester, in their action against Messrs. Chadwick and Taylor, Ltd., paper manufacturers, of Salford, for alleged breach of contract for the supply of paper, and for the repayment of sums amounting to £34,107 alleged to have been overpaid, was unanimously dismissed.

PRINTERS' CHARITY SPORTS.—The twentythird annual sports meeting will be held at the Herne Hill Track, Burbage road, S.E., on Saturday, July 26th, beginning at 2.30. p.m. There is a good programme of events, and the Finsbury National Guard Band will be in attendance. After the sports there will be dancing on the lawn. Admission tickets, one shilling each, may be obtained from Mr. H. F. Parker, 8, Albion-road, Wandsworth-road, A gift of six free seaside holidays (one week each) will be given to ticket holders who have certain numbered tickets, and this should induce to large attendance at the sports. The prizes will be presented by Lady Hulton.

TENDERS are wanted for the bookbinding required at the Norwich Public Library for twelve months; particulars and forms of tender from Mr. Arnold H. Miller, town clerk, Guildhall, Norwich.

The Board of Trade have issued a general licence authorising the payment of fees in respect of the grant and renewal of patents and of the registration and renewal of the registration of trade marks and designs in enemy countries or on behalf of enemies.

MR. John Lawson, case-room overseer of the Aberdeen Free Press, retired on Saturday after 65 years' service. He was presented with an easy chair by his fellow workers, who hoped he would find pleasure in his coming leisure. Mr. Lawson is 79 years of age.

On Tuesday, July 15th, Mr. Frank Lloyd is to unveil a tablet in the Lloyd Memorial Home, at Deal, in memory of Mr. G. A. Mascord, son of Mr. G. W. Mascord, mechanical superintendent of the Daily Chronicle. The tablet is placed over the bed given to the Home by the late Mr. Neil Turner, general manager of United Newspapers, Ltd.

The summer number of Punch is an excellent issue, and is of quite a topical character, being largely in the nature of a Peace Celebration number. Illustrations and matter are of the best, and will provide many a good laugh. The cover is a bit of bright colour work depicting "Mr. Punch" and "Toby" enjoying themselves at the seaside. An excellent shillingsworth for holiday reading.

At the Liverpool Assizes, last week, it was announced that the proprietors of the Liverpool Daily Post and Mercury and the Liverpool Echo had agreed to pay £500 damages and costs in an action brought by Mr. Stapleton Bretherton for libel contained in an obituary notice stating that deceased had sons fighting for the British and one son fighting for Germany, when all three sons were in the British Army.

The death has occurred in London of Mr-Walter D. Welford, a well-known journalist and photographer, formerly of Newcastle, but for many years residing in London. He was one of the founders of Cycling, and at one time ran a photographic paper of his own. He edited the Photographic Review of Reviews, and was the author of several photographic handbooks. Latterly he was on the staff of the Kinematograph and Lantern Weekly when he was seized with his last illness.

The death is announced at Montreal, Canada, of Captain John Reid, R.E., a native of Montrose, who was well known in journalistic circles in London and Montreal. He had served on the staff of the Daily Mail as foreign editor, and occupied a similar position on the Morning Leader. As war correspondent for the Daily Mail he went through the Turko-Greek war. When the Morning Leader merged into the Daily News he emigrated to Canada, where he was associated first with the Daily Telegraph, and subsequently with the Montreal Herald.

RURAL WORLD PUBLISHING Co., LTD. Notice is given that a meeting of the creditors of the company will be held at 7A, Laurence Pountney-hill, E.C.4, on July 15th, at twelve noon.

Associated Wholesale Newsagents, Ltd. -Notice is given that a meeting of the company will be held at London, on August 6th, for the purpose of having an account laid. before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuractes, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership carried on by William Alfred Forth and Arthur James Forth, under the style of "W. and C. Forth," at Pocklington, Yorks, as printers and stationers, has been dissolved by mutual consent. The business will be carried on by Arthur James Forth under the name of "W. and C. Forth."

The partnership subsisting between Joseph Henry Peacock and Nicholas John Gerrans, carrying on business as printers and stationers, at 91 and 105, The Exchange, Cardiff, under the style of "Peacock, Gerrans and Co.," has been dissolved by mutual consent as from March 31st, 1919. All debts due to and owing by the firm will be received and paid by Nicholas John Gerrans and Henry Edward Thrower, who will continue to carry on the business under the style of "Gerrans, Thrower and Co.

THE BANKRUPTCY ACT, 1914. APPLICATION FOR DEBTOR'S DISCHARGE.

Fisher, Bertram Charles, trading as Fisher's Advertising Agency, 19-21, Great Queenstreet, London, W.C. To be heard December 17th, 1919, at 11 a.m., at Bankruptcy Buildings, Carey-street, London, W.C.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Sayers, Frederick George, newsagent, 118, Lordship-lane, East Dulwich, S.E., and 3. Maxted-road, Peckham, S.E. Date of order, June 5th, 1919. Bankrupt discharged subject to certain conditions.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

Annual Outing.

Intent on having a good time, and optimistic enough to believe that the weather would hold up for a bit, quite a good muster of members of the Printing, Bookbinding, and Kindred Trades' Overseers' Association turned out at the annual outing, which took place on Saturday last, to Headley, Surrey. The start was made from Waterloo soon after two o'clock, and a run of about forty-five minutes brought the party to Ashstead. From here the walk, a distance of about 3½ miles, was made to the "Cock" at Headley. Ex route many halts were made to admire the beauty of the country, and several members of the party discoursed freely on wild flowers, dilating with pleasing effect on their varying characteristics. The "Cock" at Headley was reached in good time, and all obtainable seats in the gardens adjoining the hotel were taken advantage of while the cloths for tea were being laid. These gardens possess a splendid show of roses, and very great pleasure was expressed at the mass of colour displayed.

The party by now were in fine form for the welcome knife and fork tea, which was served in excellent style, giving every satisfaction. The worthy president and vice-president of the association acted as croupiers, and many jocular remarks were thrown at one of these gentlemen—(verb. sap.)—for his seemingly insatiable appetite. For the sake of the honour of the association let it be said this gentleman fully justified himself for his actions.

After the enjoyable repast recourse was again made to the gardens, where little groups of members discussed various topics and engaged in social intercourse generally. One member ventured to introduce the subject that engaged the attention of the association at the last monthly meeting, namely, "What is an overseer?" and one of the company was heard to demurely suggest: "A man dressed in a little brief authority."

After the party had been photographed the remainder of the time left at its disposal before making steps for home was spent in an al fresco concert, an event which contributed

largely to the afternoon's enjoyment.
At 7.30 the "fall-in" was sounded, and tracks were made for Ashstead Station. A different route was taken on the homeward journey, it proving quite as attractive for its lovely country aspects as the journey out. All the way back members kept step to all the popular choruses—and unpopular ones—until the station was reached.

On arrival at Waterloo at about 9.30, everyone agreed that the success of the afternoon's
outing had been due to the untiring efforts of
the two stewards, Messrs. Geo. A. Eden and
A. E. Harvey. Members then said bon soir,
and dispersed, feeling much benefited for their
few hours' sojourn in the country.

Personal

CANON MASTERMAN, rector of St. Mary-le-Bow, has been appointed honorary editor of the London Diocesan Magazine.

MR. JAMES POPE, advertising manager of the Bristol Times and Mirror, Ltd., has been elected to the board of that company. Mr. Pope has been connected with the firm for sixty-six years, having joined it in 1853.

VISCOUNT BURNHAM and Sir George Riddell were entertained at dinner, last week, by the British Newspaper Conference, in recognition of their services to the Press during the war. There was a large number of journalists present, and Sir Andrew Caird presided. Sir George Riddell was presented with his portrait, painted by Sir William Orpen, and Viscount Burnham's portrait is now being painted by Mr. Glyn Philpot.

MR. FISHER, President of the Board of Education, has accepted an invitation to open the new Manchester Commercial Library in September next, if his engagements permit.

MR. W. WHYTE, assistant secretary to the London Master Printers' Association, is to give an address at the next general meeting of the Central Districts' Branch on "Our Industrial Council: What it will do for the trade."

MR. FRANK LLOYD has made a special donation of £1,000 to the funds of the Readers' Pensions Committee, "as a sign of appreciation of the support I have received from the readers of the papers produced by my old firm throughout the period of 46 years." The Committee exists for the purpose of providing pensions for old and disabled readers and readers' widows.

MR. A. H. ARCHIBALD (Archibald and Co., paper merchants, 11, Pilgrim-street, London), has taken into partnership Mr. Ernest J. Light, who for the past 18 years has represented Messrs. A. M. Peebles and Sons, Ltd., in London.

The title of the firm will remain unchanged, and it is intended to enlarge the warehouse accommodation in order to permit a greater variety of stock to be kept in London.

THE MILLER FEEDER.—With the view of bringing the possibilities of the "Miller Feeder" for platen machines before the trade the Lanston Monotype Corporation are showing the appliance at work, attached to a Chandler and Price platen press, at 43, Baldwin-street, Bristol. Printers in that vicinity should take the opportunity of inspecting the merits of this feeder, which doubles the output with perfect register. The feeder will be on view at Bristol until the 31st inst.

W. H Everett and Son, Ltd., newsagents, 11, St. Bride-street, R.C.4.

THURSDAY, JULY 10, 1919.

Current Topics.

American Competition.

BRITISH printers will have to be on their guard lest their United States brethren take away some of their work in the near future. Even now a New York printing firm is making a bid for British trade, and several publishing firms on this side have received a letter of which the following is a copy: "Dear Sirs,-We take the liberty of calling to your attention our facilities for the manufacture of books. We do this because at the present time conditions are more favourable in this country than in England. We make a speciality of complete book manufacture, and shall be pleased to quote you on any quantity from 1,000 upwards, printed either from type or from electrotype plates, and in any

style of binding. If you will kindly send us a copy of one of your publications (not copyrighted in the United States), we shall be very glad to give you a quotation for reproducing it, and on new books we shall be pleased to make you up a sample and send with price." The firm in question also send specimens of their work in printing, as well as in cloth and leather bindings, and are evidently out to capture as much of the British book-making trade as they can manage. Such American competition is not to be thought little of, as if they can compete in price with our own printers the distance to the United States is not so very great nowadays, and if commercial airships get on the Atlantic crossing, as bids fair to be the case in the future the distance, or rather the time of the journey between the two countries will be much shortened, and the risk of competition by trans-Atlantic firms increased. We trust our British publishers will be patriotic enough to resist this new foreign invasion, and place their orders with their own countrymen.

Manchester and Technical Libraries.

THE city of Manchester is moving in the matter of establishing a technical library so that the students and workers of that city, may be able to avail themselves of the latest and best works on their several arts and handicrafts, and to further the progress of all technical industries, the literature of which is often most expensive and beyond the reach of the workman to purchase for himself. deputation from Manchester waited on Mr. Fisher, President of the Board of Education, last week, and put the claims of the city for financial assistance in the matter before him, in order that an adequately equipped library might be established. On behalf of the deputation Sir Alexander Porter said it was essential that the city should have assistance and that it was most important that full facilities for technical knowledge should be given, and the only means by which this could be achieved was by the establishment of completely equipped technical libraries, the value of which would mainly depend upon the supply of the many technical journals, which ought to be found in such a library. In addition to an adequate supply of journals, it was most desirable that foreign patents, along with English patents, should be in the proposed library, as patent specifications were the forerunners of new processes. Mr. Fisher said he recognised the importance of such a library in the city of Manchester, and as Minister of Education he might be able to do

something that would further the object of the deputation, and undertook to consult on the matter with the President of the Board of Trade.

Paper Activity.

On all hands one hears of the progressive development of paper business. The mills appear to be full up with orders, and manufacturers are even disposed to deliberate upon those they will accept. Paper dealers are also very active, and customers are coming forward in increasing numbers. At the present time there is a particularly keen demand for news-print and printing papers of various kinds. Several causes have given rise to this condition. In the first place there is a big development in newspapers, a number of new publications constantly entering the field. Then again we have the restrictions on foreign papers, and the fact that Scandinavian products are unable to compete in the matter of price with the papers produced in this country-The present price for news-print here is 31de per pound. On the other hand we have Canadian news-print coming it at under 3d. But in spite of this there is still a scramble for printings, especially of the cheap supercalendered and news qualities. In some quarters there is a feeling that the regulation of the price of news-print should now cease. free and open competition being advocated as a better method for doing business from the point of view alike of the producer, the dealer, and the consumer.

Printers and Paper Prices.

At the monthly luncheon of the London Master Printers' Association on Thursday last, Mr. A. Harris asked for information about the future of the paper trade. He said there were a good many wild stories afloat about the length of time the mills might beclosed down, and the opportunity it would give them for raising their prices so as to get rid of their high-price material. He thought printers had been held up long enough by the paper mills of this country, and he wished to know whether the Council of the Federation was putting pressure on the Government to get restrictions taken off the import of paper. He added that they were still paying anything up to £18 for strawboards, because they had to pay £25 for British, and take them or get nothing at all. It was time they got busy looking after the legislation governing the paper business.

Mr. H. C. Hill, who was a member of the advisory panel, which is no longer in existence, said that he could reassure Mr. Harris.

Of course they all wanted cheap paper, but they also wanted to be assured of their supplies, and he thought the Federation had done rightly in supporting the suggestion that the paper trade should be protected for a certain period. It was necessary that there should be a good supply of paper in this country in any conditions, and that they should not be dependent upon foreign manufacturers. Of course, they hoped that no such war as they had just passed through would ever occur again, but it would not be wise to consider that as an impossibility. If, however, it should recur, and they allowed the paper mills of this country to languish, it was quite obvious that our supplies of paper would be jeopardised very much. quently, he thought it was wise to support the measure of protection that had been given to the paper mills during the period of reconstruction which was necessary to them. As to the supplies and prices, he thought there was no great cause for alarm there. Naturally all prices would show a tendency to harden, because the mills were now full up with work. They had plenty of orders, and consequently they were not likely to go on reducing their prices. So far as his information went, they had probably reached stable prices of paper, and if they looked at them they would find that they were not very much above what the regular prices of other products were, owing to the increased cost of wages, materials and other expenses. He agreed with Mr. Harris, however, that it was a matter that the Federation would have to keep their eyes upon, so that if there was any tendency on the part of the paper trade to take advantage of the position, then they would be able to deal with it.

Mr. Harris maintained that many of the paper mills had made exorbitant profits while the war was on, and he thought that master printers ought to watch the prices of paper in the United States, where they were a good deal lower. He pointed out that paper was the raw material of the master printer, and if orders were allowed to go abroad, they would go.

On Saturday last between sixty and seventy members of the staff of Messrs. Eyre and Spottiswoode, Ltd., East Harding-street, E.C., paid a visit to Limpsfield, the occasion being the naming of a second bed in the Caxton Home, subscribed for by the employees of the firm, and dedicated to the memory of their colleagues who have fallen in the war. Tablets were unveiled by Mrs. W. E. Hebditch and Miss A. Hison, the latter in one of the newly added women's wards, after which Mr. Hebditch presided in his usual genial manner over the tea table. Fine weather prevailed, which added to the enjoyment of the company.

THE French Press and Book Printers' Union state that they recognise that the continued rise in the cost of indispensable commodities of life will render useless and vain all increases of wages so long as nothing is done officially to keep down the cost of living.

Bookbinding Notes and News.

The scarcity of russia leather continues and it is likely to be very much scarcer in the near future. Of course there are plenty of substitutes for the real thing but nothing that can touch the quality of the beautiful leather that used to be imported from Russia. The reason of its excellence is, we believe, that it is treated with an oil of the bark of birch trees, a peculiar Russian production, and great care is taken in the preparation of the leather. In France and other countries a similar oil is produced, but the manufacture of the leather has never been successfully carried out, except in Russia. Books bound in real russia leather at the present time would certainly be extremely expensive.

The name of Mr. M. Ellis, of 234-238, Bishopsgate-street, E.C.2, is well-known in connection with the excellent gold foils that are known under the name of "Oso-Esi," and his many friends in the trade will be glad to know that he is now demobilised from army service and is again handling these foils, as well as his transfer blocking foils, in all colours. For really good class work these foils are well suited, giving good results at a reasonable cost. Mr. Ellis is always glad to give all information regarding their working, and to supply samples to those interested, and our readers should investigate their qualities for themselves. Agents are required by Mr. Ellis for the sale of these foils all over the world.

A correspondent writes to ask why the presses used by bookbinders are called "arming presses," and to secure the information we have questioned several persons in the trade as to the origin of the term. Most expressed ignorance of the matter, but one erudite gentleman said the name was derived from their being used to stamp the coats-of-arms that at one period were prominent ornaments on the covers of titled owners' books in their private libraries. Another individual expressed his opinion that they were named "arming" presses, because they gave the workman's arm a good twisting during a day's work at them.

Wages in the bookbinding trade have been advanced, and, after conferences, the following terms have been agreed to for London;—Where the minimum wage to adult male members of the National Union of Bookbinders has been 68s. 6d. or 70s. it shall be raised to 75s., but in all cases an increase of 5s. is to be paid on existing wages of 70s. and upwards. Women (over 18) and male juniors, a wage advance of 3s. (making the minimum rate for qualified women 42s.). Learners, a wage advance of 1s. 6d. These advances (with equivalent bonuses to piece workers) began on and from the first pay-day in June.

Overtime rates are to be the subject of a later conference. In the warehouse the revised rates for overtime up to 10 p.m. are as follows: Class A (binders' cutters), 1s. 9d. per hour; class B (warehousemen, cutters, packers, for rail or export, etc.), 1s. 8d. per hour; class C (bench hands and ordinary packers), 1s. 7d. per hour; class D (porters), 1s. 6d. per hour. The other warehouse overtime rates will be discussed at an early date in conference with the Federated London Unions.

Wages in the bookbinding trade are rising in Canada as well as in this country, and the master printers of Toronto have signed an agreement with the Brotherhood of Bookbinders for a new wage scale covering two years. For the first year the new wage will be \$30 a week, and for the second year \$31 a week. The hours are to be 48 hours a week. The new scale is an advance of \$7 a week, and \$8 for the second year.

Writing on bookbinding, about twenty-five years ago, an expert gave it as his opinion that there was too much specialising and division of labour in the trade. In his opinion, the book, as a thing of beauty, suffered from its passing through the hands of too many different workmen. The work, he maintained of binding a book should be wholly executed by one person, and there should be no distinction between the finisher and the forwarder, the worker and the artist. True, even to this day there are books that are the work of one individual throughout, but they are expensive, and not for the general book-buying public. What would the "expert" in question say to-day, when so many books are folded, stitched, and cased by fastrunning machinery? Truly we have progressed, commercially, even in the past quarter of a century.

"Ouvrier," writing in the Typographical Journal, says that: "A war between two printing trade societies has been going on for some time, but now happily there is a chance of this fight for possession of the woman coming to an end. I have before me a document which sets forth that a memorandum of agreement has been entered into between the National Union of Bookbinders and Machine Rulers and the National Union of Printing and Paper Workers for a working arrangement between the two unions pending a vote on the question of amalgamation. It is to on the question of amalgamation. be hoped that the vote for amalgamation will be carried by a big majority, and thus put an end to proceedings which give no credit to either society. The writer was present at the administrative council of the federation at Leicester when the vote was taken calling upon one of the societies to cease poaching from the other society. Let the past be for-

Important Notice.

It will interest the Printing Trade to know that the English Branch of Ch. Lorilleux & Co. has been amalgamated with the firm of Morris & Bolton, Ltd., as from March 31st, 1919, and that the business will in future be carried on under the title of LORILLEUX & BOLTON, Ltd.

The principal object of the amalgamation is to gain additional strength to meet the inevitable Foreign competition in the future, and to endeavour to secure the premier position in the world's markets.

The fusion of these two progressive businesses will enable many improvements to be effected, and the combined resources and experience of the two houses will enable LORILLEUX & BOLTON, Ltd., to offer the trade adequate supplies of all kinds of Printing Inks of exceptional quality and value.

Ch. Lorilleux & Co. and Morris and Bolton Ltd. thank their customers for past favours, and trust that the confidence and support extended to them in the past will be continued to

11, 17 & 18, Tooks Court, Furnival Street, E.C. 4.

gotten and a brighter day dawn for both the binders and the vigorous paper workers. The decision at Leicester was arrived at reluctantly, but it was thought there was nothing else for it, as both societies were determined to pursue their own course. Now, if their members are wise, there is a chance of the fight ceasing, and these two societies becoming one and living happily ever after."

As was anticipated in the notes for June the wages and conditions of female labour in the binding-room have now been settled and put into action. The settlement follows the lines of the National movement and has been decided on the basis of district groups of which there are six. Liverpool and Manchester occupy the first group by themselves and are now paying a minimum rate of 34s. per week. Paid holidays have been arranged in conformity with the original T.A. agreement. Perhaps more important than the wage question is the adoption of a new scale of apprenticeship graded according to age and term of service. Girls of 14 and 15 years of age commence at 12s. per week (for Group 1) and serve four years. Girls of 16 and 17 years of commence at 14s. and serve three years, while girls of 18 and over commence at 16s. and serve two years only. Advances are graded to take effect after each six months' service and in each case the girl draws 24s. per week on the commencement of her last year of service.

No one will dispute the fact that as things are and as they are tolerably certain to be in the future the minimum wage now granted will only fairly meet the cost of maintaining a girl decently. Employers are universally agreed that wages sufficiently high to promote a standard of clean, healthy and comfortable living must be paid to every class of worker. On the other hand there is an increasingly strong feeling that better conditions of hours, holidays and wages ought to coincide with a relatively increased output. This does not imply that workers must be pushed and urged on with their labour. On the contrary the onus of increased output is on the management. Improved method, system and equipment will have to come more and more into play, otherwise the cost of printing, stationery and bookbinding will become so prohibitive as to reduce the demand. In every establishment faulty arrangements or conditions occasion a great waste of labour and labour is the most costly factor in production. It is up to the administrative side to maintain a system of supervision and control which will effectively reveal wastage and present the opportunity for improvement.

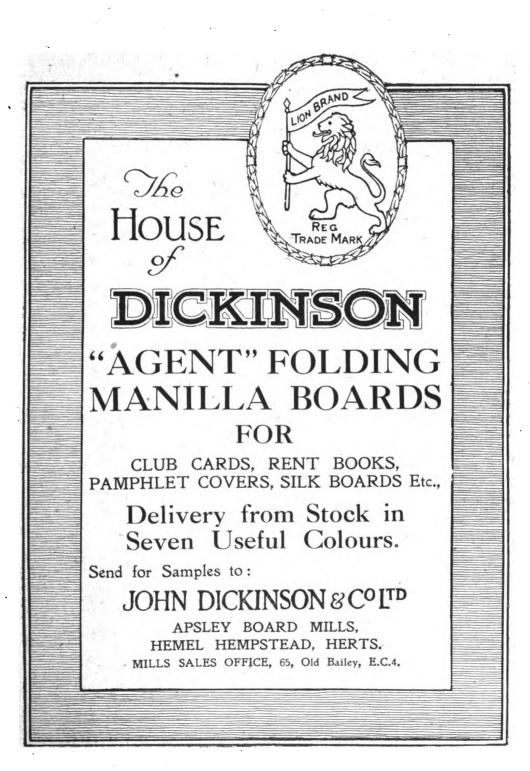

Eyes and minds will again turn to the absolute necessity of inaugurating the official costing system. It is almost beyond conception that there are houses which have been guessing at the effect of advanced wages and shorter hours, paid holidays, etc., for the last

four years, yet it is a fact that the great majority of binders do conduct their business on this haphazard basis. Certainly it proves a lack of ordinary intelligence and a total absence of business ability, but the fact remains that such is the case.

Market conditions in regard to binders' materials have not improved much during the last four weeks. Leathers in fact have advanced slightly in price although available supplies are greater. The competition for pelts and hides is said to be very keen and prices are forced upward as a result. America is taking a huge quantity of skins and our own bootmakers are also very much in evidence at the sales. Within a very short time trade with Germany will be resumed and it is safe to predict that the business done with that country will have its effect on prices in our own market. At the present time roller basils are on offer at from 50s. to 70s. per doz. Coloured basils are according to grade. quoted from 1s. 2d. to 1s. 4d. per sq. ft. Skivers are obtainable at from 71d. to 1s. 11d. per ft., the best value we have seen running out at 81d. per ft. Anglos and pigskins are now procurable and the demand is fairly good.

Glue and paste have not been further reduced since we last wrote nor have threads, tapes, or calicoes. Gold leaf shows no sign of a decline in price and is still quoted £5 6s. per 1,000, 4 by 3½-in., and £4 13s. per 1,000, 3½-in. square. Marble paper is coming round a bit better but the demand is far greater than the supply, while price maintains its high level. To-day's price on the basis of medium shell or storment is 43s. per ream. Bookcloth is unaltered in price and stands at 16½d. per yard, plain, and 16¼d. per yard, embossed, seconds quality. Buckrams are a trifle lower and low quality can be secured at 2s. 10½d. per yard.

Millboards are scarce, except in the cheap (or rather, common) English and foreign grades, which are plentiful enough and are on offer at from £40 to £45 per ton. English hand made boards are quoted £53 and grey-boards, good quality, are on offer at £45 per ton. Dutch strawboards are still a source of annoyance and contention. According to the agent, orders can be filed at £15 109. to £32 per ton for light weight boards with usual extras for heavy boards, lining, etc. Any price above £20 is extortionate and would be impossible if it were not for the restriction of fair competition. In this matter the binders of the country are in hands other than their If every buyer would set his face against foreign boards at a price higher than that named and devote his attention to English boards, even at some temporary inconvenience, the quotations would speedily become normal. Or if the Federation would carry out the idea of co-operative buying there are some agents who would be taught a much needed lesson.

Hand Sewing Fine Booklets.

Mr. Robert F. Salade, in the American Printer, thus discourses on fine bookletmaking:—"Often an artistic finish can be given a fine booklet through having it sewed by hand with silk cord or silkateen. The ordinary wire stitching looks commonplace, while the hand sewing adds a touch of quality. To particular customers the master printer should suggest having booklets hand sewed, and good prices should be charged for this work, of course. In many cases the customer would be glad to pay the extra cost of the silkateen, or silk cord stitching after considering that he would receive a more beautiful job of printing which would possesss greater value from a selling stand-

"The hand stitching can be done in the printer's own plant, no matter how small the plant may be, for no special materials are required other than a large needle and the cord or silkateen which can be bought in any dry goods store in a full range of tints and colours. A careful girl can learn to sew the booklets at fair speed after an hour's practice. The colour or tint of the silk material should harmonise well with the colour or tint of the booklet cover stock, or with the printed design on the cover.

"In sewing, three holes are made in the foldings of the booklets, and as the silk is drawn through the third hole, it is tied firmly, leaving two flowing ends about one inch long. The work can be done so that these ends are either on the outside or the inside of the booklet. Most people seem to prefer the ends on the outside, as they add a nice touch to the cover design.

"In the case of larger books, that is, those of considerable thickness, the saddle style of stitching is not done, but instead the books are sewed through from cover to cover with heavy silk cord or ribbon. Three holes are cut through the book with a punch of small size, and the cord, or ribbon, is inserted (or 'laced') with the aid of a darning needle. The cord or ribbon is tied in a bow, on either the front or back of the book, leaving long flow-

ing ends to the bow-knot.
"To get the pieces of cord or ribbon all of a standard size, after it has been ascertained what the length of the pieces should be, a sheet of heavy cardboard is cut to a size which will take the piece of cord or ribbon with one winding. Then, long windings of the material are wrapped around the card, and the cord or ribbon is cut while on the card, thus making the pieces all of one size. For hand sewing of this class the darning needle must be threaded for each piece of cord or ribbon.

"It will pay the printer to do more binding of this character, for it elevates the work of the shop. Wire stitching is all right for the ordinary booklet of large quantity, but the fine booklet should be hand sewed and finished

iu the best manner.'

Advantages of Organisation.

Interesting Meeting of Master Printers at Westbourne Park.

The advantages and, in fact, the necessity of organisation among master printers, were urged at an interesting meeting of the Association of Master Printers of West and North-West London held on Monday night at Westbourne Park Institute.

Mr. F. A. Perry presided over a good gathering and Mr. J. J. Keliher, president of the L.M.P.A., was the principal speaker. Light refreshments proved a happy introduction to

the proceedings.

Following the submission of eleven new members by the hon. sec., Mr. J. S. King (Mayor of Ealing), a discussion ensued as to whether wholesale houses, such as large drapery firms, with printing plants, should be admitted to membership and it was suggested that this matter should be dealt with by the Council.

The new rules which have been drawn up by the Organisation Committee were mentioned and Mr. S. Sidders was anxious that these should not be imposed upon local Asso-

Ciations without their consent.

Mr. A. Langley stated that these rules were to govern the new alliances, on the council of which the local Associations would be represented and there were separate rules to be

adopted by the local Associations.

Mr. J. R. Burt intimated that the new rules would be brought before a meeting of the London Association and Mr. Hastie urged that the local Associations must have a voice in the new rules. Mr. Keliher said that was the object with which the rules were being revised, the present rules did not provide for district Associations and were therefore out of date. The organisation committee recognised that in future the government of the

Association must be to a certain extent decentralised and the district associations would have certain responsibilities thrust upon them and have a decided voice in the affairs of the Association. These new rules provide the machinery for the attainment of that object. Mr. Burt added that at present there was only one representative on the council from each association, but under the new scheme there would be three or four, so the district associations were being well looked after.

Mr. J. Johnson from headquarters reported the result of the visit he had paid to the district during three days and submitted the following four names for membership:—Messrs. C. C. Whitling, Coleman and Co., Elliott and Sons, and R. Madley. There were others present at the meeting, he observed, who had not as yet joined.

These four nominations were approved.

Advantages of Association Membership.

Mr. Perry introduced a discussion upon the aims and advantages of the Association and his address was so well conceived that we hope to give it in full next week.

Mr. Keliher, who was cordially received, complimented Mr. Perry on the excellence of his address and the literary finish which had been given to it. He congratulated the members on having so proficient a president. On the London Council, they valued the assistance which Mr. Perry gave them. He thought after Mr. Perry's observations that if there were any gentlemen present who were not already members of the Association, they would not leave that room as non-members. (Hear, hear.)

Powerful Organisations.

Proceeding to urge the necessity for organi-sation Mr. Keliher said individualism no longer sufficed. The organisations they had to meet, which, generally speaking, did not work in the interests of the employers, rather the reverse, were getting more and more powerful, not only in London, but throughout the country, and the only possible way in which they could keep their end up was by having an organisation equally strong. most recent development of the Association had been the establishment of alliances throughout the country. These would have the effect of levelling up the conditions and wages as affecting small and large printers. The genesis of the movement was in the Midland area, surrounding Derby. In that district there had been as much difference as 27s. between the wages in one part as compared with another, and that placed many printers in a very disadvantageous position in the matter of competition with other printers, perhaps only a few miles away. But when the alliances were formed by General Bemrose, a prominent member of the Federation, and Mr. F. O. Roberts, M.P., the representative of the Typographical Association, following eighteen months' work, they had succeeded in minimising the difference as between any two towns to a matter of 11s. That is, the highest rated town was only tis above the lowest paid district. That, of course, was a very great advantage to the printers throughout the area and so successful was the movement that it had been extended to the whole of the country.

The Grading of London.

In London the matter had not been seriously considered by the members, but it had been before the council, and the proposal was that they in London should be formed into one of these alliances-No. 1, of course. The difficulty they had in London was to arrive at some grading system. Hitherto the trade unions claimed that their rule covered London and 20 miles round and that the same wages and conditions should prevail over the whole of that area. Giving his own opinion, Mr. Keliher thought this was impossible and very The consequence had been that ill-advised. there were very few members of the trade unions outside a few miles round London, because they could not conscientiously remain members of their union if they accepted the rates of pay that were prevalent in those The result had been that outlying districts. the difference in the rate of pay between these outlying districts and central London had been just as much as that which used to exist in the Midlands, quite as much as 27s. a week. It would be a question for the members of the Master Printers' Association and certainly for the unions to consider whether they should not be graded in a manner somewhat similar to that which had been adopted in the provinces. If they made up their minds that this was desirable, it would be for the members in the district associations to move in the matter. He (Mr. Keliher) had sounded some of the printers in the central district, and he had found them extremely apathetic in the matter. One could understand the reason why, but he thought it was a mistake. They would never see the same wage paid. The operating printer further away could work cheaper, because he would save time and railway fares. On the other hand if the master printer competed for London work he had to allow for railway fares and so on. There was not fair competition between the two parties.

Better Service.

Under the new scheme, with each alliance having a paid secretary, 24, Holborn, would be able to devote itself to the broader questions and would give members quicker service in any information they might want. They were determined to have proper experts who would assist the members in carrying on their business from day to day, which was a very important advantage of membership

Unfair Competition and Inefficiency.

Mr. Keliher complained of the competition put forward by religious institutions. thought the trade suffered a great deal more from such printing offices than from the printing plants in wholesale houses, because at such places they got boys from an institution with only a smattering of printing and foisted them on to the trade as efficient printers. At the same time, these religious institutions not only did work for their own institutions, of which they did not complain, but they touted for work outside, and that was a matter worthy of the consideration of any district where such an institution existed. One of the great bugbears of the printing trade at the present day, and the unions acknowledged the fact, was the inefficiency of so many printers who applied for work at printing offices. Often the wages paid were double what the services were worth.

Overtime Demands.

Were they coming into the organisation to make it strong, so that the association could take up an attitude knowing well that the trade was at its back? Until their organisation was perfectly sound that position would be denied to them. They wanted an increasing membership. Very soon they might have a surplus of labour, and with that would come unfair competition unless in the meantime they got the majority of master printers into their association. If they gained that end, then they could hold out for prices that were just and proportionate to the high wages they had to pay at the present time.

Advantages of Membership.

Mr. Searle gave personal experiences showing the advantage derived from membership of the Association. For instance, by reason of the confidence engendered, he had received valuable information from a fellow member with reference to certain work.

Mr. A. Langley followed on similar lines. None of them knew, he said, what help they might require from any part of the country.

As an example, he mentioned the putting into force of a regulation under Dora as to an imprint, upon a batch of circulars which Mr. Langley himself had sent to a country town. A master printer who was a special constable was aware of the regulation and was instrumental in having it put into effect. But it was this same master printer who got Mr. Langley out of the difficulty by adding the necessary imprint. It was only the knowledge gained of one another in the Association or the Federation which enabled a service like that to be rendered. Recalling a notice the once saw in a coffee shop, "we better serve ourselves by serving others best," Mr. Langley suggested that that was the principle which master printers should act upon. They got far more satisfaction and served their own interests by serving others best, and by helping other printers they not only performed their duty, but raised the status of the craft and benefited their fellowmen. (Applause.)

Mutual Confidence.

Mr. W. J. Pollock said when he was doing a great deal of work and getting little out of it he joined the Association. He was indebted to Mr. Burt, the father of that Association, for introducing him as a member. For the first time in his life that enabled him to know his fellow craftsman, not only his immediate competitors, but leaders of the trade like Mr. Keliher, Mr. Blades, Sir William Waterlow and others. His competitor, "that miserable rascal round the corner," became his friend, and that was what he regarded as of greater value than any monetary benefit. Mutual confidence any monetary benefit. was established and mutual help was rendered. Their's was a dignified craft, and those who practiced it were worthy of a decent living and not a mere subsistence. Membership of the Association was the finest investment and provided more return than putting in a double-demy machine. (Laughter.)

Mr. Walker showed how he became a member of the Association as a result of helpful information he obtained from Mr. Langley, and he went on to complain of boys in a certain home—supported by voluntary contributions, as Mr. Keliher interjected—being put on by a clergyman to do work which ought to be done by an established printer.

Duty of the Unions.

Mr. Hastie urged that the unions should see to it that their members were qualified printers. He knew men who were not worth LI a week let alone the recognised wages. At a place near Derby the society had refused a man because he had not certain qualifications. It should be the same in London, and the Association should take the matter up with the unions. Mr. Hastie went on to show how he had made the acquaintance of his fellow printers through the Association since he came to London from Scotland 15 years ago. During that time wages had increased from 328 6d. a week, and the hours had gone down from 53 to 48. He had always felt that wages before were too low. and they did not mind paying good wages for adequate work, and if master printers got the full value of the 48 hours they would not grudge the extra amount they had to pay for labour.

Incompetent Printers.

Mr. J. E. Burt agreed that it was necessary that the young people in the benevolent homes should be competent printers. They were kept in the institutions until they were 14 or 16 years of age and cast adrift with a sinattering of knowledge, and somebody else was given the benefit of their incapacity. Then they were enrolled as members of the union and deposited in the offices of master orinters, who had to suffer in consequence. But in fairness to the unions it must be said that they were not so eager to get in every-As a trade union, they should take in everybody, but the members should be graded. The societies had no right to complain of masters not paying a proper wage if they sent unprofitable labour into the printing houses, expecting the employer to pay the minimum wage for services the man could not render. If there were such members it was time they were put on the superannuation list, and not be a burden to master printers. The conditions of the trade were such that some firms were practically compelled to pay any wages demanded in order to be able to fulfil the contracts they had with the outside public. It did seem to him that they must get every master printer into the Association in order to be able to meet a grave menace to the trade. Mr. Burt added that since the West and North-West Association was formed six years ago, the membership had trebled.

The proceedings closed with a cordial vote of thanks to Mr. Keliher for his attendance

and address.

The imports of paper, etc., into the United Kingdom during the six months ended June show a big expansion compared with the corresponding periods of the two previous years, the respective totals being 2,105,995 cwts., 1,184,120 cwts., and 1,534,552 cwt. Taking the last six months as compared with the first half of 1918, the increase amounts to 921,875 cwts (or nearly 78 per cent.), made up as follows:—

INCREASED IMPORTS.

	UWts.
Strawboards	408,801
Reel paper	258,555
Mill and wood pulp boards	162,626
Packings and wrappings	106,210
Printings and writings, not	
on reels	*32,451
Hangings and printed paper	2,668
Unenumerated	15,466
*Decrease.	•

The sources of supply of reel paper during the last six months were:—Sweden, 30 per cent.; Newfoundland, 28 per cent.; Norway, 18 per cent.; and the United States, 4 per cent. Norway and Sweden supplied 90 percent. of the imports of packings and wrappings. The total values of the imports of paper during January-June stand as under:—1919, £4,012,540; 1918, £2,792,710; 1917, £1,957,688.

A New Magazine.

The first issue of the Bookplate Magazine, issued by the Morland Press, 190, Ebury-street, S.W.r. is a very fine production, and is beautifully got-up and printed, It is of a handy size 10½ by 8 inches, and is printed on a heavy deckle-edged paper, the letterpress being in a large, clear type of a pleasing face, on pages showing a wide margin. The articles in the number deal with "The English Pictorial Book Plate," "First Principles for Collectors," and "The English Book

Book Plate by Harold Nelson.

Plate Society." There are pages devoted to notes and reviews, and an interesting feature of the magazine is the reproduction of examples of bookplates, many of which are the work of well-known modern artists, including Frank Brangwyn, R.A., Harold Nelson, James Guthrie, T. Erat Harrison, H. J. Stock, R.I.; J. Paul Cooper, Peckford Waller, and Bernard Sleigh. The new venture should be welcome to all lovers and collectors of book-

Book Plate by J. Paul Cooper-

plates, which of late years are coming more and more into favour. The price of the magazine is 2s. 6d.

OPENINGS FOR TRADE.—An Auckland N.Z.) agent desires to be placed in touch with United Kingdom manufacturers of paper (writing, printing, etc.), printing mach nery, printers inks, bookbinders leathers and cloths, manufactured stationery and fancy leather goods, in which lines he claims to have considerable experience, with a view to representing them in New Zealand, or, if desired, for Australasia. This gentleman is at present in this country.—A Madras firm, claiming to be in touch with all the wholesale and retail dealers in the Presidency, desires to secure an agency, for the Madras Presidency, for printing paper, etc. The firm states that they have agents continually touring the Presidency. (Reference No. 18). Further particular may be had on application at the Department of Overseas Trade, 73, Basinghall-street, E. C.2.

"It is not good for man to be alone," says the Good Book. Then here's to woma not the fairest work of the Great Author. The colition is large and no man should be without a copy—be sure, however, that the binding is sood—Exchange.

The late Mr. George William Potter, a cting editor of the *Hospital*, has left estate of the value of £3,163.

"Of Good Report."

London Paper Trade flen as Special Constables.

Paper trade men have played their part well during the war. With the flower of youth on active service, those left to "carry on" cast all thought of personal comfort aside, and devoted their energies in one form or another to help forward the day of victory. As volunteers, special police, or engaged in ambulance

reported, never missed a call for duty, no mean performance when it is remembered that they are active business men, and carrying on with greatly reduced staffs. In the centre is left-half commander Douglas B. Spalding, of Messrs. W. Penman and Son, 14, Upper Thames-street, E.C., who joined the force as a constable in 1914. On his left is Mr. E. M. Fells, of Messrs. E. M. Fells and Co., 14, Upper Thames-street. E.C., who joined in October, 1915, and on the right, Mr. J. Loveridge, of the Lamson Paragon Supply Co. Taking the back row, reading from right to left, are:—Mr. H. Haxton, the popular London representative of Messrs. Felber, Jucker and Co.

work or promoting and assisting local organisations for the comfort and welfare of our soldiers and sailors, paper trade men have been well to the front in giving of their best, both in individual service and in money. In the City of London, the call "for the special" met with a hearty response, and our illustration is typical of several "paper trade sections" to be found in the various divisions. All have shown a keen devotion to duty, animated with enthusiasm and good spirit, winning the highest commendation. The members of the group illustrated have, it is

Ltd, of Manchester; Mr. J. Atkins, the esteemed representative of Messrs. Paul Sabel and Co., 26, Upper Thames street, E.C.; Mr. J. Ruddock, of the Westminster Gazette; and Mr. A. Bishop, the well-known London manager of Messrs. Robert Craig and Co., Ltd. The patriotic services of the paper trade have been well to the frontall along, and we look forward with confidence to further efforts.

An Advertisement is always working.

Trade Notes.

The late Mr. George Latimer Woodley, of Llandudno, stationer and bookseller, has left estate of the value of £7,768.

On Monday Mr. Asquith visited Antwerp, and paid a visit to the Plantin Museum, the sixteenth century house of the famous printer, Plantin.

The printers in Stockholm have decided to request the Swedish Government not to allow foreign printers and compositors to enter Sweden until their strike dispute is settled.

On Thursday last the National Federation of Newsagents discussed at Leicester the possibility of the re-introduction of halfpenny newspapers. Feeling was strongly against this among the delegates, and the conference decided that steps be taken to prevent it.

To MARK his retirement from the newspaper Press after 46 years' association with daily and weekly newspapers, Mr. Frank Lloyd has sent a special donation of £4,000 to the Newspaper Press Fund, wilh an expression of his best wishes- for a successful continuance of the good work of the fund.

THERE was an exciting man hunt over the roofs of several Fleet, street newspaper offices last week. A man had been seen on the premises occupied by the Glasgow Herald. He was chased across the roof of the Herald building, and the police succeeded eventually in driving him down to the floor of the Morning Advertiser offices, where he was captured.

It may interest the trade to know that all copies of the Peace Treaty were printed with "Fryotype" metal. This included not only the copies of the preliminary treaty of which 200 were handed to the German delegates, and a much larger number of course, to the Allied delegates, but also the copies of the final treaty, which are now being printed for circulation among the general public.

THE CIVIL LIST.—The following names appear in the awards of Civil List pensions just issued:—Mr. Robert Edward Francillon, author and journalist, £50; the Misses Murray Gilchrist, distinction of their brother, late Murray Gilchrist, Derbyshire novelist, £75; Mrs. David Scott, in view of services of her uncle, the late Peter Buchan, collector of traditional songs and ballads, of her father, late William Thom, the Inverurie poet, £25.

The Air Post.—The London correspondent of the New York Times, with reference to the delivery of a copy of the Philadelphia Public Ledger brought by R34 to Buckingham Palace at 2.30 p.m. on Saturday, 3 days, 9 hours 36 minutes after the airship left New York, states that a copy of the New York Times brought by R34 was received by the King at Buckingham Palace shortly after 1 o'clock on Sunday afternoon, or 3 days 8 hours and some minutes after the airship's departure from New York.

THE Summer number of Sea-Pie in aid of King George's Fund for Sailors was published on Wednesday. It is a capital number, edited from the Royal Naval Depôt, Crystal Palace.

THE National Union of Journalists has affiliated with the Printing and Kindred Trades Federation. A recent ballot in the Union showed 1,132 in favour of that course and 192 against.

THE death is announced of Sir Robert Hampson. Sir Robert was the chairman of C. Tinling and Co., Ltd., proprietors of the Liverpool Daily Courier, the Liverpool Weekly Courier, and the Liverpool Evening Express.

ADVERTISING IN CHINA.—Particulars may be obtained by application to the Far Eastern Section of the Department of Overseas Trade of schemes by which British merchants and manufacturers are enable to advertise in the native press in China under the auspices of British Commercial Propaganda organisations at Shanghai and Hongkong.

WAYZGOOSE.—The members of the staffs of the Bury Times and Radcliffe Times had their annual wayzgoose the other day, when about sixty persons visited Chester and the Wirral Peninsula in motor char a banes. Dinner was served at Chester, and immediately afterwards the party left for West Kirby, where a pleasant hour was spent in boating, bo wling. etc. The return to Chester was by way of Hoylake, Birkenhead and Port Suralight. Chester was left on the return journe y at 7 o'clock, and travelling by way of Frod sham. Lymm, Altrincham, and Sale, the motor reached Bury at 10 o'clock. The weather was very favourable, and the outing was a most enjoyable one.

The Bisley Meeting.—At Bisley, on Saturday, there was some good shooting, and in the newspaper events good scores were made. In the Daily Graphic, Captain MacKenz se, 8th Black Watch, and Captain F. R. Martin, Canada, tied with 47 points for the cup. In the Graphic contest three men tied for the cup.—Private A. H. Ford, 5th City of London, Lieutenant J. H. Vincent, Toronto, Canada, and Corporal F. Noyon, Guernsey V. Corps, with highest possible scores of 35 poin s. In the Daily Telegraph contest three men tied for the cup with 34 points each out of a possible 35. On Monday the ties were decided, when Captain F. R. Martin (Canada) won the Daily Graphic, Lieutenant J. H. Vincent (Canada) the Graphic, and Corporal J. Cope (South Africa), the Daily Telegraph prizes.

THE STATIONERS' ASSOCIATION.—The mewly elected council of the Stationers' Assoc mation held its first meeting recently, when he following officers were unanimously elected for the ensuing year:—Mr. Percy Bar singer (John Walker and Co., Ltd.), president of the Association; Mr. T. W. Thornton (Beckenham), chairman of council; Mr. Clifton Tollit (Tollit and Harvey), deputy chairman of council; Mr. Sydney C. Simmons (J. Simmons and Co., Ltd.), honorary treasurer; Mr. W. B. Warren (Burge, Warren and Ridgley,

Ltd.), chairman of membership committee; Mr. F. P. Dorizzi (George Rowney and Co.), chairman of advisory committee. Fifty-one new members were passed for the membership roll.

THE late Mr. John Edward Taylor Allen, managing director of Messrs. Taylor, Garnett, Evans and Co., Ltd., printers, Manchester and Reddish, has left estate (including settled property) of £151,177 10s. 4d.

THE tender for school requisites during year ending July 31st, 1920, for the Rawtenstall Education Authority has been awarded to Messrs. E. J. Arnold and Son, Ltd., Butterleystreet, Hunslet-lane, Leeds.

TENDERS WANTED.—For the bookbinding required at the Norwich Public Library for 12 months; particulars from Mr. Arnold H. Miller, Guildhall, Norwich.—For the supply of office stationery, for six months, for the Denbighshire Education Committee; forms of tender from Mr. J. C. Davies, Education Offices. Ruthin.

THE LLOYD MEMORIAL HOME. - On Tuesday, Mr. Frank Lloyd visited the Lloyd Memorial (Caxton) Home, at Deal, and unveiled a tablet in memory of George A. Mascord, who fell in the battle of Hooge in 1915. Mr. Mascord was the son of Mr. G. W. Mascord, the works manager. Mr. H. F. Parker, the secretary, referred to Mr. Lloyd's donation of £4,000 towards the erection of the new wing, and said that £6,000 was still required to complete it. The home would then be one of the largest convalescent institutions on the South coast. Mr. Frank Lloyd, in unveiling the tablet, said he had watched the growth of the home for some years, and had been struck by the efficient manner in which it had been conducted and the good work that it did.

"THE PAPERMAKERS' DIRECTORY OF ALL NATIONS, 1919." London: Dean and Son, Ltd., 160A, Fleet street, E.C.4. Price 17s. 6d. net.

This issue is the twenty-eighth edition of this useful handbook for all who deal in or use paper, and is a bulky volume of nearly 900 pages regarding the paper mills of the world. The close of the war and the victory of the Allies over the central Empires, resulting in a new arrangement of territories, has necessitated a revision of the geographical position, and in this respect the "Directory" has been brought up-to-date; for instance, the paper mills in Alsace-Lorraine, that were formerly listed under the heading of Germany, are now under France, those in Hungary are separated from those in Austria, and those in Bohemia.

Moravia, etc., appear under the new state of Czecho-Slovakia, while Yugo-Slavia, Poland. Lithuania, and the Ukraine have their separate headings. As to the mills in enemy countries about which exact information is at present not available, owing to the conditions imposed by the recent war, they are included; but necessarily have not been brought up to-date in the details. The book is well arranged and easy of reference, and is divided into three main sections. The first deals with the United Kingdom, and gives full particulars of all paper and board mills, wholesale stationers, paper agents and mill representatives, as well as china clay merchants, rag and paper stock dealers, exporters of paper, and other useful information. The second part gives details of the pulp, papermaking, rag and kindred industries of the world, colonial and foreign, while in the third section is given a comprehensive list of the productions of all the mills referred to in the previous sections, in all some 400 trade designations, classified in three ways; i.e, class of goods manufactured, country of origin, and name of firm. The book is well printed by Messrs. Hazell, Watson and Viney, Ltd., and is bound in cloth.

A Plucky Newsvendor.

SIR,—Eighteen years ago a mariner was bereft of hands, feet, and a considerable part of his arms and legs; notwithstanding this handicap, he started as a newsvendor, and I am proud to report that, through the intervening years this Society has been instrumental in providing him with artificial limbs. At their last meeting, among many other expressions of gratitude, the committee of management received the following letter from this very plucky mariner newsvendor :-"I this morning beg to acknowledge receipt of cheque value £3 2s. I really did not expect any as I was only too pleased to get new artificial legs, boots, and also general repairs of old one. This in itself was more than I expected. However, I can again only express my sincere gratitude and thanks to you and committee for the great influence you have continued to exercise on my behalf, and I can assure you it's a blessing for me that I am a member of your very honourable Society, and the assistance received from you since I joined is immense. Will you, therefore, again accept my most sincere thanks and please convey same to your committee and all concerned."

It is thought that you may like to draw attention to this remarkable case.

I am, etc.,
W. WILKIE JONES, Secretary.

July 4th, 1919.

Current Topics.

The South American Market.

South America, is, as we have before pointed out, becoming increasingly prosperous and there is a good demand for imported articles of all kinds, including printing machinery. In particular Bolivia, Peru and Ecuador, offer a good market for this class of machinery, and in Lima alone a considerable number of orders have been recently placed. Unfortunately British firms are not well represented there and the bulk of the orders are being placed with United States houses. which, in recent years, have been cultivating this market. English presses are, however, in good repute and with a little more push orders should be booked for this country. Many offices are now using old and obsolete

machinery and the time is suitable for their refitting. The usual British method of sending illustrated circulars, often printed in English, is of little or no use, a representative must cover the ground, and if a few of our engineering firms could combine and send out a good man, with a knowledge of the country and its language, there is little doubt but that remunerative orders could be obtained. Some effort should be made to capture South American trade before our American friends have time to secure the field entirely fo themselves.

Does Good Work Pay?

Some printers will say yes, and others no. according to their experience, but every printer, who deserves the name, likes to do good work; still, when he has got to do a job which doesn't pay him well enough to take pains with it what can he do? It is just the same with bookbinding, blank book making, or any other of the kindred trades. The one great aim of the customer always is to get work cheap. Get out first-class work if you can, but cheap it must be. The result is, the work is got out in as respectable a sha pe as can be for the price paid for it. To those who love their trade, and who are ambitio us to excel in good work, this condition of t hings is unpleasant and discouraging. It must, however, be squarely met. Customers be educated up to an appreciation of, and a desire for good work, and they must be made to understand that they usually get about what they are paying for. Meanwhile, the trade must struggle with the every-day question of how to get out cheap work and good work at the same time. It is seldom indeed that a house is called upon to spare no pains or expense with the work given it, and the finest specimens of work which an establishment is capable of doing are often do me at the expense of the firm, to show what could do if they were only given a fair chance by the customer to show their skill and the facilities of their plant. Good work does pay, but the customer must be educated up to the ordering of it, and, unfortunately, that is a difficult task in most instances.

Peace.

Peace has come again to the paper trade, though the outlook was very bad a week ago, and, indeed, right up to the time when a settlement was reached between the two parties the whole position was extremely critical. We are glad to learn that the leaders on both sides exercised admirable re-

straint though with the necessary amount of firmness. On the whole, however, the unions appear to have got all they wanted and, it may be, more than they expected. Certainly the employers have made considerable concessions. It is, however, a great gain to have come to a point where unrest may end and whence the trade can proceed without hindrance. There was great danger to the paper industry of this country by reason of threatened trouble from within. Conditions governing trade are still too critical to permit of any disturbance not having serious consequences. The recent sudden disruption was, in fact, a matter for great surprise, for both sides had been working together in the true spirit of the Interim Reconstruction Committee. Happily, it may now be said, that friendly relations are again established, and we hope they will continue. There is, indeed, every prospect that they will.

Printers' Managers and Overseers association.

MANCHESTER & DISTRICT CENTRE.

The annual Ladies' Day was held on Saturday last, and many faces that have seldom been seen during the war period once more presented themselves at a happy re-union. After detraining at Disley, the party rambled through Lyme Park, and on the way admired the fine herd of red deer. From Lyme Park Cage, which was used as a watch tower in the old feudal days, the members of the party saw a fine panoramic view of the low country round about. By special permission of Lady Newton, an hour was spent inside the romantic Lyme Hall. Works of art, showing the highest skill of craftsmanship of days that have long passed, were the means of causing many to think that the rush of later generations had been the cause of less painstaking productions by present craftsmen.

An excellent tea at Poynton and further rambling soon brought the time for entraining. A bevy of young ladies belonging to a Manchester choir party rendered songs both grave and gay during the journey.

WEB MAC.

The Typographical Circular gives the following as a well-authenticated story of the proceedings at a meeting of a "conciliation" board in a well-known provincial town. It, of course, had nothing to do with print:—Trade union representative (throwing a bundle of documents on the table): There are our — terms, and we're — well going to get them. The chairman: I'm the — chairman of this — meeting, and the — meeting's over.

Personal

MR. LIONEL CUST, C.V.O., and Mr. More Adey have severed their connection with the Burlington Magazine Co., Ltd., Mr. Lionel Cust having ceased to be a managing director of the company, and Mr. Lionel Cust and Mr. More Adey having ceased to be editors of the Burlington Magazine.

MR. EDWIN I. LAYTON has been appointed Master of the Stationers' Company. The new Wardens are Mr. Edward Unwin and Mr. Charles R. Rivington.

COUNCILLOR WARD was in the chair on Tuesday night at the monthly meeting of the Association of Master Printers of East and North-East London.

MR. E. R. ALEXANDER, the president, was trying to forget the troubles of the master printer in the Isle of Wight.

MR. A. D. PHELP, the hon. sec., had sent out another of his original notices. After briefly setting out in short lines the occasion, date, time and place, there came in heavy face type the injunction: "This function cannot becompletely successful unless you are present." Below, covering more than half the space of the sheet were two large and unmistakeable hands pointing inexorably to the injunction aforesaid.

MANUFACTURING stationers were conspicuous at the dinner given to Mr. J. H. Whitley, M.P., the other night by the Industrial Reconstruction Committee.

MR. ERNEST BENN was in the chair, and representatives attending from the Interim Reconstruction Committee for the manufacturing stationery and envelope making trade were Mr. H. Godfrey, Mr. T. Owen Jacobsen, L.C.C., Mr. Leonard Spicer, Mr. James Gallie, Mr. T. G. Newland and Mr. W. Ross.

MR. JACOBSEN also entertained a number of guests. including Mr. Percy Barringer (president of the Stationers' Association), Mr. W. E. Nuttall, Mr. W. W. Birrell, Mr. J. W. Cooke, Mr. A. W. Foster and Mr. F. L. Armstrong.

OTHERS present were Sir George Riddell, the Right Hon. C. W. Bowerman, M.P., Mr. W. Howard Hazell, and Mr. G. A. Isaacs.

MR. E. S. LENDRUM has returned from his visit to America, and is at present concerned with his business interests in the North of England.

THE business that cuts prices is apt to bleed to death.

DIVIDENDS AND REPORTS.

KELLY'S DIRECTORIES.—Presiding at the annual meeting, Mr. E. Festus Kelly said the result for the year was a justification of the directors' policy not to increase the price of the books to anything like the same extent as the cost. They were endeavouring to avail themselves of the changes in the world's trade. The report was adopted.

ILLUSTRATED LONDON NEWS.—The directors of the Illustrated London News and Sketch announce an interim dividend at the rate of 6 per cent. per annum on the ordinary shares.

NEW COMPANIES.

W. AND G. FOYLE, LTD.—Registered with a capital of £16,000, in £1 shares, to enter into an agreement with W. A. and G. S. Foyle, and to carry on the business of printers, engravers, publishers, bookbinders, art journalists, etc. The subscribers are W. A. Foyle, and G. S. Foyle. Private: company. Managing directors—W. A. Foyle, and G. S. Foyle. Registered office, 121, Charing-cross-road, W.C 2.

PHOTOGRAPHIC SERVICE Co., LTD.—Registered with a capital of £2,000, in £1 shares, to acquire the business of photographic and general printing carried on by J. de Lysle, at 267, High Holborn, under similar style. The subscribers are J. de Lysle, and A. Hunter. Private company. The first directors are—J. D. Lysle, and A. Hunter. Registered office, 267, High Holborn, W.C.

BRITANNIA FOLDING BOX Co., LTD.—Registered with a capital of £64,000, in £1 shares, to acquire the business of a company of same name, incorporated in 1889, and to carry on the business of manufacturers of and dealers in paper, cardboard, wood, and paper boxes,

envelopes and bags, etc. Private company. The first directors are—C. Baker, W. B. M. Bird, J. L. Williams, and J. B. B. Spence. Registered office, Dace-road, Old Ford, E.

DURLING, WEST AND DURLING, LTD.—Registered with a capital of £15,000, in £1 shares, to enter into an agreement with E. W. Durling, H. E. West, and W. Durling, and to acquire the business carried on at Newport-street, Lambeth, and elsewhere, under similar style, and to carry on the business of rag, metal, paper stock and general merchants. The subscribers are R. Budgen, and H. Doe. Private company. The first directors are—E. W. Durling, H. E. West, and W. Durling.

ANGLO-NORSE PAPER AGENCIES, LTD.—Registered with a capital of £10,000 in £1 shares, as dealers in paper, mill board, pulp, fibre and other substances, etc. The subscribers are E. Roll and J. N. Wendt. Private company. First directors to be appointed by the subscribers.

FORREST PRINTING INK Co., LTD.—Registered with a capital of £15,000, in £1 shares, to take over the business of a printing ink manufacturer carried on by A. E. Forrest at 2-3, Stonecutter-street, E.C. The subscribers are A. E. Forrest and S. Peabody. Private company. First directors, A. E. Forrest (chairman) and S. Peabody. Registered office, 2-3, Stonecutter-street, E.C.

WINDEBANK AND Co., LTD. — Registered with a capital of £50,000, in £1 shares, to carry on the business of manufacturers of, and dealers in paper, cardboard, strawboard, wood pulp, rags, leather boards, leather substitutes, envelopes, luggage labels, tickets, paper bags, jewel cases, fancy goods, etc. The subscribers are H. Windebank and E. F. H. Pepper. Private company. First directors to be appointed by the subscribers. Registered office, 45, Newhall-street, Birmingham

Bartlett and H. F. W. Deane. Private company. Permanent directors: P. C. Bartlett, H. F. W. Deane, R. Hudson and W. Agar. Registered office: Garrick House, 27, Southampton-street, W.C.

COMPANY NOTICES, etc.

LONDON ETCHING Co., LTD.—At a meeting of the company held at London, on June 30th, the subjoined resolution was passed:—"That the company cannot, by reason of its liabilities, continue its business, and that it be wound up voluntarily; and that Mr. Leslie S. Manvell, 12, Lime-street, E.C., be appointed liquidator of the company."

BRITANNIA FOLDING Box Co., LTD,—At a meeting of the company held at London, on June 19th, the following resolution was passed; and a subsequent meeting on July 4th, was duly confirmed:—"That it is desirable to reconstruct the company, and accordingly that the company be wound up voluntarily; and that John Lloyd Williams, of Dace road, Old Ford, E., be appointed liquidator for the purposes of such winding up." Notice is given, that a meeting of the creditors of the company will be held at Old Ford, E., on July 21st.

RURAL WORLD PUBLISHING Co., LTD.—At a meeting of the company held at London on June 13th, the following resolution was passed; and at a subsequent meeting on June 30th, was duly confirmed:—"That the company be wound up voluntarily; and that Mr. James C. Parsons, 7A, Laurence Pountney-hill, London, E.C.4, be appointed liquidator for the purposes of such winding-up."

COMPANY WINDING UP.

RE E. T. BENNETT AND Co., Ltd., Plain and Fancy Card Manufacturers and Bevel Edged Card Gilders, 6, Old Jewry, and late of 3, Dorset-buildings, Salisbury-square, E.C.—A compulsory winding-up order was made against this company in June, 1918, upon a petition by the Board of Trade under section I (7) of the Trading with the Enemy Amendment Act, 1916, following upon a winding-up of the company's business by a controller appointed under the provisions of such Act. The whole of the assets were realised by the controller, who had a balance of £970 6s. 9d. in hand at the date of the winding-np order. Mr. H. Brougham, senior official receiver and

liquidator, reports that the 2,000 £1 shares of the company were held by seven shareholders. A dividend of 8s. 6½d. per share has been paid the whole number, taking £852 1s. 6d., but £734 9s. 11d. of that sum has been paid to the Public Trustee on account of enemy contributories; the costs and fees absorbed £115 11s. 7d., and there remains a balance of £2 13s. 6d. in hand. The senior official receiver and liquidator will shortly apply to the Board of Trade for his release from office.

Gazette.

A WORD OF CAUTION.

(In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an aimost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case astisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership between William Cuthbert Bayliss and James Bayliss, carrying on business as tobacconists, stationers, newsagents and fancy goods dealers, at St. John's-street, Ashbourne, Derbyshire, under the style of "Bayliss Brothers," has been dissolved as from April 8th, 1919, James Bayliss retiring from the firm. All debts due to and owing by the late firm will be received and paid by William Cuthbert Bayliss, who will continue to carry on the business.

THE BANKRUPTCY ACT, 1914. APPLICATION FOR DEBTOR'S DISCHARGE.

Lindsey, George, printer, lately a director of Messrs. Lindsey Brothers (London), Ltd., who carried on business at 44-46, Scrutton-street, London, E.C. To be heard at the court at Edmonton, on September 23rd, at 10.30 a.m.

TENDERS WANTED.

Government Printing.

TENDERS are invited by the Controller of H.M. Stationery Office for a four-year Printing Contract (Group 170—Post Office Specified Forms, Books, etc.), deliveries being made to H.M. Stationery Office, Manchester. Section A (printing only) will absorb approximately 1,100 reams of quadruple paper in various sizes; and Section B (printing, ruling, perforating, etc.), approximately 600 reams. The paper will be supplied by H.M. Stationery Office, Manchester. Each Section in its entirety may be tendered for.

Forms of tender, due not later than WEDNESDAY 23RD JULY, are obtainable on application to the Superintendent, H.M. Stationery Office, 37, Peter Street, Manchester, where specimens of the work may be inspected. Similar facilities will also be given at the Printing Branches of H.M. Stationery Office, Westminster, Edinburgh and Cardiff; and at the Head Post Offices at Birmingham, Bradford, Bristol. Chester, Leeds, Leicester, Liverpool, Newcastleon-Tyne and Nottingham.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STA-TIONER," 58, SHOE LANE, LONDON, E.C.4.

BRITISH & COLONIAL PRINTER & STATIONER

Some Paper Topics.

Lingering hopes in some quarters that paper prices would fall to a still lower level than that which has prevailed for several weeks may now be definitely abandoned. Shorter hours, increased pay, better conditions and no contra in the shape of increased output or cheaper material will effectively set the seal on the cost of production. There are only two factors which we can look to for a restraining influence upon prices, the one being competition and the other output. It will be a considerable time before competition sufficiently keen to cut prices sets in, in view of the great demand which will exist for paper, not only in this country, but in all parts of the world. We are not the only nation keen on reconstruction and develop-The movement may be slower, but it will assuredly be more extensive and vigorous in its ultimate stages in the newer countries of the world, chief among which will figure the British colonies and dependencies. Paper figures very prominently in every scheme of intensive development, and, judged on this basis, there will shortly arise and continue a vast colonial demand for paper. It will be more than strange if the bulk of the business does not come the way of the Old Country, despite our increased cost of production. Hence our reason for assuming that competition at home will not influence price for a long time ahead.

It may be argued that September is the month which will mark the demise of the existing Board of Trade regulations for paper import, and that the direct consequence will be a flood of cheap foreign-made paper on the English market. If everything went according to plan, such might be the case; but our own feeling is that September is coming quicker than was expected, when many official promises and statements were made. The regulations were framed to meet a temporary emergency — that is how the situation was explained—and it is logical to assume that until the emergency has passed, the regulations will remain in force. The temporary emergency might very well undergo a transition from which it would emerge as a permanent necessity. If it was not difficult to prove the need for protection of our paper mills in April or May, it will be no more difficult to prove the same necessity in September which is only a few weeks ahead. So, if this reasoning prove correct, there is not much ground to support those who look to foreign paper to solve the problem of competition and the cheap price.

The English paper mills will concern themselves more closely with the matter of output. It is often claimed that shorter hours do not of necessity spell a reduced output; in fact, our most prominent economists teach that within certain limits the improved conditions may lead to increased output. From practical experience we are beginning to feel sure that unless every reduction in hours is made to correspond with an improved organisation and equipment, decreased output follows in equal ratio to the reduction in time worked. We have not a word to say against short working time, which has for long enough been a much needed reform. But the question that vitally concerns everybody in the industry is: What is the limit of labour hours that can be adopted consistently with the safety of the trade? Below a certain limit the cost of production can become so high as to suppress demand or drive it into other channels. the workers this means unemployment and stunted development of a vital industry. The limit should be fixed on cold calculation by men from every side thoroughly conversant with every aspect of paper production and conditions of labour. Output is the thing that matters next to the welfare of the human element, and as a thing of such vital importance it does not appear to have received the thought and consideration that it merits from both sides of the industry.

This is exactly the type of topic fit for consideration and permanent study at the meetings of a joint industrial council. The problems of mill organisation and equipment should be in the hands of a subcommittee empowered to collect data and instal scientific system in every mill. As an instance of such a necessity, how many mills are there in the country that would instantly be able to accede to a request for data relating to hourly cost and production of each grade of paper made, power consumption and variation on types of machinery, calorific value and variations of coal used, etc.. etc.?

H. A. M.

Paper Needed in France.

Consul-General George A. Bucklin writes from Bordeaux:—

There is a need of paper in France, little having been imported or manufactured during the war, and a requisition being also placed upon paper by the French Government during that time. This is the news sent by the American Consul-General at Bordeaux, Mr. G. A. Bucklin. Before the war a considerable amount of paper was imported from Germany, some from Italy, and a lesser quantity from England. Paper was likewise manufactured locally, but the industry has been largely suspended, many factories not yet having resumed operations. There is, however, a certain reserve stock of paper on hand. Prices have gone down lately, and are likely to continue to do so as this supply is liberated. Prices of coloured paper will diminish more slowly, since it is scarcer, it having been formerly manufactured with German dyes.

THE fellow who says his town doesn't offer him anything is usually not offering his town anything.

Alleged Delects in British Paper.

Why the British Tabulating Machine Co. has to go to America.

In a recent issue, a reference was made to a remark of the chairman of the British Tabulating Machine Co., Ltd., who stated that he had been unable to find a British papermaker who could or would make the little seven-inch cards, or, rather, the paper required for them, which are used in the tabulating machines turned out by the com-This statement has aroused some attention among British papermakers and at least one firm claims to be able to manufacture paper suitable for the purpose.

In order to find out what were the particular requirements of the paper used in the machines, a representative of the British and Colonial Printer and Stationer called upon Mr. C. A. Edward Greene, the general manager of the British Tabulating Machine Co., at 2, Norfolk-street, Strand, W.C., where he was shown not only the cards which are used, but the ingenious machines for which they

are made.

There appear to be several reasons why the paper used is imported from America. It is not only a question of price, but of character. British papermakers have, it would seem, endeavoured in times past to turn out a paper which would suit the purposes of the British Tabulating Machine Co. Some 20 or 30 samples from British mills have been considered during the past twelve years or so, but not one of them, we understand, was found to meet requirements. In the first place, our representative was informed, there was no body in the English article. The resulting card was flabby, contained specks of carbon or metal, it curled badly, gave off too much fluff, and its thickness varied. In addition to all these defects, the British paper was at least 10 per cent. dearer than the American, even including freight, etc., and, furthermore, the number of cards produced per lb. of paper is much less in the case of the English paper than the American.

It has been suggested that the fault in the British paper could be overcome by the method of cutting, but the question of cutting does not enter into the matter, we under-

stand.

"There is some body in these cards," observed the representative of the Tabulating Machine Co., as he handled a specimen of the American cards which are in use by the firm. He added that the British manufacturer had been unable to obtain the same result. Again, the American card is not subject to so much variation owing to atmospheric conditions as the English.

Of course, it is quite evident that the quality of the card used on the tabulating machines is a very important factor and may mean even the success or failure of the ma chine. The cards are ten-thousandth of an

inch in thickness and have to pass swiftly through an aperture so that any curling or crumpling or anything that would interfere with the working of the machine would be a vital objection. The sorting machine, for instance, operates at the rate of 250 cards per minute.

Our representative was anxious to find out why it was British manufacturers could not or would not produce a card similar to that turned out on the other side of the Atlantic. The representative of the Tabulating Machine Co. seemed to think it was a question of pulp. At first it was suggested that this material came from Sweden, and then again it was thought that perhaps it was a product of

the United States.

Our representative mentioned that British paper had been used in tabulating machines at the Stationery Office at Manchester with satisfactory results, but these machines, we were informed, were not those of the British Tabulating Machine Co., which are operated electrically and where a metallic speck in the card would set up electrical control, and interfere with the proper working of the machine.

Mr. Greene assures us that the British Tabulating Machine Co. has no desire to go outside the country for their paper if they could get it in this country of the necessary quality and at a competitive price. Mr. Greene observed, however, that there was no inducement for a British papermaker to put himself out in a matter of this kind when he could find a market for all the paper he could produce at a more profitable figure.

"If you can find anyone in this country who will make the paper for us," he said, "we shall be very glad. We should much prefer to get it within a radius of 300 miles instead of having to transport it 5,000 miles."

Mr. Greene added that the requirements of his company are growing enormously, and papermakers are beginning to sit up and take The annual consumption of this class of paper in the United Kingdom is something over 150 tons a year, and is growing daily with the development of costling systems. On the other hand, in the United States the consumption is very much more, and perhaps that may be the reason why the American papermaker is induced to pay particular attention to the production of this class of paper, and is able to turn it out at a price which is even said to be half of that quoted for the British make.

THE July number of Pearson's Magazine is full of good reading. Among the contributors being Lady Congreve, W. Pett Ridge, Jessie Pope, H. Mortimer Batten, George Robey and Georgette Leblanc-Maeterlinck. The number contains some outstanding stories and much variety of subject.

"I MET a real optimist the other day," said a doctor; "a fellow to whom I certainly doff my hat. He had lost a leg in a railway accident, and when they picked him up the first thing he said was, 'Thank God, it was the leg with the rheumatism."

An Artistic Diploma.

Messrs. Raphael Tuck and Sons, Ltd., have designed and produced for the Soldiers and Sailor's Families' Association a beautiful diploma which will be presented to those workers who have given their services on behalf of the Association during the war. Her

Majesty, Queen Alexandra, who has signed the diploma, has expressed herself as extremely gratified with the way that the reproduction has been carried out by Messrs. Tuck. By the courtesy of that firm we are enabled to print a small fac simile of the certificate, which in its large size is a striking production.

Watching British Paper Market.

As the outcome of a conference in Ottawa between the pulp and paper interests and Mr. Lloyd Harris, the Canadian Trade Commissioner in London, who was on a visit to Ottawa, the Canadian Pulp and Paper Association select Mr. A. L. Dawe to come to London for the purpose of keeping in touch with the market here as well as with the Canadian Trade Commissioner.

Mr. Harris strongly recommends such action as one of the best methods of the Canadian pulp and paper trade deriving the benefits which might be obtainable through closer contact with and understanding of the conditions in this country.

One of the chief obstacles to the Canadian export business has been the problem of securing steamship accommodation. Opportunities to obtain space have been lost, it is pointed out, through lack of machinery to grasp them when they arose and thus chances of making shipments to advantge have been lost. The matter of high rates is also an obstacle, but it is believed by the trade that these will come down eventually.

One object of the representative appointed to come to London will be to watch the freight situation and immediately communicate the facts to Ottawa. These could then be at once laid before the pulp and paper trade and prompt action secured. The general feeling in the trade is that the shipments of pulp and paper to the United Kingdom could be largely increased with the provision of the machinery suggested.

Anglo-Norwegian Trade.

Paper and Box Board,

Owing to the import restrictions, the business in paper and box boards between this country and Scandinavia has become more slack than ever, and in consequence of this several of the Scandinavian mills have closed down, and those who manage to keep their machines running are greatly reducing their output. In addition, says the Anglo-Norwegian Trade Journal, there seems no likelihood of any immediate improvement, and the summer months will no doubt be very quiet as regards trade in foreign papers and boards. The Scandinavian mills have been reducing their prices to the lowest possible margin in order to attract business, and the following are the present ruling figures. For Kraft in M.G. and unglazed qualities, Norwegian mills are asking from £45 to £47 per ton of 2,240 lbs. net, f.o.b., while for M.G. pure sulphite in substance 20 by 30, 7 lbs., 480's, prices have been quoted as low as £53 per ton net, f.o.b. Gothenburg. There has been a fair demand for various lines of box boards, such as leather boards, folding boards, white wood boards and straw boards. the latter, large orders have been placed with Dutch mills at prices varying from £12 to £13 per ton, f.o.b., less the usual cash discount. Machine made white wood pulp boards, in general thicknesses, have been purchased from Norwegian mills at from £24 to £25 per ton of 1.000 kilos net, f.o.b. There £25 per ton of 1,000 kilos net, f.o.b. has been some demand for folding boards. single and double sulphite lined in fairly heavy substances up to 180's, based on size 22 by 32 inches, and we understand that a price of £28 per ton of 1,000 kilos has been obtained, and also a slight increase in this price for thinner substances down to 400 sheets per hundredweight.

East London Master Printers.

Membership and Prices discussed at the Stratford Meeting.

In the absence of the president, Mr. E. R. Alexander, Councillor Ward presided on Tuesday, last week, at a meeting of the East and North-East London Master Printers' Association, held at the Swan Hotel, Stratford.

Mr. J. Johnson, organiser from headquarters, presented what the chairman described as a satisfactory report of the "recruiting" campaign which he had pursued in the district.

Arising out of this, there ensued a discussion on the Association rule which debarred from membership persons who called themselves printers, but who had no plant. It was suggested that these people, who obtained orders for printing and got the legitimate printer to do the work, were the very people responsible for cutting prices.

for cutting prices.

Mr. Buck asked if it would not be better that such people should be brought into the Association and made amenable to its rules.

Mr. Sparks suggested that these commission agents procured work which might not otherwise come along, whereas the man who did his own printing in the evening and who was eligible for membership, because he had some kind of plant, was a hindrance to the trade.

Mr. Gillard agreed that it would be better to have a commission agent inside the Association, because he would then be more likely to start a plant of his own.

Mr. Ball pointed out that an agent rather maintained prices, seeing that he would be obliged to add his own profit to that of the printer.

Mr. Johnson remarked that the complaint was that these agents set one printer against another.

Mr. Palfreyman pointed out that if agents were admitted to membership, it would open

the way to travellers, who, as Mr. Johnson observed, would get information of immense value to themselves.

Mr. Johnson undertook to go into the matter at headquarters.

The Small Printer.

Mr. Ridler mentioned the sub-district meeting of master printers at East Ham, which was attended by eight out of the thirteen master printers and as a result of which they hoped to bring several firms into membership. It was felt at the meeting that there ought to be a local committee to deal with purely local matters, such as corporation contracts, in which master printers of the district thought they ought to have a share. They also felt that they needed better representation at headquarters, because it appeared to some as though the master printers in the City controlled the Association.

Mr. Sparks said there was no ground for such a feeling as this. For his part in attending meetings in the City, the views of the small men were carefully and seriously considered. In fact, the authorities were rather inclined, he felt, to overestimate the influence of the small printer. He thought, however, that the Central Association might hold its meetings at a time more convenient for the district printers.

Therepresentative of the British and Colonial Printer and Stationer mentioned that at the meeting of the West and North-West London Association on the previous evening it was intimated that local associations would have larger representation on the new council proposed by the scheme of re-organisation, the representation in the case of the North-West

Association being some three or four, as against one, the idea of the new alliance scheme being to provide greater local autonomy.

A resolution, moved by Mr. Ridler and seconded by Mr. Buck, was carried, urging that the time had arrived when the small master printer should have greater represen-

tation on the council.

During the evening the chairman mentioned that Mr. J. W. Flet her, of the Fleet Printing Works, Leytonstone, was obliged to give up his business on account of his health, and was to proceed on a voyage to South Africa, where he would settle, if the climate suited his condition.

Councillor Ward thought it would be a nice thing if they sent Mr. Fletcher a letter

wishing him God-speed.

Seconded by Mr. Gillard, the resolution was cordially carried.

The Minimum Price List.

Mr. Ridler recorded that the local meeting, to which he had previously referred, proposed to draw up a local price list for ordinary jobing work, it being held that the proposed list now before the trade was of no use to outlying districts.

The chairman remarked that the list from headquarters as a whole was not bad.

Mr. Gillard suggested that if 24, Holborn, sent out a price list for the whole of London, it might be too high for a certain district.

Mr. Tomkin held that there was no difference in conditions between the extreme West

of London and the East.

The chairman said it was easy to get into people's heads the idea of low prices, and printers had suffered from that fact in the cast

The committee to consider the minimum price list was added to, and a meeting arranged for the following week, recommendations to be sent to the Organisation

Mention was made of an engineering firm which had been engaged on munition work during the war, and which had now launched out as general printers, a fact upon which local members of the craft had expressed their opinions strongly.

The chairman thought the best thing was to

get the firm into the Association.

Mr. Gillard remarked that evidently somebody thought there was money to be made out of printing, which was generally regarded as an unprofitable business.

WASTE papers continue to depreciate in value and very little demand is being made for the common grade. Concurrently, the cost of handling is increasing, and altogether the waste stock merchants are just now experiencing the reverse side of things after the boom created by the conditions of war. The latest quotation we have to hand, dated July 11th, offers 12s. per cwt. for white shavings, 5s. per cwt. for second shavings, and 1s. per cwt. for common waste.

Fry's Metal Foundry Outing.

The staff of Fry's Metal Foundry indulged in their first annual outing on July 12th. It had been arranged to have a country ramble, but owing to the inclement weather this was cancelled and a scratch arrangement was made to have a dinner and concert at the King's Oak Hotel, High Beach. The party arrived in good time to partake of a substantial dinner hastily prepared by "mine host," and this was much enjoyed. The loyal toast and this was much enjoyed. having been duly observed, Mr. A. F. Bell (London representative) proposed the toast of "The Firm," coupling with it the name of Mr. John Fry. In a few well chosen words he paid a high tribute to the kindness and thoughtful consideration that gentleman had always shown for the welfare of the staff, and regretted the unavoidable absence of his chief owing to a pressing engagement. speaker knew his hearers needed no assurance that Mr. Fry was with them in spirit if not in the body. The toast was enthusiastically reand accorded musical honours. ceived. Several other toasts followed, including "Our Clients," proposed by Mr. L. Sarjeant and seconded by Mr. P. M. Parish. Mr. Sarjeant, in a happy little speech, eulogised the staff in their efforts at all times to give service to the printer. He said they often heard the expression "our rights," well Fry's Metal Foundry had "rights."—the right to serve, and he was proud of the fact that the staff had loyally kept in view the needs of those who supported the firm. During the evening songs were tastefully rendered by the Misses A. F. Bowbrick, D. M. Melzer and N. Honey, Mr. Sar-jeant ably presiding at the piano. The projeant ably presiding at the piano. ceedings terminated with a hearty vote of thanks to Mr. A. F. Bell, proposed by Mr. A. H. Everitt (London representative for antifriction metals), for making the arrangements, and the singing of "Auld Lang Syne."

Printers' and their Paper Supplies.

What Canada is Doing,

The Canadian Pulp and Paper Association are showing considerable activity in bringing before the notice of paper consumers in the United Kingdom the resources of Dominion

representing any individual producer, his mission being entirely educative. Mr. Dawe is associated with the Canadian Trade Mission in London, I, Regent-street, London, S.W.I.

SW.I.

Mr. Dawe commenced his career in the paper business with Messrs. Edward Lloyd, Ltd. He was engaged in the export department with Mr. W. J. Whyte, whom Mr. Dawe is glad to acknowledge as a personal friend. It was for the firm of Messrs. Lloyd's that

MR. A. L. DAWE.

mills. Mr. A. L. Dawe, the 'Association's secretary, is now in London, with the object of giving information to interested parties concerning the supplies of Canadian paper. Mr. Dawe is not a selling agent, nor is he

Mr. Dawe first went to Canada, afterwards joining one of the paper firms in the Dominion. Two years ago Mr. Dawe took over the secretaryship of the Canadian Pulp and Paper Association.

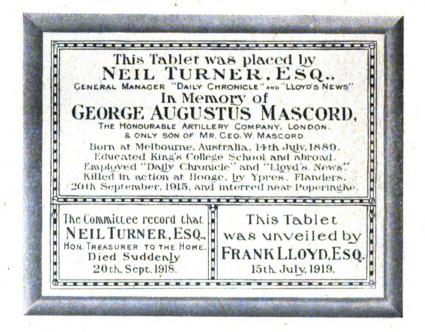

Lloyd Memorial Home.

Tablet Unveiled to a War Hero by Mr. Frank Lloyd.

On July 15th, a party, including several managers of the United Newspapers. (1918). Ltd., accompanied Mr. Frank Lloyd to Deal and unveiled a tablet in memory of a gallant employee (George A. Mascord), who fell in the battle of Hooge, September 20th, 1915. He was the son of Mr. George W. Mascord, the

in an annexe to the Home. From this fact, and the crowded state of the dining-room, Mr. Frank Lloyd had ocular demonstration that the present accommodation was inadequate. It justified their appeal to the benevolent public to celebrate Peace Day by raising the £6,000 still required for the building of a new

respected works manager of the company. The wording of the tablet was one of the last acts the late Mr. Neil Turner did before leaving his office on the anniversary of the death of Mr. Mascord's son, and which day ended so tragically in the sudden death of Mr. Neil Turner as he was about to entrain for Scotland. Owing to this sad and unforeseen circumstance, it was peculiarly appropriate that both memories should be linked together on the same tablet, which stated that Mr. Frank Lloyd, their late chief, had unveiled it.

After luncheon, the party were conducted to a bedroom in which all the eight beds bore inscriptions identified with the name and work of the Lloyd family, and were waiting to be unveiled.

The secretary, Mr. H. F. Parker, said that the 92 residents at present in the Home were grateful to Mr. Frank Lloyd for his handsome donation of £4,000 towards the erection of a new wing. There were 15 patients sleeping

wing that would make it one of the largest convalescent homes on the south-east coast.

Mr. T. A. Newnham, the chairman of the institution, on behalf of the committee and subscribers, thanked Mr. Lloyd for his kindness and interest in the work which was do ing so much good for the weary and sick workers of the printing trades. On behalf of the staff and the patients he tendered grateful # hanks to Mr. Frank Lloyd for his presence and kindness. He would also like to associate with the vote of thanks the name of Mr. Lloyd, who, as one of their trustees, had fre quently befriended them. The speaker re called with pleasure the fact that so many me mbers of the Lloyd family had been identified with So far the voluntary work of his committee. back as 1896, the late Mr. Edward Lloy d was an earnest supporter of their cause; the e late Mr. Herbert Lloyd also took an excep tional interest in their work, and, together with the late Mr. Arthur Lloyd, had been one of their

greatest benefactors. Mr. Harry Lloyd was, at the present time, one of their trustees, and a very liberal contributor to the fund.

Mr. Mabey, as one of the trustees, said he should like to add his tribute of thanks. Mr. Frank Lloyd had always been their friend. The present building could not have been opened in 1911 had it not been for his timely aid. His practical advice as to how accounts should be kept had proved of immense value. It was no exaggeration of fact to say that no institution could show a better or a more satisfactory statement of accounts than his committee at the present moment. He expressed the hope that Mr. Lloyd would again do them the honour of visiting Deal at the opening of the new wing, which building could not open so soon if history had not repeated itself by Mr. Frank Lloyd once more stepping into the breach with his splendid contribution.

The four beds named by Mr. J. J. Jagelman's collections from the contributors and staff of the United Newspapers, Ltd., together with one over the Daily Chronicle bed, were unveiled by Mr. Frank Lloyd.

In an adjacent room, Mr. W. E. Thomas and Mr. Bruce Hardie unveiled the tablets over the Ladies' Field and Tit-Bits beds respec-

tively.

The following gentlemen formed Mr. Frank Lloyd's party:—Messrs. Herbert Clarke, J. H. Parham, Chas. Fisher, Chadwell, Farley, J. J. Jagelman, Daniels, Hounslow, Kirby, Richardson, W. F. Fisher, G. Garlin, Isaacs, Collins. Glen Steel, Baldock and T. Abraham. The committee were represented by Messrs. Newnham (chairman), J. Mabey (trustee), W. A. Tucker, A. R. Stuart, J. W. Green and Inspector Sanders. The remaining members of the party were Messrs. W. E. Thomas, W. Reddeford, Bruce Hardie and F. W. Brinner.

Photo by H. James Meek, Deal.

Representatives from United Newspapers Ltd. and officials of the Home.

Mr. Frank Lloyd, in unveiling the tablet, said he had watched the growth of the Home from the beginning and had been struck by the efficient manner in which it had been conducted and the good work that it did. The committee were to be congratulated upon having an excellent matron and an indefatigable secretary. He trusted success would attend them in their new enterprise. He was glad to see Mrs. Neil Turner was an interested spectator of this ceremony.

Mr. J. J. Jagelman unveiled the tablet of the forming a similar function for the Harry Lloyd bed, named by the committee in recog-

Frank Lloyd bed, Mr. T. A. Newnham pernition of that gentleman's services to the Home.

Many thanks are due to the steward, Mr. J. Abrahams, for the admirable way he carried out the work.

£500 DAMAGES.—In the King's Bench Division a dispute between the Amalgamated Musicians' Union and the Performing Rights Society was mentioned last week before the Lord Chief Justice and a special jury. Mr. J. B. Williams, general secretary of the union, brought a libel action against Mr. John Woodhouse, controller of the society, and Mr. Francis Caine, printer and publisher of the Daily Telegraph. Judgment was entered for plaintiff, who was awarded £500 damages.

WHEN in doubt, mind your own business.

DIVIDENDS AND REPORTS.

C. ARTHUR PEARSON, LTD.—The report of C. Arthur Pearson, Ltd., for the year ended May 31st, 1919, shows a balance of £40,474; add amount brought forward, £36,518, making £76,992. The directors propose to pay a dividend at the rate of 10 per cent. on the ordinary shares, £17,500; to carry to reserve account £5,000; to carry forward £40,742.

NEW COMPANIES.

J. C. BOTTOMLEY AND EMERSON, LTD.—Registered with a capital of £30,000, in £1 shares, to carry on the business of manufacturers of chemicals, coal tar, dye-stuffs, intermediates and products, tar distillers, manufacturers of and dealers in paints, pigments, colours, varnishes, oils and printing and other inks, etc. Permanent directors, J. F. Bottomley and L. Emerson. Private company. Registered office, Brookfoot Works, Brighouse.

JOSEPH GODSALL, LTD.—Registered with a capital of £3,000, in £1 shares, to acquire the business carried on by J. Godsall, and to carry on the business of printers, lithographers, publishers, engravers, art journalist, newspaper and magazine proprietors, etc. The subscribers (each with one share) are J. Godsall and C. Patrick. Private company. The subscribers are to appoint the first directors Registered office, 46, Hall-street, Birmingham

ECLIPSE PRESS SERVICE, LTD.—Registered with a capital of £5,000, in £1 shares, to carry on the business of booksellers, newspaper owners and publishers, news and advertising agents, printers, stationers, etc. The subscribers (each with one share) are W. Hutchinson and R. H. King. Private company. The first directors are W. Hutchinson and R. H. King. Registered office, 69, Ludgate-hill, E.C.4.

W. J. WILLISON, LTD.—Registered with a capital of £30,000, in £1 shares (1,500 pref.), to take over the business of a printer and stationer recently carried on by the late W. J. Willison at Smithfield Printing Works, Smithfield street, Birmingham. The subscribers are E. Thompson, J. F. Parsons and M. W. Aston. Private company. First directors: E. Thompson. J. F. Parsons and M. W. Aston. Registered office: 24, Smithfield-street, Birmingham.

ADVERTISING AND PUBLICITY, LTD.—Registered with a capital of £2,000, in £1 shares, to carry on the business of general advertising and publicity agents, and contractors, booksellers, newsagents, etc., and to adopt an agreement with G. F. Laurie and A. Phillips. The subscribers are G. F. Laurie and A. Phillips. Private company. Permanent directors: G. F. Laurie and A. Phillips.

ALLIANCE Box Co., LTD.—Registered with a capital of £100,000, in £1 shares, to acquire all the shares in the capital of a company of the same name, now in liquidation, and to carry on the business of manufacturers of and dealers in boxes, containers, cases, packages, trunks, envelopes, and other receptacles made of cardboard, millboard, pressed cane, pulpboard, leatherboard, papier maché, wood, tin, aluminium or other material, etc. Private company. The first directors are R. T. Fairclough, F. Maguire, P. Maguire, M. Higginbottom, E. Fairclough, R. M. Stothert, H. Hatton and J. G. Fletcher.

VITTY AND SEABORNE, LTD. — Registered with a capital of £3,000, in £1 shares, to adopt agreements (1) between C. P. Vitty and H. G. Seaborne of the one part, and A. S. Bull of the other part, and (2) between Bull, Austin and Co., Ltd., of the one part, and A. S. Bull of the other part, and to carry on the business of process engravers in line, half-tone and colour, wood and gravure engravers, printers photo-lithographers, photographers, enlargers, etc. The subscribers (each with one share) are C. P. Vitty and H. G. Seaborne. Private company. The first directors are C. P. Vitty, H. G. Seaborne, and A. S. Bull. Registered office, 3, Crane-court, Fleet-street, F. C.

A. C. COX AND Co., LTD. — Registered with a capital of £10,000, in £1 shares, as general merchants, shippers, ironfounders, etc., envelope makers, stationers, motor car manufacturers and factors, etc. The subscribers (each with one share) are H. A. Cobden Cox and P. S. Edwards. Private company. The subscribers are to appoint the first directors. Office, 31, Queen Victoria-street, E.C.4.

Scottish Cinema Publishing Co., Ltd.—Registered in Edinburgh with a capital of £5,000, in £1 shares, to carry on the business of proprietors, publishers and printers of newspapers, journals, magazines, periodicals. etc. The subscribers are J. G. McCallum. W. L. D. Yule and D. Mclean. Private company. The first directors are not named. Registered office, 8, Bank-street, Edinburgh.

BRITISH & COLONIAL

STAR PAPER TUBE \ Co., LTD.—Registered with a capital of £5,000, in £1 shares, to enter into an agreement with J. Nisbet, of Ashton-under-Lyne, and Mrs. E. A. Atack, and to carry on the business of machine makers and paper tube manufacturers carried on by the late W. Nisbet, at Oldham and Ashton-under-Lyne. The subscribers are J. Greenhalgh, J. Nisbet and E. Greenhalgh. Private company. Directors, J. Greenhalgh, J. Nisbet and E. Greenhalgh.

PERLESS CARBON RIBBON Co., LTD.—Registered with a capital of £2,500, in £1 shares, to acquire the sole agency for the sale in the United Kingdom of the "Peerless" brand of typewriter carbons and ribbons manufactured by the Peerless Carbon and Ribbon Manufacturing Co., Ltd., of Toronto, and to adopt an agreement with H. C. Thompson. The subscribers are H. C. Thompson and F. L. Franklin. Private company. Permanent managing director, H. C. Thompson. Registered o ffice, 39-40, Shoe-lane, E.C.4.

GEO. C. MACKAY, LTD. — Registered in Edinburgh with a capital of £20,000, in £1 shares, to carry on the business of commercial, legal and general printers, lithographers, bookbinders, paper rulers, die stampers and general stationers, etc. The subscribers are G. C. Mackay, J. D. Mackay, W. T. Mackay and G. St. C. Mackay. Private company. The first directors are G. C. Mackay, J. D. Mackay, W. T. Mackay and G. St. Clair Mackay. Registered office, 45, Bernard-street, Leith.

DAVID MACDONALD, LTD.—Registered in Edinburgh, with a capital of £3,000, in 2,500 cum. pref. and 500 ordinary shares of £1 each, as printers, lithographers and stationers, etc. The subscribers are D. Macdonald and W. Taylor. Private company. The first directors are D. Macdonald, W. Taylor, J. M. Pritsell and W. Marchbank. Registered office, 74, Hanover-street, Edinburgh.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

HEREFORDSHIRE PRESS AND PRINTING CO., LTB.—Debenture for £1,000, registered June 16th, 1919, charged on the company's undertaking and property, present and future including uncalled capital. Holder, Sir H. Webb. Also mortgage for same amount by way of collateral security to said debenture charged on Dean Forest Mercury Offices, Cinderford. Holder as above.

Sun Engraving Co., Ltd.—Issue registered June 13th, 1919, of £10,000 second debentures, balance of series of £30,000 (increased from £20,000).

Widd, Ltd.—Charge on land and buildings in Bradford, by way of conveyance of equity registered June 13th, 1919, to secure £1,500. Holders, Mrs. A. Townsfey and others.

COMPANY NOTICES, etc.

advance Press (Blackburn), Ltd.—At a meeting of the company held at Blackburn, on July 9th, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and that Mr. William Hare, 16, Richmond-terrace, Blackburn, be appointed liquidator for the purpose of such winding-up." A meeting of the creditors of the company will be held at the offices of Messrs. Waterworth, Rudd and Hare, 16, Richmond-terrace, Blackburn, on July 24th.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

NOTICE OF INTENDED DIVIDENDS.

Bradley, W. S. (separate estate), 12-14, Fetter-lane, London, E.C., printer and publisher (trading with Arthur Edward Bradley and Chas. Wm. Bradley as C. W. Bradley and Co.). Last day for receiving proofs, August 5th, 1919. Trustee, Fredk. J. Duck, 63, Coleman street, London, E.C.

NOTICE OF DIVIDEND.

Heel, James Horatio, carrying on business as the Spa Printing Co., Llandrindod Wells, printer. First and final dividend of 3s. 10d. in the \pounds will be paid August 5th, 1919, at official receiver's office, 22, Swan-hill, Shrewsbury.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Mansell, Wm. J., Parkdine, Chudleigh-road, Crofton Park, London, bookbinder. Date of order, June 20th, 1919. Discharge suspended for two years; bankrupt to be discharged as from June 20th, 1921.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

Brawn, Wm. J., 120, High Cross-street, Leicester, printer and stationer. Date of order, July 16th, 1919, made on debtor's own petition.

THE day is short, the work great, the workman lazy, the wages high, the master urgeth; up then, and be doing.—Benjamin Franklin.

Current Topics.

Printing Problems.

MASTER printers are very greatly concerned with the outlook for printing. Costs have been going up on every hand, and up to a point the customer has been quite willing to recognise the justice of the prices he has been called upon to pay. But there is a limit to the burden which the customer is willing to bear, and there are signs that he is taking effective steps to relieve himself of it. The time for grumbling has passed, and what the customer is doing now is simply taking his orders elsewhere. The position is illustrated by a letter which Mr. J. A. Strahan writes to the Westminster Gazette. He says: "I recently prepared a new edition of a book of mine. It is a work on English law, which

sells only in England. Last week I received the first batch of proofs, and found to my amazement that they had been printed in Calcutta on paper made in India. Does not this suggest that the high wages of printers and the high profits of the papermakers may in the end prove not very beneficial to them or to their country?" There is a very serious warning in this paragraph of Mr. Strahan's letter. If printing is going abroad that is bound to affect the whole industry, employers and workpeople alike. It concerns not only the craft of printing, but all the kindred trades and distributing agencies associated with it. The position rather reminds one of the goose that laid the golden egg, the rapacity of the owner being his own undoing. In the present case the owner may be the emplayer or the employee or both. It would be well for all who are interested in the printing trade to give heed to the fable.

Printing from Abroad.

Ar the same time that there is a prospect of British printing going abroad, there is also a fear that we are encouraging importation of There is here a foreign printed matter. double dariger. The whole world seems to have got the idea that the British market is a fair one to be shot at by anyone, and with the blockade removed there is every likelihood of printed matter being sent in from every quarter of the globe. Possibly the product of Germany will find its way to these shores through neutral countries. Already, we understand, American firms are circularising publishers in this country, offering to print their books for them. It is, perhaps, an interesting specimen of American cuteness, although it appears to us to be rather over-done in this case. They are making the appeal to British publishers on the ground that they have suffered less through the war than have British printers, and that they are therefore better able to undertake the work. On the face of it, it seems rather extraordinary to make an appeal for business on such grounds as these. But, after all, is not the American gauging the character of the customer quite correctly? People are quite tired of paying high prices, and it is very doubtful whether patriotism will induce them to stick to their home printers if they can get their work done cheaper elsewhere. Human nature, after all. is very fickle, and as a matter of fact, are not printers themselves only too anxious to obtain their raw materials as cheaply as possible? It seems, indeed, that the Government ought to take some definite steps to place the basis

of trading on a sound footing as soon as possible, otherwise the trade of this country will be absolutely ruined, and manufacturers will find even their own market filched from them.

A Curious Anomaly.

IT would be a curious anomaly if while white paper was not allowed to come freely into this country, printed paper had more or less unrestricted access. Master printers are very much concerned about this aspect of the matter, and while they were able-to assist the papermakers to get relief during the period of transition, they are now asking where they themselves stand. Their position is certainly awkward, and in some respects unsatisfactory. There are many individual causes for grievance, and we understand that one firm in London has lost a single order to the value of £2,000, this particular work being produced in Canada and being exported to this country for the first time. We have already mentioned in these columns the loss which has been suffered by a London house in respect of the South American market. This is a growing tendency, which is sufficiently alarming to arouse the attention of the entire trade, and, perhaps, as in the case of the papermakers, the employees and their leaders may be able to render assistance and advice to the employers in a common task of preserving the industry. If printing is going abroad, the result is, of course, not only that the printing trade suffers, but the paper industry and all the allied operations are affected in a like degree. and the burden falls on all engaged in them.

A London Problem.

What seems likely to happen in the printing trade as a whole is already taking place with regard to London itself. This instance illustrates the whole question. We hear that, owing to the higher wages paid in London, work is being driven outside. Consumers of print are out for the cheapest market every time, and as the rates go up in London they send their work into the home counties or elsewhere, because in these areas wages are not so high, and, the cost of production being lower, the consumer is able to get what he regards as better prices.

An Urgent Problem.

THE present position of the printing industry presents a problem which requires immediate attention. It will need the united efforts of all concerned to save printing from

disaster. The outlook is decidedly gloomy from every point of view. There is still a shortage of labour, and this limits what is so very necessary—concentration on output. There seems to be an impression, perhaps a mistaken one, that the influx of new blood into the trade should not be encouraged. This would be a particularly regrettable state of things, when we hear that many machines are idle for want of skilled workers, which means, of course, that subsidiary departments are not employed to the extent that they ought to be. What we have been told for months past is that there must be an increased output, not only to meet the immediate costs of production, but to help the country through the difficulties created by the war. In spite of the better conditions which the employees are working under, there does not appear to be that concentration of effort which is required. Wherever the fault may lie, it needs to be remedied. Perhaps the Industrial Reconstruction Council or its committees will take this matter up. There should be not only increased production in the aggregate, but a larger output per person employed. We doubt if it is so as yet.

Personal

Among the members of the general committee for the promotion of degrees in commerce at the University of London are Lord Burnham (Daily Telegraph), Sir George Riddell, Sir George Rowland Blades (Blades, East and Blades), Sir Herbert Morgan, K.B.E., (W. H. Smith and Son), Mr. Gustave Tuck (Raphael Tuck and Sons, Ltd.), and Sir Ernest Hodder Williams (Hodder and Stoughton).

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, has been spending a short holiday on the Scottish border, and he had a narrow escape of being "held-up" by the railway strike on the G. E. Rly.

THE newly-formed National Federation of Newsagents, Booksellers and Stationers have appointed Mr. Alexander MacLaren, Glasgow, as their general secretary, with headquarters in London.

MR. MACLAREN is a partner in the firm of Messrs. A. MacLaren and Sons, printers, booksellers and stationers, Glasgow.

RUSH-ORDER promises are easily made, but not so readily fulfilled—consequently they often result in strained business relations. Do not make rush promises.

Trade Notes.

A GENERAL strike of printers has been declared at Verviers (Belgium), and the newspapers are not appearing.

In Montevideo a general strike of printers has resulted in the suspension of several newspapers.

THE late Walter Hazell, chairman of Messrs. Hazell, Watson and Viney, Ltd., left estate valued at £90,034 (net personalty £53,068).

WE are obliged to hold over still further Mr. F. A. Perry's address to the West and North-West London Master Printers' Association.

A FOREMAN printer who appropriated tumblers in a public house in London, was bound over. His employer attributed his lapses to "a brain storm." and gave the man a good character for 13 years.

MESSRS. GALE AND POLDEN have issued a fully illustrated official souvenir programme of the Grand Naval Assembly, containing plan of the Fleet, naval programme, description of ships and a short account of the deeds of the British Navy in the Great War.

According to the Daily Herald, amicable negotiations having failed between the executive of the National Unions of Bookbinders and Printing and Paper Workers and Messrs. Be La Rue and Co., for the payment of the union rate of wages and war bonus, a unanimous resolution has been passed by the members empowering the secretaries to take direct action.

£5,000 DAMAGES AGAINST THE "DAILY MAIL."—On Friday, the libel action brought by Lord Newton against the Daily Mail was concluded. When in charge of the Prisoners of-War Department of the Foreign Office, the newspaper, according to Lord Newton, accused him of having sneered at the sufferings of British prisoners in Germany and having been guilty of heartlessness and want of sympathy. The jury awarded £5,000 damages.

NEWSPAPER LIBEL ACTION.—In the Court of Session, Edinburgh, on Thursday last, damages of £500 were awarded to Colonel Gordon, V.C., against the proprietors of the People's Journal, Dundee, for alleged slander contained in that periodical, which stated that the plaintiff ordered the surrender of the Gordon Highlanders during the retreat from Mons. The colonel's claim was £5,000. Several shareholders in the defendant company denied that they were parties to the publication of the article.

THE TITLE OF A NEW MAGAZINE.—The action brought by Messrs. Macdonald and Martion, proprietors of Our Home, against Messrs. George Newnes, Ltd., and Country Life, Ltd., asking for an injunction to restrain the defendants from printing and publishing a magazine under the name Our Homes was

dismissed on Friday by Mr. Justice P. O. Lawrence, who held that the two publications were essentially different, and that the plaintiffs had failed to prove any probability of deception.

A LINOTYPE was recently ordered by the Trinidad Guardian, of Port-of-Spain, Trinidad. When it arrived, packed in export crates and boxes, it was set up by a negro who had never seen a linotype, or ever known there was such a thing. Having set it up, he proceeded to learn to operate it and care for it, and he is now on the job in the capacity of machinist-operator for the Trinidad Guardian.

"OYEZ NOTES," the house journal of the Solicitor's Law Stationery Society, has in the July issue taken on a new form and appears as a well got-up journal of 24 pages, with cover. The matter is of an interesting character and is brightly written, much of it dealing with matters germane to the firm, but all readable and entertaining. As a frontispiece there is a fine portrait of Mr. H. Basil Cahusac, the head of the firm. "Oyez Notes" is an admirable production creditable to all concerned in its get-up.

An addition to the increasing number of house organs issued by printing firms is "Kelwhich emanates from the house of Messrs. J. J. Keliher and Co., Ltd., the Mar-The first issue is very promisshalsea Press. ing and is well produced, its sixteen pages being filled with bright readable matter on topics of interest to the firm's staff, interspersed with verse, and there is a brief sketch of the career of Mr. J. J. Keliher, the head of the firm, illustrated by an excellent portrait. The tinted cover has the title printed as a locked-up form of type, and is very effective. "Kelnotes" is to be published bi-monthly, and is under the editorship of Mr. J. C. Keliher.

Dublin Printing Trade Dispute.

A conference was held at the Mansion House, Dublin, under the presidency of the Lord Mayor, in connection with the printing dispute in Dublin, at which were present representatives from the Dublin Master Printers Association, the Typographical Association, and the Printing and Kindred Trades Alliance. Mr. T. Foran and Mr. W. O'Brien, who were parties to the agreement between the Master Printers and the Typographical Association entered into last October, were also present, on the invitation of the Lord Mayor.

After a discussion, which lasted six hours without a settlement being come to, it was suggested that the matters in dispute be left to arbitration, and that the men should resume work in the meantime, the terms of reference to be settled at a further meeting. This proposal was to be placed before the associations of the employers and workers for ratification.

Italian Paper Market

Example of German Methods.

The following example of how Germany sold paper in Italy before the war is given by the American Consul at Venice: There was a factory in Italy producing a certain quality of wax paper called Pergamino, which was being sold at 160 lire per quintal at the producer's place. A German firm which was manufacturing the same kind of paper, perhaps better, proceeded to sell it, including all costs, delivered at 158 lire per quintal, including 18 lire paid for duty. The Consul adds: A large trade could probably be done in this line if the selling price is kept around the Italian selling price. Information has been received that the Germans intend to make efforts to recapture a considerable amount of the former trade carried on in this district by selling either directly or indirectly from that country at advantageous credit conditions. The Italian paper manufacturers are inactive, as their business has been greatly damaged as a result of the war.

The following advice is given on the same authority to American exporters: "In order to secure a footing in this market it will be highly advisable to maintain a good stock in this country in the forms and widths which are the most used. A branch should, if practicable, be maintained at an important distributing centre, such as Milan, or an exclusive agency should be appointed at Venice or Padua to handle the whole of Venetia, including any newly-occupied territories adjacent to the Province. In order to compete with any such trade rivalry as existed here before the war, it will be necessary to sell merchandise of this kind at a price which includes all costs at a port in Italy. At least, if this is not done the prospective customer should be informed at the time of writing of the prevailing ocean freight rates and insurance costs. On most goods a credit of from 60 to 90 days is customary. One or two per cent. is allowed for cash payment, and this term is taken to include 30 days from invoice date. Some American firms are successful in selling on a stricter basis, but this is possible only by reason of a market superiority of their products or a lack of competition.

It is stated that Norwegians anticipate that the British Government will not find it policy to persist in the paper restrictions for any great length of time, and that they will eventually be removed.

A FAST LINOTYPE OPERATOR.—Don Swine-heart, of the Chicago Tribune, knows a thing or two about operating a linotype. On two successive nights he turned in an average of 12,900 ems per hour for six and eight hours respectively. Mr. Swineheart was setting both agate and minion on each of these runs

BRITISH & COLONIAL PRINTER & STATIONER

Printed Paper Imports.

The Position of Lithographic Work.

Considerable perturbation has been caused, more especially among master printers, by a rumour which suggested that the restrictions with regard to lithographic work, such as the popular coloured toy books and cinema posters, were shortly to be removed. Inquiries, however, seem to indicate that there is no truth in the rumour for the moment. The matter has, however, been under consideration by the Department of the Board of Trade, at 23, Buckingham-gate, but nothing has actually been decided as yet.

The confusion appears to have arisen from the impression that all control, as announced some time ago, was to cease by September 30th, and that licences to import printed matter were effective up to that date. The position at present is that licences are still required for the importation of lithographic work, which are given on the understanding that not more than one-third of the value of the goods imported concerns lithographic

products.

While it is stated that the licence system continues for the moment, eventually it is believed that the embargo will be removed. Should this be the case, the competition with British colour printers and the producers of paper toy books, in which matter, of course, papermakers are as much concerned, perhaps, as printers and lithographers, will at once

It is common knowledge that American goods, both in the shape of toy books and cinema posters are ready to flood the British market at any moment and the books will be sold here at 6d., as against the 1s. for the British product. The prospect of this wholesale competition is viewed with alarm in some quarters. The representative of a large house which is interested in the matter declares that if unrestricted competition was permitted to arise "we shall have to shut up printing."

On the other hand, another authority pointed out that while producers in this country might not be able to compete with the Americans in the matter of price, the quality of our goods was infinitely superior, and this is indeed the case, as may be quickly judged on comparison of the respective

work.

"The American lithographer is nowhere at the present moment," declared this gentleman. He added, however, that it was not always a matter of quality, but of price,

which influenced the purchaser.

The question of price, however, is one with which the British manufacturer is for the moment unable to compete on equal terms. We have it on very good authority that the is, which is charged for the colour toy book already leaves very little profit, and far from it being possible to reduce this figure,

prices are constantly going up. Paper, for instance, will be no cheaper, and, indeed, may be dearer, as is the case with printing, binding, and labour generally.

In America, it is pointed out in contrast, they have not had such difficulties to contend with as have faced the manufacturers and the workers in this country, while they are able to make their paper cheaper by reason of the fact that they have their raw material on the

spot.

Then in the case of cinema posters, the Americans, if they had free entry into this country, would have the great advantage of printing not only for their own but for this market as well. It comes, in fact, to a policy of dumping. It is recalled, in this connection, that our printers cannot send a pennyworth of print into the United States without paying a heavy duty. In fact, we cannot import into our colonies freely. Australia puts on a 25 per cent. duty, and the same, we believe, applies to South Africa.

A New Paper Tester.

A machine for testing the tearing strength or resistance of paper has been invented by

Mr. George S. Witham, Sen.

According to the invention, an instrument is provided for testing sample sheets or strips of paper which is equipped with means for indicating or registering the tearing strength or resistance of paper in accordance with an accepted system for the paper being tested. The apparatus preferably employed comprises a graduated scale beam provided with adjustable weights and carrying a clip or other suitable device for connecting the paper with the beam while the paper is being tested. Preferably the scale beam carries a cup arranged under a graduated tube containing water or other liquid and equipped with a valve to regulate the flow of the liquid from the tube to the cup. In this way the weight of the liquid added to the cup may be read on the tube and thus the weight required to tear the paper may be determined. The scale beam is provided with devices to indicate when the beam is at zero or accurately balanced, and it is also associated with devices to indicate the extent to which the paper is torn during a test. The paper to be tested is carried by a support suitably located with reference to the scale beam and provided with means for holding the paper properly stretched on the support. The inventor preferably also employs a combined cutter and punch for cutting a hole and a slit in the paper in order that a suitable portion of the paper may be provided for connection with the testing device and in order also that when the tearing of the paper by the instrument commences a clean start may be made.

Every dog has his day; but it's not every dog that knows when he's having it.

Strawboards.

THE new regulations are having a steadying effect upon the strawboard market, and inquiries amongst the trade show that prices are settling down on a competitive basis, though we occasionally hear of prices indicating that the profiteer is still about. In a recent publication attention was directed to the extraordinary prices of straw-boards of which the writer had heard, £25 and £35 a ton being stated to have been paid. Why box makers should pay these prices we cannot understand, unless they were trying to evade the regulations by purchasing Dutch strawboards without taking the proper pro-portion of English boards. The market price for Dutch strawboards from stock at that date was about £22 a ton, while for forward delivery £16 10s. a ton was the general quota-To-day's prices are slightly lower, and business is being done from stock about £20 per ton, and forward delivery £15 per ton. The margin between £16 10s. and £35 is so astonishing that either the British boards are not proving a satisfactory substitute for Dutch boards or purchasers were ignorant of the market, and were dealing with the wrong people. The new regulations are considered by the leading authorities of the trade to be very much simpler than those previously issued, and it was expected that they would work perfectly smoothly, but the Board of Trade, having lost the services of their technical advisers, appear to be groping about in darkness, cancelling their decisions almost before they have become generally known. Witness the withdrawal of the list of papers for which free licence would be granted. We understand that this list was issued under pressure from the agents for foreign mills, to be rapidly withdrawn when it became known to the Board of Trade that the list included papers which could be manufactured by British mills. Why the Board of Trade did not refer to their technical experts or the Associations of Papermakers and Wholesale Stationers is a puzzle. One of the items on this list was strawboards above 2 lbs., but an inquirer at Buckingham gate was informed that no such concession had been granted.

Irish Strawboards.

Box-making in Ireland, particularly in Belfast, is an important industry, and consequently the necessary raw material is in The Clondalkin mill of the keen demand. Irish Paper Mills Co., Ltd., has given considerable attention to the manufacture of boxboards, and, during the period of the war, in response to the wishes of the Ministry of Munitions, engaged in the production of strawboards, extensive alterations and additions to plant being made for the purpose. We learn that at the present time the mill is turning out over 100 tons of strawboard weekly, and users say that it is better for their requirements than the Dutch article. In order to give the latter article the necessary folding properties, the straw is boiled until it is fairly soft; the Clondalkin board, however, has a thin layer of flexible material in the centre, thus giving scope for the outside of the board to stiffen, which is much appreciated by box makers. At the present time freight is a favourable factor in creating a demand for local strawboard in Ireland. The question of marketing home made strawboards is largely an agricultural one, depending upon the extent of the straw supply and whether it is cheap enough to allow successful competition with foreign manufactured strawboard.

Employees and Costing.

The general value of a costing system and the benefit it is to the employee as well as to the employer are emphasised in the course of an article which Lieutenant C. Latham (Ex-President of the National Union of Clerks contributes to the current issue of The Indus-

trial League Journal.

Costing, he says, is comparatively a late stage in the progress of accountancy which is nevertheless, destined to perform an important function in the industry of the future. It arose from the growth of industry, the application of mechanical power with its consequent division and sub-division of labour. and from the pressure of home and foreign competition. The economy of effort and material conditioned by the war has enormously intensified the application of scientific costing systems, with excellent results. The great value of costing has from this experience become widely recognised, and it is now being seen that the costing accounts are perhaps of more importance in the scheme of industry than the profit and loss account, for whilst the latter merely summarises in bulk the result of past operations, the former gives details from day to day of the course of actual running operations, and shows up the defects of organisation in the results they give.

The greatest enemy of production is waste, the waste of labour, of time, of plant, of energy, and the waste of waste; all diminish productive efficiency. By means of reliable costing data made known to all concerned, the workers could see the relation to the cost and degree of production of themselves, their labour, its extent, and its intensity; could see how efficiency is lost by checks to the "flow of production," such as break-downs, waiting for tools, rejections and rectifications, etc. Uneconomical production, either directly or indirectly, affects the worker as it does the whole community. Generally its effect is against him directly as a worker, in that it hits back on his earnings or his conditions of employment, as well as being indirectly injurious to

him as a consumer.

If, when printing, a difficulty arises regarding INKS—write to us!

We shall be very pleased to answer any enquiries and give expert advice.

We are not only makers of the finest printing inks, but have a staff of experts constantly investigating such subjects as the action of inks on various kinds of paper, the right consistency of inks for different purposes, the use of reducers, driers, etc, difficulties in litho offset work and other new processes, etc.

We have an intimate knowledge of the requirements of printers and make a feature of producing inks for special purposes. Our range of colours and tints for litho, letterpress, offset, photogravure and other inks is unrivalled.

Printing Foreman Charged.

A charge of stealing sums amounting to about £1,000 was preferred by George Pulman and Sons, Ltd, printers, of Thayer street, Manchester-square, London, at the Marylebone Police Court, against Frederick William Badger, 46, the foreman of the company's composing room. Divisional Detective inspector Albert Draper said he saw the prisoner in the presence of Mr. Geo. Pulman, the managing director, and Mr. J. H. J. Hermon, the secretary. Mr. Pulman remarked that the prisoner had confessed. The inspector said he then told the prisoner he understood that among the weekly tickets of men employed in his department, which he was handing week by week to the cashier and drawing pay for, he had been for the past 18 months handing in the names of nine men who were not employed by the firm, and had thereby obtained from the firm about £1,000. The tained from the firm about £1,000. prisoner's reply was, "It is true." A re A remand was granted.

THERE is nothing like being thorough. A Johannesburg compositor has returned his beer to the brewer because the labels on the bottles were printed in England. The South African Typographical Journal is the authority for this statement.

HAPPY the man who loves his work, and loves his work alone; for many a man loves another man's job when he ought to be loving his own.

Printers' Charity Sports.

A Great Day at Herne Hill Signalises Peace Event.

Now that the war is a thing of the past, the Printing and Allied Trades Sports Association has taken up again the annual sports day, which was so attractive a feature before the world was thrown into chaos. The 23rd annual sports, therefore, were held on Saturday at the Herne Hill track. By a piece of good fortune the weather was particularly fine, and there was a large gathering of visitors, who thoroughly enjoyed the varied programme of events. It is no small matter to organise a sports programme of such magnitude, and the large number of officials who conducted the affair with such skill and expedition, prompted by Mr. H. F. Parker, the hon. secretary, are to be congratulated upon the order and regularity with which everything was carried out.

Lady Hulton's Generosity.

Sir Edward Hulton, who is president of the Association for the present year, showed his personal interest in the fixture by attending in person, accompanied by Lady Hulton and Miss and Master Hulton. Her Ladyship was not only interested in the sports, but acted as judge of the lady's race in a charming manner. She was so pleased with the whole affair and the object of the gathering, that she generously undertook to pay for the prizes and the total cost of the expenses connected with the meeting. This announcement when made towards the close of the day by Mr. W. Mould, was greeted with loud cheers.

There was a large number of entries for the faces, and some very exciting finishes took place. Perhaps the most attractive event was the five mile point-to-point cycle race, which developed many exciting moments, while

the final struggle in the tug-of-war between Edward Lloyd, Ltd., A.C., and Kodac, A.C., held a large crowd in suspense while the competitors almost exhausted themselves in their superhuman efforts.

A Spartan-like Hero.

One of the splendid features of the day was the pluck exhibited by the youngest competitor (C. Shipp) in the two-mile championship for the Linotype shield. While the more mature competitors went ahead of him, he kept steadily on round the track, and in spite of being more than a lap behind when the first man finished, he still held on with admirable courage. This display of spartanlike endurance was thoroughly appreciated by the large gathering, and when the youngster completed the two miles he received a well-earned ovation. In recognition of his pluck, Lady Hulton, who attended to distribute the prizes, intimated her intention of awarding the lad a special prize on her own account, while another gentleman present offered a special prize. Cheers again greeted the boy when he was called up during the prize distribution and introduced to Lady Hulton.

London Schools Championships.

The championships of the London Schools' Athletic Associations for the Daily, Graphic Cup and the Daily Telegraph Cup are always most interesting. The boys for these events are specially picked from all the schools comprising the districts of which they bear the names, and are thoroughly trained for the occasion. The districts competing this year were Acton, Battersea, Lewisham, South Lon-

BRITISH & COLONIAL BRINTER & STATIONER

don, Teddington, West London and Willesden respectively. The championship is won on points, the events being 100, 300 and 880 yards scratch races. As only two boys compete at each distance from the Associations, it follows that a great deal of care is necessary to select the two champion boys from a district.

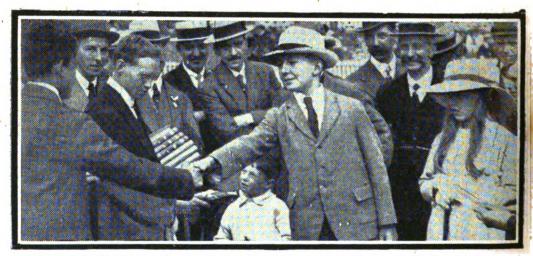

Lady Hulton was quite interested in the championship, and the prettiest incident of the day was the distribution of some of the prizes by Master Hulton and his dainty little sister. As will be seen by the photograph Master Hulton officiated as though born to the occasion and won the general admiration of the sturdy little competitors.

Prize Distribution.

At the conclusion of the sports Lady Hulton met with an enthusiastic reception when free seaside holidays of one week each to the holders of certain lucky numbers, and the holders of the winning tickets should communicate with Mr. H. F. Parker, 8, Albionroad, Wandsworth-road, S.W.4, who will arrange a week's holiday at the Lloyd Memorial (Caxton) Seaside Home for Men and Women, Deal. The lucky numbers are 43, 387, 663, 904, 1,583 and 3,992. The cost of the holiday is being defrayed by Mr. Hugh H. Walker in order to celebrate a victorious peace and to give a fresh start to sport for printing trade charities.

Following the sports, dancing took place on the green, music being provided by the Finsbury National Guard Band, who also enlivened the proceedings during the afternoon.

For the accompanying illustrations we are indebted to the courtesy of the Sunday Herald.

Master Hulton and his sister distribute the prizes to the Juvenile winners.

rising to present the long and valuable assortment of prizes on the table before her. Following which Mr. W. Mould, on behalf of the Sports Committee, thanked her ladyship for her kindness and also the president for the great sacrifice he had made in attending the meeting.

Sir Edward Hulton replying on behalf of her ladyship and himself, said it was a pleasure to come there and encourage the officials in the good work in which they were engaged in providing sport for the cause of the charities connected with the printing trades. He understood it was a record attendance and he could see by the huge crowd of happy faces before him that they had had an enjoyable time. He congratulated the committee on the excellent arrangements and the magnificent success of the gathering. This was, he said, entirely due to the efficiency of the officials, and it must be very gratifying to them, as to all present, that the result would so benefit the suffering members of the printing trades.

A feature of the programme is a gift of six

The results of the various events are as follows:—

100 Yards Open Handicap.—1st prize (case of fish knives and forks), H. M. Abrahams, L.A.C.; 2nd (basket of cutlery), G. Grant, Metrogas; 3rd (tea pot), B. W. James, Q.P.H.

100 Yards Scratch Boys' Race.—Ist (for Daily Graphic challenge cup and Daily Telegraph cup). 1st (Daily Graphic challenge cup and watch in case), V. Cooper, Willesden; 2nd (Daily Telegraph cup and leather wallet), F. Smith, South London; 3rd, E. Ranson, Battersea.

Half-mile Open Cycle Handicap. — 1st (dinner gong), W. A. Ormston, Polytechnic C.C. (scratch); 2nd (sugar and cream jug in stand), C. A. Alden, Kentish Wheelers; 3rd (case of carvers), D. H. Genner, Kentish Wheelers.

80 Yards Veterans' Handicap.—Ist (case of carvers), E. Champain, age 49 years; 2nd (cheese, butter and biscuit stand), H. N. Smith; 3rd (one pint tankard), G. H. Filmer; 4th (case of pipes), P. J. Crotty.

Miss E. A. Scott, Leicester; Mr. A. Swift,
Blackburn; Mr. J. G. Tingle, Leeds; Miss F.
Yandal, Bristol. Four vacancies.
Professor L. T. Hobhouse is the chairman,

Professor L. T. Hobhouse is the chairman, Mr. J. H. Stoker, K.C., deputy-chairman, and Mr. F. Popplewell, secretary.

The responsible editor of the Swedish Bolshevik paper Politiken, M. Otto Grinland, has been sentenced to six months' imprisonment for abusive articles published in that paper against General Mannerheim during the latter's visit to Stockholm.

Mr. Joseph Mortimer.

Viscount Burnham Presides at a Compilmentary Dinner.

Mr. Joseph Mortimer, who for the last 21 years has acted as secretary of the Printers' Pension Corporation, was entertained at dinner on Friday evening at the Ritz Hotel, London, by a large company, in appreciation of the services he has rendered to the Corpora-Viscount Burnham occupied the chair, and among those present were Sir George Riddell, Mr. Cecil Harmsworth (Parliamen-tary Secretary for Foreign Affairs), Sir G. R. Blades, M.P., Mr. G. J. Wardle, M.P., Mr. A. F. Blades (President of the Federation of Master Printers), Mr. J. J. Keliher (President of the London Master Printers' Association), Mr. Kennedy Jones, M.P., Sir Cecil Harrison, Sir Campbell Stuart, Sir W. Sutherland, M.P., Sir Herbert Morgan, Sir W. A. Waterlow, Sir Emsley Carr, Dr. W. E. Porter, Messrs. Thos. Manlowe, C. F. Higham, M.P., J. M. Blanch, E. J. P. Benn, J. H. Newton, W. P. Everitt, W. E. J. P. Benn, J. H. Newton, W. P. Everitt, W. A. Clowes, J. S. Elias, E. C. Austen-Leigh, R. H. Ruddock, C. W. V. Truefitt, G. Orford Smith, E. W. H. Walker, F. H. Walker, G. Eaton Hart, C. S. Ventes, A. B. Shury, C. B. Sheridan, N. A. Bolton, H. C. Bolton, C. E. Marsden, C. W. Iveson, G. W. Jones, A. Hewitt, W. E. Hebditch, C. H. Roud, H. F. Harding, F. F. W. Oldfield, G. Chrevollier, S. J. Spalding W. H. Walbrook, C. I. Drummond, W. A. ing, W. H. Walbrook, C. J. Drummond, W. A. Masters, H. Featherstone, A. G. Gronow, W. I. Burch, A. Mackenzie Hay, G. Rooke Colling-ridge, D. C. Griffith, R. A. Austen-Leigh, J. Gomer Berry, James Thompson, Alfred Langley, T. J. Elvidge, R. S. Cartwright, F. Hedger and W. H. Lock. Letters of apology for absence were announced by the chairman from Major the Hon. W. Astor, M.P., Colonel H. K. Stephenson, Mr. R. D. Blumenfeld and Mr. G. H. Thomas.

The chairman, during the evening, in addition to expressing the appreciation which all concerned felt of the value of Mr. Mortimer's services, handed to him a silver salver inscribed with the names of all the donors, and also presented Mr. Mortimer with a cheque for £250 for Mrs. Mortimer.

Proposing the toast of "Our Guest," Lord Burnham said they wished to show their deep respect and admiration for one who had served the trade and calling to which they all belonged so faithfully for so many years. He served a long apprenticeship with the greatest of the trade unions with which they had to deal at a time when there was a somewhat kindlier spirit prevailing than there was now, and he enjoyed the confidence both of employers and employed. He was the representative of the L.S.C. at the Trade Union Congress twenty years ago. Since then he had been connected with the great Corporation which enjoyed equally the confidence of both employers and employed. The Corporation was the greatest charity common to the whole

of their trade, and it was increasingly valued by all connected with it. Since Mr. Mortimer had been there the number of beneficiaries had increased from 200 to 1,000. (Cheers.) The amount of money subscribed had been increased fourfold, and the number of subscribers had been doubled. Their guest had specially devoted himself to preparing for the annual festivals which culminated this year in a record—(cheers)—and which he confidently anticipated would be easily beaten next year when the Prince of Wales was to preside. (Cheers.) The success of this great charity if they chose to call it so, it was also, of course, a great organisation of thrift and providence—had been largely dependent upon Mr. Mortimer for the last 21 years, and if the administration had been justified in every particular they might fairly say that it was mainly due to Mr. Mortimer's ability, energy and absolute integrity. (Cheers.)

Mr. Mortimer, who was cordially received on rising to reply, expressed his heartfelt appreciation of the honour which had been done to himself and to Mrs. Mortimer. Recalling incidents in connection with the annual festivals, he mentioned that when the present King presided as Prince of Wales he took the keenest interest in every detail. In fact, his Majesty displayed more real personal attention to the details of the festival than any president he ever met. So much so that he would not permit a toastmaster to be engaged, but himself took charge of the whole festival. (Cheers.) With regard to the institution, thrift was its basis, and he hoped, notwithstanding any socialistic tendencies, that would continue to be its guiding principle.

The toast of "The Chairman" was presented the continue of the con

was proposed by Mr. Kennedy Jones, M.P.

Paper Imports.

Speeding up the Licences.

The Department of Paper Import Restrictions (Board of Trade), 23, Buckingham-gate, S.W.I, gives notice that in cases where orders have been on a British mill's books for six weeks or more and reasonable quantities have not been delivered, it is prepared, on production of a pro forma invoice, to consider an application from the customer for a licence to import his proportionate quantity of foreign paper. Such quantity will be placed to the debit of his account, and cancelled hy actual invoice received on delivery of the goods from the British mill.

The following are the rules to be observed by applicants for proportionate licences to import foreign paper and board in respect of

British purchases:

(1) Original British invoices, dated on or after May 1st, 1919, must be submitted.

Duplicates cannot be accepted.

(2) Merchants' invoices must be accompanied by certificates, supplies of which can be obtained from the Department on application. N.B.—These certificates should be applied for from the merchant at the time of placing the order with him.

(3) The invoices relating to paper falling under clauses 2, 3, 5 and 6 of the Paper Import Regulations must be kept sep-

arate.

(4) Separate summary statements of the invoices relating to each of the above clauses must be given, indicating the description and weight of the paper shown on each invoice, and totalling the weights.

(5) Invoices relating to finished articles, such as bags or cardboard boxes, must not be

included in any application.

(6) Invoices relating to printing or writing paper, even though used as wrapping paper, must not be included in applications for licences to import wrapping paper. N.B.—This does not apply to news off-cuts, which are classed as wrapping paper.

(7) Invoices relating to "middles," which are less than the substances mentioned in clause 6 of the Paper Import Regulations, and are therefore classified under clause I, must not be included in applications for licences to import cardboard or wrapping

paper

(8) Applications for licences to import cardboard (i.e., paper falling under clause 6 of the Paper Import Regulations) must in every case contain a guarantee that none of the items included on the invoices are less than the minimum substances permitted by clause 6 (i.e., strawboards 25 by 30 ins., 4 ozs. per sheet; other grades, 20 by 25 ins., 4 ozs. per sheet).

20 by 25 ins., 4 ozs. per sheet).

(9) Other board, which is excluded from clause 6 because the substance is less than the substances allowed (vide paragraph 8

above), is classed as wrapping paper (clause 5), and invoices for such board can be included in applications to import wrapping paper. N.B.—This of course does not apply to coated board (clause 3) or to the other classes of board specifically referred to in clause 6 as being excluded therefrom.

Scottish Printers' Complaint.

In the House of Commons, Mr. William Graham (Edinburgh, Central), asked the President of the Board of Trade whether he had received complaints from the Scottish Printing Trade Alliance and also from printing firms in Edinburgh regarding the delay in the transmission of goods between Edinburgh and London; whether he was aware that there was danger of work being refused on the ground that it was not delivered in London up to schedule time, and that this was a matter of the utmost importance to a large centre of printing like Edinburgh; and whether, having regard to the fact that the difficulty was not due to labour troubles in this case, he would take immediate steps to provide for the better transport of these

Sir Auckland Geddes (President of the Board of Trade) said he had received a complaint in the matter from the Scottish Alliance of Employers in the Printing and Allied Trades. The Board of Trade had been in communication with the Railway Executive Committee, and he was sending the hon. gentlemen a copy of a letter which was recently received from the Committee.

Women's Wages.

National Basis in the Printing Trade.

As the method by which the rates of pay have been arranged for women workers in the printing trade has hitherto caused unsettlement, and resulted in many anomalies in the rates paid, it has been mutually agreed between the Federation of Master Printers of the United Kingdom and the National Executive of the National Union of Bookbinders and Machine Rulers, the National Society of Operative Printers and Assistants, the National Union of Printing and Paper Workers, and the Society of Women in Book-binding and Printing Trades, that wages in the future shall be settled on a National basis. For this purpose branches and sections of branches outside London, which has been dealt with separately, have been divided into six grades, the wages varying from 28s. per week (minimum) for qualified workers to 34s. in the more important centres. There are still a few outstanding points under consideration.

Trade Notes.

AT Sotheby's, a copy of Vanity Fair, in the original parts with the advertisements, was sold for £106.

APPROXIMATELY £130,000 was expended on Press advertising in connection with the War Loan campaign.

THE directors of Courtaulds, Ltd., announce an interim dividend of 4s. per share, free of income-tax, payable on August 7th.

MESSRS. CASLON AND Co., London, received a contract for printing materials from the Ministry of Munitions during June.

CROPPER AND Co.—A dividend is declared at the rate of 15 per cent. per annum for the six months ended June 30th, together with a bonus of 10 per cent.

THE Senate of the University of London have decided to establish a School of Librarianship, the work of which will be carried on at University College.

ALL the linotype machines were destroyed by fire at the offices of the Aberdeen Free Press, last week. The composing-room was gutted. Production of the Evening Gazette was possible by the friendly co-operation of other proprietors.

Much damage was done by a fire which broke out last week at the publishing firm of Messrs. Cassell and Co., La Belle Sauvage-yard, Ludgate-hill, through a spark from a furnace, and damage was done to the huge buildings by heat, smoke, and water, and in the news foundry by fire.

In an action heard last week, Mr. Justice Sargent gave judgment in favour of Mr. Julian David Marks against the Financial News, Ltd., and its directors. The plaintiff claimed a declaration that the rejection by the chairman, at a meeting of the company held in March last, of more than 40,000 votes tendered by the plaintiff in respect of a like number of shares in the company was inconsistent with the provisions of the articles of association and was invalid, and that a resolution which purported to be passed as a special resolution at the meeting was invalid.

Grafton Printing Works.—The second number of Sticks and Stones, the house journal of the Grafton Printing Works, confirms the the excellent impression made by the first issue. It is an extremely bright as well as a handy production, the pages being relieved by snapshots and amusing sketches. Bright contributions are given full advantage by careful editing and make-up. As a result of a suggestion made in the first issue, a house committee has been set up, with Mr. H. C. Hill as chairman, and this will doubtless cement the harmony and goodwill which already prevail in the works.

A GIRL of 17 described as a printer was charged at Lambeth with stealing a 10s.

treasury note belonging to another girl at Newington public baths.

A RESOLUTION to exclude the Press from the Earsdon District Council, Northumberland, failed to secure a seconder.

A PRINTER was sentenced to six weeks' imprisonment at Clerkenwell for striking a girl who at his suggestion had taken up her residence in his mother's house.

REPORTERS were turned out of a meeting of the Barmouth County School Governors when appointing an assistant master. Two members of the board retired from the meeting as a protest.

During the recent rioting at Coventry, considerable damage was done to the premises and stock of an aged tradesman who is carrying on a stationer's business formerly conducted by his son, who lost his life in the war.

The Accrington Observer and Times last week issued a special supplement dealing with the "Industries of Greater Accrington." Most of the leading firms in the district were represented, and the effort has proved quite a success. We congratulate our contemporary on its enterprise in endeavouring to stimulate British industry.

PRINTING FIRM'S GENEROSITY. — Messrs. Gall and Inglis, bookbinders and printers, Edinburgh, on the occasion of their disposing of their bookbinding and printing works to Messrs. Pillans and Wilson, presented each of their workers with a parting gift. Everyone received a War Saving Certificate, one for each year of service. Several other presentations were made to employees who had been in the service of the firm for a considerable period.

Contracts Open.—For the supply of printed matter, books and stationery required by the Darwen Corporation for twelve months, tenders endorsed "Tenders for Printing and Stationery," to be sent to Mr. W. P. Halliwell, town clerk, by August 14th.—For the supply of such books, stationery and other school material, as may be required for the Education Authority for Dumfriesshire, forms of tender may be obtained from Mr. T. R. Burnett, education officer, County Buildings, Dumfries, to whom they must be returned not later than August 5th.

NEW DEPARTURE AT PRINTING HOUSE SQUARE.—Interesting developments are undertaken with the last issue of The Times Weekly Edition. In addition to the full review of the week's news and the first instalment of a serial story by Lucas Malet, there is an eight-page illustrated section in photogravure. This section, printed by the Intaglio process, is the result of experiments carried out at Printing House Square during the past five years, interrupted to some extent by the war. These up-to-date news pictures, produced on fast rotary machinery, by the latest method of illustrative printing, will doubtless be received with considerable interest at home and abroad.

London Master Printers' Association

Appointment of New Secretary.

Major H. Fordyce Birch has been appointed secretary of the London Master Printers' Association, in succession to Mr. Reginald J. Lake, and will take up his duties on 1st September.

Mr. Birch is a Fellow of the Chartered Institute of Secretaries, and before the war was manager of the Cordite and Ammunition Departments, Nobel's Explosives Co., Ltd. In 1914 Mr. Birch received a commission and at the close was major on the staff of the R.A.F.

Diploma for Journalism.

The Senate of the University of London has instituted a diploma for journalism, which will be awarded after examination to persons who have pursued prescribed courses of study

within the university.

The courses will begin in October next, and will extend normally over two consecutive university sessions. The compulsory course includes: English composition and practice in writing for the Press as well as lecture courses in the general history of science, the history of political ideas, and principles of criticism with practice in their application.

The student will also choose courses of instruction in three out of the following branches of knowledge, viz.: English literature and criticism, history, modern languages (one, or in special conditions, two, to be selected out of French, German, Spanish, Italian and Russian), political science, economics, biological science, physico-chemical science, philosophy, and psychology.

The Imprint on Posters.

In the House of Commons, General Croft asked the Home Secretary whether his attention had been called to the fact that in a recent parish council election in Lincolnshire posters were issued which urged the electors not to vote for the man who got the boys into the army; whether he was aware that the printer's name and the name of the association or individual by whom published was cut off the bills before posting; and what action he proposed to take.

Mr. Shortt (Home Secretary): I am informed by the police that, after the fullest possible inquiry, they have been unable to ascertain who was responsible for the posters in question. In these circumstances, I am not aware of any action I can take.

Personal

VISCOUNT BURNHAM, presiding at the dinner to Mr. Joseph Mortimer on Friday, said a newspaper proprietor had stated at a recent Press Conference that a machine-minder carried away on the previous Saturday £21 as his weekly earnings!

SIR EDWARD AND LADY HULTON rendered the printing trade, and especially the benevolent side of it, a great service by attending the sports arranged by the Printing and Allied Trades Charity Sports Association at Herne Hill.

BOTH were keenly interested in the various events of the day, and Lady Hulton won admiration by her charming and genial manner.

MISS AND MASTER HULTON also graced the occasion with their presence.

MR. J. R. HEDDLE, general manager of the Daily Sketch, was also among the visitors.

During the afternoon Mr. A. O'Connor, secretary of the Printers' Medical Aid Association, presented to Lady Hulton a souvenir peace brooch. Over 3,000 of these attractive ornaments have been sold for the benefit of printing trade charities.

MR. M. HENNIGEN, the most recent addition to the staff of the Federation of Master Printers, who has had several years' experience in costing work and organisation in America, made his first public appearance in his new office at Newcastle-on-Tyne last week.

MR. Hennigen expressed hearty approval of the methods of cost-finding as recommended by the Federation, and had no hesitation in stating that the system was simpler and possessed other features which the American standard system does not contain.

MR. G. H. ROBERTS, M.P., having ceased official connection with the T.A., writes a letter of explanation to the *Typographical Circular*, in which he refers to the incidents of his recent Parliamentary election and the attitude of members of the T.A.

MR. ROBERTS entered the service of the association as organiser in June, 1904. Later in the year he was selected on a ballot vote the association's Parliamentary candidate. In January, 1906, he was elected to represent his native city in the House of Commons.

MR. ROBERT BRIGHT MARSTON, editor of the Publishers' Circular and the Fishing Gazette, contradicts the announcement of his death, at the age of 66, which he has just seen in the Melbourne Argus, of May 13th, 1919.

FORTY-FIRST YEAR.

THURSDAY, JULY 31, 1919.

Current Topics.

American Printing Competition.

THE danger to British printers by American competition is being constantly emphasised. Of course, no objection can be taken to this, provided both parties have fair and equal chances. The fear in our own case is that we are putting shackles upon our own limbs, which hamper the British printer from entering equally into the contest. In a recent issue of the Saturday Review, another aspect of the matter was put forward. It was pointed out that "the heavy and growing increase of cost in printing, paper, binding and distribution (all due to exorbitant wages) must prevent publishers from taking the risk of ac-

cepting works from young and unknown The publisher and the bookseller cannot pass on the whole of this increased cost to the public, because there is a limit to the price that can be asked for books. In truth, the first direction in which people begin to economise is in their mental food; they will starve their minds sooner than their bodies." There is only too much truth in this observation, and master printers are alive to it. The trouble is that they are forced by outside influences to increase their costs. The problem is an extremely difficult one, because the increase is not all the fault of the trade itself. There is not a single item which enters into the cost sheet of the master printer which has not risen enormously in price. It would be an interesting calculation to find out what proportion of the cost of production nowadays is due to labour. There is no gainsaying the fact that both labour and print generally have been too cheap in the past. The danger now is whether the mark is not being overstepped in the other direction. A depressing feature of the whole business is that with the cost of living and the cost of everything going up in a continuous circle, people are no better off under the new conditions than they were under the old. There ought really to be a relatively better standard of living, but the general raising of prices seems to be defeating this desirable object.

The British Handicap.

Another aspect of the American competition is touched upon by the writer in the Saturday Review. He points out that American books are beginning to push our native writers from the bookstall. There is little doubt that readers in this country will not be deterred by any motives of patriotism from selecting foreign books and magazines, if they can get, by that means, the literature or fiction which they desire, and at a price which is favourable to them. If this tendency is pursued, it means that there will not only be less work for the British printers, but that native talent will not find the outlet for expression which it requires. It is pointed out, with unmistakeable truth, that the American public is three times as large as the British, "so that, cost of production being about equal, American publishers run less risk." As one way of encouraging British printers, the writer implores British publishers to go on printing English classics, but in better type, "or the new-born babe will require spectacles as well as a bottle."

National Wage Settlement.

THE national wage settlements are now practically all completed with the whole of the unions in the printing trade. Whilst, of course, this must of necessity give rise to a certain amount of disturbance at the moment owing to the fact that a considerable number of anomalies have to be redressed, it must be obvious to everyone concerned that eventually these settlements will be of a distinct advantage to the trade. Every agreement contains a clause to the effect that no strike or lockout can take place until at least five weeks have elapsed, and it will be readily seen, if sufficient time can only be obtained for a peaceful atmosphere to negotiate in, there will be no likelihood of any serious disturbance in the trade.

Paper Restrictions Department.

A FAIR number of complaints are reaching us as to the delay which is prevalent in the Paper Import Restrictions Department of the Board of Trade, and also in regard to the issuing of licences. Of course, there are always aggrieved persons about, but they are not always in the wrong. It is complained that the department is either neglectful, overworked or hampered by a vacillating policy. Whatever the cause, the effect, we are assured, is to aggravate vastly the disadvantages which the restrictions inflict upon the trade. Since the alteration was made in the Control Department, of course, the staff at 23, Buckingham Gate has been greatly reduced, which is more than may be said of the work. Whether something can be done to speed up matters and remove causes for grumbling, we leave it to the Department to determine and to find a remedy.

Increased Paper Prices.

As was anticipated would be the case, the recent developments in wages, hours and coal cost have led some of the makers of commoner qualities of paper to increase their prices. Printings, which had fallen to 51d. per lb., are now quoted 52d. and 6d. per lb. Cheap bank papers, which were accepted a fortnight ago at 61d. and 71d. per lb., are now firm at 7d. and 8d. per lb. Naturally, mill people have not been keen on booking orders during the period of suspense, but a fair amount of stock business has been done. It is becoming a difficult thing to convince some paper users of the possibility of higher prices. They have heard the suggestion so often and for so long that they have become hardened in the process. These are the people who treated the threatened strike as a minor and ineffective incident in the transition of things generally. Perhaps the hard fact of a higher price per lb. for papers now bought will help to correct the unappreciative outlook of this particular section.

Paper Market Hardening.

The market has hardened very considerably lately and particularly in regard to wrappings, printings and E.S. writings and banks. Swedish kraft has advanced from 5 to 10 per cent. at the mills, and is now selling from the agent at £65 per ton, with stock quotations at £60 in certain instances. Canadian kraft is on offer at £50 10s. per ton, and English kraft (which is fast improving in quality) at £45 to £50 per ton. The Regulations are having a good effect in turning attention to the British product, and it must be said that English mills are at last doing themselves justice in turning out a kraft wrapping worthy of the name. If there is still any deficiency to be made good, it is mainly in the direction of lookthrough and The lookthrough of the better class Swedish kraft is clean and translucent, whereas most English krafts are dark and blotchy. There is also evidence of unsieved fibre and splinters, etc., on the underside of most of the samples we have seen. In strength, colour, rattle and feel, we are fast approaching the point at which it becomes difficult for the expert to distinguish English from foreign kraft. The competition of the future may very possibly be with our colonial colleagues, whose natural conditions are especially suited to the production on their own doorstep of all the elements which go to make up the production of immense quantities of kraft wrapping on an economic basis.

A Big Paper Mill to be Built

We understand that there is a big new paper mill enterprise on foot for the neighbourhood of London. A well-known firm of paper manufacturers and agents intend to set up a four-machine mill on a site particularly adapted for the purpose. It is anticipated that the new mill will be running by the end of the year.

COUNT that day lost whose low, descending sun sees prices cut to bits, and business done for fun.

Commercial Intelligence.

CURRENT SHARE PRICES.

DIVIDENDS AND REPORTS.

Weldon's, Ltd.—The profit for the year to June 30th was £261,274, which added to £14,928 brought forward gives a total of £76,202. Dividend on the ordinary shares at the rate of 10 per cent. per annum for the past half-year, and a bonus of 5 per cent. (making 15 per cent. for the year). The sum of £10,000 is placed to business development fund and £5,000 to employees' benevolent fund, leaving £24,202 to be carried forward. For the previous year the dividend was also 10 per cent., but no bonus was passed.

"EDINBURGH EVENING NEWS."—Mr. Robert Wilson, presiding at the annual meeting in Edinburgh, said the wisdom of the policy of raising the price to one penny had been amply justified, in that the price of paper was still so high that a halfpenny paper, even with the large advertisement revenue, would not be able to meet expenses on such a circulation as theirs. Both advertising and sales had shown a large increase during the last year. The report was adopted.

C. ARTHUR PEARSON, LTD.—At the annual meeting of this company, held on Monday, Sir Arthur Pearson, Bart. (chairman) referred to the continued prosperity of the business. Two new publications had been added during the last twelve months—Peg's Paper and Farming. Sir Arthur paid a high tribute to the work of the staff, and mentioned that a considerable number of their employees joined the colours. Mr. Neville Pearson was appointed a director, and Miss G. Stuart Macrae was re-elected a director. The report (recommending a dividend at the rate of 10 per cent. on the ordinary shares) and accounts were adopted.

NEW COMPANIES.

M. H. BIRGE AND SONS, LTD.—Registered with a capital of £5,000, in £1 shares, to enter into an agreement with M. H. Birge and Sons

Co to carry on the European branch of their business formerly carried on at 46, Bernersstreet, London, and to carry on the business of merchants in, and importers of, wall-papers and other paper, mouldings, and allied substances. The subscribers are W. T. Wallace and H. J. W. Hall. Private company. Directors, W. T. Wallace and H. J. W. Hall. Registered office, 46, Berners-street, W.

R. A. STEPHENSON, LTD.—Registered with a capital of £5,000, in £1 shares, to carry on the business of manufacturing stationers, gummed paper makers, sealing machine manufacturers, etc. The subscribers are H. W. Hutchings and W. H. Chisholm. Private company. The first directors are H. W. Hutchings and W. H. Chisholm. Registered office, 130, Queen Victoria-street, E.C.4.

LAND WORKER PUBLISHING Co., LTD.—Registered with a capital of £200, in £1 shares, to carry on the business of newspaper proprietors and general publishers, printers, lithographers, engravers and advertising agents, etc. The subscribers are R. B. Walker and F. J. Edminson. Private company. Directors W. R. Smith, M.P., R. Green, W. Holmes and R. B. Walker. Registered office, 72, Acton-street, Gray's-inn, W.C.

Jobbs, Ltd.—Registered with a capital of £6,000, in 5,940 shares of £1 each and 1,200 deferred shares of 1s. each, as shorthand writers, law and general printers, copiers of manuscripts, documents, plans and papers of all kinds, etc. The subscribers are R. Pownceby and R. P. Knight. Private company. First directors, R. Pounceby (chairman and managing director) and R. P. Knight. Registered office, 53, New Broad-street, E.C.

C. COMBRIDGE, LTD.—Registered with a capital of £25,000, in £1 shares, to acquire the business of a wholesale and retail stationer, carried on by Cornelius Combridge at 3, 4 and 5, New-street, 9, Bull-ring, and 142, Broad-street, Birmingham. Private company. The subscribers (each with one share) are C. Combridge, R. S. Setten, and S. H. Warren. Directors—C. Combridge, R. S. Setten, and S. H. Warren.

Joseph Stott, Ltd.—Registered with a capital of £20,000, in £1 shares, to carry on the business of manufacturers of and dealers in papers and all kinds of articles made from paper and pulp, dealers in esparto and other grasses, jute, flax and other fibres, rags and all other materials from which paper can be manufactured, and bleaching and like materials, colouring matters, stains, dyes and pigments, etc. The subscribers are J. A. Stott, and W. Stott. Private company. Directors—J. A. Stott, W. Stott, and H. Stott, and one other person to be appointed by them.

London Etching Co. (1919), Ltd.—Registered with a capital of £3,000, in £1 shares (1.500 pref.), to adopt an agreement between the London Etching Co., Ltd. (in liquidation), and this company, and to carry on the business of colour process and half-tone and line engravers, photo etchers, stationers, printers.

etc. The subscribers are G. W. W. Wright-Nooth, and W. L. McNay. Private company. Directors—G. W. W. Wright-Nooth and W. L. McNay (permanent joint managers). Registered office, 3, Holborn-place, High Holborn.

ARCADIAN WAFER PAPER Co., LTD.—Registered with a capital of £2,000, in £1 shares, to enter into an agreement with W. T. P. Cunningham, and to carry on the business of a manufacturer of and dealer in paper and all products and materials used for the purposes of confectionery, baking and other food trades. Private company. The subscribers (each with one share) are W. T. P. Cunningham and Doris M. Cunningham. Private company. The first directors are W. T. P. Cunningham, W. P. Cunningham, and one other to be appointed by W. T. P. Cunningham. Registered office, 13, Arcadian-gardens, Wood-green, N.22.

Scottish Press, Ltd.—Registered in Edinburgh with a capital of £20,000, in £1 shares, to carry on the business of newspaper proprietors, publishers, etc. The subscribers are F. Spedding, W. Lima and W. A. McWhirter. Private company. The first directors are F. Spedding, W. Lima and W. A. McWhirter.

P. N. RISKEY AND Co., LTD.—Registered with a capital of £3,000, in £1 shares, as wholesale paper and board merchants, importers and exporters, printers and bookbinders, engineers, manufacturers of and dealers in stationers' and printers' machinery and plant, stitching wire and sundries, rag merchants, etc. The subscribers are P. N. Riskey and S. Wood. Private company. First directors: P. N. Riskey and S. Wood (life directors),

Ensign Manufacturing Co., Ltd.—Registered with a capital of £3,000, in £1 shares, to acquire, manufacture and sell variable advertising devices, to print and publish (for itself or others) books, pamphlets, journals, newspapers, cartoons, pictures and advertisements, printed and written matter on metal, paper or other material, etc. The subscribers are J. A. Jarrett and D. B. Crane. Private company. The first directors are J. A. Jarrett and D. B. Crane.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

DERBYSHIRE COURIER (1912), LTD.—Satisfaction registered June 27th, 1919 (a) of £500, part of amount registered June 7th, 1915, and (b) of £2,900, balance of amount registered April 25th, 1916.

BRITISH WIRE STITCHING MACHINE Co. (1919), LTD.—Debentures registered June 26th, 1919, of £2,000, charged on the company's undertaking and property, present and future, including uncalled capital.

Sampson Low, Marston and Co., Ltd.—Satisfaction in full registered June 27th, 1919, of charge for £1,000, registered in September, 1916.

FREDERICK WARNE AND Co., LTD.—Deben tures for £13,500, charged on the company undertaking and property, present and future including uncalled capital, registered June 25th, 1919.

COMPANY NOTICES, etc.

THE ALNWICK AND DISTRICT LIBERAL NEWSPAPER Co., LTD., (in Voluntary Liquidation). — Notice is given, that a general meeting of the company will be held at the offices of Messrs. Henry Chapman, Son and Co., Barrington-street, South Shields, on September 1st, 1919, for the purpose of having the liquidator's accounts, showing the manner in which the winding-up has been conducted and the property of the company disposed of, laid before such meeting.

NOTICE is given, that a general meeting of the members of the Post Printing Press, Ltd., will be held at 12, Queen Victoria-street, London, on August 25th, for the purpose of having an account laid before them showing the manner in which the winding-up has been conducted and the property of the company disposed of.

Gazette.

A WORD OF GAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

NOTICE OF DIVIDEND.

Blakey, Wm. John (carrying on business under the style of Richard Blakey and Son), Stockton-on-Tees, wholesale stationer, printer and haberdasher. Supplementary dividend of 3½d. in the £, payable July 31st, 1919, at the official receiver's offices, 80, High-street, Stockton-on-Tees.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

Adlard, Henry Frederick, printer, 55, Banner-street, City-road, E.C. Date of order, July 25th, 1919, made on a creditor's petition. First meeting, August 8th, 1919; public examination, September 23rd, at Bankruptcy-buildings, Carey-street, London, W.C.2, 11 a.m.

An Advertisement is always working.

Canadian Paper for Printers.

Interview with Dominion Representative.

Mr. A. L. Dawe, who has come over to assist the Canadian Trade Association in London on the paper and pulp side of its operations, gave a representative of the World's Paper Trade Review his views on the paper situation.

Attitude Towards the British Paper Market.

"We have realised, of course," said Mr. Dawe, "that the British paper market is somewhat at a disadvantage at the present moment in consequence of the upheaval of the war and we want it understood that we are in sympathy with the British papermaker and the position he is in. There is no idea of attempting to flood and capture the market, in the first place because we have not the paper to do it with, and, secondly, because our view point is this: Before the war, Great Britain imported from different countriesneutral, enemy and so on—several hundred thousand tons of paper. Well, all that we are looking for is that Canada should have the opportunity of supplying a portion of that paper which is to be imported."

The interviewer at once acknowledged

this tactful view of the situation and suggested the possibility of competition British paper mills arising from the

Dominion.

Canadian Competition.

"That competition cannot be severe," said Mr. Dawe, "because, as I have mentioned, the amount of paper available is not anything like the pre-war amount of paper imported into Great Britain." Remarking that he did not know how long the arrangement as to the restriction of imports was likely to last, Mr. Dawe added: "The Canadian industry, of course, would welcome Imperial preference. I might mention that for many years Canada has been giving the Mother Country a preference of 10 per cent., the duty on British paper being 15 per cent. as against 25 per cent. on foreign paper, and I think, up to the time the war began, Great Britain received considerable advantage from that.'

Mr. Dawe observed that there was a market in Canada for some of the British grades of paper and there had been one for many years.

With regard to the future of Canadian pulp and paper business, our representative observed that Canada would develop paper enormously, and that, as it grew, competition with the manufacturers in this and other countries would increase.

To this Mr. Dawe replied: "At present all Canadian mills are pretty full with orders. News-print mills are particularly busy, chiefly on account of the tremendous increase in the consumption of newspapers in the United States and Canada, where huge advertising campaigns are being carried on. The business in other lines of paper, such as writings printings and wrappings, is gradually showing an improvement after the slump which ensued upon the armistice, and by the time winter comes business should be in full swing

again."
We were informed that the production of news-print in Canada amounts to 700,000 tons a year, of which 80 per cent. is shipped to the

United States.

Shipping Difficulty.

"Shipping is our trouble," said Mr. Dawe, answer to a question. "It is very diffiin answer to a question. cult to get space, on account of the Government taking 70 per cent. of the freight, leaving only 30 per cent. for a variety of general merchandise, and we are badly handi-

capped in filling our orders."
"Then when the situation is eased, Canadian paper may be expected to come over here to a greater extent," observed the repre-sentative of the World's Paper Trade Review.

"Just as soon as the Shipping Ministry gives licences there are several thousand tons of pulp and paper already sold which will come over," was Mr. Dawe's observation.

Price Question.

An inquiry as to whether he had anything to say in regard to the prices of Canadian

paper led Mr. Dawe to remark:—
"I am not in a position to give them exactly, because I am only dealing with the price question in a general way. Most of our mills have made arrangements for merchandising the goods. But so far as I chandising the goods. But so far as I can see, the British mills have managed to hold their own in regard to prices in a very creditable manner. We, of course, have had our troubles in the last four years with regard to labour strikes and coal shortage. question of the 8-hour day was one which was settled quite a long time ago, and, therefore, is not giving us any bother. There is perhaps one phase of the news-print industry which has not bothered the British manufacturer, and that is price control.

Control Stifles Enterprise.

"In Canada and the United States, the price of paper was controlled during the war. In the case of Canadian paper it was sold at 14d. per lb. up to and including 1916. Later the manufacturers were able to show the Government the justice of their case and to have the price fixed at 178d. per lb., all of these prices being f.o.b. mill. The fallacy of Government Control was shown in the fact that during all this time there was not a single mill erected in Canada for the production of news-print."
"So that control has the effect of stifling

industry?" the interviewer interjected.

"Yes, and now that control is ended many of the mills are engaged in extending their

Some FACTS ABOUT CANADA'S PULP AND PAPER INDUSTRY.

Ganada is the second largest pulp and pulp producing country in the world, and is rapidly overtaking the U.S. which holds first place.

Ganada's first large paper mill was built in 1865 and produced $1\frac{1}{2}$ tons of paper in 24 hours. To-day a modern paper mill produces from 250 to 300 tons in the same length of time.

Ganada makes every grade of paper and board used commercially.

Canada's pre-eminence as a paper producing country lies in the possession of hundreds of thousands of acres of pulp-wood forests and of conveniently located water powers.

Canada has the largest forest area of any country in the British Empire.

Ganada has developed water powers estimated at 1,941,700 h.p. besides undeveloped water powers incalculable.

Ganada invites enquirles for Pulp and Paper. Write to A. L. Dawe, representing Canadian Pulp and Paper industry, who will be glad to advise as to source of supply. Address:

A. L. DAWE, c/o Canadian Mission in London, 1, Regent Street, S.W.1.

Ganada Manufactures: Mechanical, Sulphite Unbleached and Fine Bleached, Sulphate Pulps, Newsprint, Printing Papers, Cover Papers, Writing Papers, Surface Coated Papers and Boards, Kraft and other Wrapping Papers, Boards of every description, M. G. Tissue, Toilet Papers, Building and Felt Papers and Wall-board.

BRITISH & COLONIAL PRINTER & STATIONER

plants by installing new machines and planning new enterprises in different parts of the country. The value of the industry to Canada may be judged by the fact that the output of pulp and paper mills in 1918 was estimated to be worth more than £20,000,000. It is by far Canada's largest exporting industry."

Incidentally Mr. Dawe mentioned that the pulp and paper industry of the Dominion sent 4,000 men to the war.

British Export Business.

With regard to British paper mills recovering their export business, Mr. Dawe remarked: "I am not worrying about that (meaning that there would be little difficulty about this). English mills are essentially export mills; even the smallest have laid themselves out for export packing. There is no doubt, when conditions settle down, that they will find their old markets the same as before."

"But in those markets," suggested our representative, "they will find they will come up against the United States and Canada as

competitors."
"They will find the United States and Canada in most of those markets," was how Mr. Dawe put it, "but the Canadian output of finer paper is not very great, and it is mainly employed for domestic use."

Paper versus Pulp.

When Mr. Becker's suggestion was put to Mr. Dawe, that it was more difficult to ship paper to England than it was to bring pulp over, the official of the Canadian Association replied:—

replied:—
"The only answer I can give to that is, that concerns like Laurentide and the Belgo Pulp and Paper Co. for many years did a large business with Great Britain in paper, and so far as I know there was no real cause for damage claims on any of the paper coming

"Naturally, every country desires to extend the export of the finished product, rather than the raw material. There is no question, of course, that you have to pack paper more carefully. An outstanding example is the Northcliffe Mills in Newfoundland. They are shipping very successfully their output of paper to England, although during the war, owing to lack of vessels, they were unable to do so."

Playing Card Profits.

The gross earnings of the U.S. Playing Card Co. for 1918 were \$1,089,921.83. The net earnings were given as \$944.415.24, after deducting reserves for depreciation on buildings and plant equipment, but before deducting the 1918 federal taxes. The surplus is given as \$2,226,026.01.

The best philosophy consists in not wanting the things you can't get.

Women Compositors.

The Belgian compositors' strike has ended as the result of a meeting of the Association of Master Printers, at which it was dedided to leave the demand for a 36-hour week to be dealt with by each union individually. All the newspapers have again reappeared. It has been decided that the female compositors will not be dismissed, since they cannot be replaced.

Photographic Paper.

A patent taken out by the Kerotype Co., London, relates to improvements in the manufacture of photographic printing paper and transfer processes. One of the rosins is precipitated in the form of a fine grain whilst the other still remains in solution in the remaining solvent in the form of a varnish. The varnish thus dries with a matt surface. waxed basis of paper, etc., is provided with a resinous substratum which is obtained from a solution or suspension in a mixture of solvents of two rosins or a single commercial rosin which comprises two constituent rosins. The solvents are chosen so that, on evaporation of one of particular example, 90 grains of sandarac and 20 grains of mastic are dissolved in a mixture of 4½ oz. of alcohol and 1½ oz. of acetic ether.

Largest Paper Consumer.

According to Mr. R. J. Hoyle the United States is the largest paper consuming and producing country in the world and its annual production is valued at more than \$300,000,000. In 1917, 5,480,075 cords of pulp wood were consumed in the United States at the total cost of \$60,815,057. The fact that New York State consumed 1,056,556 cords or about one-third of the total, shows the great importance of the Empire State in the paper and pulp business. If an acre of virgin land produces 15 cords of pulp wood, which is a liberal average yield, it will require 70,437 acres annually to produce the amount of wood required by New York State.

FOUR COLUMN leading articles are not very common nowadays, but *The Times* had one in which a plan for the solution of the Irish problem was described. The gossips are wondering who wrote this very long "leader," and Mr. Cavin's name has been mentioned. Lord Northcliffe himself is also suggested as the author.

Improved Shell Stripper.

Mr. J. Love, manager of the white paper department of Messrs. Lendrums, Ltd., has invented an improved shell stripper, for which he is taking out a patent. The invention seeks to supply what Mr. Love describes as a long-felt want with waste paper merchants,

paper mills and others.

The chief advantages gained by the use of the apparatus are ease and speed of operation, owing to the fact that the carrying devices for the rolls of paper (reel ends) do not have to be lifted aad removed each time it is desired to place a roll into position; greatly increased speed and reduced friction of reeling off because rotation is confined to antifriction bearings and properly machined supporting spindles and surfaces as against the usual bars or spindles. Herein there is a saving in the cost of cones and bars, also great economy of labour in loading and unloading the machine. The invention is supplied with a self-cutter, which is easily manipulated.

At the present time, with the high cost of labour, Mr. Love says the improved machine will be found to be a very valuable asset to the merchant who handles printers' waste and reel ends, as its construction gives every facility for a very large out-turn at the mini-The machine runs practically mum cost. without noise, and requires such a small amount of power that it can be driven from any existing shafting.

Printers' Organisation.

Address by Mr. F. A. Perry.

At the last meeting of the West and North-West London Master Printers' Association Mr. F. A. Perry, the president, delivered the fol-

lowing interesting address :-

Allow me, on behalf of the West and North-West London Master Printers' Association, to welcome all master printers present to-night who have not hitherto seen their way clear to join our association. We hope your presence here is an indication that you are willing to co operate with your brother printers in your own locality, provided we are able to prove to your satisfaction that it is your interest to do Now, in spite of all that has been said to the contrary, I contend that printers recognise a good thing as quickly as men of any other profession, because no matter how small a stock of commonsense and liberality of thought a man may have possessed when he entered the ranks of printerdom, yet the very nature of his craft does develop in the master printer many of the qualities which make for breadth of thought, acumen, tolerance, patience, receptivity of new ideas, and generally those qualities which fit a man to conduct a business of so trying a nature and one which makes such great demands on a man's clearness of perception as ours does. Therefore I am going to appeal to your commonsense and shrewdness in this matter to night. Unfortunately for the printer, his environment does also develop his character on egotistic and individualistic lines, and does not always encourage the cultivation of the more sympathetic and social propensities which some other trades and professions engender.

Concentration on Detail.

A printer's business is so exacting, and concentration on detail is so necessary, that the master printer fills his days with work and

his nights with worry, with the result that he thinks he has no time to cultivate the acquaintance of his printer-neighbour, and ignorance being always the parent of misconception, his view of his neighbour is a distorted one, and the image in his mind is a caricature with the worst elements exaggerated, rather than a true portrait. By the operation of that law which causes our thoughts to gather to themselves similar thoughts, and permits antagonisms to create other antagonisms, in nearly every case where a printer has not met and known his nearest competitor he unconsciously appraises that neighbour in a manner unjust, and sets an altogether false value upon his neighbour's character and disposition, a value far below the assessment which a better acquaintance invariably proves to be a more correct one.

It is most important that we should be on good terms with our competitors. It is important, both for our own sake and for theirs, and even in the long run for the community. Any person's good will is a real living, active force, acting and re-acting upon all, and creating an atmosphere of sympathy mutually beneficial.

United we Stand.

President Wilson, speaking at Manchester a few months ago, said that men had been too long embarrassed by international antagonisms, but they were now finding that the interests of each meant the interests of all. Machinery must be provided to bring about goodwill and friendship amongst the nations, because unless they could learn each other's minds they could not be friends. What the President said about nations is true of individuals, and particularly true of individuals with a community of interests, such as a body

of men pursuing the same occupation. Unfortunately distrust and isolation have emphasised the points of repulsion rather than the points of attraction, but just as in the evolution of the State the antagonism of individuals had to be subordinated to common action in defence of the commonweal, so to-day the dangers of isolation in world are bringing trades the business and sinking the small together dividual interests in order to secure the greater advantages common to all. machinery for promoting friendship amongst the nations has been created but has yet to be tested. The machinery for securing friendship amongst printers is an accomplished fact. Throughout London there exists a chain of Associations so that a printer in any locality has at his service an association designed to bring about in his trade that identity of interest to which the President referred. It has passed the realm of experiment and is showing solid results. Gentlemen, these local master printers' associations are bringing master printers together. We are meeting each other in assemblies such as this, and we are creating an atmosphere of faith in each others' integrity. As a result we are trusting each other, and the fact that our neighbour trusts us and expects a certain line of conduct from us puts us on our honour, and thus we become the men we believe ourselves to be, and our confréres expect us to be,

The Printer and His Customer,

Now let us pass on to the more tangible but scarcely less valuable benefits which the Association has to offer its members. First it standardises practices and customs in our trade, and by so doing it educates our customers not to make unreasonable demands on We discuss and pass resolutions on trade practices, and codify rules of practice under certain conditions, so that when a customer makes a request for a service not generally included in the price we charge for our work, we know the minds of our competitors in the matter, and are pretty sure that they will not, for instance, keep a job standing for six months without charge on the bare possibility that the customer may require a reprint at some future time. The member of an association has learned that the type represents capital and that if that capital does not earn interests in use it should earn rent whilst being held in reserve.

Again the member of his Association knows that if he purchases paper to be used for his customer's jobs, he is entitled to a profit on that paper, and that if his customer supplies the paper the customer is not getting the full profit he is entitled to on the work unless he makes provision for such special circumstances in his charges. Recently a blow has been struck at the practice of customers thus robbing the printer of legitimate profit, and many members of this Association have decided not to undertake work under such conditions except under special circumstances. The associated printer does not fear his customer going to his competitor and getting a

lower price for the job he has done for so many years, and the price of which he has found it necessary to increase to keep pace with rising wages, shorter hours and inflated material charges and expenses. He knows that if he puts his imprint on his work, that imprint will be respected, and that his competitor will see in it a notice not to trespass, and will thus help him to maintain a legitimate charge.

Many Advantages.

He knows that there is a costing committee always at work adjusting the hourly rates for all operations to rising costs so that if he has not himself seen the wisdom of installing the Costing System and getting his own hourly rates he still has a guide to the average rates in other works, and by charging them does not go so far astray as he probably would had he not those rates to regulate his charging.

He has at his service a skilled staff of experts on legal, technical and economic questions who will answer his questions as to law and practice and assist him to follow a safe and normal course in all his goings.

He can obtain special discounts for outwork such as for instance process engraving a concession to members of the Association which outsiders do not enjoy and which will probably be extended in the purchase of other goods in the near future.

He will form friendships in the trade and have the re-assuring knowledge that in times of stress and pressure his brother printer will help him to get out his work and he will have the satisfaction of being able to reciprocate when his competitor is similarly situated.

And finally his outlook on his brother craftsmen will be changed. He will not be able to love his printer enemy, because the man he has hitherto regarded as his enemy, he will find, has become his friend. If he is of a pugnacious disposition and not happy unless he is fighting someone he will have to look outside the ranks of his profession for a foe, and if he will play the game and observe the rules there is no reason whatever why there should ever arise any dispute or difference with his competitor which cannot be settled in a ten minutes interview.

An Earnest Appeal.

Gentlemen, I am not drawing a fancy picture. I am stating actual facts and am prepared to prove every statement I have made to-night. And to secure all these benefitsmoral and tangible—you are asked to pay—what? One guinea a year for the current year! In the future it may cost you a little more. If there were no visitors from 24, Holborn, present I would tell you what I think the service is worth, but in their presence, for your sake, I forbear! I am reminded, however, of the man who stood on London-bridge offering genuine golden sovereigns at a shilling each and failing to find customers. I That is a way wonder if he was a printer? printers have of under-rating their wares, and printers follow in association their practices

in business life. Can we wonder that the public follows our lead and takes our work at our own valuation. Our Association is offering golden service at a nominal fee, far below the value of that service. Those of you who are on the lookout for bargains have one here. Join the Association for a trial year, and during that year leave no stone unturned to induce your competitors to come in. The time you may spend will yield a hundredfold return. The trifling fee you pay will be the best investment you ever made.

Come into the Fold.

I said just now that the master printer was an intelligent man with reasoning powers above the average. I have given reasons why I think every master printer should join this Association. Mr. Keliher and other speakers will follow and tell you of some advantages I have omitted. Unless you have some good reasons to put forward for not joining this Association I shall hope you will not leave the room to-night without giving in your name. If you know any reason or impediment why you should not join us, you are asked to declare it, and I am confident that your prejudice will be removed and your objections met. The most frequent reason adduced is: "I don't see the need of the Association. I have hitherto got along very well without it." That may be true, but you would have got along very much better with its aid. If you have been in business many years there probably was a time when you got along very well without the telephone or the typewriter, or the loose-leaf ledger, without a filing system or methodic organisation. Our printer predecessors got along very well with the Stanhope, Albion or Columbian press. But the day came when first the steam engine, then the gas engine, and now the electric motor became necessary; when modern machinery replaced primitive practices, and where is even the most conservative and old-fashioned printer to-day who fails to recognise the superiority of such appliances over the methods of a century ago. Modern methods have become a necessity not only if we are to progress but if we are to exist. And the day has come when the printer outside this Association is a back number, handicapping himself in the race for business, and most certainly severely handicapping himself in the race for profits. The printer outside his trade association is outside the scope of many benefits and advantages which cannot be mentioned here. He does not know what he is missing because he has not experienced or realised the good things which are offered him. I ask you to try membership for a year, because I know if you give it a fair trial you will not go back again to isolated action. You will not plough lonely furrows with your single horse after experiencing the advantages of team work harnessed for mutual help with your neighbours.

Give it a Fair Trial.

Let me give you one word of warning here. To reap the full benefits of the Association, it is necessary that you do something more than merely join and pay your subscription. You cannot complain that a book is of no use to you if you merely purchase it and put it on your shelves and never read it, or merely read it and fail to use the knowledge it contains. You cannot learn to swim by joining a class, paying the instruction fee and never going into the water. You cannot gain strength by investing in gymnastic apparatus and not And you cannot get the full benefits of this Association unless you make use of the Association, attend its meetings, participate in its activities, and bear your share of its work. I should probably surprise you if I told you the time some of the members of this Association spent in your service. but it is done because these members feel it is worth while, and because he gets most benefit from the Association who gives most service to it. That is the law of all progress and the law of all service, and that is the only way to reap the full benefits of membership of this Association.

The Empire Paper Mills. Ltd.

This company has been formed with a capital of £300,000, to take over the Ingress Abbey Paper Mills, Greenhithe, formerly the property of the Wall-Paper Manufacturers, Ltd.

The registered offices and selling offices of the new company are situated at 34-40, Ludgate hill, E.C, and the directors are:-

Rt. Hon. Viscount Rothermere.

F. E. R. Becker. Arthur Baker.

Stanley Cousins.

A. E. Linforth.

W. E. Roome.

It is well known that these works, with deep water pier and railway sidings, are situated on the banks of the river Thames, and are considered to be one of the finest

paper mills on this side of the Atlantic.

The policy, it is anticipated, the directors will pursue will be that of increased produc-tion. The mills are laid out for the manufacture of rag, esparto and wood papers, and

in addition coated papers.

It will be apparent that a mill so close to London, with water, motor and railway transport facilities, must be a considerable advantage to the paper industry in the south of England.

Discount on Paper,

The disagreement between Chicago printers and paper dealers on discount terms has been practically settled. The 2 per cent. discount is being generally observed, but not the tenday period. When convenient and possible, printers are expected to take care of their paper bills before the tenth day of the month.

Trade Notes.

MR. D. W. CARROLL, a member of the staff of the *Financial News*, died on Tuesday. He was fifty-one years of age.

MR. EDWARD ELTON, formerly of Edenfield and Bury, and later a sporting journalist in Manchester, died last week in his 68th year.

In commemoration of peace, the Oxford University Press have issued a Victory edition of the Bible and the Book of Common Prayer.

LLOYD'S REGISTER OF SHIPPING has presented £10,000 to the £500,000 fund which is being raised to establish a Degree of Commerce at the University of London.

The late Mr. Leonard Upcott Gill, part proprietor of the Bazaar Exchange and Mart, and formerly governing director of L. Upcott Gill and Son, Ltd., has left estate valued at £8,424.

MR. WATTS, a member of the L.C.C. Education Committee, states that his actual experience is that boys on leaving the public primary schools read print very badly and manuscript not at all.

THE Christian has completed its 60th year. Mr. R. Cope Morgan edited the paper for over 40 years, and his son, Mr. George Morgan, is associated to day with the Rev. Dr. Stuart Holden in the editorship.

The death has taken place in hospital at Tregaron, Cardiganshire, of Mr. R. Hughes Williams, a well known Welsh journalist and fiction writer. Mr. Williams was the author of a large number of Welsh stories, some of which he published in book form. He was 45 years of age.

WRITS have been issued against the Daily News, Limited, by Messrs. Lewis and Lewis on behalf of the Right Hon. Austen Chamberlain, M.P.; by Messrs. Bull and Bull on behalf of the Right Hon. Walter Long, M.P.; and by Messrs. Fowler, Legg, and Young on behalf of the Right Hon. Sir Eric Geddes, M.P., and the Right Hon. Sir Auckland Geddes, M.P., for alleged libels in statements relating to investments made by them in Russian securities.

The Tunbridge Wells Advertiser published a special edition in which the Peace day celebrations in that Borough were well illustrated with half-tone blocks. The copies of the paper, including an extra edition, were quickly sold, and the demand for more was so insistent that a "Souvenir Booklet" of 16 pages was printed to supply the demand for the pictures. This was a well got-up quarto, printed in chocolate ink on good paper, and was an extremely creditable production.

JOURNALISTS' UNIVERSITY COURSES.—The University of London inaugurates next session at the suggestion of the Institute of Journalists and the Appointments Branch of the Ministry of Labour a course of journalism which covers

a wide range of knowledge. The general control of the journalism courses and diploma has been entrusted by the Senate to the Jöurnalism Committee of the University, which includes, Dr. W. L. Courtney, Sir Sidney Low, Mr. J A. Spender, and representatives of the Institute of Journalists and the National Union of Journalists.

THE death has taken place suddenly, of Mr. Sinclair Sutherland, wholesale stationer, of Sheffield.

MR. GEORGE ROBERTS, the Minister of Food, explains in the current issue of the Typographical Circular how his official connection with the Typographical Association, as its Parliamentary representative and organiser, has come to an end.

MANY machine minders on newspaper rotaries will be pleased at the better-class sheet now being turned out by the mills. The re pulping of waste made a hard, brittle sheet, liable to crease and break. With more wood pulp being available the waste is not being so extensively used.

TENDERS WANTED.—For the printing of minutes and reports of committees, schedules of accounts, etc., for the Insurance Committee for the West Riding of Yorkshire; particulars from Mr. Arthur Flather, 6, Bond-street, Wakefield. For the supply of printed matter, books, and stationery required by the Darwen Corporation for twelve months; tender forms from the Borough Treasurer, Church street, Darwen.

A FIRM of art publishers in New York and Boston, with wholesale connections throughout the United States, desire to represent a few wholesale manufacturers of stationery, fancy goods, etc., on a commission basis, and are prepared, if necessary, to finance shipments of orders and guarantee accounts. Further information will be supplied on application to the Department of Overseas Trade (Development and Intelligence), 4, Queen Anne's-gate-buildings, London, S.W.1. (Reference No. 260).

Printing Exhibition in Birmingham.—An interesting exhibition of commercial printing was held this week at the galleries of the Birmingham Society of Artists. It was arranged by the Design and Industries Association, and the exhibits were of a most comprehensive character. Specimens of almost every kind of commercial print ng were displayed, and, by contrast, one was able to appreciate the wonderful advances that have been made in comparatively recent years in coloured posters. and in artistic commercial printing. The Association which was formed during the war, aims at the development of British industries through the co-operation of the manufacturer, the designer, and the distributor, by means of exhibitions of the best current examples of commercial products by forming trade groups composed of the three classes named, and by enlisting the support of schools of art and technical institutes. The exhibition claimed a good deal of attention from the printing trade.

BRITISH & COLONIAL

BOOK-PLATES FOR ALL—A London publishing firm has recently commissioned a lady artist to design sets of book plates to be sold at a popular price.

"G.A.S.," which is the house journal of Messrs H. Churchman and Co., printers. 7, Wilsonstreet, E.C., is an &pp. octavo, full of interesting matter, weil edited and nicely printed.

MR. ALFRED FOWLER of the American Bookplate Society, Kansas City, U.S.A., is planning to issue a series of bookplate brochures, the first of which will be a catalogue of Stanley Harrod's bookplates, with illustrations of seven of his artistic creations. The edition will be limited to 250 copies.

A Post Card Action.—An action was brought last week before the Lord Chief Justice by Mr. Michael Besso, carrying on business as M. and R. Besso, who delivered a million illustrated post cards at the Bulldog Sailors' and Soldiers Club. The plaintiff sued Sir Fredk. Milner, as president, Major-General Landon, as a former member of the Advisory Council, and a Mrs. Leslie, as secretary of the club for the price of the post cards -£2,375. Lord Reading found that the goods were supplied to Mrs. Leslie, and that the plaintiff had given credit to her alone. Judgment was entered for Sir Frederick Milner and General Landon, and for the plaintiff on his claim against Mrs. Leslie.

Personal.

SIR HERBERT MORGAN presided at a dinner given at the Ritz, last week, to Sir William Beveridge, K.C.B., on his appointment as Director of the London School of Economics.

SIR CRCIL HARRISON (Federation of Master Printers) is among the signatories of the report which has been prepared for the Federation of British Industries as the reply of the employers of the country to the demands of Labour.

MRSSRS. HAROLD SPALDING AND Co., paper-makers' agents, have removed from 12, St. Bride-street, to Vulcan House, 56, Ludgate-hill, London, E.C.4.

VISCOUNT NORTHCLIFFE is sufficiently recovered from the effects of his recent operation to leave London He has gone to Scotland, where he proposes to remain until October.

THE KING has approved of the Lord Mayor, Sir Horace Brooks Marshall, being sworn a member of the Privy Council. Sir Horace is principal of the firm of Horace Marshall and Son, publishers.

SIR THOMAS WHITTAKER, first chairman of the Royal Commission on Paper, has been appointed chairman of the Select Committee on Land Values Duties.

Gration Works Ourings.

The staff of the Grafton Printing Works (Hill, Siffken and Co., Ltd.) held their annual outing the other Saturday, the scene this year being Southend. The weather was on its best behaviour, and the party took full advantage of the opportunity to see and admire the many improvements that have been made on the front since the last time all were together at Southend, a week or two before the war started.

Mr. H. C. Hill presided over a large gathering at the dinner, with Mr. E. Hill in the vice-chair, and after the fare was disposed of, an excellent programme of toasts and songs was enjoyed.

The toast of "The Firm" was proposed by Mr. J. W. Cox and was responded to by Mr. H. C. Hill. who in the course of a very interesting and effective speech tendered hearty thanks to the staff for their loyal and active co-operation during the trying years of the war and with the return of their men from the army, a number of whom were present with them again. He looked forward to the future with perfect confidence. The establishment of the "house committee" and the "house journal" he mentioned as evidences of the recognition of that spirit of mutual interest and good will which, if carefully developed, would ensure the firm a successful time in the future.

The ladies of the staff had their outing the same day, and spent a very pleasant time at Loughton, the journey being made by road. Telegrams of a congratulatory nature was exchanged between the two parties during the day, and the smooth working of the arrangements of both sections reflected much credit on the respective stewards.

Defrauding His Employers.

On Friday last, at the Marylebone Policecourt, Frederick William Badger, case-room overseer to Messrs. George Pulman and Sons, Ltd., printers, Thayer-street, London, was charged on remand with stealing £1,000 belonging to the firm. Mr. George Pulman. managing director, said the firm employed about 260 hands. Recently the firm was approached by some of the men with the object of obtaining recognition of the trade union. Inquiries in the office showed that only 65 per cent. of the men were members of the union. The men claimed that the percentage was 90, and as a result of further inquiry, the defendant was called upon to account for nine men who appeared in the firm's books, but could not be traced. His reply was "They do not exist." Four compositors in the employment of the firm were called to show that various sums of money alleged to have been drawn by the defendant on their behalf when they were not at work had not been paid to them. The defendant was committed for trial. An application for bail was refused.

DIVIDENDS AND REPORTS.

LIVERPOOL DAILY POST, MERCURY AND ECHO.—The directors have declared an interim dividend at the rate of 12½ per cent. per annum on the ordinary shares.

RAPHAEL TUCK AND SONS.—The directors announce a dividend on the ordinary shares at the rate of 11 per cent. per annum for the six months ending April 30th, making, with the interim dividend already paid, 8 per cent. for the year, against 5 per cent., and leaving £10,000 to be carried to dividend reserve, £10,000 to general reserve, and £8,411 forward.

Weldons, Ltd.—The twenty-first annual ordinary general meeting of Weldons, Ltd., was held last week, Mr. A. Γ . Hollingsworth presiding. The chairman, in moving the adoption of the report, said he was glad to inform the shareholders that the balance-sheet before them was a record in the history of the company, the net profits being more than double those at the time of its formation. The net profit, after providing for all expenses, depreciation, etc., stood at £61,274, which would enable the Board to propose not only the continuity of the dividend of 10 per cent., but this year to add a bonus of 5 per cent., making 15 per cent. for the year.

NEW COMPANIES.

W. Holmes and Smith, Ltd. — Registered with a capital of £12,000, in £1 shares, to take over the business of printers and publishers carried on by W. Holmes, Ltd., at the Otto Printing Works, Lightburne-road, Ulverston. The subscribers are H. S. Phillips and J. F. Lord. Private company. The subscribers are to appoint the first directors. Registered office, Otto Printing Works, Lightburne-road, Ulverston.

Anglo-French Booksellers, Ltd.—Registered with a capital of £2,000, in 1,900 6 per cent. non-cum pref. shares of £1 each, and

2,000 deferred shares of Is. each, to print, publish, and circulate books, newspapers, music, magazines, journals, periodicals, pamphlets, pictures, engravings and other literary and art works, especially those produced or manufactured in France and her-colonies. The subscribers are H. D. Dauray and C. Stephens. Private company. The directors are not named. Registered office, 8, St. Martin's-place, W.C.

CROMPTONS (STUBBINS), LTD. — Registered with a capital of £120,000, in £1 shares, to take over the business of cigarette paper manufacturers carried on at Stubbins Works, by James R. Crompton and Bros., Ltd., and to carry on the business of cigarette paper manufacturers, rag and paper stock merchants, manufacturers of paper of all kinds, manufacturers of wood pulp and other materials used in the manufacture of paper, etc. The subscribers are R. Crompton and W. P. Stericker. Private company. The first directors are J. R. Crompton, F. Hawke, A. Nuttall, R. Crompton, jun, and A. S. Newton. Registered Office, Stubbins Mill, Ramsbottom, near Manchester.

W. B. SAUNDERS Co., LTD.—Registered with a capital of £5,000, in £1 shares, to take over the business of a publisher carried on by the W. B. Saunders Co., of West Washington-square, Philadelphia, U.S.A., at 9, Henrietta-street, Covent Garden, and to carry on the business of proprietors and publishers of medical, surgical and other books, periodicals magazines, etc. The subscribers are F. B. Saunders, W. L. Saunders, jun., W. D. Watson, R. W. Greene, W. A. Pierce, J. F. Hagen, A. E. Leonard, and C. G. Perkins. Private company Directors: F. B. Saunders, W. L. Saunders, jun., W. D. Watson, R. W. Greene, W. A. Pierce, J. F. Hagen and C. C. Perkins. Registered office, 9, Henrietta-street, Covent Garden, W. C.

Current Topics.

Newspaper Sources of Information.

An interesting and important point was established in the Appeal Court last week, when the Court declined to interfere with the rule excepting newspapers from the necessity of disclosing the sources of their information. The application arose out of the action which Mr. A. Lyle-Samuel, M.P., for the Eye Division of Suffolk, is bringing against the National News, Odhams, Ltd., and the Victory House Printing Co., Ltd., for an alleged libel contained in the newspaper. It was published on the eye of the election, and dealt with the private life of the candidate, including the death of his late wife in an asylum,

his bankruptcy, and his marriage to the present Mrs. Samuel. Lord Justice Banks said it was not for him to discuss the good taste or justice of publishing such articles as that complained of. All he could say was that there was a rule excepting newspapers from the necessity of disclosing the sources of their information Under those circumstances the appeal should be dismissed. Lord Justice Scrutton concurred, and the appeal was accordingly dismissed. The opinion expressed by the learned judges, it is hoped, will have so ne weight with those who conduct our newspapers. The British Press has a reputation which we hope will long be upheld, and while in the course of justice some unsavoury investigations may have to be made, it is hoped on the other hand that newspapers will not go out of their way to disclose matters which are of no public interest but only appeal to bad taste.

The Healthy Printing Office.

A PLEASING and noticeable feature of the last few years is the great improvement that has taken place in the sanitary conditions of most printing offices, and there are now but few of the old, unclean, dirty and germ -laden work-rooms that used to be a common feature of the trade, and which were quite unsuited for the purpose of working in, to say nothing of their not being in a proper state for the economical and speedy execution of work. But little thought was, in times which most of the older men can remember, given to the health and comfort of the worker, who toiled under conditions so bad, that he was often driven to drink to stimulate his energies, and with most disastrous results to himself and family. Now that state of things has departed, and employers vie with each other in erecting premises of a sound hygienic construction, where there is plenty of light and plenty of air to keep their men healthy while at their work. This change of conditions while benefiting the worker also benefits the employer, for in a healthy, well arranged modern workroom, the work goes on to completion in a steady, rapid fashion, and contentment and health is noticed in the faces of the employees, while the waste and confusion that reigns in a badly planned, badly-ventilated building is absent, and the result is a greater output, a greater profit for the firm. It is every employer's duty to keep his premises in a fit condition for the health, comfort and convenience of his workmen, and by so doing he will reap much satisfaction and a better turn-out of work.

Some FACTS ABOUT CANADA'S PULP AND PAPER INDUSTRY.

Ganada is the second largest pulp and pulp producing country in the world, and is rapidly overtaking the U.S. which holds first place.

Ganada's first large paper mill was built in 1865 and produced $1\frac{1}{2}$ tons of paper in 24 hours. To-day a modern paper mill produces from 250 to 300 tons in the same length of time.

Ganada makes every grade of paper and board used commercially.

Canada's pre-eminence as a paper producing country lies in the possession of hundreds of thousands of acres of pulp-wood forests and of conveniently located water powers.

Ganada has the largest forest area of any country in the British Empire.

Ganada has developed water powers estimated at 1,941,700 h.p. besides undeveloped water powers incalculable.

Ganada invites enquiries for Pulp and Paper. Write to A. L. Dawe, representing Canadian Pulp and Paper industry, who will be glad to advise as to source of supply. Address:

A. L. DAWE, c/o Canadian Mission in London, 1, Regent Street, S.W.1.

Ganada Manufactures: Mechanical, Sulphite Unbleached and Fine Bleached, Sulphate Pulps, Newsprint, Printing Papers, Cover Papers, Writing Papers, Surface Coated Papers and Boards, Kraft and other Wrapping Papers, Boards of every description, M. G. Tissue, Toilet Papers, Building and Felt Papers and Wall-board.

Bookbinding Notes and News.

The bookbinding trade is settling down after its industrial discussions and settlements, and good business is the order of the day. Corporations, banks and public companies are convinced that paper has touched low level, and they have ample assurance that the cost of making account books will not be less that it now is, hence the general desire to place orders and press for execution. Binders themselves may well look at their costs in doubt, especially if they are not equipped to know the facts and figures. Recent advances and concessions to labour have made it necessary to advance the hourly rate for every process and machine used in the production of ruled and printed books. Some houses are finding that the output of work has shrunk in relatively greater proportion than the concession in hours per week. Particularly does this apply in the case of establishments whose organisation is not constructed to keep track of production and cost. It is vitally important that, with the improved payment and conditions of labour, better production should result. Otherwise, the cost of making books will reach a figure that will effectually stem the demand, and correspondingly make the cost of production still greater

The market for materials has undergone no profound change since our last notes appeared. Leathers are not too plentiful, and prices are no easier. The probability is that exports will claim a large share of our available material and thus maintain the high price for a long time to come. We have heard of anglo-hides quoted at 1s. 1od. per foot, imitation pigskin at 1s. 5d. per foot, basil at 1s. 3d., rollers at 1s. 1d., skivers at 71d. to 9d. Glue remains at its last month's figure as also do threads and tapes, gold leaf and imitation leathers. Calico and fabrics generally have advanced from ½d. to 1d. per yard, despite an earlier promise of reduction. The latest quotations we have seen for fine white calicoes, figured the price at 81d. and 9d. per yard. The pre-war price was between 2d. and 2 d. per yard.

Dutch strawboards can be bought for forward delivery (4/6 weeks) at £15 10s. per ton plus loss on Exchange. This price is for 8 oz. to 1½ lbs. board, and is subject to buying the regulation proportion of English board. For stock supplies of foreign board, taken without English board any price is asked. We have heard of prices ranging between £25 and £35 per ton being paid for small lots of Dutch strawboards taken from stock. This is a matter of sheer exploitation, and we cannot conceive how some binders can be so blind to their own interest. There are several English mills now making a boxboard of a vastly improved quality, and the price is quite reasonable. From one market in particular we have

had samples of strawboard equal to that produced in Holland and made from real straw.

Millboards are easier now to secure, and hand-made boards are obtainable at £52 per ton. Machine-made boards are quoted from £35 to £45 per ton according to quality. Marble papers are as scarce as ever, and prices remain at the same high figure. No English substitute is available, and many binders are finding it economical and satisfactory to use unglazed English self colour printings and thin cover papers. There is an excellent opening for an English imitation marble paper, and good business is assured, but nobody appears anxious to entertain the proposition.

A new leather substitute has recently made its appearance on the market under the descriptive title "Levrine." The material is handled by Reddaways, whose experience in marketing products of this kind is second to none. In character, "Levrine" has a similar appearance to the coated fabrics already in popular favour, and as the price is strictly competitive, its place on the market should be assured. Bookbinders are turning more and more to these substitutes for leather for every class of work, and as the price of the real stuff becomes more prohibitive the demand will increase for an equally serviceable deputy.

At the annual meeting, the other day, of Kelly's Directories, Ltd., Mr. E. Festus Kelly, the chairman of the company made an inter-esting speech on the company's work during the year in the course of which he gave the following particulars of two of the directories issued by the firm. The price of the "London Directory" before the war was, to subscribers 32s. 6d., and this price has been increased, to subscribers, to 50s. Those prices are gross; that is, they are not the net amount the com-pany received. To take the net amount of the complete volume of the "London Directory' for this year, the increase, after allowing agents' commission, was 14s., and the pre-war cost of the binding was 2s. Id. (one volume), and the cost per copy of binding the last edition was 9s. 71d. (three volumes). The price of the "Merchants' Directory" before the war was 30s., and this price has been increased to 35s., making a net increase in price to the publisher of 3s. The pre-war cost per copy of binding this book was is. 9d., and the cost per copy of binding the last edition was 4s. 1od. The cost of binding is, of course, only one item of many which have been increased.

The supply of books to the navy was productive of great enjoyment to the men of the lower deck, and served to dispel the monotony

of the long months of service afloat. One serious problem, however, that faces the navy librarian is the damage to books from dampness. Books that happen to be left around the decks are almost ruined in a short time, which makes maintenance costs heavy. Commander C. B. Mayo, of the United States Navy, has referred to the bookbinding committee of the American Library Association an inquiry as to whether it is possible to make books practically waterproof, not only as to the covers but with waterproof edges as well. This committee, of which Joseph L. Wheeler, of the Youngstown Public Library is chairman, would like assistance in experimentation and investigation by publishers and bookbinders. The greatly increased use of books by men in the navy and the possibility of continuing the book service on board the ships on a larger scale, makes it highly important to find a reliable method of making books waterproof.

United States bookbinders are asking for increased wages, especially in Washington (D.C.), where the cost of living has increased enormously through the action of profiteers, insomuch so that the present rate of 60 cents (half-a-crown) has become virtually a lower wage than was paid in pre-war days, with the working binder in a worse position than he then was. The new wage scale demanded by the men asks for a considerable increase on present wages, and when this is added to the increasing cost of materials it is going to make the prices of binding very high indeed.

A correspondent wants to know what is the finest finish for book edges, should they be coloured or gilt? Well it is a matter of taste and also of expense, and often the colour of the edges is chosen to harmonise with the contents of the book. For instance the sprinkled edge bespeaks the presence of didactic contents -the school book, the text book, the work on technology, etc. The coloured edge forms, when burnished, a beautiful exterior; in red expressive of tale or poesy, and in black, of course, suggestive of solemn thought, devotional exercises and communion with one's inner self. Black edges chime most artistically with a black morocco or velvet covering having broad silk registers and carved clasps of dull silver. A richly burnished black edge is greatly prized by the book lover, and is even more costly than a gilt one, requiring as it does more skill and more labour, and setting off the snowy whiteness of the margins with admir-An extremely richly tinted edge able effect. is obtained by first colouring in carmine and then gilding thereon. Such an edge almost always bespeaks contents of a deeply devotional character, being used upon the Scriptures, in fine bindings, and upon fine editions of prayer and hymn books.

The object of bookbinding is to cover literary productions so as to protect and preserve them, while neglecting none of the

means fitted to embellish this enveloper whether of perfection of workmanship or of the brilliancy and, above all, the choice of designs destined to adorn the cover of the book, all this work remaining, of course, in proportion and harmony with the merit, the value, and the nature of the volume. the invention of printing, binding scarcely existed as a separate art; it was only an art when the goldsmith, the jeweller, the enameller, or the ivory worker was called upon to enrich the cover proper. But the missals and manuscripts of those days were immense in size and weight. In the middle ages a book was worth an estate, and a psalter, for instance, was transmitted from owner to owner with lengthy legal formalities, or even bequeathed by will in usufruct.

The high prices of book cloth may be expected to continue, the present price of cotton showing no signs of a coming fall, while the present high wages have come to stay. Book cloths are a very necessary portion of the material used by the binder, as the majority of books nowadays are cloth bound, and as the cost of that material is more likely to go up than down the prices charged for bookbinding are not likely to become lower in the future. This will cause the present prices of books to become even higher than they are now. The public have now to pay more for all articles and, let us hope, they will not begrudge a little advancement in the price of their books.

Map-Mounting.

An old and experienced bookbinder, recently interviewed on the subject of mapmounting, gave it as his opinion that, although there might be more modern methods of doing this class of work, the following was far and away the best way to carry out the work, if good results were desired. He said: "It is better to mount maps on the finest linen, as it takes up least room It should be in the thickness of the book. cut a little larger than the map itself, with a further piece left, on which to mount the extra piece of paper, so that the map may be By mounting a map on a guard thrown out. the size of the page, it may be kept open on the table beside the book, which may be opened at any part without concealing the map; by this method the map will remain convenient for constant reference. The map called 'throwing out' a map. should be trimmed at its back first; then pasted with rather 'thin paste' made with arrow-root, the pasting board removed and the linen laid on, then gently rubbed down and turned over, so that the map comes uppermost; the white paper should then be placed a little away from the map, and the whole then 'well rubbed down' and laid out flat to dry. To do this work the paste must

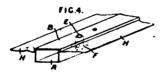

BRITISH & COLONIAL

be clean, free from all lumps, and used very evenly and not too thickly, or when dry every mark of the brush will be visible. When the map is dry it should be trimmed all round, and folded a trifle smaller than the book will be when it is cut, otherwise the folds will be severed when the edges are being cut. For all folded maps or plates a corresponding thickness should be placed in the books where the maps go, or the fore-edge will be thicker than the back. Great care must be taken, that the guards are not folded too large, so as to overlap the folds of the map; it they do so, the object of their being placed there to make the thickness of the back and fore-edge equal will be defeated.

Some Bookbinding Patents.

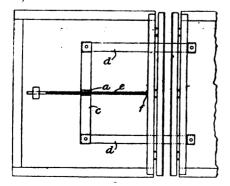

In a locking-follower for a loose leaf binder of the kind in which the locking mechanism is contained within a hollow box formed of two channelled members the channelled A, B, are secured together by bushed

eyelets or tubular rivets E. the bushes F forming distance-pieces. The box may be secured to the covers by rivets passing through the eyelets E, or by glueing to the covers a strip H of binder's cloth, which is held in position between the channelled members. The invention is patented by Mr. P. Macmaster and Barr Engineering Co.

In a loose-leaf binder of the kind in which flexible thongs d are tightened by a screw-actuated cross-bar c, the nut a is mounted on

the cross-bar so that it may swivel. A collar or enlargement f may be provided on the

serew e, against which the nut a abuts when the thongs are fully extended. By these means, the tension in the two thongs is equalised, and bending of the screwed rod e is avoided. The invention is patented by Mr. A. Kenrick and others.

Mr. Reginald J. Lake

Presentation Portrait Scheme.

Mr. Alfred F. Blades, president of the Federation of Master Printers, has issued a letter in which he outlines a proposal to present Mr. Reginald J. Lake, who lately retired from the position of director of the Federation, with his portrait in oils. All who are concerned with the craft will agree with Mr. Blades that Mr. Lake's retirement ought not to be passed by unnoticed and that some tangible recognition of his great work for the printing group of trades should be presented to him as a testimony of the affection and esteem in which he is field by the whole of the trade.

It is recalled that Mr. Lake was president of the Federation in 1905, and ten years agobecame secretary and later on director. During all these years, to quote Mr. Blades, "he gave of his best, he never spared himself, he never thought of his own convenience, and he/ gave up even his week-end rest in order to keep up with the work at No. 24, Holborn."

"It may be," adds the letter, "that the president and the past-presidents in the discharge of their duties have seen more of his great qualities than the members of Council or the trade in general, but, however that may be, I believe that the members feel that in losing his services, the Federation is parting, not only from one who has served them magnificently, but from one who is an old personal friend to many, and who is revered and admired by all. His departure leaves a great gap, which will be difficult to fill, his lifelong knowledge of trade conditions and transactions was invaluable and his high example of devotion to duty was a model for us all."

It is proposed that a portrait of Mr. Lakein oils should be painted by Mr. Hacker, A., and presented to him at a complimentary dinner as early as possible. The cost of the painting will be about £525, and Mr. Blades now makes an appeal for this amount. It is suggested that a firm's subscription should be limited to £10 10s. It is also intended to have printed the finest quality photogravure reproductions of the painting (size of print 17½ in by 10 in, on paper 27½ in by 20 in.), signed by Mr. Lake, at a cost of 10s. 6d. each, for those who desire to have a black, and-white picture of their old friend.

LINOTYPE AND MACHINERY, LTD., and Mr. H. Pearce have taken out a patent for casting engine cylinders.

BRITISH & COLONIAL

If, when printing, a difficulty arises regarding INKS—write to us!

We shall be very pleased to answer any enquiries and give expert advice.

We are not only makers of the finest printing inks, but have a staff of experts constantly investigating such subjects as the action of inks on various kinds of paper, the right consistency of inks for different purposes, the use of reducers, driers, etc., difficulties in litho offset work and other new processes, etc.

We have an intimate knowledge of the requirements of printers and make a feature of producing inks for special purposes. Our range of colours and tints for litho, letterpress, offset, photogravure and other inks is unrivalled.

T.A. Actitiity.

THE Typographical Association recently did missionary work in Bacup, which has resulted in all the printers becoming members of the "T. A." They are attached to the Rochdale Branch and are receiving Grade 3 rates of pay. Mr. J. E. Howarth, the Rochdale secretary, conducted the negotiations, assisted by the executive council.

There has been some little difficulty over the interpretation of that part of the holidayswith-pay agreement relating to the amount of money a man is entitled to for a week's holiday wage. A man working on the 'stab rate of pay, of course, gets a full week's wage The difficulty arose over men on 'stab rate. who, received extra money for special work or worked regular overtime. The Typographical Association executive have given a ruling on the matter to the effect that "Members are entitled to charge the rate ordinarily received for a 48 hours week. Overtime worked in excess of 48 hours is not chargeable." The "ordinarily received" is to include any bonus or overtime charges due to late hours which are a permanent arrangement, but nothing is to be paid for hours worked in excess of 48.

The Manchester branch of the "T A." and the master newspaper owners have had under consideration details of the wages and holidays-with-pay agreement, and the machinemen's rules. Rotary minders and extra money men, and the custom to pay linotype operators 2s. extra after a month's engagement were all discussed. The newspaper owners agreed to the retention of the extra 2s. to operators and a 5s. advance to the rotary men pending a conference on the machinemen's rules.

WARNING FROM CANADA.—The secretary of the Typographical Association has received a letter from the secretary of the Regina T. A. warning printers from taking up situations in Canada, especially the west. He says the state of trade is very bad owing to a general sympathetic strike affecting 25,000 workers in Regina. There is also unrest in the printing industry, the printers negotiating for new rates of pay not receiving very favourable consideration.

Miller Platen Record.

A successful result has attended the demonstration of the working of the Miller platen machine with automatic feed at Bristol. It was on show for 17 days, during which time about 50 firms inspected it from Bristol and adjacent towns and 36 machines were ordered. This, we believe, constitutes a record for the sale of any machine approximating to the price, considering that the largest order was for three machines only.

Coloured Process Inks.

A Plea for Their Standardisation,

At the recent convention of the photoengravers of America Mr. Wm. J. Wilkinson, general manager of the Zeese Wilkinson Company, of New York, made the following remarks on the "Standardisation of Colour Process Inks":-One acquainted with the printing of four-colour process plates manufactured to-day, he said, realises the great desirability of an effort on the part of the manufacturing photo-engravers to standardise process inks to such an extent as to make more perfect results possible. Practically every manufacturing photo-engraver in America has adopted a scale of colours of his own choice, which he uses with more or less regularity in the proving of his plates. There is a great variation in these selections, and the result is that, when several sets of plates made by various concerns have to be printed on one sheet, the printer is confronted with the greatest difficulties, and it is quite impossible at times to match any of the proofs in an attempt to strike happy mediums between the various shades of inks used.

It has been a habit in the past for printers to supply the engravers with inks which will ultimately be used on a certain job. In many cases the ink bought by the printer is purchased in large quantities, often at far lower prices than good process inks can be obtained for.

The underlying principle of the three and four-colour processes has been practically lost sight of; that is, that these processes are photo-mechanical, and that the inks to be used to reproduce copies in three and four-colours should be adapted to a scientific standard—and not merely be "yellow," "red" and "blue," but yellow, red and blue of particular hues and shades which will work harmoniously together and at the same time

reproduce the copy with the least possible hand work on the plates.

The four main factors in the selection of process inks ought to be: first, the shade or colour; second, the permanency of these inks when exposed to daylight; third, the consistency; and fourth, the printing qualities. The shade is of the greatest importance. It seems to me that the American Photo-Engravers' Association should appoint a committee to determine by scientific methods the shades which should be standardised and should be universally used all over the United States to reproduce copies, either in three or four colours. Only then will the engraver get the most perfect results, and he will incidentally save himself the trouble of re-etching the plates to a greater extent than is necessary when the proper shades of inks are used.

As far as the permanency of inks is concerned, it is a known fact that several of the inks made of aniline dyes are not permanent, and will fade when exposed to the daylight. How often have we seen posters of which the entire red has disappeared and a sickly picture, consisting of blue and yellow, remains! There is no question but that inks can be made in any shade which has permanency and which will not fade when exposed to sunlight. It is therefore evident that only such inks should be used.

As to consistency, a great difference in the appearance of a picture can be made with too thin or too heavy ink. If the plate is proved with thin ink, a large quantity of it has to be used in order to bring out the solids properly; we will find that in the deeper shadows the plate will be almost completely filled up and the high-light dots show considerably larger than they appear on the plates. Inksshould be of such consistency that

BRITISH & COLONIAL PRINTER & STATIONER

they will have the maximum amount of covering strength when the plate is merely given a thin film, without making it necessary to pile on more ink than the plate will properly carry. Due to the fact that inks of similar consistency cannot be used on the various types of printing machines, it becomes evident that it would be desirable to manufacture inks of such consistency as is proper for the various machines used for printing purposes. Proving is universally done on platen presses and heavier inks should be used than those for flat-bed presses; and again, this ink will be considerably heavier than the ink used on rotary presses. In my estimation, therefore, three grades of a consistency should be adopted to cover these three contingencies. There is no great difficulty connected with making inks of exactly the same hue and shade of slightly different consistency. If ink of the same consistency used for proving on a Universal press is used on the cylinder press, the printer will have great trouble in rolling the ink out and inking his forms; for this ink will be too thick, and there usually will be added some reducer. By adding this reducer the printer will also reduce the shade of the ink, and it is therefore necessary that the ink-makers produce an ink of exactly the same shade while of a softer quality. This pertains also to rotary printing.

The fourth and last requirement of process ink is that it should have the proper printing qualities, that it will produce all the shades of the plates without filling in, and interpret and reproduce the plates on paper exactly as

they are.

I have written to the various ink manufacturers, asking their views on the subject. They tell me that they are very desirous of co-operating with the photo-engravers in order to adopt the proper standard for process inks. There are houses which carry from thirty to forty different shades of so called "process" inks to-day for their various clients. In my estimation, intelligent co-operation would eliminate a great amount of trouble and tend to bring down the cost of process inks. would suggest and move that the International Association appoint a committee consisting of various practical photo-engravers, who, together with representatives of the leading ink houses, work out the standardisation of colour process inks. After adoption of the proper shades, formulas should be distributed among ink manufacturers to be followed and used in the manufacturing of process inks; not only as far as the shades are concerned, but also as far as the consistency is concerned. It would save a large amo int of money by supplying only standard inks to the manufacturing colour plate engravers, and a great deal of hand work now necessary on plates could be eliminated. This, in my estimation, is the proper solution of the problem, and I submit it herewith for your approval.

At the conclusion of Mr. Wilkinson's remarks, which were rewarded with hearty applause, it could be plainly seen that he had struck the key-note to one of the most im-

portant topics before the Convention. He had covered the subject so completely that there was really no room for discussion, and the Convention accepted his recommendations in the following manner:—Moved by Mr. C. C. Cargill, seconded by Mr. Oscar Kohn and others, that Mr. Wilkinson's recommendation to appoint a committee to bring about the standardising of colour process inks be adopted and that such a committee be appointed by the president. The motion was carried unanimously.

Two Coals Beller Than One.

A writer in the American Printer says:—
"There are good reasons why two impressions would be better for some jobs of presswork than a double rolling of ink. Take a solid background plate, for instance, to be run on a platen press. Double rolling of the form will perhaps supply enough colour for the occasion, yet there is apt to remain delicate streaks, and possibly some weak spots which have not covered nicely. Two printings—one over the other—cutting down on the ink—will give a firm, solid result, and the monotonous labour of handling the throw-off is avoided.

"The principle is much the same as painting. Two or three thin coats of paint, one over the other, will give better results than one extra heavy coat. It is the same with printing ink so far as solid plates and very large bold type are concerned. Print placards containing lines of big type (but no cuts) with two impressions, and the second coat of ink will gloss beautifully. In most cases, large plates containing letters and detail in reverse (white) must be double rolled to eliminate streaking, but even some reverse plates will turn out better with two printings.

"The average form to be worked on rough, or dark, cover stock should be printed with double impression, the first printing being permitted to dry before the second is applied. With a little varnish added to the colour, a high gloss can be obtained in this way. On dull finish stock, a good effect can be had from the use of gold in two impressions. The double roll is tiresome and slow, and it should be avoided whenever possible. Try two impressions instead, but be careful about register. 'Two coats of ink are better than one' in certain cases."

A British patent has been granted to Mr. T. B. Kendell, Shoreditch, in respect of guillotine knives. In guillotine machines of the type in which the cutting blade is detachably secured in a holder which is adjustably mounted in the machine carrier, the blade is provided with studs adapted to be received by holes in a holder to which it may be secured by cotter pins.

Some printers are born artists—others could not daub paint on a barn effectively.

Standardisation.

Further Arguments in its Behalf.

Standardisation of paper is still in the air, and the opportune time is slipping by for bringing the scheme to earth. No greater headway appears to have been made in the United States than in this country, for it is suggested by Mr. Wm. Bond Wheelwright, of Appleton, Wis., that a joint committee be appointed to work out "a rational and a national basis for standard quality in papers." This gentleman, in The Paper Mill, makes the following suggestions on the subject:—

Before the benefits of standardisation forced upon us by the war have been forgotten in the scramble for business, let us pause for consideration. Why not build upon the foundations of sensible trade customssensible trade standards? Such quality standards as exist to-day in papermaking only represent the accomplishments of certain individuals whose grades are imitated by newer if original competitors. Competiton in almost all classes of paper has led to confusion, both of terms and quality, and to a multiplicity of grades. The result is bewildering, the dealer's stock is burdened with an unreasonable and frequently an unbalanced variety of items, consequently, the general expense of manufacture and distribution is increased.

Take bond papers for example. It is difficult even to define the term. Originally Crane produced a fine quality of writing paper made strictly of linen rags, without mineral filler or other adulterants. It was used by a certain printer of stock certificates, who on his reorder is said to have asked for some more of that "bond" paper. To-day the catalogue of a certain typical paper merchant lists sixteen alleged "bond papers" comprising 316 stock items. The number of items carried in each grade varies from 1 to 110. Now as the only raw materials used in making these papers are linen and cotton rags and bleached sulphite wood pulp, the number of grades offered in the trade is beyond reason. Their existence is the result of competing mills edging in between recognisably different grades with an intermediate priced line.

If there were a reasonable interval between prices, the differences in quality would be readily appreciated, but as it is, experienced paper men are often at a loss to classify samples or to identify their own papers except by the water marks. The extremes in values in the price list quoted range from 16½ cents per pound to 45 cents per pound. In other words, an 8½ by 11 letter sheet in No. 20 substance weight of the best rag bond is worth five mills as against one and sixty-five one hundreth mills for the cheapest sulphite sheet. The absurdity of 14 intermediate prices is more striking when translating price per pound into price per sheet unit, particularly when it is realised that the cost of dictating and

typing the average business letter and printing the heading is far greater than the price of the stock, and is practically as costly on the cheapest as on the best.

In buying cigars a man usually has a definite idea of what a smoke is worth to him, whether it be a ten, fifteen or twenty-five cent cigar; why should we not arrive at our paper standardisation on the same basis, permitting competition on general stock orders to be decided between qualities consistent with a reasonable scale of prices? Suppose we arbitrarily adopt six grades of bond papers, requiring each to pass certain minimum specifications as to quality and priced consistently as follows:

Standard Bonds - Substance No. 20 - Paper 17 by 22.

Grade.				Price Per M Sheets.	Per lb.
No. 1 Linen	•••	•••		\$ 20	\$0.50
No. 2 Rag		•••		12	.40
No. 3 Rag				16	.30
No. 4 Rag				8	.20
No. 5 Waterma	rked	Sulphi	te	7	.171
No. 6 Unwaterr	narke	dSulp	hite	6	.15

Suppose we alse agree to a "limitation of armaments" as to size, weights and colours. Trade customs have already decreed that bond papers be carried in three sizes, and their half sizes if desired: 22 by 34, 24 by 38 and 28 by 34; in the following substance weights: 13 (usually carried in 17 by 22 only), 16, 20 and 24. Colours limited by the War Industries Board to five have been increased again, in one case to twelve. For most purposes five is sufficient, but ten should be liberal, and might well be established as a limit. A well-balanced stock line could be adopted as follows:—

TENTATIVE TABLE OF REGULAR STOCK ITEMS.

Grades.		Weights.	Items.
	22 by 34.	28 by 34.	24 by 38.
No. 1 linen	13-16-20-24	-20-	-20-24 7
No. 2 rag	18-16-20-24	-20-	-20-24 7
No. 8 rag	13-16-20-24	13-16-20-24	18-16-20-24 12
No. 4 rag	18-16-20-24	-16-20-24	-16-20-24 10
No. 5 sulph	18-16-20-24	-16-20-24	-16-20-24 10

Here we have 197 items in six qualities as contrasted with the jobber's list of 316 items, sixteen different brands.

The adoption of such a plan, while calling for many readjustments, is not so radical as might seem at first, and in addition to establishing definite national standards of quality offers the following advantages. The manufacturer would produce more efficiently because his attention would be concentrated on

BRITISH & COLONIAL PRINTER & STATIONER

a few lines, resulting in increased production, greater uniformity, and better workmanship. His incentive would be quality, not price, as list prices would be standard for given qualities, and workmanship and service would determine his success. His advertising and selling cost would be reduced, as less sampling would be required and greater turnover effected.

The premium would not be based upon price cutting, so the temptation to scrimp on quality and break into the market by introducing unnecessary intermediate grades

would be gone.

In spite of the standardisation there would be plenty of latitude for individuality in the colour texture and feel of papers, which otherwise conformed to certain physical and chemical specifications. The paper merchant would give better service at a lower cost, since his investment could be reduced and his turnover increased. His salesmen would have a more intelligent knowledge of his lines, as there would be readily appreciable differences in value, and there would be far less information to be absorbed. Hypocrisy and deception, which present conditions force upon them, would be tremendously decreased. The printer would receive and share with his customers the benefits enumerated. His competition would be fairer as substitution of "almost as papers would be next to impossible without the client's consent. Paper represents on the average 30 per cent. of the cost of a printer's work, and introduces a very uncertain element into competition. The chances of losing a job through the ability of a rival to figure a cheaper stock on the order would be minimised by standardisation, and the printer's success under competitive conditions would rest where it belongs, on his ability as a printer. His selling would be simplified, as with only six grades to select from it should prove easier to crystallise the customer's idea as to stock. Finally, the consumer would receive the benefits accruing from improved service, quality and more efficient manufacturing and merchandising.

If the allied trades will consider this proposal from a liberal point of view and with a keener appreciation for the ultimate advantages rather than the immediate and temporary inconveniences of readjustment, it is certain that this plan amplified to comprise all grades of printing papers will be promptly

undertaken.

The plan is right and the moment opportune, for we all still remember the benefits which emerged from Government restrictions as accepted by the trade, and stocks on hand, which have since the armistice of November 11th been replenished only on a hand-to-mouth basis, are reduced to the smallest minimum consistent with good judgment.

WITH the object of helping local authorities in regard to housing schemes, the Ministry of Health have decided to issue a new journal called *Housing*, the first number of which was published last week.

Austrolian Notes.

(By Our Sydney Correspondent.)

Although a number of labour-saving machines has been installed in the Government Printing Office at Melbourne as the result of the visit to America of Mr. A. J. Mullet, it is not proposed to reduce the number of employees. The new machinery will perform much of the work previously done by girls. About 100 girls are employed in the department, but according to Mr. Mullett they are in strong demand by young men contemplating matrimony. The result is that the staff is constantly being depleted, and in future the vacancies will not be filled. Included in the new printing machinery is a Kelly press, which dispenses with hand feeding, the work being done automatically. Much labour will be saved by the installation of a gathering machine, which is used in the production of telephone directories. The machine gathers up the pages of the directory in proper sequence, and completes 40 books a minute. Other improvements embrace stapling and binding devices.

The report of Messrs. W. E. Smith for the last half-year, after writing off £568 for depreciation, shows a profit of £4,398, which, with £69 brought forward, makes £4,468 available. A dividend of 9d. per share is recommended, absorbing £2,812, together with the transfer of £1,500 to the reserve fund, making that fund £11,000, and the carrying forward of £155.

To express their regret at his resignation and their appreciation of his many fine qualities, the employees of the Melbourne Age office entertained the head printer, Mr. Harry Clarke, at a social in the Masonic Hall. Mr. Clarke, who entered the printing department of the Age 49 years ago, has held the position of printer for the last 28 years, and is now retiring from active association with the office. Mr. Sanderson, father of the chapel, presented Mr. Clarke with a gold watch, a wallet of notes, a walking stick, and a case of cutlery.

DAMAGE estimated at £50,000 was caused by a fire which broke out at the printing works of Marchant and Co., Kent-street, Sydney. A mysterious explosion occurred shortly after the fire started, which, it is thought, was caused by a bomb. The explosion evidently occurred close to a wall, for a big hole had been blown through the brick work, and all the windows in the room were smashed.

AFTER 52 years in the service of Messrs. Walker, Way and Co., printers, of Melbourne. Mr. Edwin Lee has retired. His retirement was marked by a presentation from his fellow employees, and an expression of appreciation for services rendered from his employers.

The Bookstall Co. Proprietary, Ltd., has been formed in Melbourne with a capital of £10,000, divided into shares of £1 each, to take over and carry into effect an agreement between the Victorian Railways Commissioners and Messrs. A. M. Gillam and J. G. Pyke for the conduct of bookstalls at stations on the Victorian railways and to carry on business as publishers, stationers, etc.

At the last general meeting of the Victorian Master Process Engravers' Association a resolution was passed binding members individually and collectively not to buy any machinery, zinc, copper, or process material of German or Austrian manufacture for a period of ten years from the date of the signing of peace. The New South Wales Master Process Engravers' Association has also passed a resolution in support of the Victorian Association.

SOME knotty legal problems arise from time to time under the Workmen's Compensation Act. One of these is in relation to the case where an injured workman subsequently commits suicide. The question then arises, can the dependents claim compensation? The Courts have held that suicide cannot be proof of accident without strict evidence of insanity resulting from accident. If, however, the insanity was a direct result of the accident, and not an indirect result caused by brooding over it, it may be an accident. In a recent case in New Zealand a widow claimed compensation for the death of her husband, who was employed by defendant as a linotype operator. Whilst attending an engine used for generating gas he slipped, and fell against a brick wall. When he got home his medical adviser prescribed rest. After the accident he was dazed, and at times only half conscious, irritable, and complained of dizziness. A few days later he went out for a walk, but never returned, his body being found three weeks later in the river. A post-mortem examination disclosed a clot of blod in the head on the site of the abrasion. The court held that the evidence was amply sufficient to establish the insanity of deceased as a result of injury to his brain, and that he had committed suicide. Judgment was accordingly entered in favour of the widow for £529.

There have been a great many deaths in the printing world of late, and among them we may note the following:—Mr. J. H. De Courcy, managing director of the Freeman's Journal. Arriving from Ireland as a lad. Mr. De Courcy joined the printing staff of the Freeman's Journal, and was associated with that paper for nearly 60 years. Eventually he acquired an interest in the proprietary, and on the death of Mr. J. B. Blakeney he was appointed to the position of manager. There were few better-known figures in Sydney publishing circles.

Mr. John J. Hayes, who for the past 61 years had been associated with the Sydney

Evening News, died on June 9th. Mr. Hayes was 82 years of age, and joined the staff of the Empire—which was subsequently incorporated with the Evening News in May, 1859. During the latter years, Mr. Hayes was connected with the advertising side of the business.

MR. ALEX. MACDONALD has also died. He had been nearly 35 years on the composing-room staff of the Sunday Times and associated papers. He was born in Cirencester (Eng.) in 1862, and worked on the London Echo and Birmingham Daily Post, almost immediately on his arrival in New South Wales, attaching himself to the Sunday Times, on which he worked to within a fortnight of his death.

The death has also occurred of Mr. W. Norman Macleod, business manager of the Bulletin, after a brief illness. Mr. Macleod was the eldest son of Mr. William Macleod, managing director of the Bulletin, and was 36 years of age.

MR. W. S. MITCHELL, died at the age of 74 years. He ranked among the pioneers of Australia, having arrived with his father from England in 1854. He entered the printing industry with Goodhugh and Co. Subsequently he joined the firm of Ferguson and Moore, and after leaving that partnership he was associated with Mr. A. H. Massina for more than 40 years. In more recent years he established the firm of Mitchell and Cassey.

One of the oldest and most respected residents of Auckland, Mr. John Batger has died at his residence, Mount Eden, aged 82 years. He went to New Zealand considerably over half a century ago, and soon after his arrival in Auckland established, with the late Mr. Edward Wayte, a bookseller's and stationer's business in Queen-street.

The estate of the late Sir James Fairfax, senior proprietor of the Sydney Morning Herald has been sworn for probate at £558,306.

Special memorial services have been held in St. Paul's Cathedral and St. Patrick's Cathedral, Melbourne, to honour the memory of those connected with journalism and the printing industry who have fallen in the great war. Newspaper proprietors, the Victorian Master Printers' Association and the Australian Journalists' Association co-operated in arranging the details of the services, which were on the lines of the one that was held in St. Paul's Cathedral, London, in February, in memory of British journalists and printers who died on active service. An "in me-moriam" booklet, containing the order of the service in each cathedral, and the names of the fallen, was prepared for the occasion through the generosity of the Master Printers' Association, and copies were given to the relatives of the men who paid the supreme sacrifice.

BRITISH & COLONIAL

Trade Notes.

THE late Mr. John Michael Cleland. managing director of John Cleland and Son, Ltd., manufacturing stationers, printers, etc., Belfast, has left estate of the value of £26,302.

The first number of the Women's Liberal Magazine has just been published by the Women's National Liberal Federation. It is edited by Mrs. C. F. G. Masterman.

THE August issue of Flying is a "Peace Number," and is a fine paper profusely illustrated with interesting pictures relating to flying and flyers, and the literary matter is varied and readable, while appropriate fiction tempers the heavier articles.

On Saturday evening the Lord Mayor and the Lady Mayoress entertained at dinner at the Mansion House 400 members of the staff of Messrs. Horace Marshall and Son, Temple House, of which firm the Lord Mayor is the head. The opportunity was taken to present the Lord Mayor with his portrait (by Mr. F. O. Salisbury) as a mark of the staff's regard.

Accusing journalists of encouraging Consumers' Leagues against dealers, and of being the cause of the action now being taken by the public against the cost of living, dairymen and egg and butter merchants assaulted a journalist in Thalles, kicked him, threw him to the ground and then trampled on him. Eventually he was rescued by the police in a badly mauled condition.

On Monday, a party of British journalists, representing the London and Provincial Press, arrived in Denmark. They were entertained at luncheon at the Foreign Office, the Foreign Minister, M. Eric de Scavenius, said that he was happy to welcome so many distinguished representatives of the British Press. He felt sure that the visit would be successful, and would happily promote good relations between Denmark and the United Kingdom.

Under the recent wages and hours national settlement scheme between the Typographical Association and the Master Printers' Association, either masters or men can apply for their particular town to be regraded. There are several applications pending from both the masters and the men. With the applications must be sent a reasonable statement as to why regrading is desired, based upon local conditions such as cost of rents, produce, rates and the relative valve of money as compared to adjacent towns and the wages of the staple industry of the district.

The new house organ of the Avenue Press (L. Upcott Gill and Co., Ltd.), Drury-lane, W.C.2, is entitled A.P. Pennings, and is a quarto of 24pp., with cover. The literary contents are excellent, and are well illustrated with half-tone blocks of interest to the firm's staff. A bright and lively production got up in a style one would expect from the

Avenue Press, and creditable to all concerned in its get up.

The late Mr. Henry Walker, publisher of the Chemist and Druggist, has left estate of the value of £18,155.

THE TECHNIQUE OF PRINTING —A scheme has been entered into in Birmingham by which master printers are sending boys from their works to technical school classes for instruction in typography during the best hours of the day for three days a week. Machines for photo printing and other processes are to be installed by the municipal authorities representing the technical school and the school of art, and classes are being arranged for boys to have twelve months' whole training on leaving the elementary school in such technical processes as the trade may desire. After that, manufacturers undertake to apprentice the boys. By this means it is hoped to raise the standard of printing in Birmingham.

A METHODIST PRINTING OFFICE.—The Welsh Calvinistic Methodists' Connexion has taken over the printing works of the Welsh Publishing Co., Carnarvon, as a going concern. A good deal of connexional printing has been done for years in various parts of Wales, and in order to meet the growing needs of the denomination, it was felt that the time had come when the Connexion should have a printing press of their own. The Welsh Publishing Co. were already printing three denominational periodicals - Y Traethodydd, Y Daysorfa. and Trysorfa'r Plant—in addition to other periodicals and books and reports, and they employ a large number of printers and bookbinders. The Connexion's weekly paper, Y Golenad, is printed by contract by a Carnarvon firm, and when that contract expires, the paper is to be printed in the works acquired by the Connexion. The office is recognised by the Typographical Society.

BRITISH TRADE WITH BRAZIL. — Mr. E. Hambloch, H.M. commercial secretary at Rio de Janeiro, will be at the Department of Overseas Trade between August 11th-27th, during which time he will be pleased, so far as other calls upon his time permit, to see, by appointment, representatives of British firms interested in matters relating to the development of Anglo-Brazilian trade. Applications for interviews should be addressed to the Latin-American Section of the Department of Overseas Trade, I, Queen Anne's Gate-buildings, Dartmouth-street, London, S.W.I.

In the August Pearson's Magazine Georges Carpentier gives an account of "How I Train to Fight." A number of officers and men contribute to the symposium, "The Weirdest Stories of the War," an amazing collection of supernatural experiences, which leaves one with the impression that what is sometimes known as the "sixth sense" must be possessed far more widely than is usually supposed. Barry Pain, Jessie Pope, H. M. Bateman, Ralph Stock, and George Robey are responsible for other items in a delightful holiday number.

Digitized by GOGIC

"THE COMPOSITORS' AND PRINTERS' HAND-BOOK," which is just published by the London Society of Compositors, is an excellent reference manual for the printer that should become a pocket companion to every man who desires to excel in his trade. It deals with impositions of all sorts, display and lay-outs, gives trade tables, wages and overtime tables, explains the point system fully, and provides a mass of hints and information of the greatest service to the practical printer. The book, which is of 64pp, is compiled by Mr. C. E. Coveny, the financial secretary of the L.S.C., who is to be congratulated on the manner in which he has squeezed so much information into a small space.

"WALTER HAZELL" 1843-1919, is the title of a book that has been printed for private circulation by Mr. Ralph C. Hazell, who in its pages gives a most interesting account of his late father's career and his many activities in connection with philanthropic and social subjects. The late Mr. Walter Hazell was a man of broad sympathies, an earnest worker, a model employer, and was loved and respected by all who had the honour of his acquaintance, and his son's book sets out in simple but attractive manner the chief features of his career Should any of the late Mr. Hazell's personal friends desire to obtain a copy, they may get one on application at Messrs. Hazell, Watson and Viney's offices, 6, Kirby-street, Hatton-garden, E.C.

THE IMPRINT.—James Rostron and Norman Rostron, trading as James Rostron and Son. printers, Wortley-grove, were summoned at Leeds for failing to print their name and address on circulars printed by them. J. Rostron appeared and pleaded guilty to the offence. The Stipendiary Magistrate asked the defendant if, in pleading guilty, he understood that he was liable to a penalty of £5 on each of the 10,000 circulars printed, which would make a total of £50,000. Defendant: No sir. I did not. Superintendent Blakey said that defendants' premises were visited on July 3rd, and James Rostron produced a copy of a circular of which they had printed 10,000. In answer to a police officer Rostron said he did not think it was necessary to print the name and address of the firm on the circular. The offence was at once admitted, and defendants placed no difficulties in the way of the police. Defendant, who said the same thing was done by every printer in Leeds, was fined 40s. and

JOURNALISTS' CONFERENCE AT BIRMINGHAM.

—The annual conference of the Institute of Journalists will take place in Birmingham, on Friday and Saturday, September 12th and 13th. The Lord Mayor of that city (Sir David Brooks) has granted the conference the use of the City Council Chamber; he will give the journalists, of whom a representative attendance is expected from all parts of Great Britain, a civic welcome, and in the evening there will be a reception by the Lord Mayor and Lady Mayoress at the Council House and Art Gallery; and on the Saturday, at the Grand Hotel, the members and delegates will

be entertained to luncheon by members of the Birmingham and Midland District of the Institute. Apart from business concerned with the administration of the Institute, and of the Orphan Fund, etc., the chief topic for consideration at the conference will have relation to the question of journalists' minimum salaries. The proposal is to raise the previous minimum.

Birthday Honours.

Among those chosen for the King's Birthday Honours, the supplementary list, published yesterday, contains the following:—

Baron.

Sir Edward Richard Russell, formerly editor of the Liverpool Daily Post.

Knights.

George Fenwick, J.P., founder and for over thirty years director New Zealand Press Association.

Charles James Jackson, J.P., F.S.A., author of leading text books on gold and silver.

John Young W. MacAlister, F.S.A., F.R.G.S., president of Library Association.

Fuel Folly.

SIR,—How badly our country needs business management! Here is a simple example of the want of commonsense.

We need fuel. We need paper. The paperbuying firms—even those that still advertise refuse to buy old paper. To-day I have, in answer to an advertisement, a condescending letter to say that one firm might consent to remove some, if it "proves sufficiently interesting."

Now we may well hesitate to ask Government to compete with firms that are already doing their work well. Such competition injures the firms, and generally results in bad work (as with the telephone), and in loss, nominally to the Government, actually (as always) to the taxpayers.

But, when firms are not doing some important work, then Government might well start it.

Why not offer prizes for the best formula or formulas for turning waste paper into fuel?

Failing Government, I believe there is a fortune for a syndicate that would pay a fair price for the hundreds of tons of valuable waste paper that are now waiting to be sold. It might be called the Payfuel Co., Ltd.

Yours faithfully,
EUSTACE MILES.

Current Topics.

The Industrial Unrest.

INDUSTRIAL unrest is the immediate cause of an unsettled feeling in every sphere of business. The peace question is settled, and the period has arrived when we might have looked forward to a resumption of business on a normal scale. Instead, it is to be feared that conditions are more uncertain and abnormal tham at any time since November. There is no incentive to go ahead, despite the fact that almost every manufacturing concern is well booked up with orders. Prices are uncertain, transport is unreliable, and there is a general atmosphere of levity that augurs badly for serious business. It is one thing to

state that the war is over, and its terminative celebration duly honoured, so now to business, but we are finding that it is another and very different proposition to get on with busi-The way we are going corresponds to interminable industrial conflict and chaos. What appears now to be a vital necessity is a general all round clearing of the air, a national ventilation of existing grievances. and a set policy of compulsory settlement. After that, firm and strong dealing with trouble makers, malcontents and exploiters. We are not of those who lay all the blame at the labour door; there are more elaborate doors which effectually bar the way to trouble generators of a very much higher order. It is the fact that labour is aware of their existence that makes for perpetual discontent in the labour world. On their own account labour and capital in each particular sphere of manufacture and production have reached the stage when they begin to understand and appreciate each other better. Other things being equal, we should now be enjoying something like a contented and profitable co-partnership. But other things are not equal, hence the trouble. The national policy is weak and vacillating; extravagant promises have been made and not kept, because they were impossible when they were made. Exploiting has been the order of the day since 1915, and has neither ceased nor given promise of cessation. That section of the business populace which neither capitalises nor labours has gathered and stored more plums than have fallen to the lot of the capital (or generator of labour) or labourer. Between the producer and the consumer we have had, and still have, not a distributing agent, but a string of middlemen. wonder that there is a popular discontent which stands in the way of our reaping the fruits of mutual confidence and comradeship which should have followed from the seeds of direct inter-dependence between workers and administrators.

Hand Made Paper.

We are glad to know that the question of wages in the hand made paper trade has been settled, on a basis which we believe is satisfactory to both sides. The conference at the Ministry of Labour the other day was quite a model of its kind, and if only all labour disputes were dealt with in the same reasonable mood and with the same happy result there would be a good deal more hope for the future industrial prosperity of this country. There was in evidence at the conference that community of

Digitized by GOOGLE

interest and confidence which prevents unnecessary difficulties arising. The representatives of the workpeople, we understand, put their cause with a good deal of force, tempered by moderation; while the case of the employers was presented by Mr. H. G. Spicer in a thoroughly sympathetic manner. There are always at least two sides to a question, and these were ventilated at the conference by each party, and the correct course was finally adopted midway between the two extremes.

Higher Wages and Shorter Hours.

THERE have been innumerable expressions of -opinion, of late, as to the effect upon trade and production of the higher wages and shorter hours that are now becoming the rule in all trades, and it is admitted by the majority of thinkers that, provided the workers of the country "put their backs into their work," as they say in the north, the new conditions will, on the whole, prove beneficial. Engineering, in a recent issue, discussed this subject and pointed out that "while the industrial outlook causes grave anxiety there is no need for wild alarm, for if all parties will accept the new conditions in a new spirit they need not involve higher productive cost. If properly understood and met they are an incentive to modernise production, and they place an added premium upon efficiency. In the daily discussions upon the future of industry the chief factor seems to be disregarded. This is the fact that, of all men, the engineer holds the key to the apparently insoluble problein. He has always been rather timid in pressing his claims, and his opportunity has been restricted in that he has not been encouraged to apply fully those labour-saving devices which use human energy economically. . . . The present incentive is nearly as powerful as national necessity, and granted the power to apply mechanism and management in unstinted measure, the future can be made secure. If labour is ensured against want, poverty and dispossession, it should not be reluctant to allow the more intensive methods whereby the wealth it requires can be created. Shorter hours, increased wages, better conditions, can all be afforded, but only by the combination of real effort coupled to the fullest extension of mechanism. The hope of the future is the engineer. Individual prosperity, as well as national solvency, lie in the co-operation of the engineer with the scientist, and without new invention or radical departure, but by universal and intensive application of the known and proven, vast strides in the power of wealth creation can be made. Priority must be given to necessity and luxury must be penalised. It is clearly useless to attempt to solve industrial trouble with the idea of individual aggrandisement; labour is not interested in the creation of profits in which it has no share."

The Cost of Composition.

An American printer has been going into the subject of the cost of composition, especially that which is executed on the modern composing machines, and his investigations have shown that, taking into consideration the hand-work required to complete the pages for press, there is more time spent than is allowed for in many costing systems. "All composition," he says, "should be considered as a finished product, no matter what process is employed to produce it. If printers would study the cost of composition on the basis of the finished product there would be a big change in the composing-room methods of many establishments, and a decided increase in efficiency. The system of composing-room management and equipment which places the finished product on the press at the lowest cost, quantity considered, is the best and most profitable; no matter whether it carries a high cost per hour for one of its units or not. Composition must be considered as a whole to get correct results in cost finding. This is one reason why the hour costs as published by the various organisations from time to time have so little value. Were it possible to get the cost of completed composition ready for press in some form that would permit of easy calculation, such as the basis of a square inch of printed surface for certain classes of matter, it would mean much more as a guide to pricemaking and comparison of efficiency than the present method of hour costs, which is of little value unless the character of the work and of the equipment is also given, together with the production percentage." While not endorsing in their entirety the foregoing remarks there is sufficient of a hint in them to cause printers to reflect as to whether or not they are charging sufficiently for their composing-room output.

"THE COMMON CAUSE," the staid and admirably informative journal which, as the organ of the N.U.W.S.S., fought so long for women's suffrage, is thinking of transforming itself into a paper of more general interest. It is felt that there is room for a live and alert weekly paper dealing especially with matters of importance to women.

NEW COMPANIES.

RUPERT PRESS, LTD.—Registered with a capital of £500, in £1 shares, to acquire the business of a printer, engraver and publisher carried on at Leicester under similar style. The subscribers are J. B. Upton, and J. G. S. Browett. Private company. The first directors are J. B. Upton and J. G. S. Browett.

WILLIAM NASH, LTD.—Registered with a capital of £100,000, in £1 shares, to enter into an agreement with Alice Nash, Thos. H. Nash, Hy. F. Higgs and Wm. Nash, for the acquisition of the business of a paper manufacturer formerly carried on by W. G. Nash at the Cray Valley Paper Mills, St. Paul's Cray, Kent. The subscribers are Wm. Nash, and Hy. F. Higgs. Private company. The first directors are Wm. Nash, Hy. F. Higgs, and Ernest F. Barham, St. Paul's Cray. Registered office, Cray Valley Paper Mills, St. Paul's Cray, Kent.

WILLIAM SESSIONS, LTD.—Registered with a capital of £15,000, in £1 shares, to enter into agreement with Mary Sessions and W. H. Sessions, and to carry on the business of printers, stationers and bookbinders formerly carried on by them under the style of "William Sessions" at the Ebor Press, Northstreet, York. The subscribers are W. H. Sessions and Mrs. E. M. Sessions. Private company. Director, W. H. Sessions. Registered office, Ebor Press, 3, North-street, York.

R. L. Shirley and Co., Ltd.—Registered with a capital of £15,000, in £1 shares (7.500 pref.), to carry on the business of manufacturers of, and dealers in, cardboard, paper, fibre, wood, metal, and other materials, stationers, printers, lithographers, publishers, etc. The subscribers are Miss R. L. Shirley and J. Lofthouse. Private company. The first directors are Miss R. L. Shirley, F. J. Shirley and J. Lofthouse. Registered office, 31, Holloway-road, N.5.

PORTSMOUTH RETAIL NEWSAGENTS' ASSO-CIATION, LTD.—Registered with a capital of £2,000, in £1 shares, as newsagents, stationers, printers, etc. The subscribers are V. L. Jenkinson and J. E. Moore. Private company. Directors, V. L. Jenkinson (managing director) and J. E. Moore. Registered office, 2, High-field-street, Portsmouth.

TRYAD Co., LTD.—Registered with a capital of £750, in £1 shares, to carry on the business of manufacturers of advertising devices, printers, publishers, advertisers, advertising agents, etc. The subscribers are G. J. Thompson, and T. Ford. Private company. The subscribers are to appoint the first directors. Registered office, 4 and 5, Adam-street, W.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

W. GRIGGS AND SONS, LTD. (printers).—Satisfaction in full registered June 26th, 1919, of charge for £5.000, registered January 10th, 1907, and of all moneys due under charge registered November, 1916.

WIGGINS, TEAPE AND Co., LTD.—Satisfaction in full registered July 1st, 1919, charge for £100,000 registered February, 1904.

C. ANGEL AND SONS, LTD. (show-card makers).—Land registry charge on land and works known as Willmott House, Old Kentroad, S.E., registered July 1st, 1919, to secure all moneys due or to become due from company to L. J. C. and M. Bank.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership Between Ernest Palmer Ada Alberta Palmer and Ernest Albert Palmer, carrying on business as waste paper merchants, at 158 and 190A, High Holborn, W.C.I, under the style or firm of "E. Olyett," has been dissolved by mutual consent as from June 30th, 1919. All debts due and owing to or by the late firm will be received or paid by Ernest Palmer and Ada Alberta Palmer, and the business will be carried on in the future by Ernest Palmer and Ada Alberta Palmer.

The partnership heretofore subsisting between Edwin Riley Bashame and Alfred John Tyler, carrying on business as advertising agents and publishers, at 53 and 54, Chancerylane, W.C.2, under the style or firm of the Associated Publishing Co., has been dissolved

Digitized by GOOGIC

by mutual eonsent as from July 3rd, 1919. All debts due to and owing by the late firm will be received and paid by Edwin Riley Bashame, who will continue to carry on the business under the style of the Associated Publishing

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER. Rosoff, Barnett (lately trading as the Process Art and Commercial Printing Co.), 13, Haguestreet, Bethnal-green, London, as printer and stationer. Date of order and of adjudication order, August 2nd, made on debtor's petition.

First meeting of creditors on August 22nd, at 11 a.m., at Bankruptcy-buildings, Carey-street, W.C. Public examination, October 21st, at the same place.

APPOINTMENT OF TRUSTEE.

Brawn, Wilfrid John, printer and stationer, carrying on business at 112A, Highcross-street, Leicester. Trustee, John H. Burton, 1, Berridge-street, Leicester; appointed July 31st,

ADJUDICATIONS.

Griffiths, Walter Noel, newspaper proprietor, 5, Stockwell-terrace, London. Date of order August 2nd, 1919. Petition filed July 7th, 1919

FOR DEBTOR'S DISCHARGE. APPLICATION

Curtis, William, photographic post card maker and publisher, Kilnsey, near Skipton, Yorkshire. To be heard at the County Court, Manor-row, Bradford, on October 14th at 10.30 a.m.

NOTICE OF DIVIDEND.

Bradley, Walter Sidney (separate estate) printer and publisher, trading with Arthur Edward Bradley and Charles William Bradley as C, W. Bradley and Co., printers and publishers. Final dividend of 6s. in the £ payable at 63, Coleman-street, London, E.C.. August 26th, 1919:

MR. C. W. BOWERMAN, M.P., as secretary of the Parliamentary Committee of the Trade Union Congress, represents 4,000,000 organised workers.

MR. ROBERT DONALD, it is announced, has acquired the interests of Mr. Dudley Docker and of others in the Globe, and will shortly take over the direction of the paper.

MR. A. Eddington, for many years The Times correspondent in Edinburgh, and for 43 years on the staff of the Edinburgh Evening News, has recently retired from active journalism.

The 'Times" Sports.

On Saturday the annual sports of the Times Athletic Association were held at the London County Athletic Grounds, Herne-hill, and the sports attracted over 3,000 spectators. Mrs. Stephen Walter presented the prizes at the end of the meeting. The results of the chief events were:

100 Yards Flat Handicap.-R. G. Lovell

(scratch), 1; A. Maitland, Jun. (10 yards), 2; R. Delamere (8 yards), 3. Time, 10\frac{1}{2} sec.

100 Yards Veterans' Handicap.—A. Betts
(4\frac{1}{2} yards), 1; H. J. Bedford (6 yards), 2; H. Stidworthy (scratch), 3. Time, 111 sec

Half-Mile Bicycle Handicap.-W. E. Sanford (40 yards), 1; B. Hines (25 yards), 2. Time, 1 min. 11 sec.

100 Yards Ladies' Handicap.—Miss Holyoke

(5 yards), 1; Miss Deakin (4 yards), 2

Quarter-Mile Flat Handicap.—R. G. Lovell (scratch), 1; B G. Coward (20 yards), 2. Time,

Ladies' Half-Mile Walking Race.—Miss I. Wright, 1; Miss E. Moore, 2.

Inter-Departmental Relay Race.—Compos-

ing room Night Team, 1.

Two-Mile Bicycle Handicap.—H. H. Bourne (300 yards), 1; W. Sanford (300 yards), 2; J. S. Manning (350 yards), 3. Time, 4 min. 50} sec. One Mile Flat Handicap.—A. C. Pritchard

(100 yards), 1; G. Johnson (25 yards), 2; F. W. Haynes (90 yards), 3. Time, 4 min. 55½ sec. Obstacle Race.—W. R. Gardner 1; A. J.

Law, 2.

One Mile Walking Race.-F. G. Easto (scratch), 1; A. C. French (125 yards), 2. Time, 7 min. 50} sec.

A concert and dance followed in the evening, the programme of music being given by the Times concert party.

There has been issued from the offices of the Gravesend and Dartford Reporter a handsomely got up quarto booklet of 68 pages with an art paper cover having the title design worked in red and blue. It is intended as a peace souvenir, and contains a concise history of the war from the date of its outbreak, August 4th, 1914, till the signing of the armistice on November 11th, 1918. graphies of the various leaders, together with their portraits, are given, and there is an interesting account in detail of the Gravesend and district air raids. There is a list of fallen heroes who hailed from the district and many of their portraits are given, filling page after page of the book. There is also a deal of local information as to hospitals, red The booklet cross work, and other matters. is a credit to all concerned in its production and at the low price charged, threepence, it should have an extensive sale and be preserved as an interesting memento of the great war. Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

Monthly Meeting.

The above Association held its deferred monthly general meeting on Tuesday evening last, at the headquarters, St. Bride Institute, Bride-lane, E.C.4., the president, Mr. A. J. Daines, occupying the chair. The meeting was not so large as usual-no doubt due to the holiday season—nevertheless considerable enthusiasm was shown by the members present in the varied interests the Association has in hand. After the secretary, Mr. Geo. A. Eden, had read the minutes of the last general meeting, which were duly confirmed, some correspondence was dealt with.

The secretary announced that a letter affecting the future position of overseers had been sent to the Master Printers' Federation, and one similar in terms had also been sent to the London Chamber of Commerce. Both these bodies had cordially replied promising

to give an early consideration to the matter.

The following is the letter sent to the Master Printers' Federation:—
"July 26th, 1919.

A. E. Goodwin, Esq.

DEAR SIR,—Your interest is earnestly solicited in an appeal for equitable salaries for overseers consistent with the increases accorded to journeymen and the more difficult supervision existing.

Apart from the high cost of decent living, the overseer suffers from loss of prestige by his subordinates near approach to the same level of remuneration, and the consequent undermining of his authority affects adversely the output of his department.

With some laudable exceptions, for which we thank the individuals of your Federation, overseers' salaries and privileges have not been advanced proportionately with that of the staff, and this is contended to be neither just nor reasonable, while a word to your members to this effect would be productive of results which are confidently anticipated.

Thanking you in advance for your courtesy, I remain on behalf of my Association, faithfully yours,

Geo. A. Eden, General Secretary."

A letter was also received from Mr. F. C. Peacock containing the annual balance sheet of the Bookbinders' Pensioners, the letter conveying thanks for the donation which the Association last year granted to this deserving charity. On the motion of Mr. J. Walker, seconded by Mr. J. Lee, a further grant was made this year of three guineas to the same object, to which Mr. C. W. Atkins, on behalf of the Bookbinders' Pensioners, expressed his thanks to the Association.

The following new members were next elected to membership: -Mr. H. R. Laxton (binding)-Merivale Press, Cowcross street; Mr. G. A. Rutherford (platens)—McCorquodale's, Cardington-street. The president, in extending a welcome to the new members on behalf of the Association, said that although the Association was not known as a brotherhood, they would find in its ranks all the elements that go to make up true brotherhood.

The report and balance-sheet of the annual outing was next submitted which showed a small deficit, this being made good by a grant from the Entertainment Fund.

The proceedings then terminated.

London Master Printers' Association

Printing Machine Managers' Trade Society.

Limitation of Overtime.

The following agreement arising out of conferences between the above associations has been ratified, and bears the signatures of officials of the two associations.

That the limitation of overtime shall constitute 32 odd hours or three nights in any four weeks, with a maximum of nine odd hours or one night in any one week subject to the following rule regarding all night

One customary full night per week may be worked provided no other overtime is done by the member during the week in which he works a night, and provided that the member is absent from work the following day, and that an unemployed member is engaged for the day following or the day preceding the night worked; a member so temporarily employed to be paid at the ordinary casual rate for the hours actually worked. A member so casually engaged shall be subject to deduction of lost time, if the Society has been notified by 12 noon the previous day that a man is required.

It is further agreed that the Society undertakes to make special arrangements in the case of houses engaged on weekly periodical work where a twelve hour night is insufficient. Such special night is insufficient. arrangement to apply to the house concerned, and not to be considered applicable to any other firm without an understanding with the Machine Managers Society.

This Agreement to become operative on and from the first pay day of September, 1919. Signed on behalf of the London Master Printers' Association.

J. J. Keliher, president. W. WHYTE, acting-secretary. Signed on behalf of the Printing Machine Managers Trade Society

W. E. BAULCH, chairman. B. T. EMBLETON, organiser.

An ass may have wealth, but that don't change his breed.

Titaghur Paper Mills—Directors Report
Lower Output—Higher Costs of Production—New Paper Mill Planned—
Sabal Grass—Possibilities of Bamboo
—New Plant for Pulp Manufacture.—
The Indian Press Act.

(By Our Calcutta Correspondent.)

THE report of the directors of the Titaghur Paper Mills Co., Ltd., for the nine months ending March 31st, states that output has been lower than in recent years owing to difficulties in obtaining supplies of raw materials. Costs have been on the ascending scale, owing not only to the high price of supplies, but to their steady deterioration in Plans are still under preparation quality. for the construction of a new paper mill as soon as warranted by circumstances. It has been decided, however, that before such a scheme can proceed steps must be taken to improve resources in regard to Indian raw materials in order to put the industry on a sound economic footing.

In a circular to the shareholders the directors state that their staple material has been sabai grass, but this grass has become increasingly difficult to obtain, necessitating the employment of other and less suitable material or of importing wood pulp at a high cost

In these circumstances the directors have arrived at the conclusion that if the mills are to continue working successfully the resources of the company must be extended. Investigations and experiments have been carried out at the mills at Titaghur with certain species of bamboo. The results have proved beyond all doubt that this bamboo is eminently suitable for conversion into good white paper, and at a cost which compares favourably with that of pulp prepared from other Indian materials and that of wood pulp imported prior to the war. The Government has given certain concessions which will enable the company to build a mill for the purpose of converting bamboo into pulp, and the directors propose to proceed immediately with the erection of the same. The mill will be equipped with the most up-to-date pulp mill machinery, selected by experts in conjunction with technical experts at home. Orders are now waiting to be placed with a well-known firm in Great Britain.

The Press Association of India has sent the following cable to the Prime Minister, the Secretary of State for India and Lord Sinha, Under-Secretary of State for India and acopy of the same to each of the following persons:

—The Hon. Mr. V. J. Patel, secretary to the Congress Deputation in England, the presi-

dent, Empire Press Union, the president, Institute of Journalists, Colonel J. Wedgwood, M.P., Mr. George Lansbury, M.P., Lord Clwyd, Lord Carmichael, the chairman, British Congress Committee, the Hon. Mr. Surendra Nath Banerjea and Mr. B. G. Horniman:—"The Press Association of India begs to invite attention to the repression of the Indian Press under the Press Act, 1910, resulting in the suppression of legitimate expression of Indian opinion and creating a great alarm in the public mind. The Act since its enactment has penalised over 350 presses and 300 newspapers, demanded securities amounting over \$40,000 and proscribed over 500 publications. Owing to the demand of security, over 200 presses and 130 newspapers have not started.

"Since 1917 the Act has been even more rigorously administered. Leading influential Indian-English journals like the Amrita Bazar Patrika, the Bombay Chronicle, the Hindu, the Independent, Tribune, the Punjabee, and leading vernacular papers like Basumati, Swadeshmitran, Vijaya, Hindvasi, Bharatmitra, have been subjected to its rigours. Several Indian newspapers are arbitrarily barred from the different provinces. On the other hand violent provocative writings in the Anglo-Indian Press are entirely immune. Government refused last September an open inquiry into the operation of the Press Act urged by Indian members in the Imperial Council. Legitimate criticism on the Rowlatt Act, the Punjab Martial Law and other grievances, is crippled by executive action. Influential journals are disappearing because of the existing Act and its administration. The unventilated expression of public opinion is bound to drive discontent and unrest underground. The extreme and unjustifiable severity to which journalists are subjected is painfully evidenced by the arbitrary deportation of Mr. Horniman, editor Bombay Chronicle, and president of this Association. The Association presses for the repeal of the Press Act urgently."-Signed, MANILAL CHHAGANLAS MODI, secretary, Press Association.

We have received from Messrs. Wiggins, Teape and Co., Ltd., a specimen of their new sample book of papers. If anything will help to create confidence in the printing and sta-tionery trades, sample books will. The difficulty of buying paper cannot be realised except by those who daily go through the task of scouring the country for samples and prices of present make. For five years or more the word "regularity" has found no use in the paper trade. The sample book is the paper trade symbol of regularity, and for this reason we are doubly glad to have a house such as the one named finding itself in a position to create and issue a collection of samples of their various makes which can be called permanent and representative. The samples are made upon the loose leaf ring book principle. classified, tabulated and specified in English and metric figures. The binding is particularly strong and an attached leather tab permits the book to be hung if desired.

Foreign Paper Imports.

Question of Extra Licences.

The Paper Import Restrictions Department state that before granting a licence for the import from without the British Empire of any class of paper beyond the proportionate licence to which purchasers of British paper are entitled under the regulations they require to consider the full circumstances of each case, including the possibility of a British paper serving as a substitute for a particular grade not obtainable within the Empire.

Free licences are not automatically granted, even for such classes of paper as greaseproofs of particular substances, and importers are advised to ascertain whether the goods will be allowed into the country before placing an

order for foreign paper.

The Paper Import Restrictions Department give notice that, in view of the difficulty of obtaining sufficient supplies of certain cardboards within the British Empire, they are prepared until further notice to grant import licences to the extent of 250 per cent. of British purchases for cardboard of the minimum substance of 25-in. by 30-in., 4-oz. per sheet. This notice does not apply to pulp board (other than wood), ivory board, and paste board.

De-Inking Process.

An invention by Mr. W. M. Osborne consistsessentially in an efficient method whereby paper reduced to pulp may be relieved of ink and colouring matter without injuring the fibre, the materials used so acting upon the pitches of the pulp as to render it substantially a sulphite fibre after the ink has been entirely removed.

In carrying out the process, the old printed papers are placed in a digester, nearly filling it, and there is added a weak solution of sulphurous acid, to which is added sodium carbonate in powdered form to cause the necessary reaction. In the reaction the carbon dioxide gas will have great effect upon the pulp, and sodium sulphite will be formed during the reaction, and will act as a bleaching agent. Good results may be obtained with two parts of the sulphurous acid to one part of the solution of sodium carbonate.

After the ingredients have been placed within the digester, steam is applied, causing a circulation of the papers, slowly at first, until the temperature and pressure rises, after which the contents of the digester are cooked rapidly, retaining as long as possible the gases which are given off. When the stock has been sufficiently treated the digester is blown, the stock washed and screened, and it is then ready for direct use and for pressing into laps.

Canadian Pulp and Paper

Record Exports.

The exports of pulp, paper and pulp wood from Canada for the year ending March 31st, 1919, were the largest on record for any year. Official trade returns show the value of these exports at \$99,259,166, compared with \$71,821,500 in 1918, and \$52,975,457 for 1917, a gain of \$37,433,666 over 1918, and of \$46,283,700 over 1917, as follows:---

740,203,709 Over 1	· · ·		
	1917.	1919.	1919.
	Dol s.	Dol s .	Dol s .
Paper Pulp—chemical Pulp—mechanical	26,123,215	87,865,380	49,165,795
	14,032,920	19,133,818	80,226,856

Total	•••		•••	7,951,511	9,646,179

Exports of printing paper led all other grades in quantity and value. In 1918-19 Canada exported 13,248,542 cwt. (approximately 662,427 tons), valued at \$40,718,021. This is an increase of 1,146,677 cwt. (approximately 57,334 tons) over last year. Other grades of paper exported were: Paper board, \$3,037,279; wrapping, \$2,452,296; photographers' paper, \$1,302,886; wall-paper, \$360.567; felt and roofing, \$310,778, and miscellaneous, \$983,968. All showed a substantial increase over last year.

Exports of chemically prepared pulp in 1918-19 amounted to 8,332,730 cwt., valued at \$30,226,856, as against 5,385,010 cwt., valued at \$19,133,813, in 1917-1918, an increase of 2,947,920 cwt. in quantity and \$11,093,043 in value. Exports of mechanically ground wood pulp showed a falling off for the year of 802,968 cwt. in quantity and \$2,007,164 in value, as compared with the previous year. The figures being, 1917-18, 4,311,694 cwt., valued at \$6,487,079; 1918 19, 3,508,726 cwt., valued at \$4,479,915.

valued at \$4.479915.

The United States led as the best customer for pulp and paper, the United Kingdom, Japan, Australia, and New Zealand following in the order named.

Canadian printing paper exported in 1918-19 was distributed as follows:—

		CWt	Vaiue. Dols.
United Kingdom		9,310	38,434
United States	•••	11,880,069	36,031,358
Australia	•••	643,101	2,081,911
New Zealand		242,336	662,402
Other countries	•••	478,726	1,703,866
•		18,248,542	40,718,021

The chief foreign markets for Canadian pulp during the year were:

Chemical Pulp.		Cwt.	Value. Dols.	
United Kingdom	•••	140,864	611,399	
United States	•••	7,414,825	26,256,265	
Japan		639,997	2,775,486	
Other countries	•••	187,744	588,706	
Mechanical Pulp.				
United Kingdom		2,528	8,033	
United States		8,453,149	4,418,555	
Other con tries	•••	E0 046	58,327	

France, which imported from Canada 626,285 cwt. of mechanical pulp, valued at \$471,040, in 1917, took none at all in 1918 or 1919, while exports to the United Kingdom of both chemical and mechanical pulp fell off from a total of 1 163 224 cwt., valued at \$3,057,422, in 1916-17, to 142,892 cwt., valued at \$614,432, in 1918-19. This was due entirely to lack of shipping facilities. Shipments of both paper and pulp from Canada to England should show a constant increase from now on, we are informed.

New Paper Container.

Paper packages of a new kind are to be turned out at a plant set up by the Drake Process Machinery Co., Cleveland, Ohio, who, however, will give chief attention to the machines for making them.

The material that will go into the making of these containers, says The Paper Mill, is pulp of a grade inferior to that used in board production. The processes of turning the pulp into the finished product are (1) air compression, (2) heat, (3) pressure.

The air compressor is used to create the necessary pressure to force the pulp and water, a mixture of half pound of pulp to two quarts of water, into the moulds. The heated air is used to harden the container before it leaves the mould. The mould opens and closes twice every minute, so that a new container, ready for use, is delivered every thirty seconds. Officials declare that the number of moulds, and their shape and size is unlimited, and the operation can be increased to as many kinds and numbers of packages as is desired by extending the delivery system of the machine and adding the required number of moulds.

The machinery now being manufactured will turn out moulds of various thickness so that practically any weight of container required can be produced by this process. Provision in new models now being designed has been made for colouring and waterproofing the containers by mixing materials for that purpose with the pulp when it is mixed with the water.

It is stated that the container business will be revolutionised if for no other reason than because of the extreme cheapness of production. Experiments have shown that 1,000 pint milk bottles can be produced from 50 cents' worth of material, while it costs in Cleveland \$10 to gather up 1,000 glass milk bottles.

Gummed Paper Tape sticks like wax, it is much cheaper than string and much safer than sealing wax.

Half-Tone Printing on Rough Paper.

A Process Engraver's Talk to Printers.

The following address on this subject was given by Mr. C. A. Stinston, vice-president of the American Photo-Engravers' Association, at the recent convention of that body:—

The mere mention of my subject to you printers probably makes you expect the realisation of the dream which every printer has had since half-tones became a commercial success. The effects possible with half-tones when printed on the usual coated stocks; the detail with all the natural effects; the accuracy with which they reproduce difficult subjects, whether the subject be a portrait or an intricate machine—these have made the printer desire that it might be possible to combine with these qualities those to be attained by using distinctive papers.

Thanks to the efforts of the engraver, spurred on by the insistent demands of the ambitious printer, we now have half-tones for printing successfully on stocks other than coated or super-calendered.

It strikes me as being peculiar to ask a photo-engraver to talk to you about printing on rough stock. It would seem more fitting that I should talk to you about the difference between these and the ordinary kind of half-tones, rather than their use. However, on second thought, it is perhaps logical enough, I suppose, because the photo-engraver could not know how to handle a half-tone to fit given conditions if he were not familiar with those conditions.

When we think of half-tones, we quite naturally think of coated stock, although in recent years, with the continued advancement of the art, we have seen them printed on dull-finished and uncoated papers.

In speaking of printing half-tones on rough stock, we shall assume that the mechanical

equipment is in good shape, that the press is right, prefectly level, and that it does not rock like a boat in a storm.

Rough-stock printing is really a small problem to the good workman. A little time and experience will enable him to produce results as good as on the usual stocks. The first thing to be carefully watched is the thickness of the paper. It must be uniform, no matter what stock it is. To help on the good work, here is where the paper man enters—the rough stocks must be standardised as to thickness. If they are not, if the printer starts out with a paper varying in thickness, he is hopelessly handicapped, especially if half-tones are a part of the form. I must caution you also to beware of water-marked papers.

The second essential is the right quality of ink. It should be of heavy body, with lots of colour, not tacky, with the least amount of oil necessary to carry it properly. If there is too much oil, it is bound to "squeeze" and look lighter on account of the extra heavy impression.

The pressman should have very little trouble, especially if he is using one of the patent, up-to-date processes of make-ready. Some pressmen claim that a soft impression is best for this class of printing, while othersclaim that they get the best results when they use a hard impression.

The make-ready depends on the kind of paper used, and the details of its working out are to be determined by the experience and judgment of the pressman. If he is using the old-fashioned make-ready, our experience suggests that the solids and middle tones should be cut from the same stock as that on which he is to print, and make the overlay the same as for for an ordinary good half-tone. If

PRINTER & STATIONER

there are breaks in the high lights, a few sheets of tissue paper will build these up. Some pressmen use patent overlays in addition to the above.

Rough stocks are very dusty, and the forms should be washed more often. It will therefore take from ten to twenty per cent. more time to run the job. If your presses are equipped with vacuum cleaning attachments this trouble will be reduced to a minimum.

So much for the printing. Now for a word about the half-tones themselves. It has been said that "some music is not so bad as it sounds"—we might say that some half tones are not so bad as the printing looks. We are often asked, "Do you make the half-tones different for rough-stock printing?" Our answer is, "Yes." In most cases the negative is different, in both the high lights and shadows. The etching is always different, and requires a much clearer dot and a greater depth than the ordinary half-tone; this depth is required especially in the middle tones and

When a half-tone has reached the fourth man who handles it, the etcher, he has to clean the surface of the print thoroughly. This is because, when developing the print, there is a thin film of the enamel solution, or scum, as the etchers call it, that adheres to the metal, and this has to be removed. There are various solutions and methods to remove this scum, all more or less effective. A few years ago a photo-engraver, understanding chemistry, worked out a solution that, if handled properly, removes every trace of this foreign substance or scum from the print. gravers are not using this solution, but those who are know that as soon as the plate is placed in the iron solution the etching begins on every part of the plate at the same time, and the result is a clean dot with fifty to seventy-five per cent. more depth, especially in the middle tones and shadows. If all this scum is not removed before the plate is immersed, the iron solution will have to gradually break through it, which means that the etching in the wider bare spots—the high lights—begins before the etching starts in the middle tones and finally the shadows, and, in most cases this scum breaks away irregularly and leaves a bad-edged dot, which gathers a little ink, and the printer knows what that does to his form.

The engraving should be backed properly on either patent base or solid metal. Wood, as you know, is likely to shrink, swell, or warp, and is not solid enough for the impression needed for rough stock printing.

To get the best results in half-tone printing, the engraving should be made for the particular kind of paper that is to be used. A half-tone made for coated stock seldom runs well on dull or uncoated paper, and vice-versa, a half-tone made for dull or uncoated stock doesn't usually look well on coated paper. Determine definitely the particular paper you are going to use, then order the engraving to print properly on that paper.

Recently we received an order to make an engraving for an uncoated paper. Seventeen additional plates were made by another engraver, who received no instructions about the kind of stock to be used. The printer thought that all engravings were alike, the only difference being in the price. When the pressman started his work only one of the eighteen worked properly on the stock-well, you know the rest.

The New Scottish Scale.

An agreement has been reached between the Scottish Alliance of Masters in the Printing and Kindred Trades and the National Union of Bookbinders and Machine Rulers, under which Scotland, for the purposes of wages, has been classified into four grades -A, B, C, Dand the standard rates of wages were raised substantially. Grade A includes Edinburgh, Glasgow, Airdrie, Coatbridge, Dumbarton, Dundee, Greenock and Hamilton; Grade B-Aberdeen and Inverness; Grade C-Ayr, Coupar-Angus, Dunfermline, Falkirk, Kirkcaldy and Perth; and Grade D-All towns with a population of 20,000 and under, unless specified above. The following standard specified above. rates of pay have been made operative since the first pay day in August :-

Male workers—(A). 72s. per week; (B), 70s.; (C), 68s.; and (D), 66s.

Female workers—(A), 33s. per week; (B),

31s.; (C), 29s.; and (D), 27s.

Pending readjustment of piece-work rates, the same amount of advance as received by 'stab workers shall be paid to piece-workers.

It was subsequently agreed between the Scottish Alliance and the National Union of Printing and Paper Workers, Female Section, that the same rates of pay be paid to the female workers in the other branches of the industry in the respective grades. In all the female departments the period of training was fixed at five years, with varying rates of wages. Negotiations are proceeding regarding the wages of the compositors and the machinemen. These workers, whose standard pay is 66s., are likely to be put on the same scale as the bookbinders. The Edinburgh and Glasgow areas include all towns within a ten-mile radius of these cities.

JAPANESE PATENT LAW.—According to a report published in the Osaka Asahi, the Japanese Government has established a committee for the revision of the patent laws under the chairmanship of Mr. Inuzuka, the Vice-Minister of the Department of Agriculture and Commerce. Three business men will have seats on this committee, which is to meet shortly at the Department of Agriculture and Commerce in order to prepare a bill for the next session of the Diet. The four existing patent laws, i.e., patent law, designs law, utility models law, and trade mark law, will be revised separately.

Digitized by GOOGIC

Trade Boards Acts, 1909 and 1918.

In accordance with Regulations made under Section 18 of the Trade Boards Act, 1909, by the Minister of Labour, and dated October 31st, 1918, the Trade Board established under that Act for that branch of the box trade in Great Britain which is engaged in the making of boxes or parts thereof made wholly or partially of paper, cardboard, chip or similar material, give notice, as required by Section 3 (5) of the Trade Boards Act, 1918, that they propose to vary the general minimum time rates at present fixed for female workers from 5½d. to 8d. per hour, and for male workers from 9d. to 18.1½d. per hour, and to vary correspondingly the general minimum time rates fixed for younger female and male workers.

The Trade Board also propose to fix piece work basis time rates for female workers of 8½d. per hour and for male workers of 1s. 3½d.

per hour.

The Trade Board will consider any objections to the above proposals to vary and fix which may be lodged with them within two months from August 8th, 1919. Such objections should be in writing and signed by the person making the same (adding his or her full name and address), and should be sent to the secretary of the Paper Box Trade Board (Great Britain), 5, Chancery-lane, W.C.2, from whom full particulars of the Board's proposals may be obtained.

Press Cables.

The report of the committee appointed by the Newspaper Conference and the Empire Press Union, just issued, has made the follow-

ing suggestions:

(1) That immediate steps be taken to improve the existing cable services by reducing the wordage of Government messages and otherwise relieving the congestion on the wires; (2) that every possible assistance be given by the Government to cable companies to enable them to repair their lines; (3) that an adequate system of wireless be established as soon as possible; (4) that a second cable be laid without delay as part of the All-Red Route from Bamfield to Norfolk Island and certainly in the first instance from Bamfield to Fanning Island; (5) that better use be made of the ex-German Atlantic cable; (6) that subventions be granted to reduce rates between all parts of the Empire; (7) that the deferred Press rate be resumed; and (8) that investigation be made respecting the Government use of cables for the transmission of speeches of most inordinate length.

The committee takes the opportunity to refer to the creation of the suggested Imperial News Service under Government patronage,

which, the report says, could only be a form of propaganda and an interference to which the Press have the strongest possible objection, as being a scheme leading to corruption and inefficiency.

The Cost of Make-Ready.

Entirely too large a part of time of the pressman is consumed in the operation known as make-ready while presses stand idle; that is, as far as the production of printed sheets is concerned. In the average job-plant this make-ready time is easily one-third of the total press-room time. One composing-machine manufacturer claims that all new type will save one-half the make-ready time and add it to the available running time. If this is a fact, and it seems that it could easily be tested, the saving would be equal to adding seventeen per cent. to the productive capacity of the press-room.

Make-ready is caused by the imperfections in the level or height of the forms, and imperfections in the parallelism of the press, mainly the former. In fact, there are few presses that will not print a perfectly level form with but little make-ready. A small part of it is due to setting the guides and making register; while another fraction is caused by affixing the overlays, which should be made from proofs taken on a proof or job press while the press is running on another

form

This brings us to the thought with which we started out. Why do any make-ready while the press waits except the placing of the form, setting the guides, attaching the make-ready sheets and setting the fountain? Why can not the make-ready be done on special machines of less productive value which could do this work while the real presses were producing the saleable work? It is easily conceived that one of such make-ready machines could do the make-ready and registering required for several presses and at a much lower cost.

This is practically done by a special process in some of the large magazine plants running rotary presses, but it seems as though it could be profitably done in the commercial printing plants with the result of getting a greatly in-

creased press-room product.

Of course this would be a problem for the press-builder to solve, but it is a minor one compared with those he has already overcome. It is certainly worthy of careful consideration as it would give better work, because of the more careful make-ready that would be possible in a lesser time, and it would give greater production—possibly as much as twenty-five per cent.—because the time required to put the make-ready on the press would be reduced to less than a fourth of the present time lost in this way.—The In land Printer.

Some Paper Topics.

There is little or no change to record in either prices or conditions during the past few days. The stiffening tendency has apparently become a completed process and normal rates are now in operation. For how long they will last there is no certainty no more than there is any certainty in anything at the present time. For a spell the paper trade is free from internal strife and apparently we can carry on with undisturbed business so far as our own industrial problems are concerned. But there can be no real business until the general industrial conditions become more settled and the various sects cease to chase round a vicious circle in search of money.

In most trades, and certainly in the paper and allied trades, labour is now being adequately compensated and the hours and working conditions are infinitely better than could ever have been hoped for before the war. There is plenty of work to be got at and the prospects are decidedly good for both masters, men and customers. Only internal trouble can mar the success of our future and the avoidance of this is surely not too difficult a proposition to put before those in whom is vested the responsibility of steering a fair course. Between and among masters and men we want a common sanity and spirit of satisfaction and co-operation for the sake of themselves, their dependents and the country we represent.

The Government announced their trade policy before the recess. This made rather interesting reading, although of a disappointing character. In March of this year the Government spokesman (or rather two of them, for both Sir Auckland Geddes and Mr. Bridgeman made the pledge) announced that September 1st was the ultimate point to which the current policy could be carried without further consideration. Of course the policy in regard to paper at that time was one of free import and no restrictions. At a later date the findings of the Paper Inquiry Committee led to the present restriction of import and system of licences. As a direct result of the action taken practically every paper mill in the country is booked with orders to its fullest capacity.

When the Board of Trade announced the new regulations no mention of a terminating date was named but it was tacitly understood that the regulations were framed with the avowed object of tiding the trade over the transitional period, whatever that may mean. The common understanding is that until British papermakers are able to cope successfully with foreign competition no change of policy will be made. The question arises, are they able now to engage successfully with foreign competition and the answer is that we are no more able to produce certain lines of paper at the same low cost as certain countries as we were during the war or before the war. In the realm of high-class writing and printing papers generally, we can hold our own as we always did, but it is a difficult matter to draw a precise line dividing the qualities in which we would be successful and those in which we would fail against the foreigner.

Altogether it is very doubtful whether the question of relaxing the Paper Regulations will be raised for a long time ahead, and then only to consider the inauguration of tariff reform. Since the committee issued its findings in April, the cost of producing paper has not gone down but up, and any arguments that stood good then, hold good still in greater degree. One point, however, may be noted, the cost of producing paper and pulp is advancing in every other country as well as our own. Presumably when the industrial ferment dies down, as it ultimately must, we will all find ourselves in much the same relative conditions as we were accustomed to when it first began.

The British paper mill which makes the types of paper hitherto imported from Scandinavia will find itself at the same disadvantage in cost of production as compared against the Swedish and Norwegian mills. If the intention is that we are not going to have the foreign stuff then it is not by organisation or industrial skill that we shall keep it out but by artificial trade barriers of the kind we are gradually becoming accustomed to.

In a paragraph in last week's notes we drew attention to the need for an English-made marble paper. It has been forcibly driven home to us during the last few days that there is another and even more lucrative line of papermaking which we are sadly neglecting while an unprecedented opportunity presents itself. Of course there are very sound reasons at the moment for a certain amount of apathy in regard to new or fresh ventures, the one fact that every mill has as much as it can do to keep close behind its present volume of orders explains a lot. That, however, is no reason for not looking ahead. We have repeatedly urged the need for investigation and research as a separate branch of papermaking. a futurist section concerned not so much with immediate customary business as with development. It is strange how little we have learnt during the war. What are our big firms doing and what is the Papermakers' Association doing, not to found a central training and research college, or even adopt the Man-chester College of Technology papermaking department?

The line we refer to is cover papers for which there is a good demand and small supply, the latter a surviving remnant of the last imports from America. The authorities decree that English mills can make almost all the cover-paper specialties which so far have only been produced in America. The big advertisers in the country ran almost exclusively on American products for their artistic covers. Prices have always been stiff, but the papers have been superlatively good. English mills have certainly made cover papers, but we have not yet met the samples which made any attempt to compare against the lines associated with the Strathmore Paper Co. for

instance. We do not embody the essential character, nor do we secure the feel and variety of tints that mark the American cover papers as the best fitted for modern advertisers

There is not the slightest doubt at all that it we laid ourselves out to tackle the proposition, we could within a year or two make everything the American mills make and do it quite as well and more economically. But we shall most certainly have to commence in the laboratory.

H. A. M.

Foreign Paper and Board.

Revised Regulations as to Import.

Under date August, 1919, the Paper Import Restrictions Department have issued revised rules to be observed by applicants for proportionate licences to import foreign paper and board in respect of British purchases. They cancel the previous issue and are as follows:-

- (1) Original British invoices (either of manufacturers or merchants) dated on or after May 1st, 1919, must be submitted. Duplicates cannot be accepted. N.B.—In cases where orders have been on a British mill's books for six weeks or more, and reasonable quantities have not been delivered, the Department is prepared, on the production of pro forma invoices, to consider an application for a licence to import a proportionate quantity of foreign paper. Such quantity will be placed to the debit of the applicant's licence account subject to cancellation of the debit by the production of the actual invoices received on delivery of the paper from the British mill.
- (2) Merchants' invoices must be accompanied by certificates, supplies of which can be obtained from this Department on application. Manufacturers' invoices require no certificate. N.B.—These certificates should be applied for from the merchant at the time of placing the order with him. The signature thereof by the merchant entails a debit of the proportionate foreign tonnage to the merchant's licence account.

(3) The invoices relating to paper falling under clauses 2, 3, 5 and 6 of the Paper Import Regulations must be kept separate.

(4) Separate summary statements of the invoices relating to each of the above clauses must be given, indicating the description and weight of the paper shown on each invoice and totalling the weights.

(5) Invoices relating to finished articles, such as bags or cardboard boxes, must not be included in any application. N.B. —It has, however, been decided that persons who purchase heavy bags from British mills may ask the mills to give them a monthly certificate as to the

quantity of British paper which they may have purchased from them in the form of bags, and that the purchaser may be granted a proportionate licence on such certificate. This concession does not apply to purchases of bags from merchants.

(6) Invoices relating to printing or writing paper, even though used as wrapping paper, must not be included in applications for licences to import wrapping paper. N.B.—This does not apply to news off-cuts, which are classed as

wrapping paper.

(7) "Middles," which are less than substance 25 by 30 ins., 4 ozs. per sheet, are classified under clause 1 of the Paper Import Regulations. Invoices for such "middles" must not be included in applications for licences to import card-

board or wrapping paper.
(8) Applications for licences to import cardboard (i.e., paper falling under clause 6 of the Paper Import Regulations) must in every case where the substance is not shown clearly on the invoices contain a guarantee that none of the items included on the British invoices are less than the minimum substance now permitted for all classes of cardboard specified as included under clause 6 (i e., 25 by 30 ins., 4 ozs. per sheet).

(9) Board, which is excluded from clause 6 because the substance is less than the substance allowed (vide paragraph 8 above), is classed as wrapping paper (clause 5) and invoices for such board can be included in applications to import wrapping paper. N.B.—This of course does not apply to coated board (clause 3) or to the other classes of board specifically referred to in clause 6 as being ex-

cluded therefrom.

New British Palents

BRITISH & COLONIAL

Trade Notes.

THE late Mr. John Wilson Adams, of Kingston-on-Hull, printer and stationer, has left estate of the value of £51,292

WHILE trying to stop two runaway horses drawing a van in the Minories last Friday afternoon John Harris, a printer, residing at Downs-place, Peckham, was run over and killed.

The strike of paper tube makers at Castleton, Lancashire, for increased wages, has been settled, and the workpeople have again returned to work. Various advances have been granted them according to their grades of work.

Danish journalists and the British journalists who are now visiting Denmark have sent a telegram of greeting to Queen Alexandra, describing her as "the dearest link between the two kindred nations."

THE strike of printers at Rome which has lasted six weeks, still continues, another attempt to settle it having failed, through, it is said, the obstinacy of the leaders of the men's confederation.

THE death is announced of Mr. J. R. Nisbet, a director of Messrs. Hay Nisbet and Co., Ltd., printers, Glasgow. For many years past he resided chiefly in London, but he visited Glasgow regularly in the interests of the printing and publishing business.

THE "T. A." REPORT.—The 130th half-yearly report of the Typographical Association is very satisfactory both numerically and financially, considering the period of transition through which the trade is passing. The membership shows an increase of 610. Several new branches have been organised and old ones extended during the half-year. There are still well over 6,000 members serving with H.M. Forces.

The Palestine News, an army paper and the only publication allowed in Palestine, recently suspended publication. The Arabic and English editions have been taken over by a French society, and the Zionist Commission is publishing the Hebrew edition. There is also being published in Jerusalem an Arabic weekly magazine, and the Daily Palestine Mail in the Hebrew language is announced to appear shortly, with weekly editions in Arabic and English.

TENDERS WANTED. — For the supply of printing, stationery and books for the Barking Town Urban District; particulars from the clerk's department, Public Offices, Barking. For printing agenda papers, minutes and reports, and other papers for the Wilts County Council; conditions of contract may be obtained on application at the office of the Clerk of the Council, Trowbridge. For printing for six or eighteen months for the Bermondsey Borough Council; forms of tender from Mr. F. Ryall, town clerk, Town Hall, Spa-road, Bermondsey, S.E.

THE drath is announced of Mr. William John Snowdon, at Gateshead. The deceased was formerly a well-known Newcastle journalist, and was chief reporter at one time of the Newcastle Journal.

THE late Sir Edward Daniel Walker, of Darlington, senior partner in Messrs. Walker and Wilson, wholesale newsagents and advertising contractors, has left estate valued at £44,234, with net personalty £10,028.

The death has taken place of Mr. William Dickie, editor of the Dumfries and Galloway Standard. Mr. Dickie, who was 62 years of age, and was connected with the Standard from his early youth, was an authority on Burns, and a prolific writer on historical matters connected with Dumfries.

WAYZGOOSE.—The employees of the Western Mail, Cardiff, had their wayzgoose, the other day, to Cheddar, in Somerset. The party numbered 130 and included Mr. Robert J. Webber (manager and director), Mrs. Webber, Miss Emsley Carr, Mrs. William Davies, Mr. and Mrs. Thomas Armstead (Ely Paper Mills), and Mr. and Mrs. Gilbert Shepherd. A most enjoyable day was spent.

THE ADVERTISEMENTS REGULATION BILL proposes that all advertisements on land or buildings should be subject to regulations, while power is given either to regulate or to prohibit those which do not relate to the land or building on which they are exhibited. Power is also given to prohibit moving or flashlight advertisements. Local authorities may prohibit "alien" advertisements in rural and residential areas, and regulate those in the business parts of towns or villages. Powers are given by clause 4 to deal with advertisements of a repulsive or demoralising character.

The Printers' War Memorial.—Arrangements are being made to lay the foundation stone of the Printers' War Memorial Wing to the Caxton Home, Limpsfield, at an early date. Donations and promises of support have reached £3,500; but owing to increased cost of building, a further £2,000 is required to complete the scheme, including the erection of a Roll of Honour, on which over 1,500 names and particulars will be inscribed. Towards the raising of this sum, the committee of the Home have arranged for an afternoon concert at the Central Hall, Westminster, S.W., on Saturday, November 18t, when a popular musical programme will be provided.

"NEPTUNE," the Antwerp newspaper whose plant was almost completely destroyed by the German bombardment in October, 1914, and which was issued weekly in London throughout the war in French and in English has, since its return to Belgium been published once every week. Repairs to the plant having now been effected, Neptune will in future appear daily. A unique feature of the journal will be a daily English supplement, which, while giving British residents and travellers in Belgium as complete a resuméas possible of home news, will aim chiefly at forming a connecting link between the two Special attention is given to countries. shipping and commercial intelligence.

Personal.

At a conference, last week, representing the London and Provincial Press, held at the offices of the Newspaper Proprietors' Association, a resolution was passed on the motion of Lord Burnham, seconded by Sir George Riddell, congratulating Sir Edward Russell on his peerage. Lord Burnham said that there was no man connected with newspapers who did not feel that sterling merit and life service had been fitly rewarded, and Sir George Riddell said there was no man in the profession who deserved the honour more.

MR. WILLIAM MORTON FULLERTON, the well-known American journalist and author, has been promoted to be an Officer of the Legion of Honour, "for his eminent services to the French cause in America, Great Britain, and Italy through his Press campaigns."

MR. COMYNS BRAUMONT, who has been responsible for the editorial control of the World for the past few months, is relinquishing the position in order to take up further responsibilities on other of Messrs. Odhams' group of publications.

Printed Telegrams.

The wider application of the Baudot installation to post office telegraph systems has been restricted during the years of the war, but one has recently been started on the London-Dublin service, giving a total of eight channels—four either way—each working at a speed of 30 words per minute.

The Baudot installation is the name of the electrical appliance by which telegrams are mechanically printed at the office of receipt. From the moment when the key is pressed in the sending office to the printing of the corresponding letter in the receiving office less than one-third of a second elapses. At present some 20 such circuits are working.

This system is chiefly used in sending Press and commercial telegrams, but it is likely to change eventually the entire aspect of inland telegraphic working on main lines.

Evils of War Unrest

A warning note is sounded in the annual report of the National Amalgamated Union of Labour, which states the union, in common with others, has much to fear from hasty and ill-advised action, arising out of the unrest produced by war conditions. It is pointed out that reforms cannot be accomplished at once, and that it is inadvisable to throw a way

by hasty action advantages that have been sohardly won. Referring to the necessity for increased output, it is not to be expected, says the report, that the output can in every case be maintained at its former rate until the economies and improved methods of working that generally follow a reduction of hours have had time to take effect. It is also necessary to convince those from whom increased exertions are required that an increase of work means increased reward for their labour.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STA-TIONER," 58, SHOE LANE, LONDON, E.C.4.

SPECIAL PREPAID ADVERTISEMENTS

- IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us the day prior to publication to insure insertion in the current issue.

The Dublin Printing Trade Dispute.

Notwithstanding the efforts that have been made by the officials of the Federation of Master Printers of the United Kingdom, and the Right Hon. C. W. Bowerman, P.C., M.P., London, chairman of the Trades Union Congress, to settle the dispute in the Dublin printing trade, an end of the trouble does not appear to be nearer, and representatives of the employers and of the men, are not hopeful of an early termination of the present condition of affairs. Mr. Blades and the Right Hon. C. W. Bowerman attended a meeting of the Dublin Master Printers last week, and, having reported the result of a meeting with representatives of the men, they expressed regret

that they had not been able to effect a settlement. Both gentlemen, when interviewed subsequently, expressed disappointment at the failure to reach an agreement, and the Right Hon. C. W. Bowerman said that at the meeting of the masters it was decided that they were unable to meet the men in conference again to consider their present proposals. The strike is inconveniencing the public to a serious extent, and at a meeting of the Dublin Corporation the Lord Mayor said he had received a letter from the city treasurer, as secretary to the housing committee, stating that the business of promoting the building schemes now in hand was being greatly hampered by reason of the printers' strike which rendered it impossible for the committee to get their reports and plans printed. Alderman T. Kelly said the Corporation was seriously handicapped by the holding-up of the work, and it was up to them to have direct labour, not only in the printing, but in the other crafts in connection with the housing scheme. Under the circumstances, he moved: "That the Housing Committee be empowered to make temporary arrangements for the printing of the reports and plans for the Marino Scheme, and that the Workshops Committee be asked to report as to the advisability of having municipal printing works established in the municipal workshops." The motion was carried by 23 votes to 8. Commenting on this one of the Dublin newspapers says: - "One would think that there were no printers in Ireland except the houses affected by the Could not these urgent reports be The absurdity of the printed elsewhere? suggestion will be seen from a moment's consideration of the time and money it would take to get together the necessary plant for a printing works. We can safely state that the strike would be ended months before the Corporation could have its printing works started. What guarantee would the Corporation have that a strike might not arise there as well as in other printing houses? As a scheme to waste the money of the unfortunate ratepayers and provide jobs for friends of the corporators there is much to be said in favour of the project. It has nothing else to recommend it."

The Small Printer.

A good deal has been said recently about the small printer, and doubts have been freely expressed as to whether he is a necessity or not. The question has even been debated as to whether he should be exterminated or cultivated, and there is much difference of opinion on the matter. There is a good deal

Digitized by GOOGLE

to be said for the small man, he may need education himself in the matter of prices, but he educates the public and creates buyers of printing, thus putting his customers into the road that often leads to big contracts with the larger houses. Instead of trying to crush out the small printer an effort ought to be made to bring him into the fold and get him to join a local master printers' association, if that could be done without jeopardising his business by tying him down to observe hard and fast rules in his work. Meeting his fellow-craftsmen would do much to raise him out of his rut and the instruction and advice he would get would be of advantage both to himself and the craft in general. It will be better, and cost less, to educate the small man than to institute a campaign of underbidding with the object of crushing them out of business.

Paper imports and Exports.

The following figures show the value of the imports and exports of paper, etc., for the month and for the seven months ended July.—

JULY.

	• • •	•••	•••	£ 1,020,103
Exports	•••	•••	•••	323,160
Re-Export	s	• • • •	•••	24,102
Seven	Mo	RHTH	ENDED	JULY.
			•••	£5,038,553
Exports		•••	•••	
Re-Export	S	•••	•••	45,082

The imports last month were £510,785 higher than for July of last year, whilst the exports give an increase of £65,478. As regards reexports more movement is now taking place, the advance in favour of last month amounting to as much as £20,597. The seven months' imports (as compared with the corresponding period of last year) show an increase of £1,730,615, exports an advance of £452,603, and re-exports an addition of £20,042.

tieavy Arrivals of Colonial Reel Paper.

There was an increase of over 211 per cent. in the total quantity of paper (661,882 cwts.) imported into the United Kingdom last month as compared with July a year ago. The most important development was in reel paper, the receipts amounting to 217,275 cwts. as compared with 22,609 cwts. The shipments from Norway and Sweden were under 25 per cent. Of the total, whilst those from Newfoundland accounted for over 34 per cent., and from "other countries" (we take it that Canada is embraced) nearly 40 per cent. An increase of 128,099 cwts. was recorded in the imports of \$trawboards, last month's arrivals amounting

to 216,205 cwts., the sources of supply not being specified. The demand for packings and wrappings also shows a steady expansion, last month's imports amounting to 127,324 cwts, an increase of 62,102 cwts, compared with July of last year; nearly 90 per cent. of the supplies came to hand from Norway and Sweden. Printings and writings not on reels were imported to the extent of 21,164 cwts., an increase of 11,076 cwts., about half of the trade being controlled by Norway. Hangings are beginning to come forward, the supplies last month amounting to 612 cwts., whilst other printed or coated papers, received to the amount of 1,264 cwts., chiefly from Belgium and the United States, show an increase of 240 cwts. as compared with July of last year. The imports of mill and wood pulp board last month were 71,835 cwts., a comparative increase of 48,743 cwts.

British Paper Exports go chiefly to Foreign Countries.

JUDGING by the shipments of printings and writings the principal outlets for British paper are foreign countries, notably France. export trade is, unfortunately, still very contracted, home mills being well occupied on local orders, and in this respect foreign manufacturers are looking to British paper exporters and merchants to draw from outside sources in order to regain the business they held before the war and to supply the pressing requirements of overseas markets. True, the exports of British paper show an increase last month of over 85 per cent. compared with July, 1918, but the total quantity, viz., 79,808 cwts., is not likely to arouse any feeling of enthusiasm. The actual increase of 36,738cwts.in exports is chiefly accounted for by larger shipments of printings, packings and wrappings, and writings, viz., 15146cwts., 15,141 cwts., and 5,238 cwts. respectively. Of the 32,157 cwts. of printings exported last month, 21,372 cwts. went to foreign countries and only 10,885 cwts. to British Possessions. So far this year, compared with the corresponding period of 1918, heavy decreases are shown in the exports of printings to Australia, South Africa and India. Our exports of writings last month amounted to 12,865 cwts., foreign countries taking 7,413 cwts. and British Possessions 5,452 cwts.

DIVIDENDS AND REPORTS.

George Newnes, Ltd.—The report for the year ended June 30th last states that the profit, after providing for all necessary reserves, directors' fees and allowances to employees, is £81,741; £33,271 was brought forward, making £115,012. Out of this the dividend on preference shares and an interim dividend on ordinary shares have been already paid, absorbing £35,000, leaving £80,012. The profit sorbing £35,000, leaving £80,012. constitutes a record in the company's history. It exceeds that of last year by £12,315. The directors propose to place £20,000 to reserve, thus increasing the reserves to £80,000, and that £5,000 be set aside to form a sick and pension fund for the staff. They also recommend the payment of a final dividend of to per cent., making 15 per cent. for the year, as compared with 10 per cent. last year. This will leave £35,012 to be carried forward. Owing to the expansion of the business the company's premises have become inadequate for manufacturing purposes, the directors have therefore decided to build an up-todate factory to cope with increased printing requirements, and hope to commence building at an early date.

NEW COMPANIES,

COLLEYS, LTD.—Registered with a capital of £35,000, in £1 shares, to carry on the business of manutacturers of tramway and other printed tickets, telegraph coils, toilet paper, etc., and to enter into an agreement with Colley's Patents, Ltd., and its liquidator. COMPANY NOTICES, etc.

ALLIED ADVERTISEMENTS, LTD. (in voluntary liquidation).—Notice is given that a meeting of the company will be held at London on September 25th, for the purpose of having laid before it an account, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation which may be given by the liquidator.

London General News and Book Agency, LTD.—At a meeting of the company, held at London on July 24th, the following resolution was passed; and at a subsequent meeting on August 8th, was duly confirmed:—"That the company be wound up voluntarily; and that James Jennings, 6, Great New-street, Fetterlane, E.C.4., be appointed liquidator for the purposes of such winding-up." Notice is given that a meeting of the creditors of the company will be held at London on August 25th. Notice is also given that the creditors of the company are required, on or before September 30th, to send the particulars of their debts or claims to Mr. James Jennings, 6, Great Newstreet, Fetter-lane, E.C.4, the liquidator of the company.

TURF PRESS, LTD.—Notice is given, that a meeting of the company will be held at London, on September 5th, for the purpose of having an account laid before them by the liquidator, showing the manner in which the winding-up of the company has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

BANKRUPTCIES, etc.

Re Hy. Fredk. Adlard, Printer, 55, Banner-street, City-road, E.C., trading as H. Adlard and Co.—Creditors met under this failure at the London Bankruptcy Court recently, when the official receiver stated that the debtor roughly estimated his liabilities at £2,000, and valued his assets at £1,225. He commenced business in 1894, with a capital of £900 given to him by his grandfather. It had not paid since the war although latterly it had improved. Some six months since he entered into negotiations with a gentleman for the purchase of his business as a going concern, about a fortnight ago, he received an offer of £1,500 for it, which he considered was a very good offer, and should be accepted by the

official receiver or trustee of his es ate. His father died in May, 1910, and his estate was valued for probate at £7,000. His mother was appointed sole executrix, and the estate was left to her absolutely. On August 21st, 1910, his mother gave him two lots of shares in the Gas, Light and Coke Co., for £500 each. In 1915 he sold the shares for £750, and about November, 1917, his mother commenced proceedings against him for the return of the shares, or their value, together with the arrears of dividend. In February last the case came into court, and he was advised by counsel to consent to judgment for £1,000 and costs. It was upon that judgment that the bankruptcy proceedings were founded. He alleged his failure to have been caused through falling off of business owing to the war, and to the judgment obtained against him by his mother. Eventually it was decided to appoint Mr. W. J. D. Bolt, accountant, of 6, Kingstreet, E.C., and Mr. Frederick S. Salaman, accountant, of 1-2, Bucklersbury, E.C., as joint trustees of the estate to act under the supervision of a committee of inspection which was also appointed.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES. PARTNERSHIPS DISSOLVED.

The partnership between Sir Arthur Grey Hazelrigg, Eileen Turner and Henry Brandon, carrying on business as cardboard box manufacturers, 48, Hatton-garden, E.C.1, under the style of "Brandon, Turner, and Co.," has been dissolved by mutual consent as from July 31st, 1919. All debts due to and owing by the late firm will be received and paid by Henry Brandon and Eileen Turner, who will continue the business in partnership under the same style.

The partnership of publishers at 327a, High-street, Rochester, carried on under the style or firm of "Clarkson and Collingridge," has been dissolved by mutual consent as and from August 11th, 1919. All debts due and owing to or by the late firm will be received and paid by S. Clarkson, and the business will be carried on by him.

FIRST MEETING AND PUBLIC EXAMINATION.

Haworth, Lawrence Edward (carrying on business as Haworth and Son), paper merchant, 60, Carnarvon-road, Blackburn, carrying on business at 10, Lord-street West, Blackburn. First meeting August 26th, 1919, 10.30 a.m., at the official receiver's offices, 13, Winckley-street, Preston; public examination, September 3rd, 1919, 11.15 a.m., at the County Court House, Victoria-street, Blackburn.

THE PRICE CUTTER.—Once there was a concern which manufactured what they were pleased to call "silver" spoons. There was a dealer who bought largely from them but was always clamouring for a lower price. "But I can't lower the price," the manufacturer would say, "unless I put in more lead." "Oh, well, more lead by all means," the dealer

would say. Some time later the dealer wired that he would take an enormous consignment if the price were cut another 10 per cent. "Can't cut price another penny," the manufacturer wired back. "Put in more lead," wired the dealer. "Impossible," was the reply. "Last lot shipped you were all lead."—Ammunition.

Overtime and Night Work.

The Terms of the Agreement.

The following are the terms of the agreement between the London Master Printers' Association and the London Printing Trades Federation:—

Ordinary Overtime Charges. — Overtime shall be paid for at the rate of time and a quarter for the first two hours; time and a half for the next three hours; double time to continue afterwards for any further period it may be necessary to work until a rest of eight hours can be given.

hours can be given.

Saturday Overtime.—Time and a half for the first three hours; afterwards double time.

Saturday Overtime in Five Day Houses.— First four hours at time and a half; afterwards double time; minimum charge, four hours.

Holiday and Sunday Charges. — Sunday and Christmas Day, double time. Bank holidays and Good Friday, time and a half. All meal times to be charged. Minimum charge, eight hours.

Early Morning Overtime. — Members required to commence work before the ordinary time of starting shall be paid at the rate of time and a half until the usual hour of starting. Before six a.m., double time. Half anhour to be allowed for breakfast.

A Night's Work.—Twelve hours to constitute a night's work Working after twelve midnight to be charged as a full night.

Fractions of hours.—Fractions of hours to

be paid for as complete hours.

Meal Times (to be paid for).—(1) Half-an-hour before working a night after a day's work in the same office. (2) Half an hour after each three hours work. (3) Not less than two hours during the night, including

the first half-hour. (4) Saturday dinner hour: to be paid for at the ordinary hourly rate. (5) Deferred dinner hour: members called upon to work beyond the usual time for taking the dinner hour cut to receive half the hourly rate of pay, and the same additional payment for each hour beyond the first hour up till three o'clock. A cut to be allowed not later than three o'clock.

Regular Night work.—(1) The ordinary working hours of night ships shall not exceed 42 per week, exclusive of meal times, which are to be taken and paid for in accordance with the terms of this agreement. Monday to Friday inclusive: (2) Payment at the rate of time and a half all through. (3) Members called upon to stay beyond the recognised night's work shall charge the extra hours at night-time rate and a quarter. Saturdays and Sundays to carry the usual overtime extras.

Overtime Limit.—To be subject to regulation by the unions affected, in agreement with the London Master Printers' Association.

Bank Holiday Charge for Night Work.— Bank Holiday extra rates to be charged from twelve midnight from the night preceding the bank holiday (including Good Friday).

The date of operation of this agreement shall be from and including the first pay-day in September, 1919.

Signed on behalf of the London Master Printers' Association—

J. J. Keliher, president. W. Whyte, acting secretary.

Signed on behalf of the London Printing Trades Federation—

T. E. NAYLOR, chairman. WOODGATE STEVENS, secretary.

BRITISH & COLONIAL PRINTER & STATIONER

Dyes and Colours.

The Situation in America.

The printing ink industry has always been dependent to a considerable degree on the use of colours and dye stuffs, says the Colour Trade Jaurnal, and this use in the future bids fair to become more and more extensive. The country is a nation of advertisers, and the advertising art is inseparably linked up with the liberal use of printer's ink. It does not require much observation to see that colour is becoming a very important factor in carrying the advertising appeal in its most effective form. The various displays we see in journals, magazines, bill-boards, posters, and the many other forms of advertising publicity all depend to an amazing degree on the more or less artistic use of colour. It becomes at once apparent, therefore, that the printing ink industry of the country is closely connected with the dye-stuff industry, and the welfare of the one is dependent on the welfare of the other.

The manufacturers of printing and lithographic inks have a deep interest in the maintenance and progress of the American dyestuff industry. This is particularly evidenced by the fact that during the past few years some of the larger printing ink concerns have of necessity been forced into the manufacture of dye-stuffs in order to maintain their own major business in the ink trade; the printing ink business, in fact, in a certain way may be considered as an extension or ramification of

the dye-stuff industry.

The dye-stuff industry of this country at the present time is facing what might be termed a politico-economic crisis; its existence is at stake unless certain factors in its welfare are properly and efficiently guarded by the sympathetic co-operation of our Government in both its legislative and administrative departments. In advancing its claims for recognition in these respects it is necessary that it have the hearty support of all those associated industries in which dye-stuffs form a contributing factor, and the printing ink industry is by no means the least of these associated enterprises. As a measure of self-protection it behoves the printing ink manufacturers of this country to stand solidly behind the dye-stuff business in its appeal for a reasonable economic regulation over the importation of German-made dye-stuffs, the unrestricted importation of which into this country at the present condition of affairs would spell disaster and

Printing and lithographic inks, in fact, are nothing more than dye-stuff preparations in a more extended state of manufacture. There are some cases where the ink contains more real dye-stuff than the commercial dye-stuff itself from which the ink is made. From the point of view of the ink manufacturer the question naturally arises as to whether he will receive the same degree of licence and tariff protection for the dye-stuff present in his ink as the dye-stuff manufacturer will receive for

his product. If acid green, for instance, is refused a licence for importation into this country, and yet, at the same time, printing and lithographic inks containing this dyestuff in large amount are permitted to come into the country freely, will it not work both a hardship and an injustice to the domestic printing ink manufacturer?

In justice it would seem to be proper to accord to the dye-stuff preparations known as printing and lithographic inks the same degree of protective influence that is proposed to be

accorded to dye-stuffs.

There is also another feature of this case which must also receive proper attention. The printing and lithographic ink industry of this country has built up a rather intensive and important export trade in its products, especially with South America and even to quite an extent with the Orient. It is said by the printing ink manufacturers that this trade forms an important part of their business, and they are naturally rather concerned as to whether they will be able to retain this foreign business when the economic competition of Germany and England comes once more into full force. In this connection it may be said that our American manufacturers held their own under the competitive influences of both these countries even for a considerable period previous to the war. The ink manufacturers in this country probably obtained their dyestuffs as cheap as the English and German, and their methods of manufacture were so efficient that they were enabled to turn out ink products at a price to compete in the foreign markets. In order to maintain this business, however, it is claimed by the ink manufacturers here that they will have to be able to obtain dyes in this country as cheaply as their foreign competitors, and any material differential against the domestic ink manufacturer in this respect would seriously impair his ability to successfully compete in the foreign markets.

The Late Borough Printing Classes

According to the results of the examinations of the City and Guilds of London Institute, which were held in April last, a Borough student, Mr. E. V. Bourton, obtained the highest award given, the first class silver medal in honours; and besides this, another student, Mr. George Ganson, who sat in the third stage of the honours examination, obtained a pass and secured a full technological certificate. Both these students were instructed in the honours class by Mr. F. G. Shepard, who has had many successes during fourteen years at the Borough Institute as honours lecturer on estimating, costing, and other allied printing subjects. Although the numbers were small at the examinations in April, the Borough Printing Classes obtained a pass equal to nearly 90 per cent. of those who sat. The number of passes secured were: preliminary, 13; ordinary, 6; first class, 4; second class, honours, 2 firsts and 1 full technological certificate.

ST. BRIDE

Foundation Printing School.

Additions to the Staff.

The Costing Examination Results.

St. Bride Printing School Committee have once again been fortunate in obtaining men of wide practical experience as additional instructors—men who should successfully maintain the prestige of that well known educational centre. Mr. John Fuller, who prior to joining the forces, was works manager with the Menpes Printing and Engraving Co. at Watford, will undertake the duties of deputy to the principal. His experience of the various sections of the trade gained with a number of well-known firms of repute, will admirably fit him for the responsible position he takes up. Mr. Fuller, who has recently returned from Germany where he was a prisoner of war for some time, was for a number of years one of the evening instructors at St. Bride.

In Mr. G. A. Sayers, works manager with Messrs. Lakemen and Tucker, the composing students will have a keen and sympathetic guide. Mr. Sayers is well known outside the printing office as an interesting writer of technical articles suited to the needs of the

young printer.

The London machine managers will find a helpful coach in Mr. A. L. Butler, who comes to St. Bride with a reputation as a fine letterpress printer. He has closely identified himself with technical education, not only in its elementary, but also in its advanced stages, including research work. Mr. Butler has for a number of years been employed with Messrs. Thos. Forman and Sons, of Nottingham.

The lithographic department is fortunate in having Mr. J. H. Burton added to its staff. Mr. Burton for a number of years held positions of responsibility in well-known lithographic establishments in Manchester. He resigns the managership of Messrs. Monks and Pope, Bristol, to take up the position of

lithographic instructor at St. Bride.

With the augmented staff which was sorely needed to carry on the work, printers may look with confidence for still further progress at St. Bride. It says a good deal for the interest and enthusiasm of those who have been "carrying on" despite the many difficulties which had to be overcome during the last few years that they have been able to continue to make the School and its work so successful. We understand that St Bride has taken over the printing plant formerly used at the Borough Polytechnic. This will be a helpful addition to the School, which is now the best equipped of any printing technical institute in the United Kingdom.

The Cost-Finding Examination.

The following results of the costing summer term examination held on July 2nd have just been issued by the examiners, Mr. W. Howard Hazell and Mr. Harold Curwen. The first two

students receive the prizes given by the costing committee of the Master Printers' Federation:

A. L. Jonns	•••	•••	140 H	iarks.

A selection of examples of work done by the St. Bride students during last session shows that the instruction given has been practical and up-to-date. Some very fine specimens of illustrative work have been turned out, including a quarto booklet entited "Saint Bride Foundation, 1894-1919," which, besides giving a brief summary of the history of the School contains finely printed portraits of prominent men connected with the Institute. Another booklet contains the text of a series of lectures given at the School, and there are a number of examples of display composition executed by the students, which are worthy of all praise. Colour work has not been neglected and the specimens shown are very fine indeed. The whole of the work, indeed, is creditable to both instructors and students.

Quick Work.—M. Georges Koister, art editor of Le Matin, who is on a visit to London, expressed a desire to know exactly how quickly the Daily Mail could take a photograph and make a block of it for reproduction. The length of time mentioned seemed almost incredible to M. Koister, and there was a sporting interest in the performance which followed. M. Koister and a friend were photographed on the Embankment at 2.40 p.m. At 2.54 p.m. a proof of the photograph was handed to them, and at 3.14 p.m. the block was finished. The complete process thus took 34 minutes, and M. Koister described the performance as a record. Mr. Ben K. Raleigh, of the Whaley-Eaton Service, British Bureau, 17, Queen Victoria-street, E.C., claims the speed record for the Philadelphia Public Ledger, and instances a block being ready for printing 27 minutes after the taking of the photograph. This was a portrait of President Wilson addressing a meeting in Independence-square, Philadelphia, just before America entered the war. Can any of our British newspapers beat either of these re-

Trade Notes.

THE late Mr. William Edward Allen, of David Allen and Sons, Ltd., colour printers, Belfast, has left estate of the value of £88,267.

Press telegrams are now accepted for transmission between the United Kingdom and Germany between the hours of 6 p.m. and q a.m.

ABERDEEN.—Plans have been passed for alterations to printing works, on the east side of Farmers' Hall Lane, for the accommodation of the Rosemount Press.

THE Helsingfors correspondent of the Social Democrat states that Mr. Goode, the correspondent of the Manchester Guardian on the Russian N.W. Front, is missing, and it is feared that he has met with misfortune.

The death took place at Inverness of the Hon. Mark Francis Napier, fourth son of the tenth Lord Napier and Ettrick. Mr. Napier was for over thirty years director of Reuter's, and for many years and up to the time of his death he was chairman of the board.

THE strike of Swedish printers has ended, but the payment now accepted is not so high as that offered by the newspapers before the strike. It has been agreed that the employers have the right to arrange the division of work, to engage and dismiss workmen, and to employ non-union as well as union men. The working week is to be 48 hours, nightwork 45 hours.

TENDERS WANTED.—Tenders are invited for a contract for printing abridgements of specifications of patents. The work involved is the composition and printing of about 192 imperial octavo pages weekly; form of tender from the Superintendent of Printing, H.M. Stationery Office, Princes-street, Westminster, S.W. For printing agenda papers, minutes, reports and other papers for the Wilts County Council; particulars from the office of the Clerk of the Council, Trowbridge. For general printing for six or eighteen months for the Bermondsey Borough Council; forms of tender from Mr. F. Ryall, town clerk, Town Hall, Spa-royd, Bermondsey, S.E.

A CIRCULAR drafted by Mr. A. Williamson, costing secretary to the Master Printers' Federation, for a meeting of the Exeter Association caused somewhat of a sensation in that ancient city. Whether it was the spirit of modernity which it breathed that disturbed the dignity of the powers that be, or that it was suspected of being a notice calling a meeting of some dangerous secret society has not been ascertained. It is a fact, however, that the secretary af the Association, Mr. H. F. Pollard, at whose office the meeting was held, received a visit from a representative of the chief constable who put several pertinent questions as to the meaning of it. If the police are getting interested in costing, it is time for printers to wake up!

The first number of a new illustrated quarterly, called Out and Away, has been published by Messrs. G. Heath Robinson and J. Birch, London. It is devoted mainly to nature and travel interest. A feature of the magazine is the reproduction of colour and line drawings by R. E. Higgins, Bert Thomas. C. E. Brock, W. Heath Robinson, and other artists. The price is 2s. 6d. net.

A NEW edition of Messrs. Oliver and Boyd's "Income-Tax and Super-Tax" has been issued. It gives reminders and advice concerning over forty repayment claims, also tables of deductions, etc., and other information that will be of the greatest use to all income-tax papers. It is published at Tweedale-court, Edinburgh, and the price is one shilling net, by post one shilling and twopence.

The Lord Mayor (the Right Hon. Sir Horace Brooks Marshall) will lay the foundation stone of the Printers' War Memorial Wing to the Caxton Convalescent Home. Limpsfield, on Saturday, September 20th. Members of the printing, stationery and kindred trades are cordially invited to be present on the occasion. The office of the Printers' War Memorial Fund is at 3, Cr sitor-street, E.C.4.

A WRITER in the Referee says that winderinting was invented, "that was the beguning of the spread of education, and with the spread of education came discontent with things as they are and a desire for luxures beyond one's means. The greater portion of the unrest from which the world is suffering to-day is due to the spread of education, that is to say, of a certain kind of education, the little learning which is a dangerous thing."

ALUMINIUM POWDER.—We have received a sample of the aluminium powder that is being manufactured at the Elswick Works of Sir W. G. Armstrong Whitworth and Co. Ltd. These powders are in the natural colour of the metal and in various shades, and are excellently adapted for printers' use, being of a fine quality and possessing great covering power, while giving an effective appearance to any work on which they are used. The firm will shortly be putting on the market brass and bronze powders and printers should apply for samples and particulars. The London office of the firm is at 8, Great Georgestreet, Westminster, S.W.1.

EMPLOYMENT in the paper, printing and bookbinding trades generally showed a slight improvement during July. It was not so good, on the whole, as in July of last year. With letterpress printers employment was good. especially in London, where the usual amount of overtime was worked; in the provinces a little overtime was ccasionally reported, but at Leeds some short time was worked. Employment with lithographic printers was good in London and fairly good in the provinces, and on the whole, was better than in June. In the bookbinding trade the state of employment was only moderate, but, although some short time was worked in Lonion of al ggins, Be:

The Scottish Printing Trade.

uper-la A circular issued by Mr. R. T. Wishart, secretary of the Scottish Alliance of Empayments ployers in the Printing and Kindred Trades, had are informs us that the first meeting of the Wages ne greats. Board for the Printing Industry in Scotland was held recently, when proposals were put forward by the Scottish Typographical Association on behalf of its branches throughout Scotland, and by the Federated Trade Unions on behalf of the Edinburgh, Glasgow, Aberdeen, and Kirkcaldy Federations, including letterpress printers, lithographers and lithographic artists, printing and paper workers, and operative printers and assistants. The applications were for an increase of 16s. per week on wages at present paid to all male workers, female workers doing the same class of work as males (such as female compositors), and apprentices of 21 years of age and over; and for an increase of 8s. per week to apprentices under 21 years of age.

The employers' side of the Wages Board offered an increase of 7s. per week to all the male workers except apprentices included in the above application, and also to the female compositors; and they agreed that if this offer were accepted, the amount would be payable forthwith, and the employers offered, on this occasion, to waive their right under the Wages Board Constitution to postpone the increase until the first pay-day of the third month following the date of the meeting of the Board at which the proposed alteration had been first considered. If the above offer had been accepted on befalf of the Unions, this additional sum of 7s. would have fallen to be paid to each of their male members last week. The offer was, however, declined, and the meeting adjourned until this week, when the matter will be further con-

sidered by the Wages Board.

The National Society of Electrotypers and Stereotypers have agreed, on behalf of their Scottish branches, to an advance of 7s. per week, and this advance is now being paid to electrotypers and stereotypers in Scotland. Arrangements have also been made with the bookbinders by which they have received an advance, and a settlement has been made with the female workers in the Bookbinders' Union and in the Printing and Paper Workers' Union. These women are now receiving their advance, and had it not been for the refusal of the Unions' representatives at the Wages Board to accept the offer of 7s. all branches of the printing and kindred trades industry in Scotland would have already received an advance.

THE only thing we are likely to lose in this world by politeness is our seat in the tram.

"The Small Printer."

SIR,—With reference to your editorial "The Small Printer," I am anxious to remove any impression which may exist that the Master Printers' Association either discourages small printers from joining or that the conditions of membership are such as to make matters more difficult for them. On the contrary every effort is being made to get them to join and there are no binding conditions what-Naturally there are certain things ever. which they are expected to do, but these are entirely for their own benefit, and I have yet to find a member who has regretted joining. When I mention that the smallest printer has the same voting power as the largest printer it is obvious there is no desire to place him at a disadvantage.

During the last six months considerably over 100 have joined the London Master Printers' Association, and more than 90 per cent. are small printers, so it is quite evident the advantages of membership are becoming

more recognised.

Personally I cannot understand any printer remaining outside the Association, for by joining he has everything to gain and absolutely nothing to lose, and this applies particularly to the small printer.

If there are any in South-East London who wish for further information I shall be most

happy to hear from them.

Yours faithfully,

E. B. SMITH, Hon. Secretary,

South-East Master Printers Association. 94, Farncombe-street. London, S.E. 16.

SIR HORACE MARSHALL, the Lord Mayor of London, is to preside at a festival dinner in aid of the Newsvendors' Benevolent and Provident Institution at the Mansion House on Monday, October 6th.

THE Nineteenth Century and After has been acquired by a syndicate headed by the Duke of Northumberland, who will act as editor, and including the Duke of Sutherland, Mr. Walter Long, and Major Waldorf Astor.

MR. HENRY YATES THOMPSON, one of the Trustees of the London Library, has presented to that institution a fine copy of "Theocritus, Hesoid," etc., printed in Greek at Venice in in 1495 by Aldus Manutius.

Camberwell Printing Classes.

The classes for compositors and machine minders at the L.C.C. School of Arts and Crafts, Peckham-road, S.E.5, commence for the session 1919-20 on Monday, September 22nd, next. There will be afternoon classes on Mondays, Wednesdays, and Thursdays, and evening classes on the same days, with a drawing class for compositors on Wednesday evenings. The principal of the school is Mr. W. B. Dalton, and classes will be under the care of the instructors, Messrs. W. H. Amer. F. A. Gomm, M.A., and P. J. Smith. Class will also be held for bookbinding and lithographic drawing.

The classes held in the afternoon are for persons under 21 years of age only who are bona fide engaged in the trade, and the cumculum embraces the practical and the theoretical sides of the subject, together with lessons in English and the history of the craft. Employers are asked to look upon these classes as supplementary to the shop, and they are invited to give their apprentices facilities for attending them. Monthly attendance reports will be made to employers sending their employees as students, and progress will be reported every three months. Travelling expenses may be paid to apprentices resident in the county who regularly and punctually attend these classes. The evening classes are for the study of the theory and practice of typography in composing, press, and machine work, and they deal with the artistic arrangement of type in both general and bookwork. Further tuition will be given in the essentials of a perfectly printed book to those who desire it. During the session special lectures relating to typography will be given by experts in their respective branches of work. Students who have attended regularly and who reach the required standard, are permitted to take the Examination of the City and Guilds of London Institute in Typography. The work of the drawing class is specially arranged for members of the printing trade.

The classes are free for persons under the age of 21, who are qualified for admission to the school and bona fide engaged in the trade, on producing a certificate from their employers; 4s. 6d. a session is charged for persons earning 30s. a week and under; 10s. a session for persons earning over 30s. a week.

Current Topics.

The Patent Office.

The thirty-sixth report of the Comptroller General of Patents, Designs, and Trade Marks, which deals with the year 1918, has been issued. During the year 168 applications were made under emergency legislation for the avoidance or suspension of patent rights, and in 146 cases licences had been, or will be, granted. In the course of the year it was decided that the benefit of all enemy-owned patents should be vested in the custodian, and from October 31st, the date of the vesting order, to the end of the year, five applications for the grant of licences under such patents were received. The number of notifications deposited relating to foreign patents, designs,

and trade marks in 1918 was 662, as against 346 in 1917. The general business of the office shows that there were 21,839 applications for patents, 10,019 for designs, and 6,968 for trade marks. The total receipts were 345,405, and the surplus of receipts over expenditure was £135,890. During the year 3,451 trade marks were advertised, and 3,055 were registered. It is interesting to note that the salaries of the staff, including the Manchester branch, amounted to £162,407.

Canadian Paper and the British Market.

Is THERE a strong opposition among British mills to paper imports from Canada? We read in the Canadian Export Pioneer, a new monthly journal published in London, that the lack of shipping space, high freight rates and the tendency of the British Government to discourage avoidable importations are not the only obstacles with which the Canadian pulp and paper interests are now contending in their efforts to get a fair share of the British markets for their products. There is, in addition, a tendency upon the part of the British papermakers to regard the Canadian exporters as something of the nature of interlopers who are threatening their own interests, as well as a selfish attitude on the part of some British importers of Canadian ground wood who argue that Canada should be satisfied with a market for her raw material and not try to extend it to include her finished products. To both of these contentions the Canadian manufacturers reply that Britain has always been unable to supply her entire requirements of pulp and paper products, that she has always had to import a large quantity of them in any event, and that there is no reason, on sentimental, or practical, or economical grounds, why Canada should not participate in supplying these imports to the fullest extent of her ability, instead of permitting them to be monopolised by the United States, Scandinavia and Germany, as has hitherto been the case; that Canadian pulp and paper are equal in quality and as low in price as any, and that the British consumer of paper could not but be benefited by the reasonable encouragement of Canadian competition in supplying these products. We are sure British papermakers have every wish for the trade to be kept as far as possible within the family.

Buy the Best.

It is a good old aphorism that "the best is the cheapest," and it holds true of printers' machinery and materials, as well as of other things. A writer in the *Inland Printer* points

out to the trade that in buying machines there is no best in the ordinary sense of the word, as it depends entirely on the class of work to be done, when the best for that particular purpose is the one to install. If you are doing a large amount of black half-tone work and an occasional job of colour, the question of ink distribution is of much more importance than that of easy wash-up and quick change of rollers. If you are running a large number of short runs of good work requiring careful make ready, the question of speed is of far less importance than the ease of handling the adjustments of the machine and rapid setting of the ink fountain. On the other hand, if you are running long editions of ordinary work the question of speed is paramount, and a little more trouble in makeready is of no real importance in the choice of machines. It is the same in buying paper The paper that requires running slowly with special ink is fit only for the short run where the make-ready is the principal part of the job, while the ink that requires slip-sheeting is a drawback to rapid production even though its colour and effect after drying are far superior to many others. To buy the best, then, it seems that it is absolutely necessary for the printer to know the use to which it is to be put. This calls attention to one of the big mistakes of printerbuyers, that of buying according to price and of buying large quantities of paper and ink to get prices without any actual knowledge of the work upon which it is to be used. Many a time when two cents a pound have been saved on coated paper four cents have been spent in trying to make the cuts print on it; or when there has been a big saving in the price of ink the cost of the job has been made higher to an amount in excess of the saving by the necessity of slip-sheeting because the ink did not take kindly to the paper used.

National Health Insurance Act, 1919

The Ministry of Health wish to direct the attention of employers and others to the fact that by the National Health Insurance Act, 1919, which has just received the Royal Assent, the limit of remuneration up to which persons employed otherwise than by way of manual labour are liable to compulsory health insurance has been raised from £160 to £250 a year. Employers are accordingly required for the future to pay health insurance contributions in respect of persons employed by them under a contract of service as follows:—For non-manual workers, where the rate of remuneration (including any regular bonuses,

etc.), does not exceed £250 a year. For manual workers, irrespective of the rate of remuneration. A non-manual worker whose remuneration is over £160 a year, but not over £250 a year may, within a limited period, and under certain conditions, claim a certificate of exemption, and on the grant of such a certificate the employer's contributions (3d. a week) are alone payable. Forms of application for exemption will be obtainable shortly at any Post Office.

A Diamond Wedding.

The congratulations of the printing trade will be given to Mr. and Mrs. C. W. Burt on celebrating the 60th anniversary of their wedding day which event took place on Tuesday, August 12th. Mr. C. W. Burt is head of the firm of Messrs. Morton and Burt, Ltd., of Paddington and Willesden, and one of the oldest traders of those districts. In early life he accepted an appointment in the Government Printing Office, Adelaide, South Australia, and while there met and married the eldest daughter of Mr. J. Johnston, the last surviving issue of an old Scottish family of Corstorphine, near Edinburgh. Mr. Burt returned to England to superintend the Printing Department at the Crystal Palace, Sydenham, and later on, occupied the same position at the Alexandra Palace. Shortly after the fire at that place, he acquired the old-established printing business of J. Morton, of Starstreet, Paddington, and in the eighties of last century, extended the business into the Edgware road and Porchester road, Bayswater. On the business becoming a private limited liability company in 1906, an additional branch was acquired at Willesden Green.

Both Mr. and Mrs. Burt have revisited Australia, and their home at Brondesbury has been the meeting place of many Colonial friends serving the home country during the late war. Amongst them, eight nephews and a niece, two of whom have made the extreme sacrifice, one has been a prisoner of war in Germany, and two have been decorated for distinguished services by the King. grandsons have served their country, one after an absence of nearly two years, reembarking for home from Egypt on the event-ful day. It is also interesting to record that although three sons and one daughter are married and the family extends to the fourth generation, it is as yet unbroken by death. Mr. Burt, though unable to take any active part in business, maintains his interest in local affairs and is still able to read the newspapers without the aid of glasses.

With Mrs. Burt he appreciates the many expressions of respect and good wishes conveyed to them on this memorable occasion by a large circle of friends and others with whom they have been connected in various ways, both in the Colonies and during their fifty years' residence in West and North-West London.

BANKRUPTCIES, etc.

Re BARNETT ROSOFF, printer and stationer, 77, Brick-lane, Spitalfields, lately trading as the Process Art and Commercial Printing Co., at 13, Hague-street, Bethnal-green.—This

debtor filed his petition at the London Bankruptcy Court on August 2nd and the first meeting of creditors was held on August 22nd before Mr. Egerton S. Grey, senior official receiver. It appeared that the debtor came to this country from Russia in 1901, and started business as above in July, 1915, with a capital of £100. He traded till last March, when owing to the stoppage of shipments to France of writing pads and printed games which were his special lines, he closed down. In fact he had practically ceased working in the previous January, being unable to obtain orders after the signing of the armistice. The debt of his principal creditors, who claimed about £400, was incurred under the following circumstances. The debtor purchased £1,400 worth of paper, which he found he could not dispose of at a profit. He stopped a one-half of the purchase, and when owing the firm £670, he paid them £272 and offered them the stock of made-up writing pads in satisfaction of their debt. The firm in question, however, rejected the offer and the debtor sold the stock to another firm for £225, which was taken in payment of a debt, and a balance of £100 was handed to him. He owes £960; has assets of only trifling value; and ascribes his failure to loss on paper purchased and made up into writing pads which became unsaleable in consequence of the armistice. The case was left with the official receiver to be wound up in the ordinary course of bankruptcy.

Gazette.

A WORD OF CAUTION.
[In giving the official Gazette information, it must be distinctly understood that we take official records as we assunctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

THE BANKRUPTCY ACT, 1914. ADJUDICATION.

Adlard, Henry Frederick (trading as H. Adlard and Co.), printer, 55, Banner-street, City-road, E.C.I. Date of order, August 15th, 1919. Date of filing petition, June 12th. 1919.

APPOINTMENT OF TRUSTEE. Crocker, Jonathan, and Crocker, Lucy Alice (trading as John Crocker and Co.), papermakers' agents, 125-129, Edmund-street, Bir-Trustee, George Graham Popplemingham. ton, 26, Corporation-street, Birmingham. Appointed, August 14th, 1919.

ORDER MADE ON APPLICATION FOR DISCHARGE

Clutten, James Valentine Chapman, stationer and newsagent, carrying on business at 56, High-street, Oxford. Date of order, July 7th, 1919. Irish Printers' Wages.

The Labour Gazette gives the following increases of wages in the Irish printing trade:—

Belfast: Lithographic printers; increase of 6s. per week in minimum rate. Minimum rate after change, 67s. Cutters with two years' experience and over; increase of 5s. per week in minimum rate to those with under five years' experience, and of 5s. 6d. per week to those with experience of five years and over. Minimum rates after change: five years' experience and over, 58s.; under five years' experience, 50s. Labourers; increase of 6s. 6s. per week in minimum rate. Minimum rate after change, 36s. 6d. Women, girls and boys in lithographic, letterpress and binding trades: Journeywomen; increase of 4s. 6d. per week in minimum rate. Minimum Qualified pagers and rate after change, 27s. sewers (hand and machine), increase of 6s. 6d. per week in minimum rate. Minimum rate after change, 29s. Learners after first six months' employment; new scale of minimum wages adopted, resulting in increases varying from 1s. to 3s. 9d. per week. Minimum rates after change, 10s. 6d. to 19s. 3d.

Cork: Compositors, machinemen, linotype and monotype operators, lithographic printers, and bookbinders and machine rulers; increase of 7s. 6d. per week. Minimum rates after change: jobbing compositors, 67s. 6d.; book-

binders and machine rulers, 65s.

Londonderry: Compositors, machinemen, linotype and monotype operators (book, jobbing, and newspaper), bookbinders and machine rulers; increase of 2s. 6d. per week. Minimum rate after change for compositors and bookbinders, 6os.

Parnaso Nacional.

Under this title a new periodical has been published by the "Asociacion Patriotica Argentina, Pro Patria," the director of which is Senor L. P. Suárea Arán, their offices being situated in the "Calle Atacama 35 31," Buenos Aires. This new review will contain all those poetical works which have enriched Argentine literature. The initial numbers are devoted to a famous poem by Esteban Echeverria (born in Buenos Aires 1805), entitled "La Cautiva" (The Captive), with a portrait of the author on the cover, designed by the artist, Senor Wiedner. Thus the Association "Pro Patria" intends to diffuse the knowledge of Argentine literature and history, and pay a merited tribute to the poets of the country. The association will have a public reading room and library at their offices, and invite Argentine publishers and men of science to send them copies of their works for the library and review in the columns of the Parnaso Nacional.

The Asociacion Patriotica Argentina was founded July 9th, 1914, with the object of encouraging national literature.

TENDER for PRINTING GROUP 59 (1919).

Abridgments of Specifications of Patents (1916-20).

TENDERS are Invited for a CONTRACT GROUP 59 (1919), for PRINTING ABRIDGMENTS OF SPECIFICATIONS OF PATENTS (1916-20).

48 Hours a Week Bill.

Text of the Two Measures Promised by the Premier.

How New Time Rates are to be Decided.

The Bills promised by the Prime Minister in his speech the other day, for the regulation of hours of employment and the constitution of a Commission to fix minimum rates, have been issued.

The first Bill provides that the number of working hours, exclusive of recognised intervals for meals, shall not exceed 48 per week.

In cases, however, in which organisations of employers and workers in any class of employment have agreed that the hours shall be higher of lower than 48, the Minister may make a special order to that effect. He may also vary the hours in special cases in which he thinks it advisable even without any application from the parties concerned.

Any hours in excess of the statutory week shall be regarded as overtime, and regulations fixing the extent to which the conditions under which overtime may be worked shall be made either by the employers and workers organi-

sations or by the Ministry.

The Overtime Rate.

Payment for overtime shall in no case beat a less rate than 25 per cent. in excess of the normal time rate.

Any person who contravenes any of the provisions of the Bill or any order made under it will be liable to a fine of £10, and the Bill provides that duly appointed officials of employers' or workers' organisations shall be competent to prosecute or defend any information arising under the Bill.

The Bill does not apply to domestic and outdoor servants, master seamen, or seamen apprentices, persons whose hours are regulated by the Coal Mines Acts, and persons employed in agriculture, horticulture, and forestry.

Commission on Time Rates.

The second Bill constitutes a Commission to inquire into and report on minimum time rates of wages, The Commission will be set up for the purpose of—

(a) Inquiring into and deciding what such minimum time rates of wages should be, regard being had to the cost of living in the various districts, and other matters which appear to the Commissioners relevant.

(b) Inquiring into and making recommendations as to the methods and successive steps by which such minimum times rates should be brought into operation, and the machinery by which they may be varied as and when occasion requires.

(c) Inquiring into and making recommendations as to the granting of exemptions from the rates so fixed in the case of infirm and incapable workers, and in other exceptional cases, and the methods by which such exemptions should be granted.

(d) Making recommendations as to the legislation necessary for such purposes as aforesaid—whether by amendment of the Trade Boards Acts, 1909 and 1918, and other enactments relating to minimum rates of wages or otherwise—and what amendments of the law, if any, were desirable.

Learn from the Other Fellow.

No two printers travelexactly the same road. yet each at some points in the journey has many of the same problems to solve. Why not exchange knowledge? says the Ben. Franklin Monthly. Printing is for the purpose of telling what has been done and what may be done. It has great value in its important work, but the personal touch obtained through organisation has a special application that drives home many an important lesson without the accompanying bitterness where too much is paid for learning. When Jones has got the best of you it is to your interest to tell the other fellow, so he won't get bit, and he will be likely to reciprocate, and prevent Smith fooling you. There are lots of things that printers know individually which can be made generally helpful by spreading through organisation. Possibly you have heard the London fog story of a man, after almost stumbling over another, asking him where the river was, and getting the reply that it was a few steps ahead, as he had just come out of it. Don't be afraid of asking the other fellow the way in a fog. Next to the pleasure of remembering how you saved a competitor from harm is the memory of his service in guiding you to safety. It is sure to pay finally to be friendly instead of antagonistic.

U.S. News-Print Exports.

There have been large increases in America's news-print exports. During the eleven months ended with May exports totalled 226,556,329 pounds, valued at \$9,838,053, as compared with 197,159,854 pounds, valued at \$8,338,395, for the corresponding period of last year, and 133,111,254 pounds, valued at \$4,076,576, for the year preceding. Although no paper was exported to France during the fiscal years 1917 and 1918, that country has already become America's greatest market, outbuying even Argentina, the next largest single customer. Details of the export trade during the eleven months ended with May of 1917, 1918 and 1919, are shown in the following table:—

	1917.	1918.	1919.
	Dols.	Dols.	Dols.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.4.

Charles Morgan and Co.

Conversion into a Limited Company.

One of the oldest and most respected firms of wholesale stationers in London is that of Charles Morgan and Co., 58 and 60, Cannonstreet, E.C., of which Mr. F. B. Adams is sole partner. We now learn that it has been decided to convert the business into a limited

company.

It is interesting to recall that the business was founded in or about 1760 at 39. Ludgate-hill, by one John Morgan. It was continued by his son and various members of the Morgan family until towards the middle of last century, when it was carried on in Farringdonstreet by a Charles Morgan, in partnership with two gentlemen named Martyr and George, under the style of Morgan, Martyr and Co.

In 1851 the firm removed to its present premises, then just newly built, in Cannon-street. A year later Mr. Martyr and Mr. George retired, and Mr. Charles Morgan was joined by Mr. F. B. Adams, grandfather of the present owner of the business. At the same time the name of the firm was changed to Charles Morgan and Co. After a few years Mr. Morgan and Mr. Adams took their eldest sons, Charles Morgan, Jun, and F. B. Adams, Jun., into partnership; but the latter having died at an early age in 1870, his place was taken by a younger brother, Mr. H. J. Adams. Thereafter for many years Mr. Charles Morgan the younger and Mr. H. J. Adams carried on the business alone. In 1806, as neither had any son, they took into partnership men who had long been associated with them in the active management of the business. Among them was the present owner, eldest son of the F. B. Adams who died in 1870. The other partners having since either died or retired, the present F. B. Adams now remains sole partner in the firm with which his name and been associated for three family have generations.

AMERICAN Paper and the English Market.

It has been reported, says the Paper Mill, N.Y., that the situation in the trade between this country (U.S.A.) and England is causing the export trade considerable worry. During the war there was built up a good market for American paper in England, and as London was in reality the paper market of the world, this gave the American manufacturers an excellent chance to enlarge their export trade. Before the war Scandinavia supplied most of the paper used in England as well as much of the paper that was sold abroad through Persons in close touch with the London. situation believe that the English prefer American paper to that manufactured in Scandinavia, and as the cost of manufacturing in the northern European countries has increased enormously in the past few years, owing to labour conditions and to the fact that most of the raw materials for the manufacture of paper must be imported, it is believed that once the restriction against the importation of American paper in England is raised, there will be a considerable demand.

An Idyll of the Sea.

[CONTRIBUTED.]

One day when sitting on the shore in musing reverie, I pondered o'er the treasures vast which lay beneath the sea.

And secrets dark that might remain for aught that I should care,

So long as I could have my choice of all the good things there.

And then methought old Neptune popped his head

above the wave.

And said that he quite willing was to grant all i might crave.

So down I went to view his realm and probe the

mysteries there,
Intend on grabbing all [could, with no one else to share.

He took me through his printing rooms, but I may not relate

How Mi hie press and Wharfedales are completely out of date

A million copies in the hour were printed as I gazed: The layers-on were Dover soles, who fed with tails upraised

I asked him who supplied the ink, and if the work dried soon.

"All Kuglish makers are corrupt; we get it from the

moon; Chapel money is unknown; there's nothing half so

base.
Idon't permit it here," he said, "it would be a diagrace.
The paper, too, is genuine, of clean white rags is

made; Adulteration we despise, and all the tricks of trade. Not loaded up with china clay and other rotten stuff. We're satisfied with what is good. and price is fair enough."

The constitution of his realm I berged him to explain. "No House of Lords," he promptly said. How Britoss can maintain

That relic of the feudal days, to rule by right of birth Too silly 'tis to argue, and provokes us all to mirth." What say you to our Commons then," I asked with bated breath.

He said, "They would be better were a hundred pat to death.

Your legislation's far too slow; the wagging of their jaws
Wastes public time, and pleases more than framing useful laws."

useful laws."
"What think you of a tariff theu, and would not that be wise?"

"Do you want dearer food," he roared, "and shortened h me supplies?

Your manufactures would cost more, and export trade sink low,

If you adopt that spurious fad of poor old played-out Joe"
1 said I thought his counsel good, but what of his own

realm?
Useful it would be to learn how best to hold the helm
"Of legislation we've no need," he cried; "there's no

dispute below. L'etat, c'est moi," he bluntly said, "that's how I boss the show."

With that, his trident flerce he shook o'er my devoted head.

I felt it was high time to go, and trembled as I fied.

Then I awoke, and realised that I was safe from slaughter,
But, and to ay, those treasures still lay deep beneath

Handles.

Some English Bookbindings

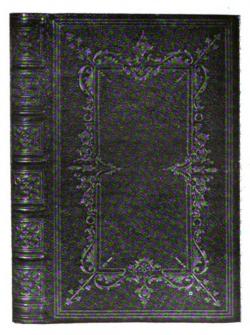

of the

NINETEENTH CENTURY.

XXII.

One of the oldest of the English writers on bookbinding who is still with us is Sir Henry Trueman Wood, the veteran secretary of the Royal Society of Arts. In his young days, now well over forty years ago, he took considerable interest in matters pertaining to the

1862.

1863.

Panel Designs on Leather Bindings.

bibliopegic art, and frequently compiled articles dealing with it, as in the case of the 1874 Exhibition, mentioned in our last article. To Bevan's "British Manufacturing Industries"(1877) Mr. Wood-ashethen was-penned a long contribution on the subject, mainly descriptive of the processes used. From this we take the following extract, which deals with the binding practice of that day on general lines. Regarding sewing, he said general lines. Regarding sewing, he said For sewing sheets for books no machine has yet been invented. Should hand-work ever be displaced in this department, it will probably be by some process of glueing or cementing the pages together instead of sewing them." His prediction was to be falsified within a dozen years. Referring to covers, he remarked that "even cheap editions of novels are now sent out in neat cloth bindings, at a price but little exceeding that charged for the flimsy paper covered boards." "Imitation leathers of various sorts have more or less successfully. used, American cloth is sometimes used for binding cheap bibles and prayer-books. 'Vegetable Leather of indiarubber on linen has been proposed for bookbinding, and various other amitation leathers have been brought forward. Some of these are so close an imitation of the genuine material as to deceive all but experts, and they appear to be at least as strong as the cheaper classes of leather. For miscellaneous purposes these materials are largely used, but probably the cheapness and excellence of cloth bindings will always prevent such materials coming largely into use, statement which is as true to-day as it was when it was written, more than forty years

The monograph on Bookbinding in the ninth edition of the "Encyclopædia Brit-' was compiled about the same time by a well-known Scottish writer on art subjects, Mr. James Paton. From the standpoint of these articles, its chief feature of interest lies in the references to the machinery then employed in the trade. The preponderance of America in the invention of bookbinding machinery, even more than forty years since, is evidenced by Paton's remark that most of the machines then used in the "casing" section of the trade were American. Reference was specially made to the rotary millboard cutter, capable of cutting fifty-thousand pairs of boards in the ordinary working hours of a week. The case-making machine having not yet arrived, the cloth was glued on the boards by hand (see last article), and subsequently the cases were passed between indiarubber rollers, to squeeze out the superfluous glue or paste. The "smasher" was already in vogue for pressing the sheets, and so was the circular-knife trimmer, the threeedge cutter, etc. Edge-gilding was expedited by placing a number of volumes in a laying press, edges outward, and gilding them simultaneously.

Speaking of the subject in general, Mr. Paton said: "The operations of bookbinding are now carried on upon a scale which could not have been dreamt of even at the beginning

of the present century, and the millions of volumes which annually issue from the press could not possibly be put into the hands of the reading public in the form and at the price at which they are sold, without the aid of machinery. In Great Britain, nearly all books are first issued in cloth cases, and while the greatest variety of grain and colouring has been reached in the preparation of the cloth for such cases, their gilding, embossing and lettering, all accomplished by machinery, leave almost no improvement to be desired, and the most handsome and fairly durable bindings can thus be supplied at an incredibly small cost. At the same time it is practicable to prepare, emboss and gild cheap leather covers by the same processes and machinery adopted for cloth cases, and the bindings of cheap family and pocket Bibles are thus produced. But although the old solid and substantial handiwork of the craft is thus fairly eclipsed, there is still employment, and more employment than ever, for binders in leather, who chiefly rely on manual dexterity for the forwarding of the work and individual taste and skill for its artistic finishing.

The Caxton Quadcentenary Exhibition held at South Kensington in the summer of 1877 did not include bookbinding in its scope. Nevertheless, there is a point of interest to be recorded in connection with our subject. One section of the Exhibition was devoted to a display of printed Bibles, beginning with the so-called "Gutenberg" edition of c. 1450. It was determined that the latest in the series should be a Bible printed and bound on the opening day of the Exhibition (June 30th) in a limited edition of 100 copies. The size selected was 16mo., and each copy consisted of thirty-three 32pp. sheets. The University Press at Oxford undertook to do the work, and the printing, from standing minion type, commenced there at 2 a.m. It was finished in time to send the sheets to the bindery in London by the q a.m. train. Arrived there. they were folded, rolled, collated, sewn and pressed. The binding was in Turkey morocco, over bevelled boards, with flexible back, gilt edge, gilt lettered on the back and inside the cover, with the arms of Oxford University stamped in gold on the front. A hundred and ten persons were engaged in binding the hundred copies, and the work was finished and the copies delivered at South Kensington by 2 p.m., in time for the opening ceremony. It is recorded that a drop of wine fell on the gilt top edge of the copy which Mr. Gladstone-who opened the Exhibition -held up to the view of his audience, and, drying, caused a purple star to appear thereon. This seems to have been regarded rather as an ornament than a blemish, and this particular copy was sent to the Queen. Perhaps some of our readers would like to experiment with this novel mode of producing book edge decoration. A copy of the Bible was presented to the late William Blades, the biographer of Caxton, and subsequently passed, with the rest of his books, into the Typographical Library of the St. Bride Foundation, Bride-lane, E.C., where it may be seen.

Towards the end of 1879, appeared the first edition of that well-known work, Zaehnsdorf's "Art of Bookbinding," of which several other editions have since been published. It was not intended to be a text book for the operative binder, but rather a guide for the use of the amateur, the connoisseur, the bookcollector, etc. It was almost entirely devoted to a consideration and description of leather bindings, and was largely directed to raising the general standard of that class of work, then at a rather low ebb in England. Said Mr. Zaehnsdorf, in the Preface to his work:—

"Nothing is more painful to witness than the quantity of gaudy but unsound binding that is too frequently in the market, which the uninformed purchaser is sometimes persuaded to believe is work of high class."

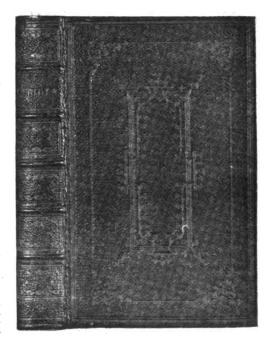

There was, some concession made to modern practice, to the extent of illustrating and describing some of the labour saving appliances then coming into use in the trade. Brehmer's was the only wire stitcher mentioned, and Zaehnsdorf said of it that "it will not, in my opinion, ever be found eligible for library or standard books . . . but it is to be feared that a sufficient number of really good books may be sewn with it to cause embarrassment to the first-rate bookbinder." Probably he had himself experienced the difficulty attending the re-sewing with thread of a volume orginally "sewn" with wire. The speed of this machine was then about 2,000 sheets per hour, and the cost £157 10s., almost prohibitive, as Zaehnsdorf thankfully remarked.

Speaking of finishing, he said, as "publishers find that books that are tawdrily gilt are better liked by the public, they are, of course, very well satisfied if their books are well covered in gold; so that this branch has not advanced very much during the last few years. It would be well if those who have the principal charge of this work would strive, by the cultivation of elegant designs, to correct the vitiated taste of the public, and seek, by a study of classic ornamentation, to please the eye and satisfy the judgment, rather than to attract the vulgar by glitter and

gaudy decoration.' This tendency to gaudiness was generally remarked upon by writers on the decorative binding of the seventies. In the course of a series of three articles on the "History of the Art of Bookbinding," by Mary A. Took, appearing in the Art Journal, early in 1876, the writer, after mentioning that "copies or modifications of ancient bindings, when a good pattern or period is taken as a model, seem a reasonable method of improving the art," said "the cloth bindings of children's books are generally too much overlaid with gilding, and have a gaudy appearance. . . . A very ugly style of binding in vulgar and glaring colours is much used in the covering of albums, and even in books of standard literature. A great deal of smart effect, no matter how transitory, is required to render these cheap albums saleable, and an imitation leather has been introduced, which

is very objectionable, and wears badly. A

new kind of cloth binding called Feltine is also used, but is in equally bad taste. Some very good linen covers, strong and serviceable, are used for school books and text books of science. What we hope for is, that modern binders will use their utmost skill, combined with really artistic designs, in carrying the art to the perfection which it attained in the sixteenth and beginning of the seventeenth centuries. Binders have good examples to study, and the mechanical appliances of the present day ought to give them advantages over their painstaking predecessors. It would seem that the best appliances are not commonly made use of. Binding in the present day requires attention and encouragement. Much has already been given by book collectors, but a general taste for good binding is as yet undeveloped among us. A great deal remains

A Panel Design 1858.

to be done before the bindings of the nineteenth century can rival in beauty and durability those of the sixteenth."

This was unquestionably very true, particularly so far as the cheaper sort of leather bindings was concerned, in which poorness of decorative design was very noticeable. From the late sixties, down through the seventies—and indeed more or less to the present day—for edition binding in leather little more was provided in the way of cover decoration than a frame or panel of some kind. In many cases the designer went no further for inspiration than the broad gilt borders of the early eighteenth century, that constituted what is,

known as the Harleian style, but with the difference that the tools of which the design was made up were mostly quite common-place. A border of the Greek "key-pattern," margined by gold lines, was also fairly popular, as was also an imitation of the gilt-line panel design of the eighteenth century, with its corner ornaments. Occasionally, a panel motive showing some traces of originality made its appearance, though the result was not always artistic. is three designs of this character that The earlier one is in red we illustrate. morocco, the others in green. A very poor quality of "gold" was often used on the cheaper leather bindings of this period, with the result that it is often found oxidised nearly to the point of blackness.

Printers' Managers and Overseers

PARENT ASSOCIATION.

Following the summer recess, the Parent Association resumed its monthly meetings on Tuesday evening at the Old Bell, Holborn,

Mr. E. H. Berryman presiding.

After the adoption of the minutes of the July meeting, the following new members were elected: Mr. C. Bradder (Messrs. Charles Pearson and Son, Ltd., letterpress works manager); Mr. J. G. W. Colbourn (St. Clement's Press, overseer machine department, letterpress); Mr. H. J. Davis (Times of India Office); Mr. H. Green (Argus Printing Co., Ltd., overseer letterpress machine); Mr. W. Muirhead (Messrs. R. Clay and Sons, Ltd., overseer composing department); Mr. A. G. F. Barns (Messrs. W. W. Sprague and Co., works manager); Mr. Geo. Flowers (Messrs. Lakeman and Tucker, overseer letterpress machine); and Mr. W. A. Francis (The Ferrestone Press, Ltd., assistant manager letterpress printing).

The new members in attendance were given

a cordial welcome by the president.

On the motion of Mr. Jackson, Mr. H. J. Forder was elected to the position of auditor rendered vacant by the retirement of Mr.

Blackwell.

The president offered a welcome to Mr. J. H. Burton, formerly of Manchester and lately of Bristol, who, he announced had come to London to take up the post of litho instructor at St. Bride's. Mr. Burton had held the office of president of the Manchester Centre with credit to himself and advantage to the organisation, and he had now transferred to the Parent Association. On behalf of the London members, Mr. Berryman welcomed Mr. Burton, and wished him success in his new work.

Mr. Burton, who was cordially received, returned thanks. He mentioned that he was second on the roll of Membership at Manchester, and was the second president of that

Centre. In coming to London he felt that he had reached something that was prefty big. He was grateful for the way he had been received everywhere, and he was encouraged by the prospects at St. Bride's, thanks to the welcome accorded to him by Mr. Riddell and the members of the staff.

The president then introduced Mr. Denison W. Allport, who had consented to give an address on the subject of "Dr. Samuel Johnson and the Wits of His Time." Mr. Berryman recalled the visit of the lecturer two months before when he discoursed so eloquently on the historic scenes in the Houses of Parliament. Dr. Johnson, said the president, was such an outstanding character of Fleet-street—"the street of adventure"—that he ever re-

mained an interesting study.

Mr. Allport dealt with his subject in a fine style of oratory which made his previous lecture so fascinating. He described the idiosyncracies of the "ponderous scholar" in appropriate periods, his wonderful memory permitting him to adapt literary quotations to his purpose without interruption to the narrative. He traced the career of the doctor from Lichfield to London and touched upon the important incidents in his life, including the gigantic undertaking of compiling a dictionary of the English language. The wonderful symposium at Johnson's club in Soho gave Mr. Allport an opportunity of presenting arresting oratorical portraits of the men of genius with whom he was surrounded. With a revelation of the litterateur's great tenderness of heart which was often obscured by his rough exterior, the lecturer concluded his address with a touching account of the closing days of the melancholy sage.

Mr. Berryman also passed some interesting observations on Dr. Johnson, and described his dictionary as a worthy monument of his literary work, all the more remarkable considering the condition of English spelling

preceding its preparation.

Mr. J. French proposed a vote of thanks to Mr. Allport for his literary photograph of a rugged but kind-hearted man, and the resolution was endorsed by the applause of the meeting.

Scotlish Printers' Wages.

An adjourned conference of the Wages Board was held in Edinburgh last week in connection with the proposals put forward recently by the Scottish Typographical Association and the Federated Trade Unions on behalf of letterpress printers, lithographers, and printing and paper workers for an increase in wages. As announced in our last issue, the representatives of the workers at a previous meeting of the Wages Board asked for an increase of 16s. per week on wages at present paid to all male workers, female workers doing the same class of work as men, and apprentices of 21 years and over; and for an increase of 8s. per week to apprentices

under 21 years of age. The representatives of the employers on the Wages Board offered an increase of 7s. per week to all the male workers, except the apprentices, included in the application, and also to the female compositors, and agreed that if the offer were accepted, the amount would be payable immediately. This offer was declined, and this conference was for the purpose of further considering the question. The conference sat all day and was ultimately adjourned. It is understood that further negotiations will take place.

Charles Morgan and Co., Ltd.

Important Developments Announced at a Complimentary Dinner given to Employees.

Mr. W. A. J. Foster, Chairman of the New Limited Company, intimates Future Relations.

To celebrate the conversion into a limited company of the business of Messrs. Charles Morgan and Co. (Mr. F. B. Adams, sole partner), wholesale paper merchants and envelope manufacturers, 58 and 60, Cannonstreet, London, E.C., a dinner was given at the Cannon-street Hotel, the other day, the object being to afford the heads of the departments and employees an opportunity to meet the board of directors. The proceedings were of a most enthusiastic character. Whilst the secession of Mr. Adams, who as an employer is held in the highest esteem and regard, caused the workers to feel they were losing a personal friend, yet it was felt that the developments now in hand would mark a new era in the history of the firm, and the interest of the employees was stimulated by the expression of a hope that means might be found of enabling them to participate in any future prosperity of the company. toast of "The King" had been loyally honoured,

Mr. F. B. Adams, who presided, said that, in converting the business of C. Morgan and Co. into a limited company, they were falling into line with other houses. The change would be for the benefit of the business and everyone connected with it. As a private company too much depended on the life of one man, and he had felt the strain of single. handed control very much, with the result that his health had suffered, and a rest was He wished to express his appreimperative. ciation of the wholehearted support he had received from the members of the staff, which had encouraged him to carry on. It was 37 years ago when he joined the firm. He had played many parts, for instance, as junior clerk, at the counter, travelling, etc., and he would like to say with his experience he had a warm corner in his heart for the commercial traveller. The time had now come for the management to be in younger hands, as he

considered they could strengthen their position in the trade, enhance their reputation, and develop in many directions. It was not the intention to inaugurate a new business, but to continue and extend an old one. When he referred to the services of the staff in the past he wished to emphasise how efficient those services had been. He also regarded the members of the new board of directors as irreproachable, as they were men who had been connected with paper all their lives, and he had no doubt they would find good value in the heads of the departments and the employees of the firm. He wished to thank the workers for the help they had given him to make the business what it was to-day. They held a high reputation and had the esteem of both customers and competitors. Mr. Adams intimated that when the conversion became an actual fact his old position would cease to exist, and he would then become a servant of the company. He could not but help feeling a tinge of regret. He had striven with his utmost power to fill his father's place, and felt his labours had not been in vain. He was confident the conversion of the business into a limited company was for the benefit of all concerned, as it would secure vigorous management and important expansion. He had pleasure in introducing Mr. Foster, the chairman of the company, and submitted with every confidence the toast, "Prosperity to Charles Morgan and Co., Ltd."

Mr. W. A. J. Foster, in reply, said it was a great thing to fulfil the duties of chairman of a company that had been established 160 years, and still greater to be associated with Charles Morgan and Co., a name honoured not only in this country but throughout the Every care would be taken not to tarnish that good name, and he asked all to live up to the high reputation to which they From the highest to the had succeeded. lowest, he urged them to do their best in the The new company interests of the firm. would have a board of five directors, with power to elect annual directors. Their idea was to make selections from the heads of the departments, and in this way to encourage them, so that by their own industry they might attain a permanent position in the company. He had pleasure in mentioning that Mr. W. R. Leonard, their country manager, would be an annual director. Mr. Leonard had rendered 37 years' valued service, and he (the chairman) hoped they would have his services for many years to come. The first member of the board was their old friend Mr. Harry Holmes, as managing director. He had been with the firm twenty-eight years, and his pre-sent position as manager he had held for eight years. He (the speaker) considered Mr. Holmes to be the right man in the right place, and he pointed to the appointment as evidence of the intention of the directors to maintain past traditions and to find whenever possible the men to fill its responsible positions from inside the house in preference to seeking them outside. Mr. H. E. Alden, also on the board, was the managing director of Messrs, Simpkin, Marshall, Hamilton, Kent, and Co, Ltd., and was

Digitized by GOOGLE

also connected with several companies allied to the paper trade. Mr. J. E. Bennett and Mr. J. C. Gardner comprised the remaining directors, the former being a large user of paper and the latter a member of the firm of Messrs. Chalmers, Wade and Co., chartered accountants, to whom they would look for valuable advice on the financial side. Their secretary was Mr. Philip Stephens, who was also associated with Messrs. Chalmers, Wade and Mr. Foster said that he personally had been associated with the paper trade 28 years. He served as a pupil in one of the best mills in the country, that of Messrs. Thomas and Green, and subsequently joined a firm of manufacturing stationers, going through all the departments of the works. He had also been engaged as traveller, and the outcome of his experiences was that he had learned a great deal about paper and its uses. During the last twenty-two years he had been engaged in the manufacture of the highest grade of paper, and he trusted that he would prove worthy in assisting in the control of the vast business of Charles Morgan and Co. Mr. Foster then proceeded to dwell on the aims and objects of the company. Their first consideration would be to keep up the high reputation which had been associated Secondly, the inwith Mr. Adams' control. troduction of new blood would mean new life and new ideas; no business could stand still, it must either go up or go down, and their purpose was to go ahead. They hoped, with the help and loyal co-operation of all workers to enhance the reputation of Charles Morgan and Co. throughout the world. In some quarters the view was taken that it was the function of a limited company to grind out dividends for its shareholders, but his opinion was that the largest and best businesses always made a point of looking after their employees. As chairman of the company he wanted them to know that their work would be appreciated; he wanted them to give of their best, and to realise that every advantage and encouragement would follow. days of unrest, it was imperative that they should all put their shoulders to the wheel and help our country. Mr. Foster said he had always been in favour that every worker should have some interest in the business in which he worked, and one of the first things the directors would do would be to consider whether some means could not be devised to give effect to this sentiment so as to give encouragement to all to put forth their best efforts. It might be necessary to make changes in some departments, but it was not the intention to make any drastic changes. Although they could not foretell the future, they had had 160 years of business life, and were on a solid foundation, and "Forward" was their motto. Mr. Adams would continue to carry on the business for some weeks until the legal formalities of conversion could be effected and had furthermore agreed to place his knowledge and experience of the business at their disposal. In conclusion, the speaker said he hoped on some future occasion to dwell on a further chapter of their history, viz., "Charles Morgan and Co., Ltd.: Its Work and Progress.

Mr. H. Holmes, managing director, paid a high tribute to the loyal and capable services of the travellers and staff. In regard to the directorate, he had known Mr. Foster for many years, and recognising the high position in the commercial world of the gentlemen on the board, he predicted a great expansion for the firm of Charles Morgan and Co.

Other speakers followed. The toast of "The Retiring Partner," was proposed by Mr. H. Holmes, supported by Mr. F. F. Ellis. At the same time Mr. Adams was asked to accept a very handsome silver rose bowl and a silver chain vanity bag for his daughter which had been subscribed for by the staff as a mark of their esteem. F. B. Adams responded, and during the course of his remarks received eloquent testimony of the respect, esteem and admiration in which he is held by the staff and workpeople.

An enjoyable programme of vocal and instrumental music, recitations, etc., was rendered at intervals during the evening.

Charles Morgan and Co., Ltd., is the title of the company, registered with a capital of £150,000, in £1 shares. Minimum cash subscription seven shares. The agreement is with F. B. Adams, and the first directors are H. E. Alden, J. E. Bennett, W. A. J. Foster and H. Holmes; the registered office being 58-60, Cannon-street, E.C.

Printing, Bookbinding **& K**indred TRADES OVERSEERS' ASSOCIATION.

Monthly Meeting.

There was a large gathering of members at the monthly meeting of the above Association on Tuesday evening last, held at St. Bride Institute, Bride lane, E.C 4., the president, Mr. A. J. Daines, occupying the chair. The evening's proceedings were enlivened by the appearance on the agenda of "Individual Anecdotes," in which members were invited to relate short accounts of incidents that had occurred to them in their careers. After the minutes of the last monthly general meeting had been read by the secretary and duly confirmed, the members proceeded to the election of the following new members:-Mr. W. D. Bentley (paper department), Burrup, Mathieson and Sprague; Mr. A. J. Latimer (electro foundry), Geo. Newnes. The president, on behalf of the Association, extended to the new members a warm welcome, remarking that in his short career he had found no set of men more sociable and friendly towards one another as in the ranks of the Association. and he hoped the new members would find amongst them the same mutual benefit as he himself had found.

In regard to the circular sent to the Master Printers' Federation and to the London Chamber of Commerce, the secretary stated in answer to a member that he had received

Digitized by GOOQIC

no further reply other than that read at the

last monthly meeting.

"Individual Anecdotes" was opened by Mr. F. J. Ibbott, who told of some interesting experiences he had had with regard to coincidences.

Mr. Daines followed with amusing stories of his connection some years ago with a

" 10,000 handbills for 10s. printer."

A musical member told how some years ago he desired a brief respite from print, and joined the band on one of the big liners. One Sunday morning they arranged what they thought was a very good programme of music, including a march, symphonies, etc., in fact it was a good selection of pieces. At the finish an old gentleman came up and said: "That light music was no good; why don't you play 'Jerusalem the Golden?'"

Mr. J. Lee, who is perhaps one of the oldest members, recalled some experiences of his school days, and dealt with the days when the cholera was rampant and the bread riots were in their midst. He also spoke of the influence exerted for the good of the people by such men as Garibaldi, Gladstone, Bright and

Joseph Arch.

After Messrs. G. Eden and G. A. Rutherford had related a few more amusing anecdotes, the meeting was brought to a close.

American News-Print

Big Newspaper Requirements may Lead to a Shortage.

The enormous volume of advertising which is being placed with the newspapers all over America has created such a great demand for news print paper that the manufacturers are greatly afraid that there may soon be a scarcity of stock. Nearly all publishers are issuing as large editions of their publications as their printing equipment will permit, says the Paper Trade Journal, N.Y., and to issue these editions it has in most cases required more paper than the publishers contracts with manufacturers called for. The publishers have, therefore, been coming into the open market to buy paper to increase their contract supplies, and as a result reserve stocks on hand at the mills are rapidly diminishing. The real bad feature of the situation, however, is the fact that the publishers can afford to pay high prices for the paper as the revenue received from the advertising is so great that it would be a loss to turn advertising contracts away because of the inability to obtain paper. This has led to some speculation in the market, as some jobbers know only too well that they can obtain high prices for all grades of news on resale. Speculation is, of course, always bad for honest business, and unless some remedy for the present state of affairs is soon found conditions will grow worse. newspapers are to continue publishing large editions, they must save paper in some other way. They must stop returns and adopt other methods of conservation. They should place larger contracts for their supplies, and they should co-operate with the manufacturers in every way to help stabilise the market.

A Parable

The following parable, based on actual facts, is given by the Ben Franklin Monthly:—

There were Two men in the Windy City. And they did each conduct a Printing Plant. Because of their constant and diligent labour did they figure they were making the Mazzuma.

But such was not the case.

Behold, one Tuesday morning the one of them reasoned that his Bank Balance did not jibe with the 1,000 per hour flat beds which had been running, yea, day in and day out for many moons.

Verily this Tuesday a.m. appeared to be an eventful one. Happened along a guy, well seasoned in jargon, and ready of smile and wit. His story was a straight one, his plea one of service. He was some boy, and a regular samaritan; and his name was Ran-

To him did the printer unburden himself, asking, "What profit shall I have if I and my

business be cleansed of my sin?"

And the reply he received was a request. For this man Randolph doth know the secret of finding weak spots in an unhealthful business. "Our Franklin-Typothetae speaketh a good doctrine," saith he. "Forsake ye not its counsel, and accordingly help me dig up some figures from thine business and I will show thee the pitfalls of thy affairs."

show thee the pitfalls of thy affairs."

This, then, beeth the lineup of the 1918
Philanthropic performance of the printer who

was seeking light :-

Loss for Year 1918 \$9,517.61 Beholding this sad exhibit, the printer doth

cuss with a vengeance, vowing he would cease from his own wisdom.

And unto Randolph saith he: "O thou of the smiling countenance, seeth thou a man diligent in business in the path I have trod, and he shall Not stand before kings; verily he shall be called up on the carpet of his creditors, and his name shall be 'Denis.' I shall amend my ways."

And, forthwith, he ordered installed a Standard Cost Finding System, which for-

south, is now being put in.

And thou, dear printer who readest this, dost thou see the point?

Trade Notes.

OWING to a strike at Valencia the newspapers have ceased publication.

A SIX-WEEKS course of training for Soviet journalists will be opened shortly in Moscow.

MR. WILLIAM MARTIN MURPHY, proprietor of the *Irish Independent* newspaper has left estate of the value of £264,004.

A NEW periodical under the title of All Sports Illustrated Weekly has just been published at the price of twopence.

It is officially announced in Dublin that the Government have decided that the time has now arrived when press censorship in Ireland may be abolished, and it has therefore ceased to exist.

THE annual outing of the employees of Messrs. A. W. Ford and Co., Ltd., printers and publishers, of The Gaunts House, Denmark street, Cardiff, took place the other day by motor to Wells, Cheddar, Burnham-on-Sea, and Weston-super-Mare.

THE DUBLIN DISPUTE.—The dispute in the Dublin printing trade is now ended, work having been resumed in the various offices. The men resume at the old wage of 70s. per week, the demand for the extra 5s. per week being submitted to arbitration; continuity of employment to be unbroken; each man to get one week's holiday per year, or payment in lieu therefor. The dispute lasted nine weeks.

THE LLOYD MEMORIAL HOME.—At the Lloyd Memorial Seaside Home, Deal, on Saturday, a tablet naming a bed was unveiled by Mr. Taylor, of the London Society of Compositors, as a memorial to the members of that body who were killed in the great war. Mr. T. E. Naylor and Mr. Wagdin were among those attending as representatives of the Society, while Mr. T. A. Newnham and Mr. H. F. Parker, chairman and secretary, represented the Home.

MESSRS. JOHN DICKINSON AND Co., LTD., announce a display of their papers, envelopes, cards and other goods, at Anderton's Hotel, Fleet-street, E.C., on Friday next, September 5th, and from Monday to Friday, September 8th to 12th, inclusive. The new productions for the autumn and winter trade will be on view, and the show should be well patronised by all paper buyers who desire to acquire the latest and best of this well-known firm's special lines.

Paper Regulations.—The Board of Trade announces that in accordance with the recent decision of the Government, a general authority has been issued to the Custom authorities, under which all articles covered by the regulation as to the importation of paper will be admitted into this country without licence as from August 29th. The Paper Import Restrictions Department at 23, Buckingham gate, S.W.I, will close on September 6th, and further communications on the subject should be addressed to the Department of Import Restrictions, 22, Carlisle-place, S.W.I.

NEW ZEALAND.—The proprietors of the Christchurch daily newspapers announce an increase of price. They say that Canterbury is the only province where the selling price of newspapers remained unchanged throughout the war.

CORNELIUS VANDERBILT, JUN., one of the wealthiest young men in America, has entered the ranks of journalism as a "cub" reporter on the New York Herald with a salary of £5 a week. He obtained the position entirely on his own initiative.

A GERMAN bookseller at Leipzig has sent to the British Association an elaborately printed catalogue of German books published from 1914 to 1919. Accompanying it is a bill for the catalogue amounting to one mark. Some cheek!

The American Federal Trade Commission has forbidden the Curtis Publishing Co., publishers of the Philadelphia Public Ledger, the Ladies' Home Journal, and other periodicals, to enforce a clause in contracts now outstanding with 447 newsagents which provides that they shall not handle competing publications without the consent of the Curtis Co.

On Saturday morning, the King and Queen of Denmark received the party of British journalists on a visit to that country, at the Amalienborg Palace. The journalists were presented in turn to his Majesty, who, with the Queen, passed along the line, chatting and making inquiries regarding the tour, which the King said he had followed with great interest.

The latest house organ to reach us is the Danite, which emanates from St. Clements Press, Portugal street, Kingsway, W.C.2. It is a quarto publication beautifully got up and well printed, with a striking cover design in colours and well illustrated. The contents are descriptive of what the St. Clements Press, under its efficient management can do for its customers, who are reminded that it is open night and day and always at their service.

At the Trades Union Congress, which opens on Monday next, at Glasgow, the London Society of Compositors are proposing a resolution on fiscal policy urging that any departure from the principle of Free Trade would be detrimental to the interests of the working classes and injurious to the prosperity of the nation. There are six resolutions down from unions in favour of a national working week of 44 hours, while the Scottish Typographical Association declare for a 40-hour week and the Licensed Vehicle workers for a six-hour day.

THE "FREEMAN'S JOURNAL."—On behalf of the trustees of the debenture holders of the Freeman's Journal, Ltd., an application was made in Dublin, last week, to Mr. Justice Samuels for the appointment of a receiver and manager. The application was granted. Mr. David Telford being appointed. The representative of the company said they had no alternative but to consent to this course. The Judge observed that it seemed to be in the interest of everyone concerned that the appli-

Digitized by GOOGLE

cation be granted. Counsel for the debenture holders said it was possible an offer would be made for the property within the next fortnight.

A PORTION of the borough of Southwark is greatly disturbed over the proposed sale of its free library premises in Blackfriars-road. It is urged that if the sale takes place it will deprive a large proportion of the residents of a densely populated working-class area of intellectual recreation and instruction, and that this will be keenly felt and indignantly resented.

AT the monthly meeting of the Executive of the Newsagents', Booksellers', and Stationers' Association, held in Glasgow, the report of the sub-committee in charge of the application to the Education Authority for permission to employ school children in the delivery of morning papers was received. It was stated that meantime newsagents were free to employ these children as formerly, and that due notice would be given of any change.

MR. ANDREW GEYER, publisher of our New York contemporary, Geyer's Stationer, died on July 28th, at Belmar, New Jersey. Mr. Geyer began life as a travelling salesman, and in 1872 he became associated with the staff of the Paper Trade Journal, in 1874 when the American Stationer was founded, he became editor of that publication. Three years afterward he left the American Stationer and founded his own publication, Geyer's Stationer. Mr. Geyer was the first secretary of the Stationers and Publishers Board of Trade.

The members of the Darwen Newsagents' Association held their annual picnic last week, when the party visited Chester. An excellent dinner was served at the Tudor Cafe, and later, the majority of the party sailed up the River Dee to Eaton Hall, whilst others viewed the attractions of the city. The unsettled weather did not rob the event of any of its interest, and after tea at the Tudor Cafe they resumed their tour of inspection, and finally commenced the homeward journey about 7 o'clock, arriving at Darwen about bed time.

SPEAKING at a dinner to the visiting British journalists, at Copenhagen, M. Hage, Minister of Commerce, said there was great confidence in British justice and magnanimity, and all Danes looked gratefully to England for its great share in the revival of their national hopes in Sleswig. Great Britain was a country that would establish peace based on mutual forbearance, and he and most Danes were convinced that the British nation was destined to play a leading role in the work of international reconstruction. Mr. Charteris of the Manchester Guardian responded.

A curious case under the industrial compensation laws has recently been before an American court. The claim was for the loss by accident of a sixth toe. Defendant argued that there could be no damages for the loss of a superfluous toe, seeing that the claimant had still the normal number left. The court decided, however, that the loss of a sixth toe

did injure the foot, and awarded compensation. The interesting fact came out at the trial that the injured man had five fingers and a thumb on each hand, as well as six toes on each foot.

THE Executive Council of the Typographical Association report that the Isle of Manbranch has experienced difficulty over the national wages agreement. As a result of a conference the employers have offered 5s. per week advance with further concessions in October and January. The total sum and time occupied do not cover the agreement and the branch have permission to hand in notices if the full agreement is not carried out.

MR. C. M. COLLINS has patented an invention that relates to letter sheets which are adapted to be folded at the middle and in which each half is formed with a lateral sealing-flap and one half is also formed with an end sealing flap, the flaps, when turned down, sealing the folded sheet along three edges. According to the invention, the flaps are separated from the body of the sheet by lines of perforations; the perforations may be circular or elongated.

In the September Pearson's Magazine there is a delightfully illustrated interview with H. S. Tuke, the "Sunshine Painter," and George Robey tells some excellent "After Dinner Stories." W. L. George, Elinor Mordaunt and H. Mortimer Batten contribute outstanding stories; "Life's Little Happenings" is the first of a new humorous series by Byers Fletcher; and there is an interesting character sketch of Admiral Sims, who, we are told, is to contribute some startling revelations about the submarine war to next month's Pearson's.

Persona

MAJOR H. FORDYCE BIRCH, the new secretary of the London Master Printers' Association, enters upon the duties of his office this week.

THE directors of the Bristol Times and Mirror have elected to the board Mr. H. C. Anning, who has been their representative in London for the past 34 years.

MR. T. GWYNN JONES, who has been appointed Professor of Welsh Literature at Aberystwyth University College, was for many years a journalist at Carnarvon, Mold and other towns in North Wales.

COLONEL H. K. STEPHENSON, D.S.O., member for the Park Division of Sheffield, is to be the new Master Cutler in succession to Col. Sir Arthur Bingham. Col. Stephenson has twice been Lord Mayor of Sheffield, and is one of the partners in the well-known typefounding firm of Stephenson, Blake and Co.

Current Topics.

The Next British Industries Fair.

This Fair, which has been so successful in past years, should be a very big thing next spring, when it is to be held at the Crystal Palace from February 23rd to March 5th. The Palace, which is probably the largest exhibition building in the world, promises to be well filled with British productions, the applications for floor space greatly exceeding those of former years, and it looks at present as if the whole of the extensive floor space, which amounts to nearly 14 acres, would be filled to its capacity. The demand for space is, we understand, so great that it is quite likely that those firms who delay making application may be left out of the running altogether.

The Fair, as before, will represent a specified group of industries, and foreign buyers, now that the restrictions of war time are relaxed are expected in great numbers, so that an extensive business should be done. Printing and stationery, together with all kinds of paper products will no doubt be in evidence in a manner that was not possible at previous Fairs, and a good display should be seen. The Fairs at Glasgow and Birmingham will be held at the same time, but as they deal with different groups of industries there will be no overlapping, and buyers by visiting the three cities will have an opportunity of seeing a wide range of British products.

Closing Public Libraries.

THE statutory limitation of the library rate to 11d. per £ is causing those in charge of public libraries all over the kingdom much concern, as owing to the increased cost of working the institutions and the higher price of books, the rate does not provide enough funds for their proper maintenance. Glasgow, in which city there are 22 public libraries, has just decided to close down six of them, as the estimates for the current year will have to be reduced considerably. The gravity of the situation may be grasped by the fact that though the use of the libraries by the public has been greater during the past year than at any previous time, the money available for the supply of books is insufficient to maintain the present stocks, and periodical literature must be reduced by one half. years ago, on the representations of the Special Committee appointed to effect economies in the various departments of the Corporation, the Libraries Committee reduced their expenditure, and at the close of the last financial year there were more than 22,000 volumes in the district libraries awaiting replacement or rebinding. This number will be largely increased during the current year. The committee recommend that application be made to Parliament for power to increase the present limited assessment from 11d. to 3d. per f. The committee recognise, however, that their action is bound to cause inconvenience, and it is only under the stress of absolute necessity that they have resolved upon the measure which they have now taken.

Regulating Advertisements.

The Bill for the regulation of advertisements on land, buildings and hoardings, which is being promoted in Parliament may be regarded by many printers as a menace to the coloured poster in its larger sizes. We under-

stand that it is not so much the ordinary poster that it is aimed at as the poster or advertisement that may well have the prefix "ugly" applied to it, and which may be seen in many rural districts to the detriment of the scenery and the surroundings. A writer in the Manchester Guardian dealing with the subject says: -" Take, for example, the high street in one of the many quiet, picturesque, old towns with which most of your readers are familiar. A single garage can destroy the repose by plastering its walls with the enamelled placques of tyre and spirit brands. Is it unreasonable to insist that the trader responsible should observe the same moderation in size. colour and material as the owners of all the other shops? So with regard to hoardings. The aim is not to prescribe 'artistic forms of posters, but to empower the guardians of streets and suburbs to prevent a display of this sort in a position where all citizens who respect their place of abode feel that bills and placards are an affront to the eye." The natural beauty of many of our most picturesque places is often quite spoiled by the incongruous juxtaposition of a glaring advertisement, and the Bill is intended to provide the remedy for such disfiguration.

Don't Forget the Spoiled Jobs.

THE printing trade differs from other businesses in that an article is not manufactured to sell to all and sundry, in the way that furniture or hardware is turned out, but every job that passes through the printer's hands is practically done to order. In the former case if the goods do not suit one customer, they will suit another, but with a job of printed work, if the customer is not satisfied and refuses delivery, the whole order is executed at a loss; it cannot be offered to another customer and may as well be thrown into the furnace or on the waste paper heap. In the event of making a mistake in a job, the cabinet maker can put in a piece of putty, or hide a blemish with a lick of varnish and make his goods look well to the eye, but the printer cannot erase a comma, transpose a letter, or put in a new heading on a job. Of course this is a great drawback to the small man who has much to lose by work being thrown on his hands, but how often does he take into consideration such a happening when he fixes his prices? Theoretically no job should ever be spoiled, but in practice every printer knows how easy a mistake may be made and passed, often with considerable monetary loss. Therefore in fixing prices the printer' should allow a little for such contingencies, if they do not occur he will be so much more to the good at the year's end.

Leather Belting.

Hitherto it has been the English custom to sell leather belting chiefly by weight, and where sold by measurement leather belting has usually been sold without any specified thicknesses. Both of these systems are so obviously open to objection from a buyer's point of view, and both have such weak points compared with some of the Continental systems, that the Federation of Leather Belting Manufacturers of the United Kingdom have decided that after September 1st no leather belting shall be sold except on the basis of the new national price list, which quotes for all widths of belting per foot, with thicknesses specified according to the customers' requirements and the purpose for which the belting is intended. Copies of the new list will be circulated to all buyers in the kingdom before September 1st, and the Federation feels that the change will be welcomed by buyers, who will in future know exactly what their belting is going to cost them, and exactly what is going to be supplied for the money. It has long been an anomaly that all other classes of belting have been sold by measurement, with thicknesses or plies specified. change is being made by the Federation entirely in buyers' interests and with a view to bringing the leather belting trade of the United Kingdom up to the highest possible standard in the early days of reconstruction.

Japanese Paper Exports.

Papermaking in Japan is confined principally to the lower grades. The high-grade paper such as art paper, bonds, and ledger paper, as well as special lines, are not manufactured to any great extent. The following figures (in yen) show countries to which paper is exported by Japan:—

		1919.	1910.

DIVIDENDS AND REPORTS.

FINANCIAL TIMES.—The directors have declared an interim dividend at the rate of 5 per cent. per annum on the preference shares for the half-year ended June 30th last.

ABERDEEN UNIVERSITY PRESS.—The report for the year ended June 30th last states that the net profit, without providing for depreciation, amounts to £4,083, to which must be added £1,226 brought forward, less directors' and auditors' fees, making £5,310. The directors recommend that, if the resolutions for the reduction of capital which are to be submitted to the company, are passed and confirmed by the Court, this balance shall be dealt with as follows, namely: - In paying the arrears to June 30th last in respect of dividend on the preference shares, £2,953; in further writing down the value of the company's machinery and plant, £1,100; and carrying forward, subject to directors' and auditors' fees, £1,256. No payment of dividend can be made at present unless the reduction of capital is carried through.

ANDREW WHYTE AND Son.—Notwithstanding the difficulties in obtaining supplies and the high price of paper, this firm of wholesale and export stationers, again record very satisfactory results. The report for the twelve months to June 28th shows that the profit, after providing for depreciation and excess profits duty, was £10,700, as compared with £12,100 for 1917-18, but a larger balance was brought in, and the available sum is £3,500 larger than a year ago, at £24,400. In these circumstances the directors have decided to increase the bonus on the ordinary shares from 5 to 7½ per cent., making the total distribution for the year 17\frac{1}{2} per cent., free of tax, as compared with 15 per cent. tax free. The preference shareholders again receive a bonus of 5 per cent., less tax, making the return 10 per cent. The allocation to reserve is £2,000, and £16,700 is carried forward, as against £13,700 brought in.

NEW COMPANIES.

"IRISH STATESMAN," LTD .- Registered in Dublin with a capital of £10,000, in 100 management and 9,900 ordinary shares of £1 each, to establish and carry on a weekly paper to be known as the Irish Statesman. The subscribers are Sir Horace Plunkett and R. A. Anderson. Private company. The first directors are not named. Registered office: 13, Stephen's-green North, Dublin.

STANDARD CATALOGUE Co., LTD.—Issues, registered July 15th, 1919, of £2,250,£3,000 and £4,000 first debentures, parts of a series of £90,000 already registered.

H. T. WOODROW AND Co., LTD. (manufacturing stationers).—Satisfaction, registered July 16th, 1919, to the extent of £1,430, of charge for £4,980, registered March 2nd, 1917.

BANKRUPTCIES, etc.

R. Shirley and Sons (R. Shirley trading as) lately marking ink manufacturers, 18 and 19, Bridge-road, Stratford, E.-This debtor attended the other day at the London Bankruptcy Court for public examination upon accounts showing liabilities £508 7s., and assets £190 bs. In reply to the official receiver, debtor said he commenced business in 1900 as a marking ink manufacturer with a capital of $\pounds 30$ but stopped at the end of 1915, being unable to obtain dyes and bottles. next started as a manufacturers' agent in His failure was caused by the fancy goods. stoppage of the marking ink business owing to the war and to heavy cost of living. The examination was concluded.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership between Walter John Gough and Sarah Eleanor Eaton, carrying on business as dealers in artists materials and stationers, 29, Paradise-street, Birmingham, under the style of "E. Norton," was dissolved as from February 27th, 1919, by mutual consent. All debts due to or owing by the late firm will be received and paid by Sarah Eleanor Eaton, who will continue the business.

THE BANKRUPTCY ACT, 1914. APPOINTMENT OF TRUSTEE.

Adlard, Henry Frederick (trading as H Adlard and Co.), 55, Banner-street, Cityroad, E.C.1. Trustees, William J. Dujardin Bolt, 6, King-street, E.C.2, and Frederick S. Salaman, 1-2, Bucklersbury, E.C.4. Appointed August, 18th, 1919.

APPLICATION FOR DEBTOR'S DISCHARGE.

Morris, James Robert, formerly printer and journalist, 28, Claremont-hill, Shrewsbury, Salop, formerly carrying on business at the Circular Printing Works, Bellstone, Shrewsbury. To be heard on October 10th, at 10.30 a.m., at the Shire Hall, Shrewsbury.

Abbreviated Cable Messages.

The Editor and Publisher, of New York, gives the following example of an abbreviated system of press dispatches for use by cable: For example, the sender would trans-

mit a dispatch like this:

"LD, Mar 22—T fs ac is nw ofly pud o a rmkb lg dsc flite ov t Nt Sa wh ws pfmd by a Br non-rigid aisp, the US11, dur t pst fu dys. T vyj took t form of a ckt, mbcg t coast o Denmk, Schleswig-Holstein, Heligoland, Nt Ger & Holland. T trip ws chzd bi xmy ufb wea T trf is rgdd as rnkg as ph t ms notbl flite f k dev utkn."

And as it would be turned out by the re-

ceiver, it would read:

LONDON, March 22nd.—The first account is now officially published of a remarkable long distance flight over the North Sea which was performed by a British non-rigid airship, the US11, during the past few days. The voyage took the form of a circuit, embracing the coast of Denmark, Schleswig-Holstein, Heligoland, North Germany and Holland. The trip was characterised by extremely unfavourable weather, and therefore is regarded as ranking as perhaps the most notable flight of its kind ever undertaken.

By the use of this code, with which the telegraphers soon familiarised themselves, it was possible to handle a greatly increased volume of dispatches, and at a much higher rate of speed.

Two REPORTERS were boasting of the speed of their shorthand. "Whenever I am reporting at a meeting on a warm evening, all the people try to get near to my table." "Why?" asked the other. "Because," said number one. "my hand goes so fast that it creates a current of air like a fan." "A mere nothing," said number two. "I always have to report on wet paper, or else the current of air caused by the movement of my hand would blow it away. Besides the paper has to be wetted every few minutes, because the friction caused by the rapid movements of my arms would set fire to it in no time."—Liverpool Post.

Bookbinding Notes and News.

The new agreement was concluded with the N.S.O.P.A. and the N.U.P.P.W. on Tuesday, the 12th ult., and became operative in the week ending August 23rd. As the terms affect cutters, packers, stockkeepers, and general assistants, many bookbinding establishments will feel the effect of the higher rates of pay. The wages are graded, first as to class of labour, and second, on the geographic principle, on the same basis as all the recent agreements. Liverpool and Manchester head the list as Grade I. For cutters and head stockkeepers the minimum wage, after five years' experience, is: Grade I., 72s.; grade II., 69s.; grade III., 66s.; grade IV, 63s.; grade V., 60s.; and grade VI., 57s. Bookpress.operators and packers come under class III., and in the respective grades the wage is (after three years' experience), 60s., 58s., 56s., 54s, 52s, 505.

In the face of these repeated wage advances and improvements in working conditions, there should not be any need to stress the desirability of carefully controlling the cost-finding data in every establishment. Within certain limits, it is not so much the wage that matters as the ultimate selling price; but to be certain of a clear margin of price it is more necessary than ever to be absolutely definite on the question of. cost. The wage advance movement on a national basis has now traversed its circle of the various branches of the printing and bookbinding trades, and it might be supposed that there will now be an interim. If rumour is correct the interim promises to be of a very shortlived variety, but we will not anticipate events too clearly.

Bookbinders are waiting very patiently to see the prices of materials decline, and the supply become more abundant, but there are few signs of such an event happening at the moment. Leathers, indeed, are actually hardening considerably, and there is the utmost difficulty in securing the everyday grades of skin used in the binding room. The demand for pelts is so great that the manufacturer of light leathers for our trade is forced to bid extortionate prices or forego the opportunity of securing supplies. It is no secret that of securing supplies. It is no secret that America and Central Europe are willing to go to any lengths to monopolise the leather market. Supplies are far too scanty to fill half the requirements of the world, and as a consequence prices will rule exceedingly high for a long time time to come. Calfs are at an extortionate price, and are quite outside the bookbinder's reckoning. Goatskins and calf fleshes are finding wide application as substitutes for calf at about 2s. 6d. per foot. Anglorussias are obtainable, but delivery is very slow, and the price works out about 4s. 6d. per square foot. Basils are procurable in limited quantity at 1s. 2d. to 1s. 4d. per square foot. Skivers have advanced slightly, and are now quoted 8½d. to 1s. per square foot, according to class. The scarcity and high price of leather has naturally enlivened the demand for leather substitutes, and fortunately the manufacturers of these are in a position to execute orders fairly quickly. A new substitute has recently made headway on the market under the descriptive term "Levrine." Similar to the well-known brands in present use, the new product is being handled by Reddaways.

There is no decline to report in the cost of calico, mull, gold leaf, threads and tapes, bookcloths or buckrams. Leather straps and buckles are on the upward grade, and will continue so. Recently one or two agents have recommenced the sale of common bookcloths at a much cheaper price than the standard qualities. Glue has fallen considerably, and good Scotch grades are now obtainable at 75s. per cwt. Paste has also been reduced, and to-day's price per 2-cwt. cask is 20s. Millboards have an hardening tendency, but good foreign boards are on offer at £36 to £45, with English boards in the region of the latter figure. Hand-made boards are selling at £52 per ton, and deliveries are slow. Both English and foreign mills are over-booked with orders at the moment, and prices are likely to advance rather than recede. Strawboards from Holland are quoted £15 10s. basis, plus loss on exchange. There has been industrial trouble on the Dutch canals, and many orders in hand are long overdue. Consignments, however, can be brought by rail at an extra cost of about 7s. 6d. per ton. Deliveries from stock are quoted £20 to £24 per ton, and the proportion of English boards is usually charged at a higher rate. A fair price for English box-board is £21 to £24 per ton.

Too much must not be expected from the lifting of the restrictions on imports. Until the consumer is face to face with the fact it will be as well to take a sceptical view. Papermakers are strongly of opinion that so far as paper and boards are concerned, there will be no absolute freedom of import. Whatever happens, there is no immediate probability of being able to buy boards at prices less than those we have named.

A good deal has been written of late on the effects of acids in leather. The American committee which was formed to investigate the determination of free sulphuric acid in leather, has just issued its 1919 report. Apart from determining actual free acid, the Procter-Searle method (that being discussed) may be influenced by the following factors: Tannin, organic acids, organic salts of lime, mag-

nesia, and the alkalies, calcium and magnesium carbonates, MgSO₄, and sulphur compounds as introduced by the use of sulphonated oils, sulphited extracts, sulphite cellulose, synthetic tanning agents, etc. As regards details, the chairman, in his remarks, says that the rate of ignition with Na₅CO₄ does not appear to influence the determination, but should be complete. The investigation is still proceeding.

In the International Bookbinder Mr. Connor concludes his description of the United States Government Bindery, extracts from previous portions of which we have already given. The blank folding and sewing section is located on the fifth floor. Here the employees are working on manifold for post office, guards for Philadelphia patent backs, repair blank, and various other kinds of miscellaneous work such as making up, pasting and gathering. There are seven bookbinders and 110 girls. There are in operation four Singer sewing machines, two folding machines, one crimping and scoring machine. The bookbinder in charge is Wm. A. Riedl, formerly of Jamaica, L.I., New York.

The manifold section is a machine force which employs seventy three bookbinders, fourteen girls, eight counters, and fourteen labourers. With Wm. K. Harrison, of Washiugton, D.C., and Wm. G. Ganthrum, of Baltimore, Md., in charge. There are 16 large flat cutting machines, 10 punching machines, 10 wire stitchers, eight drilling machines, six perforators, two eyelet machines, three numbering machines, one pad stripper, one glueing machine. Tons and tons of cardboard are cut and punched in this section every day, and the work goes on smoothly.

The only branch of bindery located outside of the Government printing office is also under the supervision of the Public Printer. This branch is on the ground floor east side of the most beautiful library building in the world. It is named the "Congressional Library," or as some call it, "Library of Congress." It is justly celebrated as the culmination of control of the con tion of architectural achievement of the day, and was completed in 1897 at a cost of six The library is on the millions of dollars. next square east of the Capitol building. The dome and lantern are finished in black copper, with panels gilded with a thick coating of gold leaf; and the cresting of the dome terminates in a gilded final representing the torch of science ever burning. On the inside the hand work of the painter and the most skilled work ever seen anywhere dazzle the eyes, and when the electric lights at night are turned on with their brilliant lustre you stand spellbound at the extraordinary spectacle. The work for this library is strictly of job variety, bindings being of half-morocco, full buckram, with occasional cloth, calf, or sheep. The morocco books are cut in the round burnished edges, silesia joints, and cloth sides, as a rule, no bands. On heavier buckram books the boards are laced and have silesia joints. The thinner buckram and cloth volumes are cased. There are also in the neighbourhood of two thousand newspapers a year bound in half-calendered duck paper sides.

The finishing of the library work is of a rather difficult nature, as a large percentage of the books are printed in foreign languages. The Russian and Hebrew books being lettered in their respective type. The work in the sheet room is of a difficult nature also, owing to the large number of foreign and scientific books done, and requires a skilful force of men and women. The work in the manuscript division is almost marvellous. The most dilapidated manuscript being made almost perfect by careful repairing, substituting pieces and mounting on crepeline. The mounting and repairing of maps, photographs and prints is also an important part of the bindery work.

The binding of Chinese books is of a peculiar nature. A five-section buckram case fastened with ivory thongs is made, and the volume is inserted. A large item in the output of the branch bindery are library cards. Annually there are cut and punched fifteen millions. There is a force of sixty-eight employees, with Foreman Richard C. Lohmeyer, of Richmond, Va., assisted by George H. Aukward, of Washington, D.C.

A writer in the American Printer points out that when gold stamping leather book labels or any material where the design covers but a small portion of the article, a thin cardboard mask, is quite the proper thing for dust-ing on gilding powder. When all gauges are set and exact location of design has been determined, take an impression on a sheet of cardboard the exact size of article to be stamped. Cut around the impression, following the same general shape of the design, the hole in the mask being i of an inch larger all around. The mask is laid on the material and powder applied through the cut-out portion. This prevents spreading of powder to parts not affected by the design, or die; also affords an excellent guide for laying on gold leaf. This method is of especial value in stamping leather indexes, monograms, etc. It not only saves powder, but gold, for the leaf may be cut close when such an excellent guide for "laying on" is to be had.

Art in Book Covers.

The art of the bookbinder can only be thoroughly understood by the lovers of things exquisite and perfect. Such an art is worthy of study, even on the part of those—and they are the immense majority—who cannot think of dressing their books in full morocco, either adorned or unadorned with hand tooling. It is worthy of study for the same reason that all

arts are worthy of study because their creations are capable of producing pleasurable sensations, and those pleasurable sensations are all the more pleasurable as they become more vivid, that is to say, more intelligent.

Books hold the place of honour in the They are the chattels of civilised society. symbols of the superiority of civilisation over barbarism, and at the same time, in the style of the printing and especially in the style of the cover, they are invaluable indices of the condition of a nation in matters of art. And there is a further and more cogent reason for studying bookbinding, for besides the fine jewellery of crushed morocco, privilege of the wealthy alone, there are the various kinds of current book covers in cloth, paper and other For instance, the covers of the materials. books that we buy to read, the covers of our gift books, the covers of the works of our popular novelists, poets, etc. Between these covers, stamped off by thousands in steam presses, and the work of hand-tooling, over which the patient artist has spent weeks of delicate labour, the difference is immense.

The designer of the machine-stamped cover will design none the worse for being acquainted with the work of the great artists, and the public would be less readily satisfied with untasteful, inappropriate or mistaken designs if it were familiar with some of the main principles which have guided the great bookbinders from the earliest times up to the present day. The subject may seem at first sight technical and of small general interest; it is in reality of almost as great general interest as dress. Books are our wisest counsellers, our safest guides, our truest friends; we surely ought to know how to dress them.

Coaling Carbon Paper.

Barium stearate is proposed for use in the preparation of a carbon paper composition which has been patented by Mr. Sanroku Hattori, of Tokyo, Japan. The invention relates to improved carbon paper, which is produced by coating paper with a particular paint-like composition described, which coating operation may be conveniently effected by passing the paper over a roll dipping into the composition or in any other suitable manner.

The composition contains as its basis, barium stearate, or equivalent material, mixed with an oil, such as olive oil, peanut oil, castor oil or the like, together with a suitable pigment or colouring matter. In place of barium stearate, other soaps having similar properties may be used, for example, soaps of the metals, aluminum, magnesium or numerous others. Barium stearate may be produced by saponifying stearin to produce a soluble alkali metal soap solution to which is added a solution of barium chloride or other soluble salt of barium or a soluble salt of magnesium, aluminum, etc. After filtration and drying the barium stearate is ready for use.

As an example of the preparation of the coating compounds the following is given: say, 3 kgs. of barium stearate are mixed with 2½ kgs. of castor oil and 3½ kgs. of violet lake, the entire mixture being well kneaded and agitated, for example, in a paint mill. The paper is then coated with this mixture in any suitable manner. Instead of stearin, ordinary soap-stock or animal or vegetable oil or wax. such as olive oil or peanut oil, and the like, can be used. In place of castor oil, with which to mix the soap, other fatty oils can be employed. In place of violet lake, various other pigments can be used.

Carbon paper made as above described is claimed to be of a superior quality, does not smut, does not soil the hands of the user, and is very durable, and can be cheaply prepared. This carbon paper, it is claimed, has the further advantages that it gives a good clear copy and can be kept indefinitely without injury, irrespective of

climatic conditions.

High Prices and Competition.

Sir,—It does not apparently occur to those people who, from motives of patriotism, advocate a boycott of German goods, that they are acting contrary to the interests of their country, because, if for no other reason, it would be impossible for the indemnity to be paid if Germany were not allowed to sell her produce.

Moreover, although the high cost of food has brought about a large increase in standard wages, it must not be assumed that the present excessive prices for all classes of manufactures are justified.

Householders during the war have had humiliating experience of the "autocrats of the counter" at grocery and other establishments, but those methods are mild in comparison with the independence and rates of manufacturers of all classes of goods, who have been, and still are, profiteering on a large scale, and for which the new Act provides no remedy.

Just as there is no excuse of wages and material for a rise from 10d. to 2s. od. for a pair of socks weighing 21 oz. and machine made, there is no justification for the present excessive cost of chemicals used in the manufacture of paper and colours for printing and other purposes.

To take one chemical as typical, viz., acetate of lead, which is the base of chrome yellows and greens for printing inks, the price before the war was 22s. per cwt., rising to 185s., falling on the armistice to 120s., and now is about 100s.

It is obvious that the proposed boycott would be welcome to our manufacturers, because they well know that free imports of German chemicals would speedily put an end to reprehensible fleecing of the consumer, which, in the absence of healthy competition, has long prevailed, and under which they have blossomed into affluence.

It is to be regretted that there should be any restriction on imports, and I hope that adequate pressure will be brought to bear upon the Government to amend their present pro-

I append copy of a letter addressed to the Board of Trade with regard to one chemical,* but have not much faith in it getting beyond the stages of acknowledgment and pigeon hole, for the apathy of officials is exemplified by the following two incidents.

About two years ago I applied to the Import and Export Office for a permit to obtain from Paris a certain material which is made only there, and although I called at Carlisle-place twice (interview refused) and wrote twice (no reply), my application remains unanswered to this day.

On mentioning these circumstances to a friend, I was advised to order the goods from Paris, and when (as was probable) they were stopped by the Customs on this side, to start a perpetual worrying of the Import and Export Office until, to get rid of me, the

required permit would be granted.

The second incident relates to an application by some friends of mine for a permit to export about 28 lb. of copperplate printing ink, which was refused on the ground that the export of copper in any form was prohibited. On it being pointed out that there was no copper in the ink, the permit was granted, but soon afterwards the export of all printing inks was prohibited, apparently without good reason, and certainly contrary to the interests of this country, which cannot exist without an export trade.

Yours truly, R. G. KIMBER.

September 1st, 1919.

*[COPY.]

SIR, -Observing by the newspapers that lithopone is included in a list of prohibitions of import from Germany, I beg to draw your attention to the following facts with regard to this material.

Lithopone is a compound of baryta, chemically mixed with about 30 per cent. of sulphate of zinc, forming a white pigment, the use of which is much more satisfactory than that of white lead.

It is not made in this country, where some 2,000 tons are annually consumed, but imported from Holland Raiging and freeently the United States. Prior

land, Belgium and (recently) the United States. Prior to the war it came mostly from Germany, and the market cost then was about £11 per ton, but since 1914 the price rose by degrees to £60, and now it is £40, and likely to remain high until the German make comes into competition.

Moreover, as baryta deposits in appreciable quantities are found only in Germany, lithopone can be made more cheaply on the spot than by manufacturers in other lands, who must obtain this raw material from Germany.

The effect, therefore, of the prohibition will be to continue the benefit now enjoyed by Holland, Bel-gium and the United States at a considerable loss to onraelves.

Yours faithfully, ed) R. G. KIMBER. (Signed)

The Secretary, H.M. Board of Trade.

Saint Bride Foundation Printing School,

Bride Lane, Fleet Street, London, B.C.4.

THE TWENTY-SIXTH SESSION commences on SEPTEMBER 15th, 1919, with an augmented whole-time staff of practical instructors. The Curriculum is based on Workshop Needs and embraces every branch of the Printing and Kindred Trades.

DAY CLASSES

in all grades of Composing, Machine and Lithography; Mornings 9 to 1 afternoons 2 to 6

EVENING CLASSES

include instruction in Composing, Machine and Lithography; Science for Printers; Costing and Estimating; Paper; Binding and Warehouse; Design and Advertisement Writing; Printers' Readers; Stereotyping and Electrotyping; and Advanced Photo-Lithography for those holding executive positions; General Knewledge for those just entering on their career (open to girls); and a class for Printers' Assistants.

ENROLLING WEEK

from September 8th to 12th, when instructors will be in attendance until 8 p.m. to advise on courses of study. Early enrolment is necessary.

A PUBLIC MEETING

will be held on FRIDAY, SEPTEMBER 12TH, at 7 p.m., when representative men of the Craft will address the meeting. The Prizes gained by Students will be presented during the evening.

The School will be open for inspection prior to the meeting from 6 to 7 p.m.

Those engaged in the Printing and Kindred Trades are cordially invited.

J. R. RIDDELL, Pfincipal.

LONDON COUNTY COUNCIL.

DAY AND EVENING CLASSES IN TYPOGRAPHY

are held at the undermentioned Institutions maintained by the London County Council:-

MBERWELL SCHOOL OF ARTS AND GRAFTS, Peckham Road, S.E.S.—After-noon Classes for Apprentices; Evening Classes for Journeymen and Appren-

CENTRAL SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1.—Day Techni-cal School for Boys Preparing to enter the Book Production (Bookbinding and Printing) Trades. Evening Classes for Journeymen and Apprentices. Early Evening Classes specially arranged for Apprentices.

Maximum Fee (Evening Classes): 10/- for the Session for any number of subjects.

Persons under 21 years of age qualified for admission to the School and bona-fide engaged in the Trade are admitted free.

Full Prospectuses may be obtained on application to the Secretaries of the respective institutions.

> JAMES BIRD, Clerk of the London County Council.

County Council of the West Riding of Yorkshire.

THE above mentioned Council are prepared to receive applications for a post as a Principal Assistant to the Stores Manager in the Council's Central Stores, who must have a practical knowledge of the printing and stationery trades. Commencing salary £250 per annum increasing by £10 annually to £300 (No War Bonus).

Particulars as to the appointment, and forms of application which must be returned not later than 15th September, 1919, may be obtained upon application to the Stores Manager, Cliff Lane, Wakefield.

THE FRENCH PAPERSTOCK CO., Ltd.,

21-27, BERMONDSEY WALL, LONDON, S.E.16.

Paper Control in Canada.

It is not likely that the Government restrictions on the paper trade in Canada will be lifted until as late as October next, says a correspondent of the Paper Trade Journal, N.Y. Mr. Robert A. Pringle, K.C., Controller of News-Print, said he understood from members of the Government that the control exercised over the news-print industry would not be relinquished until peace was formally ratified and approved by the Canadian Parliament. Owing to the fact that the present session of the House is about concluded and that no session will be held until the fall, the necessary ratification will be held in abeyance until then. Mr. Pringle said as soon as his authority as News-Print Controller is cancelled, the Government intended to leave the field wide open to the paper manufacturers and to place no Governmental restrictions in their way calculated to hinder them.

As soon as the Government's control is abolished, the fixed price which has been prevailing in Canada will also go by the board. The News-Print Tribunal is at present endeavouring to determine what a fair price is. They may lower or raise the \$10 which was set by Mr. Pringle or they may decide on it as being fair. Whatever their finding it will be retro active to July 1st, 1918. After the abolishing of the control, Mr. Pringle will remain in charge of the work long enough to clear up the little tangles which, naturally, will exist. The question of payment of dif-

ferentials is one of these matters.

A Note on Writing Paper.

The scarcity of good writing paper provides a writer in the Manchester Guardian with a peg for his facetious humour. Good writing paper is still a luxury, he says, and one family has taken to an ingenious way of economising in it. Instead of taking a virgin sheet, notepaper that has once been used is used a second time by writing on the back, if blank. This has certain points to recommend it. The recipient gets two letters instead of one—a letter addressed to him personally for his own particular benefit, and another not addressed to him. which he can ignore or read as he chooses. The system might also save the writer of the letter a lot of trouble. haps he would like to mention that he has received a note from Smith or Brown, but at the moment he does not feel equal to the task of summarising the contents of that note. use the blank side of that selfsame message saves all trouble and communicates its terms to the third party in all the pristine freshness of the original. Judiciously handled, the idea is quite good, and, if generally adopted, one might live to see the day when inter-family letters would follow the lines of official correspondence, in which, starting with one

letter, which automatically becomes Minute I, it is directed "for information and remarks" in a Minute 2 to some other member of the family. And so it would go the rounds, accumulating pertinent and impertinent remarks as it proceeded, and becoming in time quite an interesting family document.

Cover Paper Sizes.

What is being done in the United States.

The standardisation of paper sizes has followed the standardisation of booklet and catalogue sizes in the Unite. States. The Cover Paper Manufacturers' Association has adopted new cover paper sizes 20 by 20 and

23 by 33.

The new sizes were adopted particularly to fit the new standard catalogue size, 7½ by 10½, and the much used 6 by 9 booklets. The and the much used 6 by 9 booklets. former size cuts without waste from the 23 by

33 size of cover paper and the latter from the 20 by 26 size.

In adopting the new cover paper sizes, the manufacturers announce a new set of trade customs. They are, in part, as follows:

On standard lines of cover papers, the fol-lowing shall be considered "regular" sizes and substances; all others shall be considered special":-

Regular sizes: 20 by 26 and 23 by 33, and

multiples thereof.

Regular substances: 20 by 26-25, 35, 40, 50. **65, 80, 90**.

Intermediate substances carry same ream price as the next higher substance. Below substances 25 the same ream price as substance 25

Sizes other than 20 by 26 made to substance weights and figuring a fractional pound would be billed to the nearest half pound.

Special making orders (but in no instanœ for merchant's stock) may be manufactured in not less than ton quantities.

On special colours, or colours not regularly made in the grade ordered, not less than 25

per cent. additional price.

Orders for less than a full package not less than 25 per cent. additional. A full package shall be construed as that number of sheets which it is the custom of the mills to use in wrapping and selling the item of paper in question.

This does not apply to orders for one or more full packages and a fraction; for ex-

ample, an order for 31 packages.

On special orders for one ton or less, 15 per cent. over or under-run to be accepted as a On orders for more commercial delivery. than one ton over or under run not greater than 10 per cent. to be accepted as a commercial delivery.

THE day is short, the work great, the workman lazy, the wages high, the master urgeth; up then, and be doing —Benjamin Franklin.

If, when printing, a difficulty arises regarding INKS—write to us!

We shall be very pleased to answer any enquiries and give expert advice.

We are not only makers of the finest printing inks, but have a staff of experts constantly investigating such subjects as the action of inks on various kinds of paper, the right consistency of inks for different purposes, the use of reducers, driers, etc., difficulties in litho offset work and other new processes, etc.

We have an intimate knowledge of the requirements of printers and make a feature of producing inks for special purposes. Our range of colours and tints for litho, letterpress, offset, photogravure and other inks is unrivalled.

A Proposed Municipal Printery.

Discussion at the Newcastle City Council.

At a meeting of the Newcastle City Council. last week, the Lord Mayor presiding, a deputation from the Newcastle and District Printers' Association waited upon the Council with reference to the scheme for establishing

a municipal printing plant.

Mr. C. F. Bowes, addressing the Council, said the Education Committee had already commenced a printing department, and had been doing work connected with other departments; and the printers of the city naturally looked with suspicion at any extension of the present plant, both as ratepayers and as contractors. They suggested that it would be contrary to the basic principle of municipal enterprise, which should aim at conferring greater benefits on the community than were possible when the same thing was undertaken by private individuals or firms. The scope of the benefits of this printing scheme was very limited. Any actual service benefits which might ensue would be felt only by certain departments of the community; but they maintained that the contractors had always expedited urgent work, and had loyally fulfilled the requirements of the Corporation departments. mitted that the scheme would fall short of anticipations, not only on account of the amount of capital required for plant and stocks, but also owing to the slow return on the capital involved and the fluctuating demands of work, which entailed the keeping of a larger staff than could be constantly employed. The idea had been discussed and abandoned by the Edinburgh Corporation. Also many large and important industrial undertakings had experimented in the establishment of their own printing plants, but many of them had gone no further than the experimental stage. No corporation had obtained Parliamentary powers to set up a printing establishment and carry on printing for its various departments. They disputed flatly the claim that the existing plant at the Education Department had "produced work at a cost much below that quoted by the contractors." They thought investigation would show that the private tradesman was able to do printing work at a lower price than the printing press now maintained by the Council.

The deputation having withdrawn, some

discussion ensued.

Mr. H. Forster said it was one of the most disgraceful things he had ever heard of. It was very wrong for the Corporation to carry on business in competition with private enterprise.

The Lord Mayor: You object to the whole

thing?

Mr. Forster: Yes.

Sir George Lunn said there was a good deal of misapprehension. When the war broke out, the Education Committee was not able to get its regular supply of copy books. It was difficult to get paper; but they set up a small printing plant, and the result had been very satisfactory. They did a good deal of work, and it had extended. The only outside work they had done had been work for the Town Hall, and that was emergency work. He had authority for stating that, both for expedition and cost, this work had been equal to that done by outside firms. It saved time and All the committee wanted was that the whole of the facts should be investigated.

Asked a question as to the trade union rate os wages, Sir George Lunn said they were not likely to pay less than the trade union rate. The cost compared favourably with other de-

Digitized by GOOGIC

PRINTER & STATIONER SEPTEMBER 11, 1919.

partments. The Education Committee could not have gone on as it had done if it had not taken the bull by the horns and set up its own printing plant. But if now a printing establishment was to be run, it must be run at the Town Hall.

Ald. Robinson suggested that the reason for the low cost had been that the Education Committee was able to get paper through the Government departments which the private printers were unable to get.

It was agreed to refer the question to a special committee, which was thereupon ap-

pointed.

The Indian Press Act.

Considerable dissatisfaction exists in India owing to the alleged oppressive working of the Press Act, and from time to time we have referred to this in our columns. Now a delegation from the Indian Press Association has come to London to explain the grievances under which newspaper prietors in that country labour, and Mr. B. G. Horniman, editor of the Bombay Chronicle, and Mr. A. Rangaswami Iyenger are now endeavouring to get the measure repealed. A number of English journalists met Mr. Horniman last week, and he addressed them on the subject, in the course of his remarks saying that: "The grievance of the Indian press was not against the Defence of India Act, a war measure which was much more severe than D.O.R.A., but against the administration of the Press Act of 1910. This Act keeps every newspaper under a sword of Damocles. Every newspaper must put down a deposit as security for good conduct. It is liable to condemnation and forfeiture not merely at the will of the Imperial or Provisional Government, but at the will of minor officials like district magistrates and collectors, and often on the authority of a subordinate police officer. All this is done by executive order. The deposit is forfeited and the judgment made, and there is no judicial process until there is an appeal to the High Court to get the order and confiscation set aside. Lawrence Jenkins, a judge of the High Court, has said that almost anything can be brought under the Act. Since it was passed some £50,000 or £60,000 has been taken as security, and a great part of it has been forfeited-a very heavy tax on a struggling industry. meeting was addressed by Commander Kenworthy who spoke as an English Radical member of Parliament. He said that wherever you have autocratic government, you have these attempts to suppress the press. If we cannot allow freedom of the press in India, our Government has failed there, and the sooner we hand it over to the people the better. There were also speeches from the Indian delegates, including Mr. Tilak, and one in particular, from Mr. Satyamurti, who gave a quotation from the Press Act forbid-

ding anything that tends to bring the Government into "contempt," whether by influence, suggestion, allusion, metaphor, or otherwise. The Press Act is ten years old, but during the last few months it is said to have been so severely used that nearly every day a deposit has been forfeited or a paper suppressed.

A Further Linotype Achievement.

The Display Linotype advertised in this issue of our journal represents an advance second only in importance to that of the original Linotype. It puts display composition on a straight-matter basis. The keyboard has six horizontal rows of twelve keys, seventy-two in all, similar to the standard Linotype keyboard of ninety keys. The magazine, as will be seen by referring to the illustration, is half the length of the standard magazine, and weighs only twenty-one pounds. It has seventy-two channels, spaced far enough apart to accommodate the large display faces. Each channel carries ten matrices. To change from one face and body to another, the operator simply lifts the short, light magazine from the frame, places it on a revolving magazine rack which stands beside the machine, and selects the magazine desired. The entire operation, including change in body-size of slug, takes less than thirty seconds. The universal knife block affords full range of body sizes up to 36-point, and the entire range may be covered with one movement of the knife lever. The doublequick two-pitch distributor screw returns the magazine so rapidly that a never-ending supply is available (All 18 and 24-point faces, and many 30-point faces, will run in the Display Linotype. Thus display composition is put on a Linotype straight-matter basiseasily reducing hand composition of sizes 18point and larger at least eighty per cent. The New York Tribune, which have two of these machines, states that 95 per cent. of the composition of the Tribune is now set on the Lino-The New York Herald, commenting on the Display Linotype, says that it has accomplished for their Linotype display what the Linotype has for so long achieved for news composition, i.e., put display work on a "nonhand set " basis.

New National Wages Movement.

Following upon a request from the National Printing and Kindred Trades Federation for a further all-round increase for their members of 10s. per week, a conference between representatives of that body and of the Master Printers will take place on or about September 18th. This is the first application for an advance of wages since the agreement was come to that such questions

Digitized by GOOGLE

should be treated on a national basis. It is expected that any advance granted will apply equally to all workers, irrespective of grades. Thus a 10s. increase would raise the wages of compositors in Liverpool and Manchester to £4 5s., and of linotype operators on night work to £5 3s.

A conference will also take place about the same date between representatives of the linotype operators' section of the l'ypographical Association and representatives of the Linotype Users' Association. The linotype operators' claim is for a further reduction of hours in order to keep their working week three hours below the number agreed upon for case workers, a difference of only one hour being provided for in the national agreement on wages and hours.

Hints for Exporters.

The Board of Trade Journal gives some useful hints to those who desire to do business abroad. Dealing with the export of paper to South America the following are the views of several importers in Valparaiso as to how

the packing should be done: -

As regards flat papers, it is the custom to press-pack in bales common "news" and printing papers, but it is strongly recommended that writing papers, book papers and tissue papers be also packed in hydraulically pressed bales, and that cases be used only for coated papers or when specially ordered by The advantages of baling over customers. casing are that the packages are cheaper and stronger, and occupy less freight space. Further, before the war the steamship companies carried bales of paper at a lower freight rate than they did cases. For baling, the paper should be wrapped in oil paper and hessian, and hydraulically pressed packed. The bale should then be made up, top and bottom, with three-quarter-inch boards, strengthened across by four stout battens on both top and bottom, 11 inch by 3 inch, and bound together by inch iron hoops passing round the bale over the battens, and fastened with a buckle at the side. The method of fastening the ends of the iron hoops with small ovalheaded rivets is unsatisfactory, as they work loose and drop out, and the hoops consequently come off. The hoops should further be fastened with one or two short nails to the The use of the narrow and weak battens. hoops should be avoided.

Bale packing will easily carry a weight of a quarter ton gross, beyond which weight it is not generally advisable to go, taking into consideration that from the time the bales are landed in Chile the work of stowing in Customs House sheds and delivery to consignees

is done by manual labour.

Only the best classes of papers should be packed in cases, and then only when so instructed by the buyer. When cases are asked for they should be strongly made, and should have battens at the ends similar in strength

to those described for bales, passing round the top, bottom and sides. The battens should be bound, further, with hoop iron, and should be nailed only through to the ends and sides of the case, in order to avoid

damage to the contents.

Dealing with stationery, it is recommended that exporters of stationery should take careful note of the requirements of their Chilean customers as regards the detailed weights of goods, which should be given on the commercial invoice. Take, for example, the case of boxes of correspondence cards and envelopes. The Chilean Custom House charges duty on plain cards at 60 cents a kilo, on giltedged cards at 2 dols. a kilo, and on envelopes at 1.20 dols. a kilo. The importer consequently requires to know the weights of each of these, and also of the cardboard box, given separately on the commercial invoice. Otherwise, the Custom House at the Chilean end will have to open up the cardboard boxes and weigh the goods there, with consequent trouble, delay, and risk of damage to the The weights should invariably be goods. given in kilos and grammes.

It is pointed out that considerable trade may be done with Colombia, and it is pointed out that insufficient attention is given by British manufacturers to the importance and value of advertising in Colombia. Advertisements should be in Spanish, large, attractive, and brightly coloured in order to appeal to the Latin temperament. Catalogues also should be in Spanish, and it is desirable that if English weights and measures are used, the metric equivalents should be given. Prices may be quoted either in sterling or in North American currency, as both systems are thoroughly understood. Attention is also called to the desirability of preparing new and up-to-date catalogues as soon as possible. The experience of most buyers is that catalogues issued before the war or during the first year are practically of no use now, owing to the great difference in prices.

Competition for foreign trade, we are reminded, is very keen, and if we are seriously trying to increase our trade, we must watch the important questions of careful packing and prompt delivery with the strictest attention.

IMAGINE two customers each having enough work to keep one printer going. They have two printers bid against each other until they get estimates which do not allow a fair profit. Then each printer gets a share of the work and both are losers. Is there any sense in that? Suppose they insisted on a satisfactory price, what would happen? They might get it.—Ben Franklin Monthly.

A POST CARD, patented by M. Cholodenko is provided with an additional leaf and bears advertisements so arranged that the purchaser cannot avoid reading them. A space is reserved for the address of the addressee, and another space for the address of the addressor. The communication is written on the face whilst the remaining sides of the leaves bear advertisements.

HE COLONIAL SEPTEMBER 11, 1919.

"KELLY'S DIRECTORY OF STATIONERS' BOOK-SELLERS, PUBLISHERS, PAPERMAKERS, ETC., OF ENGLAND, SCOTLAND, WALES, AND THE PRINCIPAL TOWNS IN THE CHANNEL ISLANDS AND THE ISLE OF MAN." 1919. London: Kelly's Directories, Ltd., 182-184, High Holborn, W.C.1. Price 35s.

This is the thirteenth edition of this very useful book, which is an indispensable work of reference for all interested in the allied trades, as it gives the addresses of the whole of the firms engaged in the various ramifications that are connected with paper and print. The book was first published some fifty years ago, and since then new editions have appeared at intervals of about four years, each succeeding volume including an increase in the number of names and addresses. The present volume, however, shows a falling off in some instances. The edition for 1916 contained in all 1,412 pages, whilst that for 1919 covers only about 1,380. The only explanation for this falling off is that the trades have been so badly hit by the war that many have closed up their businesses, and embarked on other ventures, or mayhap have joined the colours, and fought and died for their country. As an instance of this falling off, we note that the retail newsagents in the section dealing with the provinces and Scotland show a shrinkage of about 20 per cent., the 10,000 in 1916 having shrunk to about 8,000 in the present volume. Still, even with these reductions there is a goodly show of names in a bulky volume that does credit to all concerned in its production, no pains having been spared to make the present edition as reliable and accurate as its predecessors, and to bring the information it contains down to as late a date as possible.

"Paper and Pulp Makers' Directory of Sweden, Norway, Denmark and Finland." Edited by Hugo Brusewitz. 8vo., cloth, 260 pp., with map of the mills. Gothenburg, 1919.

This is a standard book of reference that, even during war time, appeared with great regularity, and now in this year of peace again is published with its contents brought fully up to date. Mr. Brusewitz's Directory is, in fact, a work of the greatest value to the pulp and paper trades, keeping buyers and manufacturers posted in the various changes that take place in those industries down to the date of publication. The accuracy of the details given is practically ensured by the co-operation of the secretary of the Swedish Wood Pulp and Cellulose Associations. From the lists in the Directory we give the following figures as to the number of mills, which will no doubt be of interest to our readers:-

			Sw	eden	Nor- way	Fin- land	Den- mark
Paper mills		•••		58	41	28	9
Vat mills				8	_	_	_
Board mills	••	•••	••	28	10	20	2
				-	_	_	_
				94	51	48	10
CHEMICAL WO			lıll	8 -			
Bleached	sulph	ate		.2		_	_
Easy-blea	aching	sulph	ate	11		3	_
Strong su	lphai	ė		20	7	5	_
Bleached	sulph	ite	•••	10	ā	1	_
Unbleach			•		_	16	_
⊦asy-blea	aching	sulpt		20	10	_	
Strong su	lphite		•••	48	9	_	_
MECHANICAL	Wood	PULP	Mı	LL8—			
Aspen pu		•••		2	5	1	1
White pul		•••	•••	112	67	40	_
Brown pu	ι[p	•••		27	12	21	_

The preponderating position of Sweden is well illustrated by these figures, particularly as regards the pulp industry, the Swedish mills outnumbering those of the other three countries put together. Sweden also has a larger number of paper and board mills than any of the other countries. Details of the many and varied makes turned out by the mills appear in the Directory, which also gives reproductions of the various trade marks, and a mass of statistical and other information of great value to all connected with pulp and paper manufacture, or who use these products of the Scandinavian countries, to whom it is practically indispenable. The Directory is issued in two editions, printed in English and Swedish respectively. Copies of the former are now ready, and may be obtained at the office of the World's Paper Trade Review, but the Swedish edition can only be had to order.

The Scottish Paper Trade.

By Our Edinburgh Correspondent.

It is understood that the restriction of paper imports is now at an end, but the enigmatical intimation just published in the papers seems to have been framed to enable the Government to change their mind if sufficient pressure is brought upon them.

Presumably German papers will now come into competition in this market. If they are sold at the prices that are current in their own market, they will have to be admitted under the present regulations. Few British firms will allow their "patriotism" to interfere with their desire to do business, and at present there are a good many orders being lost through delays in delivery. Export trade will now be practicable, but the dealings will be in foreign papers to a large extent, if we are to have a show in the markets we had before the war.

A crisis of this kind was inevitable as soon as the restrictions were removed, as we pointed out in the early part of the year. The delay in reverting to the normal state of trade has put us in a worse position than we were at that time to meet the crisis, and has enabled the Americans to secure much of our export trade. Moreover, the home trade has been disorganised for the last eight months, and heavy losses made, not only by paper merchants, but by manufacturers as well. these have to some extent been cancelled by excess profits, it does not follow that this is a healthy state of trade.

We have now to learn what the foreign manufacturers can do in the way of price, and until this is known there will probably not be much movement in the rates now ruling. All foreign manufacturers have their difficulties as well as we have, but they have had the advantage of eight months to organise their forces, and report goes that many of their representatives are now in this country, and prepared to do business, whereas, with the stimulus of competition from the first, our own mills could easily have kept the At that time we had no three-shift system to contend with, and if it had been introduced, which was probably inevitable, as it was only fair to the workers, it would have been arranged on business lines, which in the end would also have been to the advantage of the workers.

WITH reviving trade there will be a great scarcity of wood pulp and esparto grass, and papermakers will be well advised if they endeavour to secure new fibres, but bamboo, to which a good deal of attention is being given, is never likely to be a cheap fibre, as the outturn is poor, and there is a considerable demand for it in the East in its natural state.

MR. P. PRESCOTT, linotype operator, of Wigan, has been appointed to the Commission of the Peace for the county borough of Wigan.

MR. J. W. BIBBY, a compositor, and secretary of the Leigh (Lancs) branch of the Typographical Society, has been appointed a magistrate for the borough of Leigh.

M. GABRIEL GUARY, manager of the Sociétè Ch. Lorilleux and Cie, has had the misfortune to lose his son, Jean-Pierre, at the age of five years, following an accident.

THE Rev. Walter H. Armstrong, who has just become the minister of Wesley's Chapel, City-road, once sold newspapers on the Lonstreets.

A COMPLIMENTARY luncheon organised by the National Party is to be given to Mr. H. A. Gwynne, editor of the Morning Post, on Thursday, September 18th, at the Connaught Rooms, in acknowledgment of his work before and during the war.

MR. A. G. GARDINER, after a connection of nearly 18 years with the Daily News as editor, has resigned that position, the resignation taking effect from yesterday. Mr. Gardiner will continue his connection with the journal as a member of the board of directors, and will continue his weekly contribution to its columns over the initials "A. G. G."

Digitized by GOGIC

Trade Notes.

THE newspaper, Die Zeit, of Vienna, has ceased to appear after an existence of 18 years.

A LOCK-OUT affecting 11,000 men has been declared in the printing and lithographic establishments of Christiania. Newspaper offices are not affected.

THE late Mr. Bernard Dawson Woodhead, of Wharf-street and Northwood-street, Bradford, manufacturing artistic stationer, has left estate of the value of £16,428.

A GENEROUS ACTION.—M. Crepin-Leblond, printer of Rennes, France, has just given his printing business to his staff. The latter have chosen one of their own number as the director.

THE first number of a new weekly has made its appearance under the title of Nash's Illustrated Weekly; the contents are mostly fiction, but there are also articles on serious subjects, and pictures on nearly every page.

The first number of the Technical Review, formerly the technical supplement to the Review of the Foreign Press, has been issued under the editorship of Major W. E. Simnett, M.B.E., R.E. Its chief object is to act as an intelligence service for British industry.

The construction of the permanent plant of the California Cedar Products Co. at Stockton, Cal., is practically completed, and will open soon for the manufacture of lead pencils. The concern will employ 200 hands. The plant is being built at the cost of \$100,000, and will consist of seven concrete buildings.

Danish Pencils.—The Scandinavian Pencil Wood Co., with a capital stock of \$134,000, has been organised in Koge, Denmark, to prepare woods, especially the cheaper kinds, such as birch, ash and elm, by a patented method that makes them more durable. All wood treated by this process is called teakin wood.

WE regret to announce the death of M. Georges Choisnet, for many years director of the Firmin-Didot French paper mills, from which he retired when that business was taken over by M. Olmer. M. Choisnet was 63 years of age. The service was held at the church of Notre Dame de la Misericorde, at Passy.

A NUMBER of American journalists visited the Gutenberg Museum at Berne recently, and as a souvenir were presented with a plate reproducing in facsimile a page from the New England Courant of February 4-11th, 1723, the first journal written out, edited and printed by Benjamin Franklin, and two other plates, giving a facsimile of the titles of Swiss journals from 1814-1874, and of those of the 19th and 20th centuries with historical explanation notes.

THE strike of printers in Rome is practically broken. The Giornale d'Italia and the Messaggero are appearing regularly and others will follow.

The late Mr. Richard Welford, of Gosforth, Northumberland, at one time sub-editor of the Newcastle Chronicle, has left estate of the value of £17,052.

The death is announced of Mr. Joseph Tress, a New Zealand journalist and newspaper proprietor. He was credited with having started 45 newspapers in New South Wales and New Zealand. Mr. Tress was 74 years of age.

The Times supplement on Saturday last was a remarkable issue of 52 pages entirely devoted to French affairs and carrying quite a large number of well displayed advertisements of French firms. Among the interesting reading matter was a well-informed article on "The French Press," giving a resumé of the leading journals, their politics and the various fields covered by them.

NEWSVENDORS' PENSIONS.—A festival dinner in aid of the Newsvendors' Benevolent and Provident Institution, which was founded in 1839, will be held next month under the presidency of the Lord Mayor. The object of the dinner is to raise a fund which will produce about £700 or £750 a year, to enable the pensions to be increased by 50 per cent. to meet the enhanced cost of living. Mr. Frank Lloyd has started the appeal with £4,000.

LEIPZIG FAIR,—The Germans propose for their autumn fair to construct a vast palace specially for this Fair, in which they will collect some specimens of work realised in the different branches of industry, in such a manner as to give to the visitors a general view of the graphic arts. There will be eight divisions:—(1) papers; (2) inks; (3) characters; (4) stereotypes; (5) impressions of all kinds and by all processes; (6) bookbinding; (7) publishing; (8) machines and material.

TENDERS WANTED—For the printing of minutes, reports, etc., and the supply of rate, receipt, and other books, for the Merton and Morden Urban District Council; tender forms from Mr. C. J, Mountifield, Kingston-road, Merton, S.W.19. For printing, for one year, for the Chorley Guardians; forms of tender from Mr. R. E. Aspden, clerk, Union Offices, High-street, Chorley. The Kent Education Committee invite tenders for a period of one year for each of the following: I, minutes and reports; 2, pamphlets; 3, monthly schedules of payments; 4, official forms; particulars from the Stores Superintendent, Sessions House, Maidstone.

PRIVATE WILLIAM PATTERSON, IST South African Infantry, a well-known young South African journalist, was reported missing on the Western front last year. In the absence of news of him, his death has been presumed by the military authorities. Mr. Patterson joined the Overseas Contingent for Europe at Cape Town, where he had been on the literary staff of the Cape Times. He had previously been connected with the Johannesburg and Natal

Digitized by GOOGLE

Press. He was also a successful writer of short stories. The deceased was the only son of the late Mr. Adam Patterson, formerly sub-editor of the Newcastle Evening Chronicle.

It is interesting to note that a second large edition of "The Indian Drum," by William MacHarg and Edwin Balmer, has been called for. This mystery story of Lake Michigan was an instantaneous success, and received unstinted praise from the Press. The publishers are Stanley Paul and Co.

SALE OF PRINTING WORKS. — The Cooperative Wholesale Society have purchased the printing works of Messrs. Taylor, Garnett, Evans and Co., Ltd., South Reddish, and will take possession on September 18th. The whole of the workpeople, numbering about 340, will be given the opportunity of remaining. The change follows on the recent deaths of Mr. John Edward Taylor Allen, the managing director, and Mr. Mark Smith, the well-known inventor of printing machinery, who was also associated with the firm. The goodwill of the business has been purchased by Messrs. Hudson and Kearns, of London.

The Institute of Journalists hold their annual conference at Birmingham on Friday and Saturday next under the presidency of Mr. F. Hinde, London editor of the Yorkshire Post. The Birmingham delegates have a notice on the agenda paper asking the council to represent to the Newspaper Owners' Associations that the purchasing power of £1 being less than half what it was before the war, all salaries should be increased 100 per cent. above the 1914 rates. There are also two motions, one from Yorkshire and one from "Ulster, requesting the council to press for a Government inquiry into salaries and working conditions in newspaper offices.

A PRINTER'S FRAUDS.—On Tuesday, at the Old Bailey, Frederick William Badger, who had been for over seven years case-room overseer at the printing works of Messrs. George Pulman and Sons, Ltd., was sentenced to eighteen months' hard labour for forgery. The accused had by means of a secret key entered the premises at night and made out time cards in the names of nine fictitious workmen, and placed them in the machine used for that pur-Altogether by his frauds he had obtained upwards of £1,000. The frauds were discovered by the question arising whether the house should be trade union or not. Mr. Pulman desired to interview some of the men on the subject, and then it was found that they did not exist.

PRESS SPORTS.—A large company attended on Mill Ground, Tonbridge, the other Saturday, to see the sports of the Whitefriars Press Club and Institute. Some good racing took place. In the two-mile walking race, the winner, W. G. Gurr, had to concede as much as 200 yards, but at the ninth lap had only to overtake one more man. In the tenth he put on a spurt and won easily by 30 yards. The half-mile for the challenge cup was another good event, the holder winning after being pretty well pressed by the runner-up. At the

conclusion of the sports Mrs. W. S. Minton presented the prizes, and during the afternoon 200 children were provided with tea. A band was in attendance. The officials were:—Referee, Mr. F. Whiffin; judges, Messrs. W. S. Minton, R. Pottinger and W. J. Lewry; time-keeper, Mr. W. J. Wright; starter and clerk of the course, Mr. J. W. Hawkins.

THE late Mr. James Herbert Wild, head of the paper firm of J. Wild and Sons, has left estate of the value of £125,361.

MESSRS. GREENING AND Co. will have ready immediately "The Mummy's Romance," by Theophile Gautier, and "Madame Bovary," by Gustave Flaubert, in their Lotus Library, which contains translations (otherwise unobtainable in English) of the works of the greatest Continental writers.

THE TOY TRADE.—The Minister of Labour has given notice of his intention to apply the Trade Boards Acts (1909 and 1918) to the toy trade, by which is meant the trade engaged in the manufacture of articles intended for the amusement of children, excluding such manufacture when carried on as a subsidiary branch of work in connection with some other trade.

EXHIBITION AT BARCELONA.—The Associacion Dependencia Mercantil, Aribau, 21, Principal, Barcelona, is organising what they call the "1st Salon Internacional de Organizacion Comercial." The exhibition is to include steel and wooden office furniture, interior decoration of offices, office fittings, writing requisites, paper, card indexes, maps, etc., typewriters, duplicators, calculators, dictaphones, presses, account books, loose-leaf books, industrial and commercial advertisements, posters, specimen advertisements, luminous signs, transparencies, articles for propaganda, etc. The exhibition will be held in the Palacio de Bellas Artes in January, 1920. British firms desiring to exhibit should communicate with the Secretary, British Chamber of Commerce, Barcelona.

Openings for Trade.—H.M. Trade Commissioner at Winnipeg reports the receipt of the following inquiries:—A firm of wholesale stationers in Winnipeg are desirous of getting into communication with United Kingdom manufacturers, who are interested in supplying the Canadian market with the undermentioned lines: — Pencils, penholders, erasers, blackboard erasers, paper schoolslates, school bags, and paper fasteners. Samples, price, and time required for delivery of these goods are desired. Samples of the goods required may be inspected at the Department of Overseas Trade, 4, Queen Anne's-gate-buildings, London, S.W.i. (Reference No. 557.) A reliable wholesale company also at Winnipeg is desirous of obtaining samples and prices of the following lines from United Kingdom manufacturers: -Typewriter carbon paper, pencil carbon paper, pencils, type-writer ribbons (black, blue, red-black, and blue black), paper clips and fasteners, pins steel pins, general stationery, and inks Samples of goods required may be inspected at the Department of Overseas Trade, as as above. (Reference No. 558.)

THURSDAY, SEPTEMBER 11, 1919.

Current Topics.

Sale of Printing Works.

An important announcement is made this week particulars of which will be found on another page. The extensive printing works of Messrs. Taylor, Garnett, Evans and Co., Ltd., at South Reddish, near Manchester. have been purchased by the Co-Operative Wholesale Society, and will be taken over this month. The Reddish printery has made a name for itself in the trade and is one of the most extensive establishments in the Midlands. having been long carried on with great energy and success by the former proprietors. Mr. John Edward Tayler Allen, the managing director, died lately, being pre-deceased by

Mr. Mark Smith, who was also associated with the firm. The latter gentleman was fruitful in inventions relating to printing, and his bronzing machines, patent flyers and other appliances are known all over the world. These deaths, we understand, account for the sale of the business. As to the purchasers it says a deal for the success of the co-operative movement that, in addition to the several printeries already run by them, they are in a position to acquire such extensive premises as those at Reddish. The goodwill of the business has been sold to the wellknown London printers, Messrs. Hudson and Kearns, of Stamford-street, S.E.

The Trade Union Congress.

THE Trade Union Congress which opened at Glasgow, on Monday, is the largest meeting of the kind which has yet been held, the delegates attending it representing no fewer than 5,265,000 trade union members, and the magnitude and gravity of the questions upon which it must pronounce opinion far exceed those of any previous Congress, and its decisions may be fraught with critical issues to the industries of this country. The president's opening speech was free from extremist views, and his pronouncement on the folly of "direct action" should serve to quiet down some of the orators who desire to use force to gain their ends, even if it be at the expense of a revolution, and who view a departure from constitutional methods as the only means of attaining the ends of labour. As instancing the attitude of unionists on the question of tariff reform, Mr. Scroggins, of the London Compositors Society, introduced a resolution affirming Free Trade, notwithstanding the economic conditions created by the war, to be the "broadest and surest foundation for world prosperity and international peace." The motion urged upon the Government the undesirability of setting up any system of preferential duties, whether by the introduction of new taxes or by the preferential reduction of existing duties, and instructed the Parliamentary Committee to interview the Prime Minister with the object of obtaining from him a clear statement of the Government's fiscal policy. When put to the vote the resolution was adopted by a large majority.

The Indian Press Act.

THE dissatisfaction caused by the working of the Press Act in India has culminated in a deputation of Indian editors and others coming to this country to endeavour to obtain some relaxation of the severe clauses contained in the measure. The repressive character of the Press Act has already resulted in the suppression of a good many newspapers and printing offices, and it goes without saying that fewer presses and newspapers mean restricted business, hence the matter is important, not only to the printer who immediately suffers, but to those who supply him with printing materials, paper. etc. A delegation at present in London is endeavouring to enlist the sympathies of British journalists in having the Act repealed or altered, and several meetings have been held and addressed by prominent Indians, as well as Mr. B. G. Horniman, editor of the Bombay Chronicle. and Mr. A. Rangaswami lyenger. Indian delegation was entertained at lunch. last week, by Lord Burnham who, in proposing the toasts on behalf of the Empire Press Union, said "that in India they were on the threshold of great changes, and there was no problem of more importance to that country than that which the Government of India Bill was intended to solve. All must be impressed by the fact that the vast preponderance of expert opinion was in favour of the change in administration. There was no opposition in principle to the plan of the Government, and no alternative had been proposed—the Bill was not in danger. There were, however, difficulties to overcome, and it would be impossible to surmount those difficulties without the influence of the Indian Press. He felt sure that the Indian Press had the means to present a fuller service, and he hoped that on this side every opportunity and facility would be provided. He hoped that in the future British newspapers would give greater prominence to Indian affairs. It would add strength to the native Press of India and to ourselves if there could be established an Indian branch of the Empire Press Union." There has been considerable apathy in the Press in regard to Indian affairs, but now it must be brought home to the citizens of this country that England is responsible for good administration in India, and must act up to that responsibility.

German Competition.

THERE is a considerable amount of discussion going on in the daily press regarding the British toy industry and German competition. As the toy trade includes children's coloured picture books and other articles that are produced by means of the printing press, the subject is one that has an interest for British printers as well as for British toy

makers, especially when it is publicly stated by a responsible speaker that "a Birmingham firm was proposing to build a factory at the cost of £100,000 for turning out picture books, but has now stopped operations," probably in view of the expected German competition. Last week a deputation waited on Sir Auckland Geddes to present the views of the British Toy Makers' Association on the matter, when Mr. Walter Scoles, the chairman of the Association, pointed out that the toy industry in Britain was a comparatively new industry which was built up under extreme difficulties, and before it was on its feet, there was a threat to remove all the restrictions upon German competitive goods. This must necessarily result in cutting the ground from under their feet. Up and down the country manufacturers were alarmed, large orders had already been cancelled, and large contemplated extensions had been stopped. There was already a serious slump in the British toy trade. Mr. W. H. Nicholls, deputy chairman, said that over 20,000 workers were employed in the British toy industry. The deputation asked for three years' "close time," and by the end of that time they would be able to meet any German competition. The reply of Sir Auckland did not give much hope of action being taken to protect the trade, and when Mr. Scoles asked, "Cannot you point us to a ray of hope"? He replied, "I see nothing but hope in front of you-there is a blaze of hope. You have the export trade of the world in your hands if you show courage and resource. There is really no reason why our trade should not be far greater in the future than it has been in the past." All that British firms ask for is protection for three years until they have equipped their factories for the fight. The German factories are equipped with the finest tools for speedy production at a low cost, and it is obvious that until British factories are also fully equipped the German can undersell the manufacturer in this country, and three years' protection for the trade does not seem an unreasonable request.

An invention, patented by Mr. A. Albini, relates to envelopes adapted to be forwarded through the post a number of times. The envelope is provided with a gummed sealing-flap which is divided into three or more parts by lines of fracture, and is formed with a window on the address side. The window may be closed by transparent material. The flap may converge for a short distance and, beyond this convergent part the flap is parallel and may extend nearly the full length of the envelope.

NEW COMPANIES.

PRICE AND COUSENS, LTD. — Registered with a capital of £3,000, in £1 shares (2,000 6 per cent. cum. pref.), to take over the business of a nautical optician, nautical publisher, bookseller, etc., carried on by W. F. Price at 1 and 2, Broad Quay, Bristol. The subscribers are W. F. Price and B. C. Cousens. Private company. The first directors are W. F. Price and B. C. Cousens. Registered office, 1, Broad Quay, Bristol.

Morland Studios, Ltd.—Registered with a capital of £2,000, in £1 shares, to carry on the business of publishers, designers, advertising agents, journalists, newspaper and magazine proprietors, machine, letterpress, copperplate, lithographic, electro-plate and general printers, engravers, art dealers, etc. The subscribers are W G. Brickel and E. S. Annison. Private company. The first directors are W. G. Brickel (permanent) and E. S. Annison. Registered office, 37, High Holborn, W.C.

ELSOM AND Co., LTD.—Registered with a capital of £10,000, in £1 shares, to take over the business of printers and bookbinders carried on by J. S. Elsom, A. Elsom and A. J. Lynn at Fetter-lane, Hull, as "Elsom and Co." The subscribers are J. S. Elsom, A. Elsom and A. J. Lynn. Private company. Directors, J. S. Elsom and A. J. Lynn (managing directors), and A. Elsom. Registered office, Fetter-lane, Market-place, Hull.

Shoober, Palmer and Co., Ltd.—Registered with a capital of £20,000, in £1 shares (5,000 pref.), to carry on the business of manufacturers, brokers, importers and exporters of, and wholesale and retail dealers in, paper, esparto and other grasses, jute, flax and other fibres, rags and other papermaking materials, colours, stains, dyes, etc. The subscribers are J. C. Shoobert and F. J. Palmer. Private company. Permanent directors, J. C. Shoobert and F. J. Palmer. Registered office, 60, Carter-lane, E.C.

"United India" Co., Ltd. — Registered with a capital of £10,000, in 200 shares of £50 each, to carry on the business of printers, publishers, newspaper proprietors, journalists,

newsagents, etc. The first directors are Annie Besant, D. Graham Pole, Narottam Morarji, Jarmadus Drvarnadas, Bakman Pestonji Wadia, Edward L. Gardner and Susanna M. Sharpe. Private company. Registered office, I, Robert-street, Adelphi, W.C.2.

LAMBHAY, LTD.—Registered with a capital of £10,000, in £1 shares, to carry on the business of designers, printers and publishers of calendars and diaries, etc. The subscribers are C. E. Brendon and L. H. Lewin. Private company. The first directors are C. E. Brendon and L. H. Lewin. Registered office, Commercial-road, Lambhay, Plymouth.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

BRADFORD AND DISTRICT NEWSPAPER Co. LTD.—Satisfaction in full on July 22nd. 1919, of charge for (a) £1,500 registered in March, (b) £1,000 registered in May, (c) £2,000 registered in October, 1902, and (d) £500 registered in October, 1903.

GILBERT WHITEHEAD AND CO., LTD. (printers, New Eltham).—Satisfaction in full on July 22nd, 1919, of charge for £7,500, registered March 25th, 1918, (b) £16,500 debentures, charged on the company's undertaking and property, present and future, including uncalled capital. Holders—Lloyds Bank, Ltd.

BRADFORD AND DISTRICT NEWSPAPER Co., LTD.—Satisfaction in full registered July 25th, 1919, of charges for (a) £3,000, registered June 2nd. 1902, (b) £5,500 registered July, 1908, (c) £506, and (d) £200 registered November, 1908, and (e) £20,000 outstanding on July 1st, 1908, and registered under section 12 of 1907 Act.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuractes, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case attisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership between Francis Billing and Arthur Billing, carrying on business as wholesale printers and paper manufacturers, Livery-street, Birmingham, under the style of "Martin Billing, Son and Co.," has been dissolved by mutual consent, as from June 30th, 1919. All debts due to and owing by the late firm will be received and paid by Francis Billing.

Some Paper Topics.

At the time of writing there is great uncertainty as to how the policy of free imports is to be applied to paper. No one appears to know anything, and inquiry at the Board of Trade does not bring any solution to the problem. It was the height of political unwisdom for the Government to announce such a momentous decision immediately prior to the vacation, when no questions could be asked or answered. Apparently, buyers will be within their rights in placing foreign orders for manufactured paper, but we predict that the procedure will not be entirely unfettered. Whether free imports become an immediate fact or not, there is no trace of a falling market at the present time, and, indeed, there are very great doubts concerning the ability or desire of foreign manufacturers to entice the English consumer with cheap prices. The English consumer with cheap prices. world's demand for paper is big enough to maintain a good price, and so far we are only experiencing the beginning of the demand. There is evidence that America is endeavouring to monopolise raw material for every branch of industry. Both Sweden and Canada could dispose of the bulk of their stocks of either halfstuff or manufactured paper without approaching English buyers if they wished to, so that there is no ground for assuming that free imports will cause a drop in paper prices.

Quotations for Swedish and Canadian kraft have hardened slightly of late, and there is little to induce the consumer to favour foreign goods. In point of quality, the English product is improved out of all recognition, and as our attitude toward the earlier grades was critical in the utmost degree we take a corresponding amount of pleasure in paying our tribute to the energetic efforts of the mill people in improving their standards. We have recently seen coloured striped kraft, made in the North, which is good enough for anything. In one sense it is a pity that mills are booked so far ahead, or, to put it more appropriately, it is unfortunate that the development of equipment is restricted by the ability of papermakers' engineers to meet the urgent requirements of the mills. This will permit an influx of foreign and colonial-made paper to fill the immediate needs of users. In the choice between foreign and colonial wrapping, the latter should receive preference on the score, not only of quality and price (in which respect the Canadian mills claim to equal and even surpass the foreigner), but on the basis that if money must go out of the country, it will benefit us most by being kept within the Empire.

Company meeting reports often make very interesting reading, especially when the chairman ventures to review conditions affecting the production of profits. The latest contribution is by Sir John Benn, of Benn Bros., Ltd., publishers of trade journals, etc, who holds paper responsible for thwart-

ing ordinary business development. In prewar days the paper used by the company cost on the average about 13d. per lb., and during the war as much as 1s. 8d. per lb. had to be paid. At the present time he said the paper they were using was quoted at double the price for which it could be bought in the United States and in Canada, and even higher than it could be obtained from Germany. On these grounds he claimed the company was paying thousands of pounds per year into the pockets of our papermakers. In his own words: "The history of the control by Government of the paper market is typical of many other controls. In April last the Publishers' Association put the case so strongly to the Government that the Paper Controller himself was demobilised. that was done, we were all under the impression that the control of our material would cease. Nothing of the kind happened, for we very quickly found that the Board of Trade had taken to itself powers which were even more troublesome than those wielded by the old Controller, because, whatever may have been said about that functionary, he was at least accessible, while the Board of Trade is not.'

The statements contained in the foregoing report are perhaps not quite all of full face value. Because the English mills were not able to cut so keenly as those outside the country, it does not follow that orders placed here would put many thousands of pounds into the pockets of papermakers. The paper mills of this country are not making exorbitant profits, and, with few exceptions, are charging reasonable prices for the paper they sell, as anyone who has direct dealings with them will testify. As for the statement that is. 8d. per lb. was paid for paper during the war, it is no doubt true to fact, but we venture to claim that the vendor was more likely to have been a vendor than a reputable papermaker. Again, on the score that the publishers' protest was the means of dismissing the Controller, to be followed in office by the Board of Trade, there is a lot missed out here as anyone who has been in touch with the paper trade must know. Did not the Board of Trade take up the reins after the decision of the Paper Inquiry Committee, and did not the Paper Controller leave office because the end of the war brought the natural end to the peculiar circumstances of the Controller's appointment?

Finally, we leave publishers to reap the anticipated but probably illusory benefits of free import of foreign paper, trusting that the spirit which prompts them to demand an unfettered influx of this commodity will hold good also in application to American periodicals, books and other printed matter.

H. A. M.

MESSRS. EDWARDS AND BRYNING, printers, etc., of Rochdale have now installed a monotype in addition to their recently acquired linotype. Out of eight offices in the town there are six possessing mechanical composing machines.

New De-Inking Process.

A process for removing ink and colouring matter from printed paper has been patented

by Mr. Wesley M. Osborn.

In carrying out the process, the old printed papers are placed in a digester nearly filling the same, and to which is added a weak solution of sulphurous acid, H_2SO_3 , such as is used in sulphite plants, and to which is added sodium carbonate, Na_3CO_3 , in powdered form to cause the necessary reaction. In the reaction ensuing the CO_3 gas will have a great effect upon the pulp, and sodium sulphite will be formed during the reaction, and will act as a bleaching agent.

An excess of sulphurous acid is required in order to cause a chemical reaction, and the amount of sodium carbonate may vary along with that of the sulphurous acid. In practice, the sulphurous acid should be of ordinary strength, while the carbonate of soda, or soda ash, is made into a solution, in order to dilute the acid strength, without being too quickly

weakened.

The inventor has found that good results may be obtained with two parts of the sulphurous acid to one part of the solution of sodium carbonate. After the ingredients have been placed within the digester, steam is applied, causing a circulation of the papers, slowly at first, until the temperature and pressure rises, after which the contents of the digester are cooked rapidly, retaining as long as possible the gases which are given off. When the stock has been sufficiently treated, the digester is blown, the stock washed and screened and ready for direct use in making paper and pressing into laps.

By this process, Mr. Osborn has found that a high grade of pulp is obtained, differing slightly from the original sulphite pulp, relieved of pitches, and being of a suitable consistence for use in the making of paper.

Wasie Paper Collection.

Commenting on the result of investigations into the profits derived from refuse, the Daily Telegraph deplores the fact that the systematic collections during the war have been dropped. Brighton, Swansea, Southampton, Nottingham, Dover, and other towns did very well out of their waste paper collections duri g the war, some of them making as much as £1,000 in a year. But now many have Some say that there is no local market where they can dispose of their supplies, and this is a very real difficulty, though not, the writer believes, an insuperable one, given organisation on a national scale. For though the price of paper has fallen very considerably, it is still high. During the war, of course, the collections were often made by Boy Scouts, who treated this as part of their war work. That has dropped, and householders have also dropped the habit of saving their paper and putting it aside to be ready when the boys called. It is a great pity that the practice has been discontinued, for it had a distinct moral influence.

The case of Glasgow is specially mentioned. Prior to the war, between £3,000 and £4,000 was obtained yearly from sales of waste products, but during the year ended May last the figure reached the record of £14,002, or nearly £2,000 more than in the previous year. By far the greater part of this revenue was secured from the sale of waste paper, which is obtained by separate collections from offices, warehouses, and dwellings throughout the city. In addition to the waste paper obtained by this means a large quantity was salved from the refuse received at the destructor stations, and this method of recovery proved exceedingly profitable. The output from all sources was 1,055 tons, and the record sum of £9,416 was obtained by sales.

Commenting on the fact that various leading towns have given up their collections of waste paper, as there is no local market where they can dispose of it, Messrs. Lendrum, Ltd., write: - "This is the crux of the whole difficulty-there can be no market while the mills are not using waste paper. They have discarded it for imported wood pulp, the result being that producers and collectors of this one-time useful commodity have lost a source of income or profit, and, moreover, the increased imports adversely affect the rate of exchange. If you would produce wealth from waste, you must tackle the problem from the root, and urge the mills to recommence using waste paper and to import less pulp.

THE publications of the Morland Press, 190, Ebury-street, London, are always a delight if for nothing else than the way they are produced; type, paper, cover designs, and the whole get-up are such as to please the most fastidious reader. The second number of the "Green Pastures" series just out is no exception to the rule. It is in the form of a memorial number to the late Edward Thomas, poet, essayist, and nature lover, who was killed in action on Easter Monday, 1916, and contains a characteristic poem of Thomas, called "Up in the Wind," a prose article by J. W. Haines "As I knew him," and poems by Vivian Locke Ellis, W. H. Davies, and Julian Thomas, the designs being by James Guthrie, editor of the series. This little volume should be in the possession of all the many friends and admirers of the lamented poet. Price, 2s. 6d.

The Sheffield Independent, which this year attains its 100th anniversary, announces a change in the editorship. Mr. W. W. Chisholm, who has a 52 years' connection with the paper, has asked, now that the war is over, to be relieved of the responsibility of control. though the paper will continue to have the advantage of his experience and local knowledge. As his successor the directors have appointed Mr. Basil Clarke, who resigned from his appointment as Director of the Public Information Branch of the Ministry of Health to take up the editorship.

September 11, 1919

BRITISH & COLONIAL

TRADE IN JERUSALEM.—The Chief Administrator of the occupied enemy territory administration at Jerusalem states that he would be glad to receive commercial publications, such as trade journals, from the United Kingdom. There are frequent inquiries for these. They should be sent at least in triplicate, so that copies can be handed to the three Chambers of Commerce. Trade directories are also required. Even with the out of date copies which he has, inquirers have been put in touch with English firms. He also recommends a number of leading manufacturers to send out travellers to find out the requirements of the country and to book orders which can be shipped within a reasonable time. Publications, etc., should be addressed to Headquarters, Occupied Enemy Territory Administration (South), Jerusalem.

A disastrous fire broke out on Saturday afternoon at the stationery and paper store of Messrs. Burleigh and Co., Ltd., printers, etc., Rupert-street, Bristol. The adjoining premises of Messrs. Butcher and Co. were also involved to a lesser degree. Being Saturday afternoon the premises were locked up and everyone away. About 3 o'clock smoke was seen to be issuing from the windows, and very quickly it had increased to huge volumes. The fire brigade were soon at work, and after about an hour their efforts began to have a good effect upon the burning building. upper storeys continued to be involved, but by 5 o'clock the buildings were completely There was a large stock of paper, gutted. and the business for some time must be considerably hampered.

The well-known printing and engineering firm of Messrs. Hoe and Co. have an interesting innovation in their latest rotary machine. The duct and ductor is now done away with and the ink supply is obtained by means of a series of pipes through which the ink is pumped and sprayed. The ink passes through a wire filter which can be removed and cleaned. The ink control screws are in a box at one end of the machine with a master screw to govern the row.

Press, with Slogger Feeder; Quad Crown DITTO; Ditto DEXTER FOLDING MACHINE, 32-in. by 44-in.—11\frac{1}{2}-in. by 14\frac{1}{2}-in., 32 p.m., delivery second, third or fourth fold; PARALLEL FOLDING MACHINE, by Bremner, two folds, largest sheet 30-in. by 32-in.; all in perfect condition. Offers invited.—Address, "Furnival," Wm. Porteous and Co., Advertising Agents, Glasgow.

Mr. W. C. Powers Arrives.

Faith in the British Paper Market.

Mr. W. C. Powers has arrived at 180. Fleetstreet, London, to take charge of Messrs. W. C. Powers and Co., Ltd., which was incorporated in April last to handle the sales of Canadian paper exports to Europe. Mr. Powers is a man of tremendous energy and enterprise, with a complete knowledge of the paper trade in all its phases, and he has already entered upon his big task with a force which will not be held back.

A representative of the British and Colonial Printer called upon Mr. Powers at his office, and found him not only a man of keen business instinct, but extremely courteous, and, above all, a confirmed optimist. He is a thorough believer in the future of the British Paper industry, both from the manufacturing and selling points of view. Mr. Powers is no stranger to this country, since he spent twelve years up to 1910 in England for the International Paper Co., so that he is fully acquainted with the conditions of British trade, in which he has such faith that he has given up a very important business connection in Canada in order to develop the new trade in Europe. Mr. Powers explained that his group of interests was not here to take the British market from the home manufacturer, holding that the foundation of good business in this country depends primarily on the success of the British mills.

"The interest of Canada," he observed, " is chiefly in the surplus of paper, which in the past has been supplied by countries which have not been so friendly as Canada has been, and which have not helped so much in the

war. Mr. Powers understands very thoroughly the value of a good press in this country, and without it he doubts whether the war could have been won, and for this reason he regards

papermaking as a "key" industry.
"The Canadian Mission," he remarked, "is trying to show as far as possible that an important industry such as paper should be kept within the Empire. We do not say that the countries within the Empire should abuse that position, but if Canada can put paper in at the same value as other competitors, we think we might expect the British publishers to patronise us."

Canada's Claim.

Mr. Powers recalled the reliable manner in which Canada had carried out her business obligations during the war. He mentioned that board had even been shipped by Dominion mills at a third of what the market would bring, while from elsewhere board which had been contracted for at cheaper prices was not delivered except at a considerable premium. This was not good business, but Mr. Powers believes that the reputation thus built up by Canadian firms will have its reward.

Believing that sentiment follows business rather than that business follows sentiment, Mr. Powers is convinced that this also will have a beneficial effect upon Canadian products, remembering, of course, that business depends upon giving real value.

The strong points of the W. C. Powers Co., Ltd., are news-print, folding boards, kraft paper and printing papers, especially coated, and sulphite bonds. The interests represented cover something like 1,000 tons a day, of which 800 tons are news-print alone.

Mr. Powers is a little doubtful whether Canada can supply all the surplus paper that this country requires, owing to the difficulties of shipping and so on, but the real plan, he says, is to apportion the available tonnage to those publishers who are familiar with the advantages of Canadian paper, and who are far-seeing enough to realise that so important an industry as paper should be kept within the Empire, buying either from the British or Canadian mills.

"I have not enough to go round everyone," he remarked, "but I could develop the tonnage to those publishers who see the position

in that light.'

Incidentally Mr. Powers mentioned that the market for news-print on the other side was very strong, as indicated by the fact that news-print is bringing close upon 3d. per lb. in New York.

Scandinavian Competition.

As to how far Canada can compete with Scandinavians in paper supplies, Mr. Powers had no available data as to the costs of the Scandinavian product, but he has no doubt that their costs must have increased very much during the war, and they are up against a much harder coal situation than Canada is, while with regard to labour, although it was much cheaper pre-war, it does not follow that such is the case now.

"They have a much lower freight rate," said Mr. Powers, "and that, of course, is a great advantage to Scandinavia and a considerable handicap to Canadian paper mills"

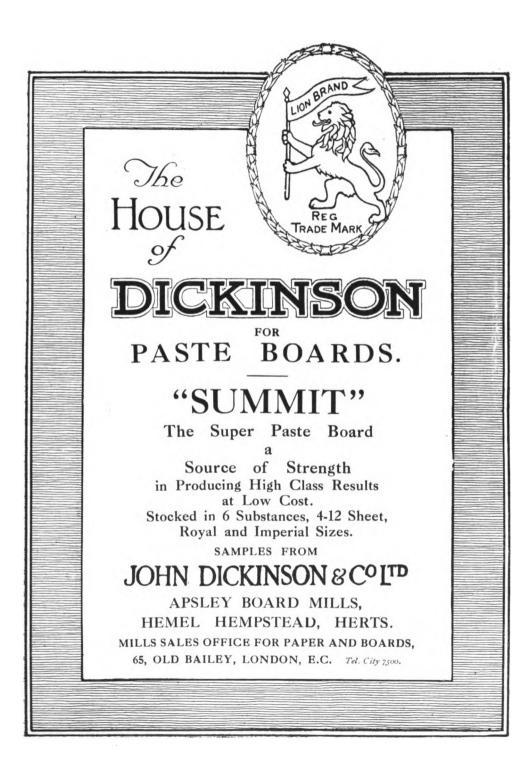

Mr. Powers does not seem to approve of a subsidy on the Canadian side as a means of equalising the position.

"A subsidy is a bad thing in the long run because the people of the country have to pay for it, and many are charged for the benefit of a few, which is a wrong policy."

Imports of Canadian paper are steadily increasing, and Mr. Powers believes they will continue to do so. "The quality of the paper, the satisfactory running, and the fact that the publishers were very badly treated by some Continental suppliers are factors which are bringing Canada into favour, together with the circumstance that during the war Canada made good on every obligation, no matter at what loss to itself."

Germany!

The possibility of German competition being mentioned, Mr. Powers declared that he was not afraid of it at all. He thinks that if a sovereign is worth 90 marks in Germany, things will cost four times as much there as in this country. While this will not apply to

growing timber or coal in the ground, it would apply very much to the cost of getting that timber to the mills and bringing the coal from the mines, and these conditions and such an adverse exchange as now exists against Germany must be reflected in the increasing cost of everything produced in that country. Of course, if Germany were able to put paper on the market at pre-war prices, the position might be different, but in any case, as things stand, Mr. Powers has no fear of the German bogey.

British Products Secure.

So far as the British paper trade is concerned, Mr. Powers has a great admiration for the products of our mills, and he is convinced that British manufacturers will continue to hold their own, both at home and abroad, in the papers in which they have excelled in the past. He is not so sure of the durability of merely war-time experiments. At the same time he thinks British papermakers should be guarded against dumping or adverse exchanges and he believes the authorities in this country will see that nothing unfair in these directions is allowed.

"The general opinion in Canada," said Mr. Powers, "is that publishers and papermakers here would see that it was to their advantage to continue some form of import regulation which would at the same time afford Canada an opportunity of taking care of the additional requirements of this market, and the hope in the Dominion is that something of

this kind will be worked out.'

Japanese Paper Yarn.

At the moment paper yarn is probably of most interest from the point of view of its employment in the weaving of certain kinds of fabrics, mainly those used for making bags and packing cloth, until supplies of raw cotton and jute are increased to a quantity more nearly adequate to the world's demands. In Japan paper cloth is no new thing, writes a correspondent of The Times (Trade Supplement), but during the war its manufacture, from paper yarn or from raw fibres used in papermaking, has shown a progressive ten-dency. Formerly a kind of paper cloth was made and used in Japan as a substitute for cotton and silk fabrics for clothing. The paper yarn which has been made in Europe during the war, mostly in Germany and Austria, is made chiefly from chemical wood pulp, but Japanese paper yarn is made from a much tougher paper, in the manufacture of which the inner fibrous bark of the paper mulberry and other trees having a fibrous bark is used In a fabric known as Shi-fu the warp consists of silk and the weft of paper yarn. Fifty years ago Shi-fu fabric was very popular in Japan for women's summer clothing. Later, when the finer and more durable cotton fabrics began to be imported in large quantities and at low prices, the industry declined.

From the oldest times the fibrous bark of paper mulberry (Broussonetia papyrifera), the gampi (Wickstræmia sp), and Edgeworthia papyrifera have been used in making Japanese paper, and the fibres of these three plants are the strongest known for the purpose. Gampi cloth is well known in Japan. In the manufacture of paper yarn in Japan the paper manufactured from the fibres of Edgeworthia papyrifera, being fine, elastic, and of glossy appearance, is chiefly used. In external appearance Japanese paper yarn resembles linen yarn rather than cotton. Its most important uses are for weaving the cloth used for wrapping wool, silk yarns, and similar goods, and as the woof of material for belting, neck ties,

If the shortage of raw cotton continues an increase in the Japanese production of paper cloth may help the situation to a slight extent.

Machinery Saves Human Energy.

In the pursuit of the greatest result for the least expenditure of human energy, the machine is everywhere replacing simple mus-cular effort. Skilled handicraft will never be superseded, but there is little reason for the retention of more sordid toil, says Engineering. The increase of human efficiency by the avoidance of undue effort is becoming more and more a feature of modern machine design. Handiness is a leading characteristic of present day tools, all the controls being grouped within easy reach. Having revised all conceptions as to the use of labour in other men's businesses, the engineer is appreciating the refinement of such methods in his own.

The total units of human energy available in any period of time are a limited quantity, and it is a paramount duty to avoid their wastage. No man wishes to exhaust all hisdaily store of energy for his task. He expects and needs to reserve a proportion for his own consumption; as a rational being, his production of energy is shared between his employer and himself. Where shop conditions are adverse, because of poor equipment, the working day, although of the same duration, is, for this reason, longer than where more rational conditions obtain. This is the same thing as saying increased production depends upon better conditions. mechanical appliances have advantages both for master and man. To the former, they represent increased output; to the latter, they mean an easier day's work with a greater amount of energy reserved for his own uses. It is simply that the ratio between useful and total effort is altered to give greater efficiency and benefit to both. A quotation from a recent article by Lord Leverhulme is worth reproduction:—"Man is not a machine. He is the master of machines, and by inventing better machines and bringing more machines under his dominion for production purposes. he will be able to create a bigger fund of wealth out of which he can take a bigger reward for his services."

St. Bride Printing School.

Inauguration of the New Session. The Proposed Institute of Printing.

The St. Bride Printing School had a good start on Friday for the new winter session. In spite of the heat wave, there was a large gathering in the Institute Hall, the audience comprising for the most part the young blood upon which the future welfare of the craft will depend to a large extent.

Mr. J. W. McAra, J.P. (chairman of the St. Bride Foundation Printing School Committee) presided, and among those present were:—Mr. W. R. Codling, C.B.E., M.V.O. (Controller H.M.S.O.), Mr. Edward Unwin (upper warden of the Stationers' Company), Mr. Geo. E. Holloway (president of the Electrotypers and Stereotypers' Federation), Mr. H. C. Hill (London Master Printers' Association), Mr. A. E. Goodwin (secretary of the Federation of Master Printers), councillor H. F. Wagdin (London Printing and Kindred Trades' Federation), the Rev N. Taylor, M.A., and Mr. J. R. Riddell (principal of the St. Bride Printing School). Sir Geo. Riddell was absent in France, and Mr. C. W. Bowerman, M.P., was on duty at the Trade Union Congress.

Growing Success.

The chairman, after expressing satisfaction at the size of the gathering, mentioned the growth of the St. Bride Printing School from 700 pupils and 45 classes last year to 66 classes this session, with 18 teachers, and an accession of pupils which necessitated a waiting list. This state of things led Mr. McAra to recall the scheme for printing schools which was submitted to the L.C.C. before the war and which aimed at establishing a school for the north of London, another for the south, and a central technical institute. With the

coming of the war, that scheme had been at a standstill and it had been necessary to call into being a committee of influential gentlemen with the idea of establishing a central school of printing. Reference was made to the disappearance of the printing classes at the Regent-street Polytechnic, the Borough, and Aldenham Institute. St. Bride still went on flourishing, however, but there was no technical institute. It was part of the agenda for that meeting, said the chairman, to beat the big drum with regard to a technical institute and see whether something could not be done to get a real move on. There was no possible room for providing further accommodation at St. Bride's, and even the Readers' Class had to meet in the kitchen. (Laughter.) A great increase of plant, however, had taken place and it had been stowed away somehow.

A Great Need.

Mr. McAra felt that a great industry like printing ought to be housed in an institution worthy of the very important position it held to-day. (Hear, hear.) He wanted to fill everyone present that night with the convicthat they must have a big printing institute and that they must move the County Council to do it. If they could get all the sections of the trade to take the matter up in real earnest, something might be done. The chairman went on to show what the newspapers owed to the cause of technical education, and thought they ought to try and repay it by supporting the movement for such an institute as he had indicated. Every section of the newspaper organisation was now dependent upon the young printer being thoroughly grounded in his craft. While the

newspapers did not take apprentices, there was to be an exception from next January so far as stereotypers were concerned. What was wanted was a big technical institute that was self-contained with a comprehensive curiculum and in every way worthy of the craft. He mentioned that the ages of the applicants for admission to St. Bride's ranged from 14 to 66 years. With regard to the teachers, some who applied for positions on the staff were prepared to sacrifice bigger salaries in order that they might be engaged in the training of the young printer. The chairman felt that St. Bride's had an enthusiastic body of students and they had as teachers men who were taking up the work because they had a love and zeal for it, and those conditions, he thought, must produce first-class results.

The Report.

Mr. Riddell, in the course of his report, stated that the success of last session, when day classes were first inaugurated, had been more than maintained, and records had been attained in every section of the school's work. The individual enrolment of students numbered 70b, some of whom attended two, and even three, classes per week, so that each week well over 1,000 attendances were made.

In 1917-18 they had an increase of students' hours of 240 per cent. over that of 1916-17; again, in 1918-19 there was a further increase of over 236 per cent., making an increase on the two sessions of nearly 500 per cent. A large amount of the credit for this was due to the 115 employers, managers, and overseers of the various firms who sent over 500 students to the school, paying all their expenses, including their wages, for the working hours in which they were in attendance at the school. The school examinations were considered by the members of the independent examining board to be highly satisfactory, as were also the practical competitions for prizes given by Mr. George Eaton Hart and Mr. Harold Hood. In the City and Guilds of London Institute examinations 300 students were entered, of whom 216 obtained passes, this being equivalent to 76 per cent. of all the passes obtained throughout the United Kingdom. This must be considered satisfactory, particularly when it was remembered that boys as young as 14 years of age were entered for these examina-City and Guilds Institute medals as well as the special prizes given by the Printers' Managers and Overseers' Association; also three students have been awarded the much coveted silver medals and prizes presented by the Worshipful Company of Stationers.

The new classes in photo-lithography, binding and warehouse work, printers' reading, stereotyping and electrotying had by their successfully justified their formation, as also did the whole-time course of instruction for sons of employers, a number of whom had btained honourable distinctions. Over one hundred disabled men have passed through the school, and while the work had put additional strain on the staff, his colleagues have

sincerely undertaken a work which at times seemed physically impossible, endeavouring not only to instruct the men in the printer's art, but also inspiring them with hope that those in the printing business will accept their responsibility and ensure that despite their handicap they will be welcomed into the craft when they are fitted to take up work in the printing office. (Applause.) St. Bride has also given to overseas soldier printers and our own demobilised men an opportunity to burnish up their craftsmanship before resuming their positions in the workshop. After speaking of the moral influence exercised at St. Bride and the need for technical education, Mr. Riddell added: I recognise that if we printers are to hold our own in competition with other nations, not only as regards increased production, but also in relation to improved methods and technique, we must of necessity adopt new methods to reach the desired end, and this can best be achieved by a course of scientific training. Therefore the whole question of educating and training the printer is important, not only to those engaged in the business-although they are primarily concerned-but also to the nation as a whole. If the practices sometimes met with in the school reflect what is being done in printing offices, a clear case is made out for the need of reforming their methods. To me the waste in material alone is appalling, and shows clearly that those in the workshop are not taught to be economical or to appreciate the cost and value of the materials they are constantly We can never hope to get the best results from our teaching here until we have the practical support of those in the printing If the results of technical education are to be a force generally felt throughout the craft, there must be a greater trade interest, backed by guarantees, to demand from the educational authorities a Printing Technical Institute worthy of the craft, containing all sections of the printing and kindred trades, and organised to meet the needs of everyone engaged in these trades, from employer to "printer's devil," and thereby removing the stigma that the printing and kindred trades are the "Cinderellas" of London's technical education.

Master Printers' View.

Mr. H. C. Hill, who took the place of Mr. J. J. Keliher, President of the London Master Printers' Association, thought the enthusiasm displayed that night looked very encouraging. Upon the subject of increased technical training there could surely be no difference of opinion at all. Every practical business man realised that increased production, the greatest need of the hour and of which they heard so much and saw so little, was very largely a question of improved methods, and improved methods could only be expected to follow sound technical training. He thought it was a question for co-operative effort, and speaking for the London Master Printers' Association he thought he might say that the employers in that Association were fully pre-

pared to do their share of the work. He felt, however, that the subject had not received the attention during the last few years that it deserved. That was not due to lack of interest, but to the fact that during that time the executives of the employers and employed had been so fully occupied had been so fully occupied with other matters. He hoped that they would be able to give more attention to the important question of technical education in the future. St. Bride School, he thought, provided the most perfect example of what such an institution should be, but it needed They had to make up for the extension. terrible wastage of the last few years.

America's Example.

Incidentally Mr. Hill mentioned the issue by the Typothetæ of America of 64 volumes comprising text books on printing and kindred trades. They were to form a library of reference for those who wished to improve their knowledge, and a ground work for those who were following the course of instruction. He thought that we in this country were lacking in the number of effective and useful text books that have been produced of late in the printing trade, and some of our experts might employ their spare time in putting together useful text books for the printing trade of this country. Printing, they would agree, was an art, but the art was in danger of being sacrificed to printing as a purely mechanical process, and because we had no qualification tests, no standards. There were many men, employers and employed, acting as printers to-day who had not the necessary technical knowledge of their trade which should be in the possession of every man who followed it. He might say that the greatest need of the printing trade was better craftsmen. He did not know whether the suggestion was practical or not, but it seemed to him that a system of examination by some central body, with certificates graded according to proficiency, would be a great incentive to young men to perfect themselves, and would arouse the necessary interest needed to keep their art and their trade in its foremost and proper position.

Stationery Office Encouragement.

Mr. W. R. Codling, Controller of H.M. Stationery Office, said the St. Bride Institute was an embodiment of the idea that education was the real secret of success. His experience in official life was that there was more room at the top of the ladder than at the bottom. In other words, it was even more difficult to find men who were fully qualified for responsible posts than it was to find men who could do ordinary work. Apart, of course, from the personal qualifications, the whole secret of the matter lay in the education of the individual. He was pleased to be present that night to show his sympathy with the practical work of the St. Bride Institute in giving the training and experience that were necessary for such an important craft as that of printing. In a sense he felt that he was there under false pretences. He was not a practical printer. By force of circumstances it had come to be that he had under his control certain printing offices and he was responsible for a good deal of public money which was spent in printing, but he had realised the value of the work which was being done there, and he was very glad to say that 50 of the young people in the works for which he was responsible, apprentices and others, were about to enter, if they had not already done so, as students of that institution. (Applause.) Technical education was playing an important part in the Stationery Office and a scheme was being formulated there for the education of their apprentices. An apprentice master was being appointed to look after their interests, educationally and otherwise. He could not help being struck by the fact as Mr. Riddell was speaking that all our progress practically as a nation depended upon the individual and that no worker, whether in the printing trade or any other, could take more out of the industry than he put into it in the long run, either as individuals or as a class. (Hear, hear.) What they got in the way of remumeration for their work depended on the value and the effort they put into it and in that way their social progress depended upon efficiency in industry. The St. Bride Institute in its own particular line was doing a great deal in that direction.

An inspiration.

Councillor H. F. Wagdin introduced a good deal of humour into his address. Referring to the location of the reading class in the kitchen, he thought the average compositor would consign the corrector of the press to a much lower region and the compositor would have the right on his side. (Loud laughter.) He thought that meeting constituted an inspiration in itself, for they felt there was something that they were really laying hold of and were determined to better themselves and the community. They were witnessing the genesis of a revolution in the printing trade, because the main object of that meeting was to get a suitable technical institute. The speaker criticised the quality of the trade journals in the printing trade in this country as compared with those of America. He went on to complain that the master printers, when a scheme was put forward for improving the trade, would not put up "the purse." He wanted to ask, when they had got their technical institute and the employer had a lad who was capable of rendering better service than in the past, were master printer's going back to the old system of cutting one another's throats, by which they got just sufficient profit on the work to provide themselves with a crust of bread and cheese and render it absolutely impossible that they should ever leave behind them a fat fortune? And was a worker to be satisfied with the price that was paid for his labour before the war broke out, because, as a journeyman he held that, despite the comparatively high wages paid to day, it was an everlasting disgrace to the printing profession that the skill which was demanded of them as printers at the present time was so poorly remunerated. The printing trade ought to get together, employers and employed, and con-

Digitized by Google

sider how they could improve the craft from every point of view.

Grading Suggested.

Mr. Edward Unwin expressed profound satisfaction with the position which the St. Bride Institute occupied and he acknowledged the work of Mr. Riddell in this connection. He was glad to think that the employers were appreciating the work of the School, and allowed the time needed for their apprentices to attend the classes. The cost, he held, was returned to the printing office in the skill which the apprentices displayed when they got to manhood. With regard to Mr. Hill's suggestion of a certificate of proficiency, Mr. Unwin said he had often desired that trade unions, and especially the L S.C., should in some form or other grade their men for the mutual benefit of the employers and of the men themselves. Unfortunately for want of this efficiency there was often a dead level of wage, which might be avoided if certificates were made compulsory. The speaker went on to say that he wished the Stationers' Company to return to its original purpose of elevating and protecting the craft. He could assure them that this year they had a Master of the Stationers' Company who was anxious to bring that about.

Mr. G. E. Holloway recalled a meeting 26 years ago at St. Bride's, when there was virtually formed a Whitley council in the particular branch of the trade which he represented. They had a committee formed from each side who discussed various topics for the benefit of the employees. He mentioned that they admitted all the assistants as journeymen and some of the men who had been raised to that status had taken up technical training because they wished to earn their money. In the electrotyping section they had a fortnight's holiday, 48 hours a week and £4 6s. wages.

Mr. Codling then distributed the prizes and at the conclusion was accorded a hearty vote of thanks for so doing.

MR. J. P. TUCKER, for 21 years overseer of the Birmingham Post composing-room, has just retired after 42 years continuous service with the proprietors of that newspaper. The other day Mr. Tucker was the recipient of two testimonials—a clock, a silver cigarette case and a fountain pen from the composing department, and a case of table cutlery of rustless steel from the members of the editorial staff. Mr. Tucker's predecessor was the late Mr. Baker, whose son, Mr. H, Baker, for many years a reader on the Post, was recently appointed secretary in Birmingham of the National Union of Manufacturers.

FAULTY CATALOGUES.—The British Consul at Parimaribo calls the attention of United Kingdom firms to a complaint made by traders against the practice of sending unpriced catalogues from the United Kingdom, which has, in several instances, resulted in the loss of trade. He points out that instances have occurred in which orders have been lost because certain catalogues contained no indication of prices.

The Journalist's Conference.

The thirty-fourth annual conference of the Institute of Journalists was held last week at Birmingham, when the members were accorded a civic welcome by the Lord Mayor, who, after paying tribute to the ability and discretion of the individual journalist, said that during the war the Press had played its part. The newspapers had fostered and encouraged the very best characteristics of the British people. He warmly commended the objects of the Institute and the steps being taken to establish a course of training for journalists iu London University, and expressed his belief that in the new era of national and social life upon which the country was entering the Press was going to be of equal value and importance to the nation as in the past.

Mr. Frederick Hinde, in his presidential address, said that during the war the lot of the journalists was one of great difficulty. From being the freest Press in the world, newspaperdom, in England, became the most severely regulated. The individual men suffered more greatly than many realised. No Whitley Council for the profession had yet been established. The time had come when the Newspaper Society, the only body representative of the employers, should be invited to join the Institute and help in the formation of such council for the journalistic side of the newspaper industry. One of the chief subjects for the consideration of the conference related to remuneration, a question which had never loomed so large as during the last few years. In view of the depreciation of the sovereign and the fact that newspaper workers other than journalists had obtained increases in pay proportionately far beyond anything accorded to journalists, he anticipated that members would readily agree that the minimum should be revised. As to the course for journalism in London University, he explained that they did not claim for such teaching that it would make a journalist, but it was believed it would produce the raw material from which some excellent journalists might be obtained.

The question of salaries was discussed and the opinion was expressed that journalists should be in receipt of at least 100 per cent. increase on their pre-war salary

At the concluding session, on Saturday, Mr. George Springfield was elected president for the ensuing year.

The discussion on salaries was continued, a resolution being unanimously approved which claimed 100 per cent. increase on pre-war rates to meet the higher cost of living. The conference also expressed the view that in no case should journalists of three years' experience be paid less than four guineas per week. It was decided that owing to the difficulties connected with the proposed Government inquiry into salaries and working conditions, further consideration of the matter should be deferred until the result of the negotiations

with the proprietors' organisation as to higher wages has been ascertained. In the event of a satisfactory settlement not being secured the executive committee was requested to consider immediate action in accordance with the Minimum Wages Bill. Districts were recommended to enter into local negotiations with newspaper proprietors with the object of giving effect to the principle of the resolutions adopted by the conference.

The report of the Orphan Fund Committee, which was approved, stated that to date 161 children had received grants amounting to £13,915; in 1918 children were granted £562. A gift of £4,000 by Mr. Frank Lloyd was

acknowledged with gratitude.

The conference expressed deep regret at the growing practice of the publication in responsible newspapers of signed articles not actually written by the persons who were represented as the authors, a practice which was regarded as not being in accord with the high traditions of British journalism, and which, moreover, was inimical to the best interests of working journalists. The council was urged to consider the matter with a view to steps being taken to induce newspaper proprietors and editors to discontinue the publication of such articles.

At a luncheon given by the Birmingham and Midland Counties District, Mr. W. A. Cadbury, Lord Mayor-Elect of Birmingham, proposed the toast of the Institute. He described the daily newspaper as a recurring miracle with its fresh lists of appealing advertisements, its telegraphic news from the ends of the earth, and the words of wisdom from

the editor and his staff.

Personal.

Mr. C. J. DRUMMOND, M.B E, has completed fifty years' membership of the L.S.C.

THE Newspaper Press Fund has appointed Mr. W. Thornton Sharp secretary, in place of Mr. J. P. C. Coast, who has resigned the post to take up the secretaryship of the Land Agents' Society.

LADY NORTHCLIFFE is to be president during the ensuing year of the Society of Women Journalists.

THE Daily Mirror is responsible for the statement that Mr. Henry Drennan, the artist milliner, is really Mr. Geoffrey Robert Henry Drennan Allen, son of the late William Allen, the wealthy and well-known chairman of Messrs. David Allen, Ltd., colour printers.

MR. J. R. RIDDELL, Principal of the St. Bride Printing School, has faith both in the craft and in the school. His son was a big prize winner last session.

THE Lord Mayor (Sir Horace Brooks Marshall), accompanied by the Lady Mayoress

and Sheriff Sir William and Lady Smith, will lay the foundation stone of the Printers' War Memorial Wing to the Caxton Convalescent Home at Limpsfield, on Saturday afternoon next, September 20th.

MR. ALEXANDER EDDINGTON, the chief reporter of the Edinburgh Evening News, and Mr. Thomas Gibson, the deputy chief reporter, have resigned their appointments after services with that paper respectively of 43 and 35 years. Mr. Eddington for many years acted as Edinburgh correspondent for the Press Association, and also for the Times and other London papers.

MR. H. C. Anning, who for about 35 years has been the London correspondent of the Bristol Times and Mirror, has been given a seat on the board of directors of that journal.

THE new Mayor of Richmond will be Alderman Simpson, a local newspaper proprietor, who has held the office twice before.

MR. A. F. BLADES (president of the Federation of Master Printers) has returned home much better for a holiday. He has at once taken up the consideration of delicate labour problems.

MR. WM. C. Cox, by mutual arrangement with Mr. Geo. Clarke (Messrs. Martin and Clarke), has commenced business entirely on his own account as papermakers' agent and merchant, and has opened new premises at 7, Lambeth-hill, Upper Thames-street, E.C 4.

A WELSH writer and preacher, the Rev. Ben Jones, vicar of Penmachno, Carnarvonshire, has been appointed editor of the Welsh edition of the Church Family Newspaper. He is to give up his living and come to London

Printers' Wages Demand.

Negotiations are taking place in London this week between the Federation of Master Printers and the representatives of the Typographical Association on the memorial for 10s. a week advance in wages.

The conference sat all day on Tuesday until 9 o'clock in the evening, and was then adjourned until next week, no settlement

having been reached.

A NEW monthly magazine called the London Mercury is due on November 1st. The editor is Mr. J. C. Squire, who has relinquished the editorship of Land and Water and has been in charge of the literary department of the New Statesman. It is to be entirely literary, not touching public affairs at all except incidentally through books. The magazine is to be issued from the offices of the Field and the Queen.

Trade Notes.

THE Islington Gazette, which for many years has been published five days per week, is now to appear six days weekly.

The late Mr. Nathaniel Gould, author of sporting novels, who died on July 25th, has left property of the value of £7,797.

We understand that Gardening Illustrated and Farm and Home have changed hands, and are now the property of Mr. John Nayler, who has been associated with both papers for several years.

THE Helsingfors paper, Sosialli-Demokratti, states that Professor Goode, the correspondent of the Manchester Guardian, has been arrested by the Esthonian authorities at Reval at the request of the British authorities.

THE death is announced of Mr. Robert Henry Cadge, manager of Messrs. Miller, Son and Co.'s, Ltd., Printing Works, Fakenham. He had been attending to his duties apparently in his usual health. During the night he was suddenly taken ill and passed away almost immediately.

MANCHESTER SCHOOL OF TECHNOLOGY.— The Manchester School of Technology and the Printing Crafts Guild are holding a reunion and concert on September 27th, to provide facilities for the meeting of old students, who are asked to assist in bringing together possible recruits to the School who have been interrupted through war service. The arrangements are in the hands of Mr. Fishenden, M.Sc. Tech., head of the printing, etc., section.

TENDERS WANTED. — For the supply of printing and stationery for twelve months for the Nottingham Guardians; particulars from Mr. J. A. Battersby, Poor Law Offices, 50, Shakespeare-street, Nottingham. For the supply of books, stationery, kindergarten, and other school material to the schools in the County of Stirling, or district of same, for twelve months; forms of tender from Mr. G. Blane, clerk to the Education Authority, Dumbarton-road, Stirling.

PRINTERS' PENSION CORPORATION. — The council of this Institution have decided that, for reasons of economy, the customary annual elections to the Almshouses and Orphan Funds will not be held this year. All candidates will be admitted to benefit without election. The council point to the advantages of the Orphan Fund. The fathers of five children contributed, collectively, the sum of £8 5s., and in return the sum of £980 will be expended upon the education and maintenance of their children.

THE employees of Messrs. Edwin Ombler and Sons, printers and stationers, Hull, had their annual outing the other day. The party of over 70 left by the 9.8 train for Bridlington, arriving there by 10. A four course dinner was provided at the Oberon Café. Mr. Rippon presented Mr. H. Craft with a small token of regard from his fellow employees on sever-

ing his connection with the firm after 17 years' service. The present was an umbrella; also one to Mrs. Craft.

The death has occurred of Mr. John Henry Pitfield, newsagent, 32, Bridge-street, Darwen. Mr. Pitfield passed away in his sleep.

THE death has taken place of Mr. Geo. D. Wood, Finkle-street, Knaresborough, at the age of 64 years. Mr. Wood had carried on the business of printer and publisher for the past twenty years.

THE late Sir Robert Alfred Hampson, of Ulverston, Lancs, chairman of C. Tingling and Co., Ltd., proprietors of the Liverpool Daily Courier and the Liverpool Evening Express, has left estate of the value of £20,617.

A REPRESENTATIVE gathering of the staffs of the composing and reading departments of the Daily News journeyed to Southend on Saturday. A capital repast was provided at the Victoria Hotel. The toast of "The Firm" was given and acknowledged. Mr. H. Murch replied to the toast of "The Printer," which was proposed by Mr. L. P. Menage, the "Father" of the composing department.

REASONS FOR LEAVING.—In an office with which I am intimately acquainted, writes a correspondent, there has been a constant stream of new men in one department, who only stay for a short period and then move on. The same difficulty is not experienced throughout the whole office. I think it would be a wise plan for every employer so placed to get each "passer by" alone, and try to ascertain the reason for his leaving. There is often a cause of which the employer is ignorant.

It is now over twenty years since Linotype and Machinery Limited obtained from the originators of the Miehle the exclusive right to manufacture and sell in the United Kingdom the two-revolution single-cylinder press bearing that name. During this period the Miehle has been continuously made at Broadheath Works, Cheshire, and supplied to practically every printing office of note in the kingdom. Linotype and Machinery Limited are the only manufacturers in this country of the press known as the Miehle, and the press can always be supplied to British printers by this firm. All communications relating to the press should be addressed to Linotype and Machinery Limited, 188, Fleet-street, London, E.C 4.

GATESHEAD.—The first of the fourth series of lectures on economic subjects arranged by the Gateshead Advisory Committee for senior scholars attending the elementary schools was given in the Gateshead Town Hall on Tuesday night. The lecturer was Mr. A. J. Platt, works manager for Messrs. Mawson. Swan and Morgan, Ltd., Newcastle, and he explained the technicalities of the work in a printing department. The printing trade, he said was a good one, and sharp intelligent lads were wanted as apprentices. There was plenty of room at the top for good printers, and the work was interesting because it came into contact with so many other different

Digitized by GOOSIG

kinds of occupations. It was essential that lads who wished to get on should be good spellers, and have a good knowledge of their own language, and this was particularly important in the printing trade.

THE "FUTURE."—A publication bearing the title of the Future was issued as a national publication, this week, the contents being contributed by the Prime Minister and other Ministers. It is announced that between four and five million copies are issued. Published by the Chief Whip's Literary Department, the publication presents in popular form an outline of the Government's policy, as announced by the Prime Minister, and urges on one and all the need for a united effort to solve the urgent social and industrial problems facing the country after the war's upheaval. Ministers have contributed to its columns solely with this object in view and with no regard to the interests of political parties. The manager of the Future, the organ of the English Language Union, writes that his magazine has nothing whatever to do with this new publication, "and the use of our title is an infringement of our long-established copyright. Our journal is entirely unconnected with the Government or any political party or association."

CONFERENCE OF EMPLOYERS AND EM-PLOYED.—The success of the three days' conference of employers and employed, recently held in Birmingham by the Industrial League has encouraged that body to extend its opera-Arrangements have therefore been made to hold similar conferences in Glasgow, Newcastle, Manchester, Bristol, Portsmouth, and Sheffield, and negotiations are being conducted in other places. Subjects relating to labour and commerce in all their various forms will be considered. One very important subject to be dealt with was suggested by Mr. J. R. Clynes, M.P., in the discussion on his paper at Birmingham. Mr. Clynes suggested that "the relation of improved labour conditions in this country, and imported sweated goods," would be a subject on which the Industrial League could most usefully institute a conference. A most interesting discussion should take place on this matter, and it will be included in the agenda of one or more of the conferences.

Paper Thread Manutacture in Spain.

The Board of Trade Journal publishes a report from the British Vice-Consul at Granada who states that a local manufacturing concern has erected a factory to manufacture thread from paper and to weave cloth for the packing of their products. The raw material or paper paste which is required for the manufacture of the thread, is obtained from eucalyptus wood, of which tree the company has a large plantation, covering many acres of ground, and which is being largely extended. The process for its manufacture is described as follows:—With the wood paste destined for

the weaving machine paper is first fabricated. This is then cut in long and narrow strips, like ribbon, similar to what is used in telegraph offices, and like them are rolled on small reels. Each reel is placed on a spinning-wheel. which is held in position by a needle which revolves with a velocity of 5,000 to 6,000 revolutions per minute. By this means the strip of paper is twisted and forms a kind of tube, which, so far, is neither very fine nor very strong. To make it of greater resistance, it is soaked in a special kind of glue, which at once becomes indissoluble, being exposed to thermal vapours. In this way the thread can again undergo another stretching or straining, and remains fine but stronger. materials which are obtained from paper thread are still far too coarse to substitute for linen or cotton cloth.

Scottish Printers' Wages.

A meeting of the Scottish Alliance of Employers in the Printing and Kindred Trades was held in Edinburgh, last week, at which members from all parts of Scotland were present. The president, Mr. Paterson, explained that he had called that meeting of the Alliance so that a full report might be made to the members of the proceedings of the Wages Board in regard to the claim for an increase of wages. The meeting of the Wages Board under the neutral chairmanship of Sir Thomas Munroe was held in Edinburgh on Friday last, when the whole position was discussed and Sir Thomas made a statement embodying his opinion.

Many of the members present at the meeting voiced their objections to any increase being given at this time, but ultimately the following resolution was unanimously adopted-" That this meeting of members of the Scottish Alliance of Employers in the Printing and Kindred Trades, having heard the report by the Scottish Alliance representatives on the Wages Board of its recent meetings, and specially of the meeting of the Wages Board held on September 5th, under the neutral chairmanship of Sir Thomas Munro, approves of the action of their representatives in offering an advance of 7s. per week to the adult male workers represented by the unions on the Wages Board, and of 7s. The meeting to the female compositors. notes with much satisfaction that Sir Thomas Munro expresses the opinion that the offer made is fair and reasonable, approves of the offer made on their behalf, and resolves to take such steps as the Executive Board may consider necessary to withstand any attempt to enforce a higher concession.

An old-time printer, who has installed the costing system within the last three years, remarked that "charging a high percentage of profit on an inaccurate cost had resulted in wasting a large part of his life and searing his conscience."

Current Topics.

The St. Bride Institute.

On another page of this issue will be found an interesting report of a meeting held at this popular school of printing, on Friday evening last, when a number of leading men connected with the allied trades was present, and a report was presented describing the work of the past session. How successful this work was is amply demonstrated by the fact that St. Bride still retains its reputation of gaining the greatest number of national medals and prizes. On last year's examination the following awards were made:—Three City and Guilds Medals and special prizes presented by the Printers' Managers and Overseers

Association, also three of the much-coveted silver medals and prizes awarded by the Worshipful Company of Stationers. The work of the Institute not only embraces the teaching of the various branches of the printing art, but it is to a large extent also a moral teaching, as endeavours are made to infuse a higher tone into the younger members of the printing craft and to impress upon them the importance of punctuality, and a keen sense of the importance of loyalty and responsibility. For the coming session the syllabus of the Institute is a comprehensive one, embracing all sections of the art of the printer. and opportunities are offered, which, if taken proper advantage of, should do much to start the students on a successful career.

The U.S.A. Trade Mark.

Some time ago there was a considerable agitation in this country for a British trade mark with the object of marking all goods that were of British origin. The scheme after much discussion was held in abeyance and nothing has been heard of it lately. Now a section of the United States manufacturers desire a trade mark that will distinguish goods made in the U.S.A., while, as here, the scheme has met with considerable opposition. The main idea of such trade marks is that the superiority of the goods that bear them will be so manifest that it will mean greater business for the country of origin. That this view is not held by all is manifest from the fact that the Merchants' Association of New York has sent to members of Congress and other Federal officials a brief in opposition to the Bill which authorises the adoption, registration and protection of a national trade mark to distinguish merchandise produced in the United States. The Board of Trade Journal says:—The memorandum claims that the Bill will not bring about the results which it aims to produce, and that its operation will injure instead of promote trade with foreign nations. Although the general use of a suitable legend showing the origin of merchandise, such as "Made in U.S.A.," accompanied by a suitable emblem, is favoured by the Association, the memorandum dwells on the legal obstacles which will be encountered. The chief is practical difficulty of determining and enforcing the standards to be followed in licensing or refusing to license houses to use the trade mark. Again, objections are raised to granting of too much responsibility and authority to one man-the Secretary of Commerce-in enforcing the provisions of the Act. stated that the power which the Act would

Digitized by Google

give to the Secretary of Commerce is dangerous, inasmuch as it would give him complete control over the business of persons engaged in foreign trade. He would also encounter difficulties in fixing and enforcing standards based upon the grades and accepted traditions of manufacturers and trade associations in the United States by the necessity of interpreting and considering at the same time the standards of a large number of foreign countries in each of which the standards and traditions vary. The attempt to establish and enforce standards, therefore would be sure to injure American sellers or offend foreign powers.

Some Paper Topics.

The paper market has not varied remarkably since the wages and hours concessions were made to the men. At that time a stiffening tendency set in, and prices advanced on printings and writings. Foreign papers have since hardened in sympathy, and the following figures may be taken as representative of current buying. Common printings are selling at 41d. to 5d.; seconds printings of good white colour at 58d. per lb.; fine white printings are quoted 6d. to 61d. per lb.; and esparto printings are on offer at 7d. per lb. Making orders for S.C. lithos and imitation arts are accepted by the mills at 6d. per lb., but except under special circumstances delivery cannot be made under at least two to three weeks. Foreign glazed coloured printings are selling by wholesale houses at 7d. per lb., by agents at 5d. to 6d. per lb., and the English alternative (which is too good for common work) is selling at 7d. per 1b. upwards.

Common E.S. writings are quoted 5d. to 51d. per lb., while most mills making ES. papers are in a position to quote 6d. to 6dd. for quite a good quality. The best esparto writings are firm at 8d. per lb., with a slightly inferior grade at 7d. per lb. Despite these conditions there are still a few wholesale houses adhering to higher figures in the hope of clearing better profits. Thus we have seen quite recent quotations for named E.S. papers based on 9d. and even 91d, and 10d. per lb. The time for these figures has passed, and so long as the mills are open to accept orders for equal quality at 8d. per lb., there is small prospect of the bigger business falling into the hands of the distributor.

One of these days the problem of the true functions of maker, distributor and consumer will become acute. It is growing increasingly evident that many mills are preferring to sell direct to the user rather than through the agency of the middlemen. Some makers, who in pre-war days never did a stroke of business direct, are now encouraging con-sumers' inquiries. The worst evils of the indirect system of selling were revealed by the

war, and papermakers can well be excused for favouring a more direct method of distribution. If the rationing system of the closing years of the war had been based on direct supplies, prices would not have reached the height they did consequent upon the in-auguration of the chain policy of selling. Wholesalers, agents and dealers, private speculators and second-hand brokers, all stood in on the war policy of the vicious Small wonder that while excess profits and private fortunes were in process of formation, the consumer was called upon to pay an exorbitant price, and the mills were occasionally blamed for reprehensive practice that in truth was not attributable to them.

In principle, the manufacture, sale and consumption of paper is a triangular proposition. The ideal system would comprise the mill, the distributor and the user. This arrangement is essential for the small mills, and, in fact, worked out successfully before the war. Immediately the large mill comes into the proposition the system fails, for the desire is then to both make and distribute. Thus we have the large papermakers of the country acting as their own wholesalers. Even the few who in pre-war days elected to deal only through the wholesale houses are now endeavouring to perform their own distribution. The price of paper is largely governed by the costs of distribution, as ample proof of which we now have the mill agents quoting far more favourable prices than the wholesale house. Where a mill carries out its own distribution through its own house and branches, the costs are heavier than those incurred by a smaller mill selling direct through its agent, but lower than those which have to be borne by paper which passes from the mill to the wholesaler's store and thence to the user. Here there are two profits and two sets of establishment or maintenance charges to be carried by the paper, and naturally the ultimate selling price contrasts unfavourably with the direct mill quotations.

We are likely to hear more on this subject from wholesalers in the near future, for to some of them it is becoming obvious that the making orders are passing them and the only consolation left is the small printer's sundry orders. One of the safeguards of the wholesaler in earlier days was the foreign-made paper. It may happen that this commodity will again come to the help of the middleman, but until evidence of the fact becomes visible it is best to say nothing.

Some of the prices current in the paper market, in addition to those already named, are as follows:—English kraft, £52 to £57 per ton; Swedish kraft, £55 to £60 per ton; M.G. manilla, 5½d. per lb.; Dutch strawboards (forward delivery), £14 10s. per ton, immediate delivery, £18 to £20; foreign millboards, £35 to £40 per ton; coloured tissues, 20 by 30, 10s. per ream; bottle tissues, 5s. 6d. per ream. H. A. M.

WHATEVER your work, make it your business to appreciate its dignity and worthwhileness and service.

THE PAPER BARREL.—The paper barrel. has arrived, says the Box maker, and is being made in New York. It is a war product, but has evidently come to say. They will bear the weight of man and the anger of the express man. They are formed by winding strips of gummed paper around a mandrel by a machine which has been patented and is in commercial operation. The core of the machine may be altered to make different barrels. The only wood used is for the square hole in the top, and they are easily headed. The barrels are clean, and will not allow the con-tents to sift through. They weigh less than tents to sift through. the wood barrel, and, it is claimed, cost less.

Paper Control and Atter.

interview with Mr. Hail Caine,

Some Effects of Paper Restrictions.

Now that Paper Control is a thing of the past, and even the Paper Restrictions Department of the Board of Trade has been abolished, a representative of the British and Colonial Printer called upon Mr. G. R. Hall Caine, the former Deputy Controller of Paper, in order to get from him some thoughts on the present position of the paper trade in this country and the outlook for the future.

Our representative found Mr. Hall Caine in his office as chairman and managing director of the British Hard Paper Ware Co, Ltd., 19, Clerkenwell-close, E.C. This company, by the way, is developing a new use for paper in containers of various sizes and descriptions, besides contracting for the printing of books and continuing their bookbinding business. Mr. Hall Caine is, of course, also joint managing director of the Greycaine Book Manufacturing Co., Ltd.

Mr. Hall Caine explained to our representative that he was now a detached personality so far as the paper trade is concerned, and he spoke no longer with the inside knowledge which he formerly had as Deputy Controller.

Paper Trade Loyalty.

"One would like to say, however," he observed, "how much one is indebted to all papermakers and to the consumers of paper for the very loyal manner in which they assisted the Department of the Controller of Paper in carrying out most difficult regulations for the Ministry, particularly during the last four months. During the war one had naturally patriotic feeling and the war-time difficulties, which always helped the Department to get through; but during the last four months that restrictions have been in force we have been at peace. It is always much more difficult to carry out what one might call strict administration while people think they should be free as air; but I think, on the whole, that the Department, penalised very greatly by the lack of staff, because we started our 'cut' much earlier than Government offices, have done their part very well. We reduced our staff immediately, and much of the delay that has been spoken about in your excellent journal and outside has been due to the fact that we have been trying to administer the Department with a minimum staff.

Mr. Hall Caine mentioned that he severed his connection with the Department on April 30th, and it was then his intention to get back to his ordinary work. He was, in fact, away from the Department for a month or six weeks, but the authorities thought they would like him back again, and, therefore, he has been in attendance at Buckingham Gate for the the last two months or so.

A Disappointment.

"Of course I am disappointed," pursued the Ex-Deputy Controller, "that the Government

did not see its way to allow the restrictions on paper to remain in force for the period recommended by the Committee of Inquiry. I never heard any serious complaint during the time I was at the Department from the consumers that there was any great shortage in any particular variety of paper. Naturally the representatives of foreign mills felt they were being hardly treated; but, with very few exceptions, even those gentlemen realised that it was a perfectly natural thing for this country to protect its own industries before thinking about the foreign mills. On the whole, however, we are satisfied with the condition of things, and my own personal opinion is that we have given just that degree of stability to the trade which the committee thought it was necessary to give if the Government had seen its way to allow the restrictions to continue to the end of the year. I believe even the four months have done good; but another four months, which was all that was wanted, would have turned the good which has already been done into what we believe would be a solid and lasting benefit."

Price Movements.

The speaker went on to say that the restrictions had not had the effect prophesied for them by the opponents of all restriction.

"They have not had the effect of stiffening prices," our representative was told, "except where the normal stiffening would have taken place in any case. I mean in the case where altered working conditions have been introduced or higher wages have had to be paid during the period of restrictions. On the other hand, the operation of these restrictions has exceeded the most sanguine expectations of many members of the Committee in so far as paper prices have been reduced during the operation of the embargo on foreign paper. It was assumed by some that the restrictions would perpetuate the war prices, but they did not, and, of course, it is impossible to say whether the prices would have come down or have come down as rapidly without restrictions.

Mr. Hall Caine quoted figures in support of

his argument.

"We have only to compare paper with other commodities," he stated, "to find that paper prices have been reduced since the armistice in some cases by 75 per cent—these are figures I have worked out," the speaker explained—"and in hardly any case that I can recall have they been reduced by less than 33 per cent. Take news-print, for instance. The price at the time of the armistice was 4½d.; it has since been down as low as 3½d., and now it is 3½d., due, of course, to the fact that there have been changed conditions of late. The shift system, for example, has been introduced, but that is a natural thing and would have taken place in any event. Then turn to boards. In November they were £35 per ton, while just before the regulations came off they were £18 per ton, a difference of nearly 50 per cent. Esparto papers, again, at the time of the armistice were Is. 2d. per lb.; now I think they are down to about 5½d."

Digitized by Google

BRITISH & COLONIAL

Comparisons.

"Now compare that with other things," Mr. Hall-Caine went on, "say the price of steel or woollen goods or cotton goods, almost any commodity you like. Can you show me a single instance in the whole of the raw materials upon which this country depends for its manufactures where such a drop has occurred? I know of no instance, and I attribute the reduction in the price of papers to the fact that by means of these restrictive regulations which we were able to bring in, mills have been able to take back the men they had been obliged to dismiss, to employ the labour that came from the front, to start up their new machines and to get a more or less normal output.'

The Only Danger.

"Again, we have passed over the great danger of American invasion of paper. now no longer possible owing to the drop in the exchange, and papermakers of the United States are unable to compete successfully with modern British mills Even the Scandinavians will now find it difficult to compete as they would have done four months ago. The only danger that I see on the horizon is the German attack. There is a great deal of difference of opinion on the possibility of Germany being a competitor in the British paper market. There is no doubt the British paper market. about it whatever that the Germans are equipped to compete, and will certainly be able to put news into this country at a figure which no British mill could for a moment contemplate reducing its price to. You have only got to consider the exchange, and then you realise that in order to make German paper sell in this country at 3d per lb., it has to be selling in Germany at I mark per lb., which, of course, it is not.

"The only question that arises-and on this question I am not competent to give an authoritative opinion — is, has the German paper manufacturer got any surplus to export? We might say that paper is one of the commodities which the Germans can export at the greatest advantage, because they are entirely self-contained in this manufacture—that is to say, they make the wood pulp and they make the paper. In certain manufactures they have to go outside to other countries to buy a portion of the constituent parts of commodities, and when they have to go outside they are faced with an adverse exchange. Thus if Germany has to go to Sweden for wood pulp, finding the exchange against them, they would not be in the same advantageous position to compete, as they are by virtue of the fact that they make their own wood pulp. There was a German quotation in London the other day for a thin substance kraft paper at £25 per ton. Of course there are a lot of German quotations knocking about, but whether they can be substantiated with goods remains to be seen."

The position of Canada being mentioned, Mr. Hall Caine observed: "It is satisfactory to see that quite considerable quantities of Canadian pulp have been imported, and I

understand that the first Canadian Govern ment steamship is about to leave the othe side, and upon it is a cargo of pulp and pape and other commodities. Other steamships are to follow."

"Canadian pulp," it was explained, "has not been knocked out of the market by the fall in the exchange, because there is still a considerable margin between Norwegian mechanical and Canadian, which enables the Canadian product to stand the fall in the exchange and still not come up to the price of the Norwegian mechanical pulp."

The fall in the rate of exchange, however, we were informed, had had the effect of handicapping Canadian paper.

A Bit of Advice.

"I would like to say this," added Mr. Hall Caine, "that I hope that now the papermakers of the country have succeeded in impressing upon the Government the importance of paper both in war and peace, they will see to it that the Government does not forget it again, and I should like to see papermakers urge upon the Board of Trade the importance of maintaining in that Government a special department, however small, which would be a link between the papermakers, the consumers of paper and the Government, so that they might be able to deal with any futuretrade legislation which affects the paper tradeas a whole. With the dissolution of the department with which I was connected, the-Government are left, as far as I am aware. without anybody who knows anything about papermaking. We are back again in 1914 so far as the Government is concerned.

Our representative was informed that the statistics and other information which had been gathered during the period of control had been handed over to the Board of Trade, but Mr. Hall Caine pointed out that these particulars, covering the period of war, would have little relation to normal conditions. Mr. Hall Caine thought, however, that the statistics should be kept up-to-date, and he mentioned a scheme which was completed just before the closing of the department.

"We had a record of the actual position of nearly every papermaker in the country," he said, "as to how he was placed for orders, and so on, and the qualities he could make. The manufacturers filled in a form for us which told us how they stood for orders for September, October, November and December. I do not want them to let the thing drop because we are all out of it."

Question of Dumping.

In this connection Mr. Hall Caine mentioned the Anti-Dumping Bill which would be coming along, and he urged that the papermakers would have to see that their case was put before the country when the problem of anti-dumping arose.

"Information such as we had would be useful in that case if it was kept up-to-date," added Mr. Hall Caine. "Papermakers ought to learn by this time that the Government never does anything unless it is pushed. You may be sure something will be done for the toy-makers, because they have the bit between.

their teeth, and they will stir up Parliament until they get some satisfaction.

"In regard to this question of dumping, the case of the papermakers, as I understand it, is a perfectly reasonable one. The ordinary definition of dumping—that is to say, that the article should not be sold in this country at a price lower than it is sold in the country of origin-would not protect the British papermaker to any considerable extent; but a definition which said that paper made under conditions of labour and rates of pay which differed from the hours and rates of pay in this country-that condition imposed on foreign countries would benefit the British papermaker very considerably, and the Government have accepted to some extent that definition."

Mr. Hall Caine cited a case of Japanese pencils and stated that the labour on a certain quantity of pencils made in this country was reckoned to be 2s. as compared with the

cost of two yen in Japan.

"Nobody is going to seriously contend," said the Ex-Deputy Controller, "that pencils made under those conditions should be allowed free import into this country to compete with the British pencil-maker, who has to pay trade union rates of wages, even though pencils may be sold in Japan at an equivalent price to what they are in this country.

Mr. Hall Caine added that he thought the work which Mr. Vernet and he had been able to do should not be left without being

followed up.

"We have done our best," he said, "and I think the paper trade of this country was extremely fortunate to have a man like Mr. Vernet to take charge of the department. He is one of the big outstanding men of this country. He has a great big brain, and there is no man I have ever discovered with whom it has been more easy to work, and who has been more consistently right in his decisions."

CEMENT STEREOS.—Under a patent by Mr. J. C. Grant, printing surfaces are made in pure Portland cement by casting on a flong, papier maché, or other matrix. If not properly type-high, the cast block may be made so by casting plaster of paris or the like on the back. In the process a flong or matrix preferably made impervious to moisture, by treating with oil or paraffin wax, is placed face-up on a glass or metal plate to which it may be made to adhere by a coating of warmed paraffin wax. Plates of glass or metal are placed round the matrix and the Portland cement is run into the space the apparatus being agitated to eliminate air A glass plate is placed on the top of the cement. When necessary, the block may be made type-high by casting on it a cement or plaster of paris backing, the block being placed face down on a level surface on which are placed type-high supports for an oiled glass plate, which is applied to the back.

Colonial Notes and News.

AUSTRALIA.

The Commonwealth departments, apparently in a spirit of self-advertisement, are becoming more and more prone to spend money in publicity. There is an increasing belief on the part of Government officials in the policy of issuing magazines outlining their activities, and there is danger of the bookstalls being flooded with pamphlets and magazines dealing with the work of every department, from the Prime Minister's downwards. A beginning in this direction has already been made by the Institute of Science and Industry, which, taking for granted the mere detail of full Parliamentary sanction to its continued existence, has issued a publication called Science and Industry, three numbers of which have already been published. Mr. Tudor (V.) asked several pertinent questions regarding this venture in the House of Representatives and succeeded in eliciting the following facts:—The number of copies of each edition printed were—May, 2,000; June, 2,000; and July, 1,500. The cost of each number, including printing, paper, postage, etc., was 1s. 8\frac{1}{4}d, this sum including "nonrecurring preliminary expenses." ber of copies issued gratis was: - May, 1,715; June, 1,492; and July, 250; the latter figure being incomplete. The number of copies that have been sold were—May, 215; June, 288, and July, 251 (incomplete). The cash receipts from sales and subscriptions, but not including advertising revenue, were-May, £12 175.; June, £46 9s., and July, £16 10s. (incomplete).

According to the latest published statistics the value of paper, stationery, etc., imported into the Commonwealth in the period July, 1918, to April, 1919, was £4,214,162, as compared

with £2,678,765 in the corresponding period of the previous year.

Mr. Groom (Minister for Works and Rail-ways) has given notice in the House of Representatives that he will move:—" That the proposal for the erection of a Commonwealth note printing office in Fitzroy be referred to the Standing Committee on Public Works for inquiry."

A well-known lithographic artist has passed away in Melbourne in the person of Mr. Cark F. L. Lang, at the age of 85. In his day he was a conspicuous figure in the commercial artistic world. Thirty years ago he was artist-in-chief to Messrs. Sands and M'Dougall. While with them he re-produced in colours for guinea art union purposes many well-known pictures, among them being "Mount Wellington" and "The Cattle Drover," which were much admired as fine examples of stone-engraving and chromowork. Subsequently he was in the Government Printing Office, and later still set up in business for himself. He is described by those who knew him we'll and worked with him as a most amiable man, an artist to his finger tips.

Another recent death was that of a Sydney journalist, Mr. Morgan M'Mahon, a native of Cork, Ireland. After leading a seafaring life in his earlier years Mr. M'Mahon took up journalism, and was leader writer on more than one Melbourne newspaper. Leaving that city, he went to Sydney, became a contributor to the Sydney Freeman's Journal, and later was for about sixteen years a leader writer on the Evening News. He then went to Brisbane and took the post of associate editor

Digitized by Google

on the Brisbane Courier. Returning to Sydney, Mr. M'Mahon was associate-editor with Mr. J. M. Sanders on the Australian Star. His next move was to the Freeman's Journal, of which paper he was editor for some time. He resigned this position, rejoined the Evening News, and was an occasional contributor up to the time of his death.

The Australasian News Co., Ltd., has increased its capital from £10,000 to £25,000 by the creation of 15,000 £1 shares.

At a mass meeting of the Printing Trades Federation Council of New South Wales the following motion has been carried:—"That this mass meeting is of opinion that the immediate amalgamation of the affiliated unions is absolutely necessary for the future welfare of the allied printing trades, and urges each unionist to support the proposal." A ballot is to be taken on the question.

The Public Library at Sydney is a wonstocked well -derful institution, books on all subjects as well as comand technical publications, and an exhibition of some of its treasures has just been opened for the education of the public mind. There are shown beautifully illuminated manuscripts dating back to 1420. The bibliophile glories in a wonderful collection of incunabula printed before the year 4500. And alongside of it all the comparatively modern - the first book published in Australia. It embodies the New South Wales General Standing Orders, published in 1802, the first almanac and the first newspaper, the Sydney Gazette. That the standard of commercial art locally is high is evidenced from the modern display by the N.S.W. Commer-←ial Artists' Association, including showcards, catalogue work, and posters. There are also artistic posters presented to the library by Mr. Chas. Lloyd Jones, of David Jones, Ltd., and representative of British, American, and poster art generally abroad.

At a meeting of the Minister of Lands and a deputation in favour of the Kiewa electric supply scheme it was pointed out that if the Kiewa scheme were developed opportunity would be afforded of cultivating spruce trees extensively for use in the making of paper, an industry which would absorb a considerable amount of labour.

At Sydney, before Judge Backhouse and a jury, David John Wildey, of Sydney, paper and machinery merchant, sued Messrs. McCarron, Stewart and Co., Ltd., of Sydney, in connection with the sale of 20 tons of supercalendered paper. The plaintiff claimed on two counts, the first being for £350 commission on the sale of the paper, and the second count was an alternative claim for £350 for profits of an alleged partnership between the plaintiff and the defendant. The defence was not guilty, and a denial of any agreement

between the parties. After a hearing His Honour gave the defendants a verdict.

THE Australian Paper Mills Co. has declared an interim dividend at the rate of 10 per cent. per annum.

THE report of Messrs. Edwards-Dunlop covers the year ended April 30th last. A net profit of £47,027 is shown, and, with £14,110 brought forward, there is a total of £61,137. Dividends (including interim dividends) of 10 per cent. on ordinary shares and 5 per cent. on preference shares absorbs £29,748. A sum of £17,000 is carried to reserve, making that fund £118,000, leaving £14,389 to be carried forward. The report points out that the stock is larger than usual owing to the manufacturers on the other side of the world hurrying forward all orders on hand at the time of the cessation of hostilities. It is, however, merely a question of a little time when this surplus will be disposed of and stock resume its normal proportions. Costs of paper in the producing centres fell a little after the armistice, but both in America and Canada the market has since hardened, and our cables indicate advances in the cost of paper in Great Britain and Scandinavia. The high cost of production throughout the world makes it unlikely that there will be any marked fall in paper during the remainder of 1919.

THE possibilities of Australian trade with Finland are being discussed and the new Consul for Finland in Sydney has been expressing his opinions on the feasibility of trade between the two countries. He says that there are many things that could be exchanged between Australia and Finland. Australia wants paper and pulp. Finland is producing these in enormous quantities. pre-war days, Russia was one of her best customers, and thousands of tons of paper found yearly their way into the great empire. now, owing to internal troubles, Russia imports hardly anything, and the surplus of the Finnish paper production could consequently be exported to Australia to fill local requirements. In the pre war days Finland imported £8,000,000 worth of goods from Germany. The bulk of this came from the British Colonies and South America, with German merchants acting as middlemen, and receiving great profits. The reason of this was that German merchants were able to sell their goods on special terms. By eliminating the middleman the producer and consumer could get into direct touch with one another, and the imported needs would be more accessible to the public. Now Finland can obtain nearly all her goods from the British Empire. Thus we can anticipate that Finland, in the future, will be a good customer to the Empire, especially as the Finnish people have an unbounded confidence in the fairness of British business principles.

have passed away was Mr. Michael Donnelly, one of the best known men in Christchurch. He arrived in Dunedin in early youth, and subsequently took up newspaper work in that city. For several years he held responsible positions on the literary staff of the Guardian, Otago Daily Times, and the Herald. he was sub-editor of the Christchurch Press and editor of the Telegraph for several years. He studied law, political and moral science at the Otago University, and in 1885 was admitted to practice as a solicitor of the Supreme Court, and six years later as a barrister at Christchurch.

The death has also occurred of Mr. John llott, who conducted a well-known advertising agency in Wellington. Mr. Ilott, who was 66 years of age, was a native of Ireland. Prior to the foundation of his business he was engaged in journalism both at home and in New Zealand. He arrived in New Zealand in 1883, and for seven years was connected with the Te Aroha News, being for the most part of the time editor and managing partner. He was a member of the Te Aroha Hot Springs Domain Board and Town Board. In 1890 he joined the New Zealand Times, Wellington, from which he resigned in 1891 to start business on his own account.

During the war many thousand copies of the Auckland Weekly News were dispatched to New Zealand soldiers and sailors in all parts of the world, and many grateful letters have been received expressing the gratitude of the recipients and at the same time speaking in the highest terms of the paper. The following highest terms of the paper. letter is quoted as an example of the many unsolicited ones that have been received:-"I have recognised the red cover in many strange lands. Out in Egypt I read it almost in the shadow of the old mosques and temples. In France the boys argue heatedly over the merits of Auckland and Wellington or Wellington or Dunedin, but they all agree that our Weekly News is a fine paper. In the almost impregnable defences of the Hindenburg line, away down in the deep dugout recently vacated by the enemy, I found an old copy of the Weekly News, evidently taken from our lines and eagerly read by the Hun. A friend found on the walls of another dugout a caricature of the Kaiser by 'T. L.,' and the Germans evidently prized the picture, for it was carefully pinned under the light. In France and Belgium and Germany itself the children and adults alike were very interested in the pictures of our land contained in the Weekly, which came regularly by mail. . business man in London said to me that he thought that for quality of paper, clearness of type, photographic excellence, and literary style our paper compared favourably with any he had seen in his journeying around the world.

CANADA.

The Canadian pulp and paper industry continues to make huge strides. Work has commenced on the plant which the International Paper Co. intends to erect at Three Rivers, costing approximately \$4,000,000. The undertaking will be rushed, and it is expected that the structure of the mills will be completed by December. When completed, some 3,000 hands will be employed. The product will be pulp and all grades of finished paper.

The Canadian paper industry is fast becoming one of the most successful industries in Canada, and we learn that the Wayagamack Pulp and Paper Co. is supplying the English market with kraft wrapping. The English market with kraft wrapping. Wayagamack, which is the largest kraft mill in the world, is situated at Three Rivers, on the deep-water ocean channel at the mouth of the St. Maurice River, where it joins the St. Lawrence. The site is one of the finest for the purpose in the world, having excellent water and railway communication with industrial centres. The company owns 1,100 square miles of forest in the upper reaches of the St. Maurice, and the timber is floated down the river to the mill at its mouth.

Mr. James Gairdner, one of the oldest members of the Toronto Typographical Union, passed away recently. Mr. Gairdner was 87 years of age and was born in Ayr, Scotland, going to Canada in 1881. He had formerly been a foreman in the composing-room of the Glasgow News, later going to Ireland and acting in the same capacity on the Belfast Northern Whig. On going to Canada he was engaged for 15 years in the composing-room of the Mail and Empire. Later he left the newspaper and was employed in the Methodist Book Room. During his newspaper work he saw printing develop from its early stages to its present efficiency. He is survived by two sons, James Gairdner, employed in the Mail and Empire composing room, and Robert Gairdner, of the Globe.

Mr. James A. Lambert, who until a year ago controlled the Mount Forest Representative, has also passed away at Toronto. When fifteen years of age, he went to Picton where he learned the printing business, afterward working on newspapers in Prescott, Toronto and Acton. He moved from Acton to Mount Forest, where he established the Representative in the interests of the Conservative party. He conducted the paper until a year ago, when he retired from business. Two sons survive, Norman of Winnipeg, formerly a well-known Toronto newspaperman, and now secretary of the Canadian Council of Agriculture, and E. F. Lambert, Toronto. general secretary of the Canadian National Institute for the Blind.

A meeting of the newspaper men connected with the various Toronto daily papers has been announced to discuss ways and means of improving the general conditions of the work in Toronto. While nothing definite has yet been decided upon, the suggestion of

forming a Newspaper Writers' Association is spoken of. A number of such organisations have recently been formed in large American and Canadian cities, the latest being in Boston, Mass. These are understood to be proving a success, and many of the newspaper men in Toronto are desirous of seeing a similar association formed there. It is believed that such an organisation would raise the status of reporters and newspaper writers, and would prove a distinct advantage to the newspapers themselves.

A pleasing feature in the Canadian trade reports is an increase in the imports of British literature, books accounting for \$224.515, against \$151,605, and magazines and literary papers, \$12,013, compared with \$6,612. In view of the preponderance of American literature on the shelves of book stores in the Dominion, the better class of the reading public in Canada will look upon this increase with pleasure. With an improvement in Atlantic shipping facilities there should follow a further expansion in Canada's import trade with the United Kingdom. In the meantime the low rate on sterling exchange naturally acts as a temporary stimulus, while on the other hand, the abnormal high rate on New York tends to restrict imports from the United

INDIA.

The annual report of the Bangalore Printing and Publishing Co, Ltd., of Bangalore City, is just to hand and we quote from it as follows: - "I would first direct your attention to the fact that while our receipts under the head of "capital" total during the year about Rs. 1,30,000; our assets in the shape of buildings, plant and machinery, stock in trade and furniture, less depreciation charges on a fair scale, amounts to Rs. 1,11,000, while our investments aggregate about Rs. 36,400 and debts owing to the company (mainly by Government departments and since recovered largely) Rs. 15,600, making in all about Rs. 1,63,800. The buildings were extended to provide for the additional accommodation required at a moderate cost, and the extension has been pronounced by competent experts as both substantial and suited to the growing needs of the company. In the years to come much more accommodation will be found to be necessary and that is one reason why the directors of the company have been anxious to build up a strong reserve for meeting con-tingencies of this kind. To the reserve of the past year, viz., Rs. 5.000, it is therefore proposed to add Rs. 13,000 this year, raising the total under this head to Rs. 18,000. As regards general expenditure, the directors have been, as in the past year, cautious, but in the current and coming years this item is likely to go up. Despite the higher cost of materials and wages -and they have gone up 200 to 300 per cent. on the pre-war prices-the company has kept to its usual moderate rates. The increasing patronage that the company is getting shows that its work is appreciated. To meet the needs of the place and the wishes of constituents, it is under active contemplation to add to the company's plant and machinery and to make it more or less self-contained. In a place where labour is notoriously scarce and what there is available of it is uncertain to a degree, you will all agree there must be difficulties. To avoid these and to push forward the work, it is deemed essential to add to the company's plant and machinery, the latest types of labour-saving appliances."

"The result of the year's working, after providing for all fixed charges and for depreciation of plant, machinery and furniture, is that there remains a balance of about Rs. 28,400 including the balance brought forward from last account. Out of this, the directors re-commend the payment of a dividend at the rate of 8 percent, per annum for the year ending December 31st, 1918. This will take about Rs 8,500. The directors also propose a bonus of one month's pay to the men on the establishment who have worked for one full year on the date of this balance sheet, which is likely to absorb about Rs. 500. They all propose to write off the general charges of the past year amounting to Rs. 1,500 and to place to the reserve fund Rs. 13,000 and to the fire insurance account Rs. 1,875. Despite all these appropriations, we carry forward about Rs. 3,000 to the credit of the current year. The dividend paid for the year 1918 is 8 per cent. as against 6 per cent. of 1917.

The report goes on to state that "the trade in India is largely dependent on conditions in England and America, and as regards skilled labour, India is by no means blessed with it to the extent necessary. As regards our own State we are, if anything, worse than most parts of British India. Technical education of the young printer is still a desideratum and the inducements held out to him are neither many nor handsome. In these conditions, no trade which requires skilled labour can flourish; least of all the printing trade which requires not merely theoretical knowledge of a kind, but also practical apprenticing for a period of time. If ignorance is to be dispelled from the land, the improvement of the printing trade is a prime necessity. The production of books, newspapers and trade and business circulars all depend on well organised printing houses and these cannot flourish unless they can readily secure locally the requisite skilled Here is something, in my opinion, for the Government Department of Education to carefully look into." So it seems that the technical training of young printers is as necessary in India as in this country.

His Excellency Lord Willingdon, Governor of Madras, recently opened a conference regarding publicity in relation to Government activities, and in the course of his speech referring to the influence of the Press in giving publicity to accurate information said that it was with the greatest regret that during the few short months that he had been at the head

ABEL HEYWOOD & SON, Ltd,

47 to 61, Lever Street, MANCHESTER. by

of the administration of the Madras Presidency it had been found necessary to take legal measures against certain organs of the Press. He assured them that his record at Bombay showed that no one disliked more than he to fetter in any way the freedom of views and opinions on public questions. He had during the past few weeks the opportunity of very free and frank discussion with some of the principal editors of the daily papers, and hoped and believed that this discussion may prove to be of mutual advantage to both the editors and himself. He was glad to be able to learn something of the difficulties under which they labour-difficulties, which, as a result of this meeting may be largely done away with. He believed that the conversation showed them their immense responsibilities to the public, especially in times of serious political agitation and unrest, and that they had obtained a more clear idea of the difficulties and responsibilities of Government, too.

The speaker then referred to a personal matter, and in this connection said: I have seen lately—I am not quoting the exact words -that this unfortunate Government with broad and liberal views is being dragged at the tail of a chariot of its bureaucratic colleagues and has been forced to agree to these actions which we have taken under the Press Act much against its wishes and inclinations. I should like it to be clearly understood that so long as I am at the head of the administration of the Madras Presidency, I take the fullest responsibility for the action of Government. My views on the future of India have never been disguised. My desire to satisfy, as far as possible, the political hopes and aspirations of Indians is well known, but I am determined that the fine record for loyalty and good citizenship which this Presidency has long held, and which has stood the test in the past of many anxious times, shall not, if I can help it, be undermined by speeches or writings of an undesirable character. Let me repeat what I said only a few weeks ago in replying to an address of the Madras Corporation, that every Government must expect criticism of their action and should welcome that criticism, but we have a right to demand that that criticism should be fair.

Later His Excellency opened a conference and called for a general discussion on the question of a Publicity Board. The speeches showed the conference welcomed very warmly the formation of a Publicity Board. His Excellency said that from the speeches, so far delivered, he understood the main idea to be that, if possible, the publicity bureau should be purely an information bureau. In a good many speeches there was also an idea that the Government should be eliminated from the bureau, which should be a non-official one. His Excellency failed to see why there was this terrible suspicion of the Government. So far as His Excellency and the Government were concerned, the idea was that the Publi-

city Board should be purely an information bureau on all possible subjects, and the people who run the bureau should not indulge in any way in controversial matters.

At the emergency meeting of the council of the Press Association of India held on July 31st, 1919, the following urgent resolutions were passed:—

- n. That in furtherance of the cablegram sent by this Association on July 1st to the Prime Minister, the Secretary of State for India and others regarding the present situation of the Indian Press and the sore sufferings inflicted on it by the rigorous administration of the Press Act by the executive authorities in India, this council authorises its president, Mr. B. G. Horniman, now in England to place before the authorities and the public there the case for the repeal of the Press Act and for the rendering of justice to the Indian Press, as well as to the business of printing and publishing in India in collaboration wherever possible with other members of the Association now in England.
 - 2. That the council of the Press Association also deputes Mr. A. Rangaswami Iyenger, a member of the executive council of this Association, to co-operate with Mr. B. G. Horniman in the said work and authorises them to cause the preliminary memorandum, as well as the subsequent memoranda hereafter to be sent, placed before the authorities, as well as the Parliament and the public of the United Kingdom.

 That a committee consisting of Messrs. S. Kasturiranga Iyenger. M. K. Gandhi, S. A. Brelvi and Manilal C. Modi, be appointed to prepare the supplementary memoranda to be sent later on.

4 That the council of the Press Association place on record their grateful appreciation of the very valuable services rendered by Mr. B. G. Horniman (president of this Association ever since its establishment) to the Press in particular and to the country in general and while reposing unabated confidence in him, condemn the most arbitrary and high-handed action taken by Government in deporting him from India without trial and strongly urge that the order of his deportation be revoked without delay.

BRITISH EAST AFRICA.

Although the United Kingdom holds the largest share of the trade of British East Africa, it is probable that the changed conditions which are at present affecting competition in all markets will produce a keen struggle for the supply of manufactured articles to the Protectorate, and for a share of its raw materials. Before the war, says the Board of Trade Journal, our chief competitors were the Germans, who were firmly established on the East Coast of Africa. They had several old-established and first-class firms trading there, who lost no poportunity in

Digitized by GOOGIC

SEPTEMBER 25, 1919 BRITISH & COLONIAL PRINTER & STATIONER

pushing their business. They were well served by excellent lines of steamers running between the Protectorate and Europe, four ships every month, and also a fortnightly connection with Bombay. German shippers obtained preferential rates, and they received all the credit they needed from banks in Ger-

The trade with India was also, and still remains, in keen competition with that of Europeans, and as the manufactures of India develop this competition is likely to become still greater. Even during the war the service of boats running between that country and East Africa was fairly well maintained. The Indian community plays a very important part in the commercial affairs of the Protectorate. In all the leading towns and districts its members are well represented, and their scope is continually extending. activities are particularly marked at Mombasa, Nairobi and Kisumu, the three most important towns, where it is at once apparent that the European trading element is much in the minority. Indian merchants are engaged in an extensive export trade with all parts of the world in connection with all the products of British East Africa and Uganda.

Embossing for Printers.

The beauty of embossed lettering on the cover of a catalogue or other piece of printed work adds to the attractiveness of the job and causes it to be regarded by the recipient with greater attention than if a piece of plain printing had been given to him. The printer who has never tried embossing on a printing press will find that it opens up for him a new and profitable market in which he will obtain better prices, The demand for embossed printing is increasing, and as not only lettering, but artistic designs may be employed it offers a wide field for new and original

Of course in this class of work the great thing is to get the dies, printing blocks, etc., prepared by a firm that understands what is wanted to produce a high class effect, and here we may point out that Mr. B. Dyer, the well known die sinker, 1, Dorset buildings, Salisbury-square, E.C.4, specialises in this kind of work, and produces in his own works all the necessary appliances for every class of embossed printing, and is always ready to instruct or advise printers on the subject of embossing or to produce designs and sketches for any special job that may be required.

For this class of work the firm has a full staff of trained artists and the most up todate machinery and plant.

IF you get to Heaven there will be those there whom you will be surprised to see, but they will be just as surprised to see you.

Caxion Convalescent Home.

Lord Nayor Lays Foundation Stone of Printers' War Memorial Wing.

An interesting function took place on Saturday last when the Lord Mayor of London (Sir Horace Brooks Marshall, P.C., M.A., LL.D., J.P.), who was accompanied by the Lady Mayoress, laid the foundation stone of the Printers' War Memorial Wing to the Caxton Convalescent Home, Limpsfield. There was a good muster of members of the printing and allied trades with their ladies, who had assembled to watch the proceedings, which were carried out under ideal weather conditions. Among those present were Sir Harry Brittain, K.B.E., M.P.; Sir Arthur Spurgeon, and Messrs. C. J. Drummond, M.B.E., J.P. (president), C. W. Bowerman, P.C., M.P. (treasurer), J. Mortimer, H. W. Howes, A. Dargavel, G. Isaacs, R. S. Cartwright, G. Clark, W. H. Christopher, E. J. Benn, S. J. White (secretary), and others. Previous to the ceremony, Miss Rita Fowler presented to the Lady Mayoress a handsome bouquet.

Mr. Drummond, in opening the proceedings, extended a warm welcome to the Mayor and Lady Mayoress, and gave a short résumé of the early beginnings of the Home. He said the founding of the Home was the idea of a few humble journeymen compositors. The work of the Home has gone forward and has been very successful, and they have never looked back. When it was first started it was intended only for men, but since the coming of women into the industry, the committee realised that provision should also be made for women. Mr. Drummond went on to say that the Home was the only one in the United Kingdom open to members of the printing and allied trades; when he said allied trades he meant it in the broadest possible sense. It was not only for journalists, but for everybody associated with the trade. Their efforts in the past made them feel justified in laying this foundation stone to day, and although they had not got all the funds necessary, experience made them feel quite sanguine about it. The printing industry was the second largest in the metropolitan area, and it was felt necessary that something should be done to serve as a war memorial. A meeting was called in the early days of the war at which everybody connected with the trade was invited to attend, and it was unanimously agreed, continued Mr. Drummond, that the best mode of fixing a war memorial was to erect a new wing at the Convalescent Home. Donations and subscriptions towards this new wing have been very gratifying, and to make special references would perhaps be invidious, but he would like to mention the very great services rendered by the Federation of Master Process Engravers.

The dedication of the foundation stone of a building for the War Memorial Wing of the

Caxton Convalescent Home was undertaken by the Rev. G. G. Richards, Rector of Limpsfield, assisted by the Rev. E. C. Cruttwell. The following is the inscription on the foundation stone: ---

PRINTERS' WAR MEMORIAL.

This Wing was erected to commemorate the Supreme Sacrifice of Members of the Printing Bookbinding, Publishing, Stationery and Kindred Trades who fell in the Great War, 1914-1919.

The Foundation Stone was laid by The Right Honourable Sir Horace Brooks Marshall, P.C., M.A., LL.D., J.P., Lord Mayor of London, on the 20th day of September, 1919.

At the conclusion of the dedicatory service the Rt. Hon. the Lord Mayor was presented with a silver trowel with which he proceeded to carry out the function of laying the stone, saying: "In the name of the Great Architect of the Universe I do declare this stone to be

well and truly laid.

Mr. C. W. Bowerman, M.P., moved a vote of thanks to the Lord Mayor, and referred to the day, 25 years ago, when the foundation stone of the building was laid, and mentioned that on that occasion the skies were dull, as some of them might remember. To-day the sun was shining and he would like to suggest it was because of the presence of the Lady Mayoress. We are here to commemorate this great war and the men in the printing trade who have died in order that we might live. He wished to say to the Lord Mayor that in coming there that day in assisting the committee he was doing his part in helping the Home and in saving the lives of men and women, and on behalf of the committee he sincerely and devoutly expressed thanks to the Lord Mayor for his presence.

Sir Harry Brittain, M.P., in the absence of Sir George Riddell, supported the vote of thanks. He remarked that he had by far the hardest task of the afternoon in speaking in the place of Sir George Riddell, whom he considered one of the wittiest speakers he had listened to. He counted the Lord Mayor among his oldest friends, and he had seen him at many historic gatherings, and he was always impressed by the splendid manner in which Sir Horace Marshall undertook his duties. He had seen the Lord Mayor in a new role that afternoon, and he was perfectly certain that if he ever undertook another profession he would make a good living at the brick-laying business. He would like to ask him if he had his trade card with him. (Laughter.) He had much pleasure in sup-

porting the vote of thanks.

The Lord Mayor, in reply, said he belonged to a kindred trade, and thought that the institution was one worthy of the sympathy and support of every member of the printing trade. We had heard much about the value of the sovereign, and he had been struck by the great value of the penny, as it showed what great possibilities there were in this humble coin in regard to the success of the Home. The penny collection had been an immense success. Some of us, continued the Lord Mayor, who were neither "fathers of chapels," nor "members of the congregation." had been permitted to assist in helping the institution in another way. During the war the printer at home had given invaluable services. He had also played another part during the last five years. His acts were written on the hearts and engraved on the affections of the people of this country. God forbid we should ever forget them. The Lord Mayor concluded by announcing that he had very great pleasure in placing to the funds the sum of 300 guineas. (Applause.)

After the ceremony, Messrs. Elliott and Fry photographed the assembly. This was followed by light refreshments served in the dining hall. Before dispersing for home visitors took advantage to view the many charming attractions this institution possesses

Coming Boom in Paper.

In Germany, America and Japan there appears to be an expectation of a boom in paper, says the Financial Times, which might have ventured to say that the boom has already arrived in the United States. During the war the price of waste newspapers rose to £25 to per ton in India, where previously the market price had been between £3 and £4 per ton. In Germany paper took the place of cotton, flax and hemp in many directions, and considerable ingenuity was displayed in its manufacture and adaptation to various requirements. Owing to the restrictions imposed on the export of paper from England, America reaped the benefit of the big Indian hand-made Japanese paper has always commanded a good market, and the war scarcity gave the industry a big lift. It will thus be seen that the rumour originates in the countries which are likely to benefit by such a boom. Probably it is a case of the wish being father to the thought. However, there is now a tendency in all industries to establish prices on a new basis in order to cover the higher costs occasioned by the demand for better living conditions. If the boom materialises Japan should stand to be the gainer, for her paper industry was already established nearly 250 years ago, when the Dutch traders set foot in the country. Today, nearly 150,000 people are said to be employed, at an average daily wage of 24 cents. Labour at this price leaves plenty of room for price-cutting.

THE Henry Watson Music Library, Manchester, has recently acquired, through the generosity of Dr. H. Wilson, of Cheadle, the entire musical library of his father, the late Mr. Henry Wilson, founder of the Manchester Vocal Society.

LEARN to shake hands in a way that gives the other fellow a feeling that you mean something by it.

What does Ink Cost?

In a recent issue of a well-known printing trade journal an expert in estimating gives the following as the cost of a particular job.

						£467	19	6
Ink	•••	•••	•••	•••	•••		7	3
Warehouse,						10	0	6
Paper				•••	•••	11	15	0
Machining				•••	•••	61	1	O
Imposition				•••	•••	26	9	6
Compositio				•••	• • • •	£358	6	3

In another estimate he gives ink as 9d. out of a total, cost of £21 0s. 9d., and in a third case 3d. for ink on a job costing £6 16s. 6d.

Since Ink cost so little why not use the very best money can buy? One reason why the work of the American Printer is so excellent is because he never grudges money for ink.

Kidd's make and supply inks which for quality are not surpassed in this or any other country. If you want to do the best work use Kidd's best Inks.

The Library Association.

The annual conference of the Library Association of Great Britain was held at Southport last week, when there was a large attendance, and several matters of great interest to librarians were discussed. Mr. G. F. Barwick, the president, in the course of his address said that since the cessation of hostilities the association had taken big strides. One was the establishment of a library school at University College in connection with the University of London. Thanks to the gener-University of London. Thanks to the gener-esity of the Carnegie Trustees, the experi-ment was successfully launched. Librarians could not carry on their work for enlightenment and culture without proper rations and supplies. It was the community alone that could deal with the country as a whole. The failure of continuity was the bane of success. The public libraries and the association had received full recognition by Parliament and the public, and the third report of the Adult Education Committee of the Ministry of Reconstruction was the most important document for public libraries that had appeared since they were first established. It was for them to maintain their position and authority unimpaired. The librarian's work was supremely one of faith.

A memorandum had been submitted by the executive council of the association to the President of the Board of Education upon the third interim report of the Adult Education Committee of the Ministry of Reconstruction upon libraries and museums. It was agreed that the abolition of the statutory restriction upon the library rate and the giving to county councils power to apply the Public Libraries Acts to rural areas would go far towards extending the scope and usefulness of public The association offered strenuous libraries. opposition to the principle that public libraries should be remitted to special committees of the Education Authority. memorandum pointed out that it was for the new Authority to prove itself before it forced a common administration upon public libraries, and submitted that the interest of the general public was the main interest of the library, and should not be endangered by or subordinated to the special interests of education.

A discussion on "The Place of the Public Library in our System of Education" was opened by Mr. Spurley Hey, director of education, Manchester, and discussion ensued. Mr. A. Whipple, director of education, Blackburn, said that amalgamation between education committees and public libraries was inevitable, and he trusted that whatever became of the discussion they appreciated the fact that so far as education committees were concerned they were not out to annex the libraries, and if they were handed over the committees would do their very best to make the change with as little friction as possible.

Mr. J. S. Just, Manchester, said if there were no discipline between the teachers and taught there would be a Bolshevik idea in education

which would lead to chaos. The Education Authorities had failed to maintain that discipline, and there was hopeless poverty of imagination in the younger generation. The lamentable fact was that the present generation of boys and girls were ignorant in the main of the literature of their country. In many cases they had not read the books which mattered.

At the meeting on Thursday a paper was read by Mr. G. T. Shaw, chief librarian of Liverpool, on the position of libraries during the war and after, and he spoke of the financial difficulties under which the public libraries movement laboured. He urged that the limit on the library rate should be abolished by Parliament.

Sir Alexander Porter (Manchester) protested against a suggestion that technical libraries should be merely confined to each industry. The opinion of business men was that in big towns the proper method was to have a central technical library which could be made perfectly adequate for the purposes of each industry.

Mr. Stanley Just (Manchester) moved a resolution testifying to the value of the Central Library for students, suggesting to public library authorities the desirability of making an annual subscription to this library, and strongly recommending a Government grant in order that the library might fulfil the objects for which it was formed.

Mr. G. T. Shaw seconded the resolution,

which was carried.

The hon. secretary of the association (Mr. Pacey) said that in any measure, whether promoted by the Government or by the Library Association, they should fearlessly face the question of how to deal with indifferent, apathetic, or recalcitrant library authorities. The Ministry of Reconstruction should have the right to exercise mandatory powers in this matter.

The conference then terminated.

Lord Ampthill on the Press.

On Thursday last Mr. H. A. Gwynne, editor of the Morning Post, was entertained at a complimentary luncheon at the Connaught Rooms, Lord Ampthill presided, and among those present were Sir George Riddell, Sir Henry Dalziel, M.P., Sir Arthur Pearson, Sir E. Robbins, Mr. William Davies, Sir Emsley Carr, Mr Robert Donald, Mr. Leo Maxse, Mr. Harold Cox, and Colonel Repington.

Proposing the health of Mr. Gwynne, Lord Ampthill said there were few positions more responsible, more arduous, more closely concerned with the public welfare, than that of editor of a great newspaper. We owed it to the Press that our affairs were not hopelessly mismanaged. It was on the Press far more than on Parliament that we depended for the preservation of our liberties and the maintenance of national honour. Without the Press, patriotic and courageous as it had shown itself to be, we should not have won the war.

Twinlock means only well-tested, thoroughly practical Loose-Leaf Books.

THE name Twinlock is inseparable from the best Loose Leaf Systems, for it represents a series of 23 binders which cover every need of every business. A Twinlock Binder helps you to correctly classify your records, keeps them in good condition and easily accessible ever afterwards.

Stationers and those desirous of securing information in regard to the Agency for the Twinlock lines of Loose Leaf Books should get in touch with us immediately. Firms who are at present experiencing any difficulty in buying Twinlock Books through their Stationers, should communicate with us direct asking for Catalogue "E."

PERCY JONES and COMPANY, 15, LITTLE SUTTON STREET, E.C.

Digitized by GOOST

Trade Notes.

MR. CHARLES ALFRED LUFFMAN, editor of "The Continental Bradshaw," died suddenly last week at the age of 67.

The proprietors of the Dudley Herald are to publish on October 4th a new weekly under the title of the South Staffordshire Times.

THE Boston Town Council has passed plans as follows: A printing office Mitrelane, Wing and Son, Ltd.; a printing office, Wide Bargate, the Lincolnshire Standard, Ltd.

THE late Sir Donald Mackenzie Wallace, K.C.I.E., K.C.V.O., LL.D., for many years director of the Foreign Department of the *Times*, has left personal estate in the United Kingdom valued at £76,445.

The death has taken place, at the age of 67, of Mr. John Albert Howe who, for many years, until he retired from the management in 1912, carried on the business of stationer and newsagent on the Old Bridge, Bath.

A NEW business monthly called "Business Organisation and Management" is announced for October 1st. It is to be a monthly magazine for the accountant, the secretary, the manager, and all engaged in commerce or industry. The price is 1s. 6d. net.

An appearance has been entered for the National Labour Press, Ltd., in an action for libel brought by Sir Eric Geddes. The alleged libel was contained in a letter by Mr. James Winstone, of the South Wales Miners' Federation to the Merthyr Pioneer, dealing with the question of Russian investments.

THE members re-union smoking concert of the Printing, Bookbinding and Kindred Trades Overseers' Association is to be held on Tuesday, October 7th, 1919, at the "St. Dunstan's Room," Anderton's Hotel. The executive are hoping to see a large representation of members on this occasion.

INTERNATIONALISATION OF PATENTS.—The International Congress held at Brussels this month, at which representatives of all the principal countries were present, advocated the internationalisation of all patents. M. Wauters, Belgian Minister of Industry and Works, suggested that the city of Liège should be chosen as the future seat of the Universal Unions of Inventions. Italy was represented at the Congress by no less than 60 members.

PRINTERS' MEDICAL AID.—Persons of both sexes employed in and about the printing industry will be interested to learn that the Printers' Medical Aid Association have appointed Mr. Charles Ledsham, of 455, Highroad, Tottenham, N.17, 145, Stoke Newington-road, N.16, and 121, Hertford-road, Enfield Wash, optician to the Association, and subscribing members residing in these localities may now obtain orders for free spectacles by applying (through their local collectors) to Mr. Arthur O'Connor, general secretary, 30, Fleet-street, E.C.4.

THE Family Pictorial is a new weekly journal, well illustrated, and attractively produced. The paper is sold at 2d., and is published by the Amalgamated Press.

MESSRS. NICKERSON BROTHERS, 99-101, Worship street, E.C., report that they are now receiving stocks of the bookcloths manuractured by Messrs. J. Bancroft and Sons, and are able to supply them to customers as formerly.

A PRINTERS' swimming gala which was held under the auspices of the Printing and Allied Trades' Charity Sports Association, at Shore-ditch Baths, was quite a success. Twenty-three teams took part in an Inter-House Team Handicap of four a side, the final being won by Caslon's after a dead heat with Star A team, both teams being allowed 40 sec. start. Wyman's, 44 sec., were third, and Times B team fourth.

Newspaper Raid. — Police officers and soldiers entered the printing department of the Cork Examiner last week and dismantled portions of the machinery. This action was taken on a warrant from the "competent military authority," by whom the police were instructed also to seize copies of the issues of the Examiner of September 12th. The proprietors of the Examiner in a statement they have issued describing the raid, say that the premises were invested by "a large force of police, with rifles, accompanied by a number of soldiers in their tin hats, with a large motor lorry, in attendance.

PRINTING AND PAPER WORKERS' UNION .-At the quarterly meeting of the National Union of Printing and Paper Workers held at Norwich, the other evening, Mr. C A. Couzens, the East Anglian organising group secretary, reviewed the events of the trade generally since Peace had been signed. He said the printing trade workers in East Anglia are in a solid and united position, the membership probably totalling more than 3,000. The East Anglian employers are also well organised. A most hopeful sign is the formation of a Norwich and District Printing and Kindred Trades Joint Council, the president being Mr. W. T. F. Jarrold (president E.A.M.P.A.), and the vice-president Mr. C. A. Couzens (T.A. and P.P.W.). The towns represented, in addition to Norwich, are Yarmouth. Lowestoft, Beccles, Bungay, Fakenham, etc. A scheme is affoat for technical training. A standardised indenture for future apprentices is also in preparation.

Newspaper Air Service.—The Daily News thus describes how that paper was delivered in the Isle of Man by aeroplane:—"The Avroseaplanes flew from Windermere to Douglas every day during August Bank Holiday week, taking papers brought by the 5,30 a.m. train. They left the aerodrome about 6.30 a.m., delivering the papers in the Isle of Man about 8 a.m., eight to ten hours earlier than any other newspaper Only on three occasions was the service abandoned; once on account of engine trouble and twice because of gales. The service shows what can be done, in a

small way, by business aircraft, and the promoters of the scheme are to be thanked for the stimulus, they have given to commercial aviation."

The late Mr. William John Rees, a director of the South Wales Daily Post and a former Mayor of Swansea, has left £157,559.

NOTICE is given in the London Gazette that, at the expiration of three months from the date hereof, the names of the undermentioned companies will, unless cause is shown to the contrary, be struck off the Register, and the companies will be dissolved:—

Anglo-American Advertising Co., Ltd. Associated Catholic Newspapers, Ltd, British Poster and Printing Alliance, Ltd. Old Hall Publishing Co., Ltd. Traders. Press, Ltd. Willesden Labour Press, Ltd.

A PRINTER'S GAMBLING LOSSES.—At the Mansion House, on Friday, before the Lord Mayor, Mr. John Stanwix, a printer in Fleetsteet, was summoned by the Board of Trade for having between October, 1917, and October, 1918, materially contributed to the extent of his insolvency by gambling. He pleaded "Guilty." Mr. Comyns Carr, who prosecuted, said that more than two-thirds of the defendant's losses were incurred through betting. He was adjudicated a bankrupt last October. His unsecured liabilities, mostly trade debts, were £374, and his assets £1 IIs. 6d. There had been a profit on his trading, but he had gambled it away on racecourses. The Lord Mayor ordered the defendant to pay a fine of £25 and £5 5s. costs.

A series of excellent four page leaflets entitled "Talks about Work and Wages" is being issued from the office of Ways and Means, 8, Bouverie-street, E.C.4. The leaflets deal with economic questions, and are intended to show the worker that high wages and low production cannot, in the end, benefit him, but rather lead to a lowering of his standard of living, while increased production will tend to raise him in the economic scale. The leaflets are written by such men as Ernest J. P. Benn, Sir Wilfrid Stokes, K.B.E.; The King, Boyd Cable, and others. They are intended for distribution by employers amongst their workmen for the education of the latter, and are sold at a low price, in quantities, 100 for three shillings up to 1,000 for 18s. 9d., post free. The leaflets are admirably adapted for their purpose, and the arguments they embody are clearly and tersely put.

The Typographical Association Report.—The 139th half-yearly report of the Typographical Association states that the membership of 24,762 shows a gain of 610 on the half-year. The general fund of the Association stands at £61,901, an increase of £1,174, and the superanuation fund at £27,756, an increase of £864. Contributions from members totalled £15,841, and the 2d. weekly levy accounted for £2,752. On benefit expenditure the biggest item is the £8,015 paid out for superannuation, this being a decrease of £80 on the half-year, the number of annui-

tants being 733. Funeral expenses amounted £2,776, and incapacity benefits to £520. Apprentices are now eligible for membership at the age of 16, and the report appeals to members to try to secure the entry into the Association of these youths. Reference is made in the report to the activity of some branches in bringing about the better organisation of readers. In this work, it is stated, there is room for extension, and it is hoped that members will rise to the occasion.

AT Limerick, on Tuesday, three more newspapers were suppressed—Limerick Leader, Munster News and Limerick Echo. The two former newspapers are published three times a week, and the Echo is a weekly.

SCOTTISH PRINTERS' WAGES. — We understand that the members of the Printers' Federated Trade Unions have, by ballot vote, decided to accept the offer of an advance of 7s. per week to all males, and to females doing the same work as males.

PRINTERS' WAGES.—The resumed conference between the Federation of Master Printers and the representatives of the T.A. is taking place at 24, Holborn as we go to press on the question of the demand for an increase of 10s. in wages throughout the country. A firm attitude is adopted on both sides.

THE French publication, "Le Manuel Pratique de Composition Typographique," by Victor Breton, the issue of which was suspended during the war, has now been resumed. It contains technical notes concerning letterpress printing, developing it in all branches, and forms a large volume in quarto of nearly 500 pages, illustrated with more than 300 jobs of all classes and styles. Its careful composition and printing in various colours, give to this work a real artistic finish.

TENDERS WANTED. — For the supply of stationery for six months for the Epsom Guardians; particulars from Mr. A. G. Ebbutt, Gynsdale, Epsom.—For the supply of stationery, for one and three years for the Dublin Port and Docks Board; tender forms from Mr. N. Proud, secretary, Port and Docks Office, Westmoreland-street, Dublin.—For the supply for one or for three years, for the Denbighshire County Council, of printing circulars, minutes of meetings, placards, etc., supply books, stationery; forms of tender from Mr. W. R. Evans, County Offices, Ruthin.

Through negotiations just concluded between the Chicago Typographical Union and the Chicago newspaper publishers, the union employees have obtained an increase of \$4.80 a week for day work and \$5.60 for night work, making the wage scale for day work \$42 a week and for night work \$45 a week-48 hours per week, day or night. The Chicago publishers newspaper voluntarily have offered their union pressmen a weekly increase of \$3 a week, which would make the day wage for pressmen in charge \$38 a week, and for pressmen \$32 a week, and have offered their union stereotypers the same increase, which would make their scale \$34 for day work and \$36 for night work.

THURSDAY, SEPTEMBER 25, 1919.

Current Topics.

The Irish Press.

THE Press in Ireland has been suffering lately from a succession of suppressions at the instance of the authorities, and Saturday last saw the breaking of the record by the suppression of no less than six Dublin newspapers, thus bringing up the total number of newspapers suppressed in Ireland since last Easter to thirty-three. As to the reasons for the suppression we say nothing, but are more concerned with the economic results in throwing working printers out of employment and dislocating the literary staffs of the papers that are thus prevented from publishing. In some cases, after a delay that told severely

on the incomes of the stopped newspapers. they have been allowed to resume publica tion, as, for instance, in the case of the Cork Examiner, which was suppressed last week, and the type broken up. Now it is to appear again, and the suppression has proved but The Examiner was the newstemporary. paper which produced the late Justin McCarthy. He was a reporter on its staff for some years, and his autobiography has some pleasant pages describing his connection with Another young reporter at the the paper. same period, with whom Mr. McCarthy formed a life-long friendship, was the late Mr. Thomas Crosbie, who afterwards became proprietor of the Examiner, and whose family still own it. Mr. Crosbie was president of the Institute of Journalists in the year when that body held its annual meeting in Cork.

Look After Industry.

THE great need of the time is to look after British industry. There is a danger that in the chase after political red-herrings this matter may be overlooked. It is essential to encourage business in this country, and upon the measure of success in that direction depends the welfare of the nation and all the sections of people who represent it. So far as the paper trade is concerned, we are glad to know that those engaged in it are setting about their task calmly and steadily. The removal of import restrictions has not led to panic as in some other directions. At the same time a watchful eye is being kept upon the political and general situation. Thus the Papermakers' Association have had before them the position created by the withdrawal of import restrictions, and after full consideration have addressed a letter to the Board of Trade protesting against "the sudden withdrawal of all restrictions on the import of paper into this country." As was only right, a special point is made of the fact that neither the Paper Inquiry Committee, which was then in being. nor the Interim Reconstruction Committee for the Paper Trade, which is still in existence, were consulted. It seems to be in keeping with the Governmental attitude to appoint committees to tackle a problem, and then not only to leave them to their own devices, but to make the task more difficult by cutting the ground from beneath them. The view has also been placed before the authorities that while the paper trade here has benefited to a certain extent by the restrictions so far as they went, it has not been able fully to recover from the upset due to the war. Repairs to machinery, for instance, Digitized by \UO

SEPTEMBER 25, 1919 BRITISH & COLONIAL PRINTER & STATIONER

have not been possible to anything like the extent required, and the new conditions, such as the three-shift system, have revealed a lack of skilled men. These are severe handicaps. But it is a hopeful sign that while making their grievances felt, papermakers as a whole are going ahead with their work.

Labour's Share.

AT the same time guard is being kept on dangers from without. Problems may arise at any moment concerning rates of exchange and dumping, and they concern all whose welfare is bound up with the trade. But we venture to think that the workpeople will be most affected by any undue competition which arises from those causes. Anything that disturbs employment at the mills hits them at once, There is a pretty good understanding of this in the paper trade. Labour has the first call on earnings, and it is the first to feel the withering blast of retrenchment. How big a stake labour holds in industrial concerns is not clearly recognised. It is too readily assumed that capital takes out the largest share and the greater proportion of There are instances in the paper trade, however, where the workpeople derive many times the benefit that shareholders do, and it is a fact that in some cases the shareholders are much larger in number than the employees. It is estimated that before the war labour received nine times as much as capital from industries in general. being so, any substantial increase in the cost of labour which is not accompanied by a larger output very soon eats up the remuneration to capital. So it is much more the concern of the workers that industry should prosper, and to the personal interest is now added the national.

Technical Education in Edinburgh.

The Edinburgh Education Authority have completed arrangements for instruction in technical work in the continuation classes during the coming winter session. The Milton House continuation classes and workshops will be resumed on Monday, September 29th. The Authority, encouraged by the success of the printing and stationery costing class—last winter's new venture—have decided to start another new course in this school in English for linotype and monotype operators and compositors who wish to become readers. Special classes will also be formed in the printing and bookbinding trades, for discharged and deniobilised soldiers whose apprenticeships were interrupted by the war.

Personal.

The Newspaper Press Fund has appointed Mr. W. Thornton Sharp as secretary in place of Mr. J. P. C. Coast, who has resigned the position to take up the secretaryship of the Land Agents' Society.

MR. KNOX MAGEE, who has been editor and general manager of the Winnipeg Telegram for the last two years, has resigned.

MR. W. S. Robinson, who for 13 years has been on the staff of Messrs. Hulton and Co., latterly as editor-in-charge of the Daily Sketch, has been appointed editor of Lloyd's Sunday News.

MR. WILLIAM B. STILES, of the staff of the Barnsley Chronicle, was, at Leeds, last week, married to Miss Gertrude Mary Sproston, daughter of Mr. John Sproston (of Messrs. John Sproston and Son, printers, Marshall Mills, Leeds). The presents included a set of table cutlery from the employees of the latter firm.

MR. HERBERT C. BOLTON was installed as Worshipful Master of the Saint Bride Lodge (No. 2,817) at the Cafe Monico on Monday. He subsequently initiated his eldest son and also the Right Hon. G. H. Roberts (Food Controller). A large gathering of prominent Freemasons were present, including many brethren associated with the paper, printing, and allied trades.

MR. C. J. DRUMMOND, P.A.G.D.C., is the secretary of Saint Bride Lodge.

MR. EDWARD M. ILIFFE, O.B.E., managing director of lliffe and Sons, Ltd., the publishers of the Amateur Photographer, has been awarded the Cross of the Legion of Honour by the French Government for valuable services rendered during the war.

Mr. Asquith will take the chair at a dinner which is to be given to Mr. A. G. Gardiner at the National Liberal Club on October 14th.

SIR GEORGE RIDDELL is to take the chair at the annual dinner of the Readers' Pensions Committee to be held at the Cannon-street Hotel on Saturday, November 1st.

IRELAND—Six Dublin weekly newspapers were suppressed on Saturday. Police and military visited the printing works, seized all the copies found on the premises, broke up the type, and in some cases dismantled the machinery. The Dundalk Examiner was also seized. The explanation given at Dublin Castle was that the papers had inserted the prospectus of the Sinn Fein loan. They cannot again be published without the permission of the authorities.

Commercial Intelligence.

CURRENT SHARE PRICES.

DIVIDENDS AND REPORTS.

JOHN DICKINSON AND Co.—The directors announce an interim dividend of 5 per cent., or is. per share, on the ordinary shares; the same as a year ago.

AIRD AND COGHILL.—The report for the year ended June 30th last states that the profits, after providing for all working expenses, including repairs to plant and property, bad debts, etc, directors' fees, income-tax, interest and depreciation, amount to £12,701; £1,722 was brought forward, and after deducting interim dividend on preference shares there remains £13,904. The directors propose to appropriate this as follows: - Writing off balance of goodwill, £2,196; to property reserve account, £1,000; reserve for equalisation of dividend on preference shares, £1,000; dividend on ordinary shares as already announced. Last year £1,000 was added to property reserve account, a similar amount written off goodwill, and £500 off bond over property.

LONDON "EXPRESS" NEWSPAPER.—The report of the London Express Newspaper, Ltd., for the year ended June 30th last states that the profit, after payment of interest on debentures and depreciation, together with the balance brought forward, amounts to £15,093. The directors recommend a dividend at the rate of 5 per cent. per annum on the preference shares, which will absorb £8,500, to set aside for remuneration of directors other than managing director, etc., £1,300, and to carry forward £5,213. There have been considerable purchases of machinery and furniture and fixtures during the year. This expenditure has been necessary to bring the plant up to date in order to cope with the increased output, which has also necessitated the taking of additional premises in Fleet street.

RAPHAEL TUCK AND Sons.—The report of Raphael Tuck and Sons for the year ended April 30th last states that, after providing for bad and doubtful debts, depreciation, directors' remuneration, income-tax and all expenses, there is a net profit of £60,097; £2,064 was brought forward, making £02,161. De-

ducting one year's preference dividend to January 1st last, £13.750, and interim dividend on ordinary shares at the rate of 5 per centper annum, free of tax, £6,250, there is left £42,161. The directors now recommend a final dividend on the ordinary shares for six months to April 30th last at the rate of 11 per cent. per annum, free of income-tax (making 8 per cent., free of tax, for the year), which will absorb £13,750, to transfer to special dividend reserve fund £10,000, to general reserve £10,000 and to carry forward £8,411. The reserve accounts now stand as follows:—Capital reserve. £8,845; special dividend reserve. £32,602; general reserve, £30,042.

"John Bull."—The directors of John Bull announce a dividend of 10 per cent. on ordinary shares for half-year, making 20 per cent for year: £12,147 to preference share reserve (making £47,148); £60,000 to a special suspense account against special advertising and excess profits duty; £5,626 for balance of income-tax for 1917; £2,208 for excess profits for 1917; £11,354 for editor's percentage; £5,677 for managing director's remuneration; £10,236 forward.

NEW COMPANIES.

JUSTIT ENGRAVING SERVICE, LTD.—Registered with a capital of £5,000, in £1 shares, to take over the business of process engravers carried on by M. Wollaston at 93-4, Chancerylane, W.C., as the "Justit Studio." The subscribers are C. S. Yeates and Hilda Yeates. Private company. The subscribers are to appoint the first directors. Registered office: 15-19, Vine-street, Clerkenwell-road, London.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

NOTICE OF INTENDED DIVIDEND.

Hunt, Edgar James, fancy goods dealer, 52, Upper Conduit-street, Leicester. Trustee, Evans Barlow, official receiver, 1, Berridgestreet, Leicester. Last day for receiving proofs, October 4th, 1919.

APPLICATION FOR DEBTOR'S DISCHARGE.

Cass, Charles Ernest, printer and publisher, carrying on business under the style of Charles E. Cass and Co., Ventnor Works, Ventnor-street, Leeds. To be heard on October 13th, 1919, at 10.30 a.m., at the County Court House, Albion place, Leeds.

Printers' Managers and Overseers association.

Manchester and District Centre.

At the September general meeting, Mr. F. H. Fisher was admitted to membership, after which the secretary gave a long report of the meeting of delegates which was held in London, on June 7th. Mr. J. H. Nuttall, the other Manchester delegate, added his quota. The delegates were thanked for the attendance and reports.

WEB MAC.

"THE HOE WAY" is the title of a 4pp. illustrated sheet issued by Messrs. R. Hoe and Co., Ltd., Borough-road, S.E., with the intention of showing how finely half-tone blocks may be printed on the firm's High-Speed Pictorial Newspaper Perfecting Press. A full specification of the press is given, and the fine appearance of the "Hoe Way" speaks well for its capabilities.

Moster Printers' Rolly.

New London Secretary Introduced at North-West London.

Under the auspices of the Association of Master Printers of West and North-West London, a special rally of the north-west district was held on Monday night at St. Gabriel's Parish Hall, Cricklewood. Mr. F. A. Perry, president of the local association, presided, and the attendance of Major H. Fordyce Birch provided the members an opportunity of making the acquaintance of the new secretary of the London Master Printers' Association.

After a little social chat over refreshments, Mr. Perry opened the meeting by extending a welcome to a number of visitors including Major Birch, who he said, came to the Association with a very high record of administrative and organisation ability. He was sure the London Association had selected the right man, and the members would find it a great pleasure to work with him. Recalling that the West and North West Association was the parent of the district organisations, the president said, "They stood for proper profits for printers, brotherhood among master printers, and a better feeling in the craft."

Major Birch thanked the president for his cordial welcome, and expressed the hope that events would justify what he had said. Speaking of the advantages of the Association, the speaker said, "Although we have only taken up the reins of office in the beginning of September, the only wonder had been that any master printer could afford to be outside the Association, in view of the valuable help which was to be obtained at 24, Holborn. One of the first things he had been trying to do was to multiply the directions in which the Association could be of assistance to its members. With the very loyal co-operation of Mr. Whyte, he hoped they might possibly be of even more use. They welcomed inquiries at 24, Holborn, and would do their best to deal with them. A remark had been made that night that nobody should be considered a small printer, because eventually a child always grew into a man. If they could only get the small printer to consider that he was just as important to the Association, and that his interest in all matters was as great as the so-called larger printer, they would probably experience a big increase in the membership. While he had been with the London Master Printers' Association, something like 90 per cent. of the inquiries referred to them had been from what he would term the small employer of labour.

Major Birch went on to speak of the advantages of such gatherings as they were holding that night, and indicated that one of the advantages to be derived might be in the direction of output, which was what everyone

wanted. He added a tribute to the work of the printing craft, both as he had seen it in operation overseas, and as it had faced the difficulties of war-time at home.

Mr. E. R. Alexander, president of the East and North-East London Master Printers' Association, spoke of the advantages of and combination. Master organisation wanted a better understanding printers among themselves, which he believed would lead to what they were entitled to, that was, a profit on the work they do. He was afraid that metropolitan printers had not full appreciation of what was their due in return for the capital expended and the labour put forth in their work. Many master printers at the present time required to know how to charge their work. They should give up the old rule of thumb methods, and base their charges upon cost. Printers should understand what a job must cost, and should then see that they obtained a profit. They had to educate the man who had only a staff of two or three in that direction. The time had come when they must see that they secure a profit for themselves for the capital and labour which was put into their business. The speaker also urged the need for confidence and loyalty one with another.

Mr. A. D. Phelp, East London, referring to the distance which the members of the East and North-East London Association had had to travel in order to get to that meeting, mentioned the need of a central hall which would be at the disposal of all the district associations. He went on to say that master printers were ranked as gentlemen, and by which they might still wear swords and buckles. If they all lived up to swords and buckles in their work and made a real effort to do better than their next door neighbour, that would help to raise the status of the whole craft. wanted to maintain the honour and dignity of their craft, which was above all other crafts and necessary to all other crafts. If they went on loving their craft and their fellowmen, they might even become proud of their defects and rise on the stepping stones of their defects to

president as the father of the district associations was proud of the progress which had been made since the first meeting which took place some five or six years ago, He claimed that they had wiped out the old feeling of jealousy and suspicion which had been such a drag on the wheel in the past. They had now much greater unity among master printers not only in the districts, but throughout London. They could not only get protection in their own localities, but they could obtain assistance in any part of London. He wondered how many master printers would have survived the strain and trial of the war, if they had not had these district associations. He believed many of their fellows would have gone to the war but for the support which they had obtained through association. The strength which had thus been forthcoming, was one of

the results of the friendship which existed

throughout London and of the meetings to

Mr. J. R. Burt who was described by the

which they brougnt their troubles to exchange

council and help.

Mr. A. Langley who had been doing some useful propaganda work in Cornwall during his holidays, mentioned the establishment through his agency of the West Cornwall Master Printers' Association which he claimed as an indirect offspring of the West and North-West Association.

Mr. W. J. Mizen (North London) complained that what printers suffered from was small prices and went on to enlarge upon the bene-

fits the Association provided.

Mr. W. J. Pollock, vice-president of the District Association, spoke of the value of the investment arising from the subscription to the Association, which he described as more valuable than putting in new plant. adoption of the system was also a profitable investment. He went on to urge that while they owed a duty to one another through the Association, they could put their businesses on a better footing, and so be able to better remunerate labour.

Mr. Fowler, once a journeyman but now a master printer, spoke of the need of better craftsmen and the proper development of the apprenticeship question. He thought there ought to be an examination for proficiency. They should hitch their waggon to a star and

get out of the old rut.

Subsequent discussion revolved around standardisatien of paper and other matters and the proceedings closed with a cordial vote of thanks to Major Birch for his attendance and address and to Mr. Fowler for the refreshment arrangements.

St. Bride "Full-up."

St. Bride Printing School finds itself in an unprecedented and not altogether enviable position, nearly every class being closed for further enrolments, and no more accommodation to be obtained. We understand that over 800 students were enrolled up to the time the classes commenced, necessitating the duplication of a number of the classes, in some of which there is as many as 60 students. The Costing Class has had to be split into two sections, oue to be held on Friday evenings under the able tuition of Mr. T. G. Bergin, the popular teacher of this highly specialised sub-Arrangements have been made for a ject. duplicate class on Wednesday evenings when Miss G. E. Etherington, a lady well known in printing circles, will assume charge. There can be no question that this lady with her lucid expositions and wide practical knowledge of all the ramifications of a cost-finding system, coupled with her training as teacher, will fully maintain the best tradition of St. Bride Costing Class. We learn that there are still a number of applicants awaiting enrolment, but it is anticipated that it may be possible to arrange for another term in January next, therefore those desirous of gaining a knowledge of costing methods should register their names at St. Bride without delay.

The position in which the Governors of St. Bride School find themselves should at last convince the educational authorities that something must be done without delay to provide the necessary accommodation to enable those in the printing business to obtain the instruction which they desire, It is nothing short of a scandal that any one from assistant to employer who desire to improve their knowledge cannot obtain the necessary supplementary instruction to make them more efficient. Economy is the demand of the times, and this can be done with increased efficiency by containing in one centre, instructional classes suited to the needs of everyone in the printing and kindred trades. The prevailing conditions present an excellent opportunity for the trade organisations to unite in a movement for the good of the trade by pressing for the School of Printing heard so much about during the past few years.

A Printers' Ouling.

The letterpress departments of Messrs. E. S. and A. Robinson's East street works held an outing to welcome home those who had served with H.M. Forces. The party numbered about 60, of whom 32 had served and were guests of their fellow employees. The places visited were Cheddar and Weston by char-a-banc. Tea was served at Cheddar, and Mr. E. G. Harrison expressed the pleasure at the return of so many fellow workers.

Mr. W. G. Collier and Mr. H. Wilde also added their appreciation of the way the men The company had answered the call of duty. then stood in silence for those who had laid down their lives, after which three hearty cheers were given for those who had been privileged to return. Thanks were expressed to Mr. Harold Robinson for his kindness in contributing to the outing.

Mr. Smith and Mr. Paynter responded on behalf of the guests and for the arrangements. which had been made for their pleasure.

AND

CUSTOMS REGULATIONS.

(From the "Board of Trade lournal.")

FRANCE AND ALGERIA.

The French Journal Official for September 4th, contains a Ministerial Decree which modifies the "co-efficients of increase" established by the Decree of July 8th, 1919, in so far as concerns certain classes of paper and cardboard, as shown below, included under Nos. 461 and 462 of the French Customs Tariff. The effect of the Decree is to reduce the rates of duty actually payable on the articles in question, the "coefficient of increase" having been reduced as shown in the following statement:—

. 1	Rate		"Coefficient of Increase"	
Articles.	Du und "Mi mu Tar	er ni- u"	Under Decree of July 8th	Under present Decree.
Paper of all kinds, other than the paper called fancy paper:— Machine-made, weighing above 30 grms. per square metre, except news-print Paper as defined	per kilo	100		
under the Law of August 14th, 1915 Machine-made, weigh- ing 30 grammes or	10	00	3	1
less per sq. metre Paper called fancy paper:	15	00	3	2
Couched in white Couched in colour, marbled, printed (indienné), guffered, enamelled. stamped, steariued, paraffined, cut, prepared with oil or spirit, prepared for decalcomanias, couched, coloured	30	00	3	1.5
or marbled by ma- chine		00	3	2.5
(including straw- board)	30	00	8	2.5

The Decree provides that, as regards straw-board (to which, under the Decree of July 8th, the "coefficient of increase" did not apply), cargoes which are proved to have been shipped direct to a French port or to have been put en route direct from a European country for France prior to the publication of the present Decree shall be admitted under the conditions of the Tariff formerly in force, i.e., shall

pay only the duty specified in the Tariff

(30 francs per 100 kilogs.).

[Note.—Under the system instituted by the Decree of July 8th, the Customs duties actually payable on goods imported into France or Algeria are those established in the Customs Tariff multiplied by a factor (the "coefficient of increase" fixed by the Decree. Article 4 of that Decree provided for the periodical revision of the rates of the "coefficient" by an Inter-Ministerial Commission; and the present Decree is issued as a result of the recommendations of the revising Commission.]

Messrs. Raphael Tuck and Sons.

At the annual meeting of this company, on Tuesday, Sir Adolph Tuck, Bart., presided and gave a resume of the past year's work. The sales, he said, were the largest on record, and the profits corresponded with the increased turnover. Dealing with the removal of import and export restrictions Sir Adolph said: -You will naturally desire me to say something on a subject which is engrossing the minds of the trading community no less than of the general public. I refer to the practical removal of all import and export restrictions since the first of this month. Well, ladies and gentlemen, I may at once say that I amentirely at one with the views held by the Government, as expressed by Sir Auckland Geddes in his recent reply to a trade deputation which waited upon him. With Sir Auckland I see no cause for alarm in this decision. The fears we hear expressed in many quarters that the removal of the trade restrictions on import and export is likely to prove injurious to British commerce are, in my humble opinion, and assuredly so far as the business of this company is concerned, entirely groundless. On the contrary, we have every reason to promise ourselves a considerable increase in our trade by the opening up of markets which have been closed to us for the past five years, during which period we have produced many successful publications, which will now find their way to these markets as new and most desirable goods, and doubtless lead to additional The nature, style and profitable reprints. quality of our distinctive British productions, which are characteristic of the publications of this company, justify us in looking with perfect equanimity on all competition from whatever quarter. It is this individuality which has enabled us to hold our own against all foreign competition during the past fifty years, and so long as we continue our policy of both guiding and following the artistic instincts of the great public, and with it maintain the quality of our productions, we can well afford to smile at all attempts to dislodge us from the high position attained by our publications both at home and in all the markets of the world.

Australian Notes.

(From Our Sydney Correspondent.)

A curious incident has occurred here in connection with a cartoonist named Jack Waring. His cap and shoes were found at the gap, Watson's Bay, and as it was surmised that he was dead a search for the body took place. Waring, however, turned up at the Watson's Bay police station and made an explanation. He said that his full name was John Kennedy Waring, and he was now living at Double Bay. He was born in Bel-Before enlisting in 1914, he was engaged as a cartoonist on the Belfast Evening Telegraph for four and a half years. He was on active service with the Royal Irish Rifles for three and a half years, and was invalided home, having been gassed. He arrived in Sydney by the "Manuka," and since then had been doing free-lance cartoon work for various newspapers. Waring had read about a number of tragedies at the Gap, and he conceived the idea of a free advertisment by disappearing.

By a fire that occurred in Clarence-street, Sydney, a portion of the premises occupied by Messrs. Collie and Co., Proprietary, Ltd., printers' suppliers, was damaged. The fire had broken out in an electrical shop on the ground floor, and the flames, travelling up the lift, extended to the three floors above, but were soon mastered by the promptness and energy of the brigade.

A writ has just been issued by the Melbourne Wharf Labourers' Union against the Age, claiming £10,000 damages for an alleged libel.

In the action by Mr. Ryan, the Prime Minister of Queensland, against the Melbourne Argus for £10,000 damages for an alleged defamatory article published during the conscription campaign, alleging conspiracy with the Germans and with persons not loyal to the Empire, the jury were unable to agree, and a new trial will probaby be ordered. The defence submitted is that the article was fair comment on the Government.

A CASE came before Sir William Cullen, C.J., and a jury, in the Banco Jury Court, Sydney, in which the plaintiff was William Edward Fisher, who carries on business in Sydneyunder the firm name of Fisher and Lingham, indent agents, and the defendant Patrick Hassett, proprietor of a business college in Melbourne. The dispute arose as to the price to be paid for 100 dozen typewriter ribbons, imported by the plaintiff to the order of the defendant, the former asserting that the price agreed upon was 23s. 9d., and the latter that it was 15s. per dozen.

Plaintiff sued to recover £126 118., and defendant paid into Court £82 6s. as satisfaction of the claim. The jury returned a verdict for the plaintiff for £43 15s., in addition to the amount paid into court.

MELBOURNE was the venue of a complimentary smoke concert, which was tendered by his fellow employees of Gordon and Gotch Pty., Ltd., and friends to Mr. R. W. Musgrave, on the occasion of his retirement from the management of the railway bookstalls at Princes-bridge and Flinders-street, with which he has been connected for twenty-two years. A silver coffee service was presented to Mr. Musgrave as a mark of the esteem in which he was held.

A CORRESPONDENT in the Melbourne Age calls attention to the injustice Australian authors suffer by reason of the manufacturing clause in the United States Copyright Act: -Foreign authors were unable to secure copyright in the United States until 1891, and were glad to accept any sort of protection, however inequitable, against the American "pirate" publisher. At that time the United States had few authors worth the attention of the British "pirate" publisher; but it is very different now, as a glance round Australian bookshops show. American books are everywhere. Indeed, in 1891, the value of American literary property bore very much the same relation to the British that Australian literary property now does to the American. The United States will never voluntarily remove this injustice, and negotiation would not bring about a settlement in the lifetime of any living Australian author. But, if the Commonwealth Parliament passed an act restricting United States authors' copyright in Australia in the way the United States restricts Australian copyright there, a satisfactory settlement would probably be arrived at.

A WRITER in Smith's Weekly, a Sydney publication has a tilt at the erotic tendency of the contents of many of the magazines offered for sale on the bookstalls. He says:— "It's naughty, but it's nice" is the motto of the bookstalls these days. Train or ferry, you are met at the entrances with magazine covers displaying the bared limbs of intended to be seductive females, and carrying suggestive titles. The war, by its interference with the regular import of the fair-topiffling English magazine matter, has let us in for this stuff from the land of Mr. Wilson. The professor may be making the world safe for democracy, but the reading matter of his countrymen is certainly making the world safe for pornography. The American magazine, as we have it on the bookstalls, is deliberately designed to break down a sane reading taste, or, that already being accomplished, to pander to the messy result. If you read one of the type, you have read the lot. Reading of this quality cannot do any good and may well do infinite harm. The penny dreadful does reward virtue in the end.

Digitized by GOGLE

These productions spell virtue "prudery" when they touch it all."

THERE has been some discussion as to who was the first printer in Australia, and Smith's Weekly says:—"There is a common belief that George Howe was the progenitor of printing in Australia, but this is not so. James Smith was our first printer, having brought with him type for the purpose of marking stores aboard the "Lady Penrhyn," one of the transports of the First Fleet. The printing press brought out by Gov. Phillip lay unused for several years. George Hughes (1795) was printing Government ordinances five years before Howe (1800) entered the colony. The latter was the first Australian newspaper printer and publisher.

MANCHESTER Municipal College of Technology.

Particulars of the various classes for the printing and allied trades that are to be held at the Manchester Municipal College of Technology during the coming session have been issued, and show that ample provision has been made for the practical training of the students who enrol for the course. typography, machine and press work, lithography, lithographic printing, commercial bookbinding, and photo-mechanical processes there are first, second, third and fourth year classes, and other classes deal with printing organisation and costing, printing technics, estimating for printing clerks, mechanism of composing machines, and composition. There are also special day classes for typography and machine work, lithography, process engraving and photo-lithography, including an advanced class on offset printing.

Classes for lithographic drawing are held on Thursday and Friday evenings, and for machine ruling on Tuesday evenings.

In addition to the regular part-time courses in printing a course is specially arranged for estimate and order clerks, buyers, and warehousemen, and during the session lecture demonstrations will be given on printing technics, in which the various processes will be explained; these will be followed by exercises and examples in estimating on the same subject. There is also a class dealing with printing office organisation and costing, which is conducted by Mr. H. A. Maddox. This class has been arranged for master printers, managers, and overseers, and will be limited to those occupying positions of responsibility in printing offices.

Another class consisting of a course in printing extending over two years is provided for those who intend to occupy positions of responsibility in the industry. The syllabus consists of both lectures and practical work, and is arranged to give instruction in technique; in addition it provides a training in administration, costing, estimating and management.

The session begins on October 6th, under the care of Mr. R. B. Fishenden, M.Sc.Tech., and a full staff of qualified instructors and lecturers. Prospectuses, giving every information as to the various classes, hours, fees, etc., may be had on application to the College.

Illustrated Trade Almanacks.

The popular trade almanacks, published by Messrs. Abel Heywood and Son, Ltd., 47-61, Lever-street, Manchester, in their issues for 1920, keep up the reputation of the firm for these useful and profitable publications. The 32 pp. illustrated almanack is well illustrated with half-tone pictures from photographs of interesting localities and has on its cover the picture symbolising "Peace," which was so much appreciated last year. The size is crown 8vo., and the almanack can be issued as published, or additional sheets may be added by the purchaser and advertisements secured so as to give the publication a local character. As a medium for advertisers, a printers', stationers' or other business, there is nothing better, and the prices are most reasonable. They can be had either folded or unfolded to suit requirements. A feature this time is the excellent "Diary of the Great War," and there is much other interesting matter. The firm's diaries are well-known. There is the foolscap-folio scribbling diary, with customers' imprint, three days on a page, sewn, and with one sheet of blotting. The price is one shilling and threepence each for quantities of 144 and upwards, and they are as good value as many diaries that are on the market at half-a-crown. There are also trade calendars, tear-off, with a different photo illustration for each month, and a complete calendar for the year on the back page. These are 13 by 9 inches, and can be had with any name, business or address printed at the top of the sheets. This is an excellent line and a good advertising medium. As the almanack season is now close at hand, customers should place their orders with Messsrs. Heywood as early as possible, as, owing to the high cost of production, it may be impossible to secure supplies if orders are delayed too long.

Saving Waxed Paper Waste.

The Glendale Pulp and Paper Co., with a capital of \$250,000, has been formed at Kalamazoo to develop a process which has been perfected for saving the constituents of waste waxed paper. By this process the wax is separated and reconverted for use, while the paper is made into paper pulp. Formerly, waste waxed paper was destroyed. Machinery for the new plant has been nearly all purchased.

BRITISH & COLONIAL

Some Paper Topics.

The abstract from the Amalgamated Society of Papermakers' quarterly report contained some of the most hopeful matter set before the trade for some time, chiefly valuable through the medium of its expression. Ordinarily one does not revert to partisan journals as the ideal source of the co-operative spirit, more especially in the immediate aftermath of a contest between the powers that be. We are by now becoming accustomed to the fair words and full promise of the Whitley table, but for naked truth, devoid of sentiment and unhampered by unusual environment, there is more hope in the sectional publications. It is for this reason that the views as expressed by the A.S.O.P. general secretary in the quarterly report are doubly welcome. Obviously, something like satisfaction now prevails in labour circles of the paper trade. That is a sound foundation on which to build progress. Right away, then, we get on to production as the keynote of progress, and here again the admission that this is a men's question as well as a masters' proposition, clears the air for further action.

We agree wholeheartedly that the greater issues rest with the mill administrative staffs, though there are some output issues of infinite importance that will not be decided even by mill managements. Deep problems exist which can only be solved by scientific probing and investigation. With these, we, as a foremost papermaking country, are not organised to deal. Until a more soundly educated generation takes our place, they are likely to wait. But of the things that can be done under existing conditions to help output, the majority are dependent upon machinery equipment and availability of skilled labour. Touching the latter point, it is and always has been the attitude of unionised labour to restrict the inflow of the juvenile element as a means of providing full employment for adults. Within the next year or two, the country generally, and skilled labour in particular, may conceivably suffer from this policy, masmuch as already certain trades are inadequately provided with trained men to cope with the demand which exists for manufactured goods. Hence an inlet for the foreigner. If it be argued that the toll of war has deprived us of a percentage of our best skilled men, then the argument is an admission of the immediate need for more elasticity in apprenticeship rules for the sake of filling up the gaps. The question of proportional apprenticeship is one of deep statistics, and we very much doubt if organised labour has ever devoted the necessary amount of detailed study and research, combined with broad perspective and future outlook, which the question involves. Apprenticeship and the creation of skilled labour has always been treated in a narrow and immediate sense, whereas the

issue is one of the future need, possibility and

development. It is in this sense that it should now be viewed.

The means are not to hand for an immediate and complete remedying of the output difficulty, inasmuch as the same problems are confronting the makers of machinery and equipment. Until the engineers have found the means of securing quicker and larger production, the papermakers' orders for machinery, repairs, and reconstruction must be delayed. Consequently much time must elapse before the benefits of adequate equipment are realised. Meantime, the makers of papermaking machinery are so overwhelmed with work of immediate importance that they have neither time nor staff to devote to the development or introduction of new ideas in plant or method. Thus the opportunity of improving production on a machinery and equipment basis is inevitably postponed by the pressure of imperative and immediate needs.

It remains with labour, therefore, to accelerate production by the process of concentration and ordinary attention to the conditions There is no doubt that the of employment. workman of to-day is decidedly more lax in his methods and habits than he was before the war. Time-keeping generally is not so good as it was. The regard for discipline is less keen, and the desire to produce the maximum is not evinced except where the incentive offered is exceedingly remunerative and proportionate to the volume of production. It is useless to rail against this present tendency, which is no trade union monopoly, and which is, in fact, equally prevalent in every sphere of hand or brain work except where self-interest is the counteracting motive. It is doubtful if we will ever return to the old conditions, except by the aid of measures taken to induce self-interest in work. If such be the case, and such measures would accelerate output, it is a sound business investment to take in hand their introduction.

Apart, however, from inducement, there is a need for tuning up the administration and organisation in our mills. A tight control should be maintained over the general routine. All possible data bearing on output, leakage, consumption, time recording should be compiled regularly and recorded graphically for the use of the management. The only value of data is that derived from its mastication and subsequent application in correct form. Data which is collected as a matter of routine, and which serves no direct purpose of application, represents sheer wastage of time, energy, and finance.

H. A. M.

Success.—"What is the secret of success?" asked the Sphinx. "Push," said the Button. "Take pains," said the Window. "Never be led," said the Pencil. "Be up-to date," said the Calendar. "Always keep cool," said the Ice. "Do business on tick," said the Clock. "Never lose your head," said the Barrel. "Do a driving business," said the Hammer. "Aspire to greater things," said the Nutmeg.—American Stationer.

British Paper Imports & Exports.

Imports.

Imports of paper and board continue to mount up, the August figure of 832,092 cwts. multiplying several times the 1918 figure of 119,401 and even the 216,705 of 1917. In July the imports were 661,882 The quanity for the eight months, 3,599,969 cwts., exceeds by just over two millions that for 1918, and roughly by one million and a half that of 1917. The value of the British paper market to the seller may be gauged to some extent by these figures and by the values which they represent, and yet the free import of foreign paper only began at the end of August! The largest item of increase is naturally that of "news," Newfoundland sending in reel paper to the extent of 156,710 cwts. as against nothing in August 1918 and only 3,000 in 1917. The total of reel paper imported in August was 331,735 cwts., against 11,682 in 1918. For the eight months the total reaches just over the million mark, whereas it was little more than a quarter of a million cwts. for the same period last year. Strawboards are also coming in in increasing quantities—202,631 cwts. this August, as against 35,498 cwts. in the corresponding month of last year. Mill board and wood pulp board have jumped from 17,073 to 113,503 cwts.

A Feature in Exports.

Packings and wrappings are a feature among the exports, and show another big spurt for the month of August. Up to the end of May there was exported 19,574 cwts., while for August alone the total is 28,881 cwts., the corresponding figure in 1918 being 3,502, and in 1917, 5,421. For the three months, June, July, and August, the total export of packings was 59,466 cwts., and for the eight months 79,040 cwts. This latter figure compares with 36,884 cwts, in 1918, and 56,644 in 1917. This jump in the export of packings and wrappings is regarded as a very healthy sign. Of course the pre-war figures are not yet reached by any means, and that could not be expected in the comparatively short and difficult period which has elapsed since the end of the warbut in spite of the handicap, very sustantial headway has been made.

Printings and Writings.

Printing papers are also taking a favourable line in regard to export, the total of 25.591 cwts. for August comparing with 13 329 in 1918, and 22,924 in 1917. The total for the eight months of this year, 209,460, shows an advance on the 169,853 in 1918, but are still behind the 300,774 cwts. in 1917, though the value is higher. Writing papers have not recovered quite to the same extent, the August figure of 13,303 cwts. comparing with 8,752 a year ago and 15,398 for 1917. The total for the eight months 89,811 cwts., has passed the figure for 1918, which was 78,218, but there is a considerable margin compared with the 103,832 cwts. of 1917. Here, again, the values

are substantially higher, especially comparing the eight months of 1919 (£651,829) with 1917, (£393,752). It is pleasing to see that France is taking a large proportion of our exports, 40 per cent. of the writing papers and 30 per cent. of the printing papers going to that country. Other foreign countries figure equally prominently in the list, so that there is not a very large proportion left for the colonies.

Colour in News-Print Paper.

By GRO. ERSKIN.

News paper is generally referred to as white by the casual observer. While there are wide variations in the ordinarily accepted white shades, a true white such as is seen in bleached fabrics presents a wide difference to even the "whitest" news-print paper. Compared with a true bleached white the average "news" is quite blue, in fact, it is actually a "bluewhite." The materials used in making paper in their natural state, unbleached, produce a dull yellowish shade. To overcome this undesirable feature, blue and red dyes are usually employed, although dyes that might be referred to as violet blues when used alone produce a very attractive so-called white.

To fully appreciate the reference to violet blues one must understand the relationship between the various colours. This is illustrated in the "spectrum," or in other words the decomposition of a ray of white light passed through a glass prism. Not only is the direction of the white ray changed, but it suffers dispersion. The picture obtained—the spectrum—if examined minutely will show the following colours, not sharply separated, but merging into one another, in the order named:—Violet, indigo, blue, green, yellow, orange red

From the foregoing it may be seen that a blue dye while producing a shade that is actually a blue might be over towards the greenish side of the blue range. Such dyes require reds to counteract the greenish tinge. The various blue dyes produce various shades of blue from greenish to violet blues. As the resulting shades creep over to the violet or indigo side of the blue range less red is necessary. When the shade produced is violet to indigo then a green or greenish blue is necessary to counteract the reddish tinge. The violet blue above referred to is a dye which produces a shade about half-way between the middle of the blue line and the point where the blue merges into an indigo. This shade is the most attractive so called white shade in news-print paper. With such dyes the quantity necessary may be easily regulated to perfectly counteract the natural colour of the stock and produce a sheet, which unless compared directly with a true bleached white would be universally accepted as white paper. -Pulp and Paper Magazine.

A resolution has been adopted by the U.S. Senate to investigate the news-print industry, and the resolution has been referred to the Committee on Commerce.

During the first six months of the current year there was produced in Canada 388,924 tons of news print paper, and in the same period the United States produced 671,141 tons, which was 6 per cent. more than in the corresponding period of last year. The de-

mand for news print is so great that the supply on hand has never been smaller. Advertising in the United States was 46 per cent heavier than a year ago. There is optimism as to the outlook for increased production in the news-print line, and makers of news-print machinery report great activity in all lines, to such an extent that the output of machinery is behindhand.

Bookbinding Notes and News.

The National Union of Bookbinders and Machine Rulers have ratified the Overtime Agreement, and it will take effect as from the last pay-day in September so far as the members of this particular union are concerned, it being already in operation in the case of the unionscomprising the London Printing Trades Federation.

The book buyer who has been looking forward to some relief in the price of books as a result of the return of Peace is likely to be disappointed. It is stated in publishing and printing circles that so far from prices falling in the immediate future they are unfortunately likely to rise still higher. Printing and binding costs, together with the price of paper, are enormously greater than they were in 1914, and so long as that is so the publishers' wares must necessarily be dear. Those who buy must necessarily be dear. French literature will find that the same process is at work on the other side of the Channel. One firm of leading French publishers have recently issued a notice to the effect that they find it necessary to place an addition of 100 per cent. on the price of the novel which formerly sold at 3 francs 50. That is to say, almost six shillings are to be demanded for the ordinary work of fiction in paper covers.

With the removal of import restrictions there is a fear in some quarters, says the Leather World, that Germany may again endeavour to ingratiate herself, and by her subtle methods capture a portion of the trade, that, as an authority in the industry said recently. "the progressive firms will undoubtedly be able to hold their own. We cannot be beaten on quality, but progressive methods of organisation are necessary. Quite a number of new firms have taken up the industry, and they are extremely keen." Leather must con-

tinue at a high price for some time. That is inevitable, but the British manufacturers are able to produce goods of much greater value than the Germans are capable of doing, and, everything considered, the British goods can be sold at a reasonable price.

Writing in the American Printer on the "Use of Carbon Paper in Stamping Books in Bindery," Mr. Edwin R. Mason says:— "When stamping a line on cloth, canvas, or a light shade of leather, and where ink is specified, use carbon paper instead of ink. It dries almost instantly, thereby avoiding smut. Heat the type in the pallet until it is good and warm, not hot, but just warm enough to melt the composition on the carbon paper as you bring the type in direct contact, pressing it two or three times against the paper. The composition melts, adheres to the face of the type and is thus transferred to the object in question before the type cools. Canvas bound books may be rolled and lettered in this manner, as can, also, law sheep, and an occasional line or two be stamped on light cloth. In fact, wherever ink was formerly used, carbon paper makes a much better sub-It takes quite a while for ink to dry stitute. after.

A writer in a recent issue of the Scientific American asked how to get rid of the book worms in his library. This writer, who lives in Santos, Brazil, says he has tried camphor, naphthalin and formaline without any success. As in so many other things, an ounce of prevention is worth a pound of cure in the treatment of book worms. It certainly is a difficult matter to get rid of the worms once they are in the book, but it is splendid insurance against their depredations to buy books that are bound in leather substitutes. In Brazil, the Philippines, India, Egypt, and tro-

pical countries having an exceedingly warm climate, the immunity of the leather substitute from attacks of book worms is well known. This class of material is surfaced with a pyroxylin film. This film is absolutely impervious, and prevents the entry of the worm into the book cover, and consequently into the body of the book. The film is also poisonous to minute animal life, and better still, it is repellant to the various small worms and insects that "lunch" on leather bindings and bindings of cloth and paper. It is not at all difficult to buy books that are bound in leather substitute, or to have them rebound with this material. Bookbinders are familiar with this material the world over, and it is obtainable at all the leading book binders' supply houses.

The Public Library at Sydney, N.S.W., houses delightful examples of bookbinding, commencing with a wonderful ivory binding on an illuminated manuscript of 1420. It is The mere an exceedingly rare specimen. mention of Roger Payne's wonderful binding makes the collection appeal to bookbinders and leather workers. A delightful modern French binding by Menuier is also there; the design of thorns and passion flowers is inlaid on green levant Morocco, tooled on the inside borders with a continuation of the inlaid cover design, and lined with damask. From the 1420 bindings all periods are traversed, showing leather bindings that have been on books for several hundred years. And examples from the Government Printing Office, and the Master Printers and Allied Trades Association bring one back to the pre-The library has been experimenting with Australian skins and tannages for bind-The statement, for instance, that all kangaroo skins have been sent to America in the green state for boot leather, when there is no finer skin in the world than this for bookbinding, will probably astound people. they can get sufficient quantities suitably tanned locally, the library authorities propose to use the kangeroo skin in place of the calf binding, which is not regarded as being so endurable.

No sooner are we settling down to the new conditions, after a settlement with every class of labour employed in the allied trades than the ball starts rolling again. The T.A. are in for a 10s. advance, and everything points to a stern contest. Up to the time of writing there have been several meetings of the contestants, and the matter is referred to the Industrial Council. It is no secret that the masters have set their faces against the demand and strongly expressed themselves against the hammer stroke policy of the union. Be that as it may. it is safe to conclude that any concession ultimately awarded will eventually apply to the binding trade and other branches of the industry. It is almost impossible for organisation and costing to keep pace with labour and wage. No sooner is the adjustment made to counter the cost of one concession than it is upset by the claim for further concessions. If there is a limit, the sooner it is made known and reached, the sooner will trade fall into its normal channel and bring relief to the much harassed proprietor of manufacturing establishments.

An American contemporary says that a onepiece solid leather cover for loose-leaf books, is being put on the market by the Trussell Manufacturing Co., of Poughkeepsie, New York. Flexibility and ability to stand the wear and tear of bending and folding without the least risk of breaking is one of its chief features. Cut out of the hide by the use of an automatic die-cutting machine the cover is one piece of leather all the way through and will naturally stand up longer than the usual three-ply, glued cover can be expected to do.

In February, 1888, Mr. Wheatley lectured before the Applied Art Section of the Society on The Principles of Design as Applied to Bookbinding, in which he referred to the past mainly as a storehouse of ideas for use in the future. He insisted upon the importance of an author, or a publisher, calling in the services of a good artist to design the cover for a book. Mr. Wheatley also expressed himself as being in favour of the old idea that the decoration of the outside of a book should be in harmony with its contents, e.g., Chaucer's works might be covered with flowers, as appropriate to the great poet of nature. The back of a book lent itself well to decorative treatment, in cases where there were no raised bands, but the finisher usually neglected the back. Book cover designs, in his opinion, should not be too pictorial in character. Good binding naturally cost much money, as representing a great expenditure of time, and until the English book lover was educated up to this point, the best work would continue to be done in France.

Among those who took part in the subsequent discussion was Mr. T. J. Cobden-Sanderson who had then had about four years' experience as an art binder, and exhibited a few examples of his work. He considered that the craftsman in bookbinding suffered from the too great pressure of tradition, both in forwarding and finishing. He had not time to throw off the burden then and to come fresh to his work. In his opinion the finisher should be also the forwarder, and should know something of the book he was binding. He should strive to do all he could for it, and having bound it well, should add just such touches of decoration as his own fancy playing over it suggested to him. But if, in ignorance of the subject and history of the book, the finisher attempted to apply to a book which he had not bound a design which he had not invented, the result must be lifeless and mechanical.

"It is with the hope of assisting his confreres in this country, by providing them with

illustrations of the best class of work, and giving them new designs and every information that is likely to be useful that the bookbinder makes his bow to his readers." When the first volume was completed, the editor remarked in his preface to it that "he hopes he has succeeded, to some little extent, in carrying out his desire to raise the binders' craft of the present day to a higher level than before, both by showing examples of the best work of the old masters in the art, and by inculcating what all good critics admit to be the first principles of book ornamentation."

The Winterbottom Book Cloth Co., Manchester, offered recently for subscription at par 300,000 $7\frac{1}{2}$ per cent. 2nd cumulative preference shares of £1 each. The total share capital is £1,700,000, of which £400,000 is in first preference (6 per cent.) and £1,000,000 in ordinary shares. The company was formed in 1891 to take over a number of concerns in this and other countries engaged in the manufacture of book cloth and other specialities. prospectus states that large sums have been expended upon extensions and new businesses. No additional cash capital has been raised to cover the cost of these additious, but in 1918 £598,860, part of the reserve, was capitalised. Additional capital is now required to meet the greatly increased cost of stocks of cloth and drugs, to pay for the completion of certain extensions, and to provide for necessary. developments. The average annual profit for the last ten years, after providing for taxes, was £174,910. The directors and their friends have applied for 100,000 of the new shares, and these will be allotted.

The eighty-ninth annual report of the Bookbinders' Pension and Asylum Society is issued, and it shows how well this excellent institution has been managed during the year. Notwithstanding the difficult times, the work of the society has been carried on, and by the generosity of the trade the committee has been enabled to distribute £850 in equal amounts to the whole of the old people, as well as other benefits. The society is a deserving one, and well worthy of the greatest support from the bookbinding trade, whose members in old age and infirmity are eligible for its benefits.

The Fisher Bookbinding Co., Ltd., Hernehill, S.E., have found the closing of the entire work for the annual holiday so satisfactory to customers and employees alike, that the managing director, Mr. Edgar P Woodman, writes to the trade press as follows:—"Now that we have returned after the annual holiday of the employees, I am sure you will be interested to learn that we have not received a single complaint from any of our customers that our being closed for the week has caused them any inconvenience; on the contrary, we have been congratulated by a large number of our customers upon the experiment, and having found it so highly satisfactory, if all is well next year we shall try and keep to the same

dates for the employees' annual holiday. Apart from it being suitable to all our employees to be away at the same time, it has enabled us to get urgent repairs done to the factory and to our machines, which will enable us to go full speed ahead now that we are approaching the busy season, which I am convinced it will be, judging from the large number of inquiries we are receiving from printers and publishers in the United Kingdom."

Mr. T. J. Marquis, in opening the Leather Substitutes Exhibition, at the Central Hall, Westminster, in the course of his remarks said that he thought one of the great benefits which the war had brought to the country was that it had shaken them all up and had set them thinking, and had set creative minds to work to find out new and better methods of doing things, and it would be nothing short of a calamity if the war and the immediate necessity being over they threw back all those things they had gained from that great creative force, and just tried to hark back to 1914. He thought it was a very great pity that material of first-class value should be branded "substitute." Another speaker expressed the opinion that the name "substitute" was a misnomer. It would be worth while for some of them to get together and endeavour to think out a more appropriate name. With Mr. Marquis, he thought if there had been any failure with substitutes it had been due to bad workmanship, and not to the substances themselves.

The market for bookbinding materials holds a steady course, and no decline in price is to Leathers are hardening conbe recorded. siderably, and much delay is experienced in getting orders executed. Very few tanners hold stocks of any dimensions, and orders are filed tor execution in rotation. There is a very heavy demand, and a very low supply of pelts, hence a high price. As there is no prospect of even half the quantity of pelts required, high prices are likely to rule for a considerable period. The need for leather is much greater in every one of the Continental countries than it is here, and as they are now free to buy a large proportion of the pelts available are going their way. The English and American dealers who anticipated a big volume of profitable business from Germany are finding that the proposition is not so choice as it seemed, but German agents are striving their utmost to secure supplies of the raw material.

Skivers which were available about two months ago at 8d. to 10d. per square foot are quoted 10d. to 1s. to-day and basils have made about the same advance, to-day's price ranging between 1s. 3d. and 1s. 4d. per square foot. Calfs are almost beyond the reach of the average bindery, but anglo-russias are in fair demand, while fleshers and rough basils are being substituted for rough calf. The fleshers offered by one or two prominent houses are

particularly good value and lose nothing in comparison with the real thing. Parchments and forils are still as scarce as ever although the Government demand ought by now to have declined somewhat. Formerly a large quantity of forils were used in making up bank pass books and shopmen's books but in the absence of this material binders have had recourse to plain cream bookcloth which is cheaper and easier to work. Presumably the users will by now have become accustomed to the change and it is practically certain that in many cases it will constitute a permanency.

AFTER a steady run for some months sewing cord and threads are about to advance according to a good source of information. At the price charged one would have thought a further advance impossible but the manufacturers of this type of material are so well combined and we might say so well shielded that buyers and users are in a powerless position. Costs of material are something to conjure with nowadays and the only satisfaction that bookbinders can obtain is that derived from the knowledge that full costs plus a reasonable profit are being passed on to customers. Fortunately we can turn to one commodity that has weakened in price, to wit, Dutch strawboards, for which, to-day's quotations are figured out at £14 5s. per ton for forward delivery. Even this figure leaves a good margin of profit for the agent, and we should like to think that the bookbinders of the country could combine on the subject of co-operative buying. Something of this sort has been proposed in the paper line, but the difficulties there are insuperable. Strawboards, however, are a distinct and simple commodity, made abroad and imported by a large number of agents, whose profits during the last few years have been abnormal. If the Master Printers' Federation could be persuaded to take in hand the import of strawboards for use by their members in the bookbinding trades, a very great advantage would be secured, and we should not again be at the mercy of the comparatively few agents who have had the monopoly for so long. Failing this, it is up to the medium and large users to do their buying direct, after taking the precaution of a careful negotiation to ensure getting the lowest wholesale terms. The co-operative plan is by far the best, because it enables big business and simple transport to be done, thus cutting down all costs to their minimum.

"BOOKMAN'S JOURNAL AND PRINT COLLECTOR" CO., LTD.—Registered with a capital of £4,000, in £1 shares, to establish, print and publish a journal or magazine under above title, etc. The subscribers are W. Hillier, Major J. C. Lloyd, H. C. V. Morton, H. L. H. Ewin, and W. G. Partington. Private company. The first directors are W. Hillier, Major J. C. Lloyd, H. C. V. Morton, H. L. H, Ewin, and W. G. Partington.

Printers' Wages Demand.

An Impasse.

Something like a deadlock exists in the negotiation between the masters and the trade unions in the printing trade as to the ros. advance. The Federation of Master Printers and the newspaper organisations decided that as the conference had arrived at an impassé, the question should be referred to the Conciliation Committee of the Joint Industrial Council. The president of the Federation (Mr. A. F. Blades) suggested to the secretaries of the Joint Industrial Council that the Right Hon. C. W. Bowerman, M.P., should preside over the Committee, which consists of four representatives from each side, selected by the parties to the dispute. The names of the employers' representatives have been chosen, and Mr. A. E. Holmes, secretary of the Printing and Kindred Trades Federation, has been written to, to arrange for the representation of the unions.

It was intended that the employers' representatives should meet this week to further cansider the proposed new rules of the T.A., and that they should resume conference with that body on these proposals next week. Owing, however, to the railway strike, it is, of course, impossible for the committee to meet, and the

conference is therefore adjourned.

Printers and the Strike.

The strike is likely to have a serious effect upon the printing, paper and kindred trades. There is a good deal of talk of the probability of printers coming out, apart from the question of paper supplies. Resentment is felt at the attitude adopted by the daily press to the railway strike, and it is stated that if they continue to send forth what is termed poison gas action will be taken by the printing unions.

It is significant that representatives of the printing trade unions took part in the trade union conference called on Wednesday (this week) to consider the advisability of taking

sympathetic action.

Printers are also likely to be affected by the limited supplies of paper, and it is stated that some of the larger firms have only sufficient paper to keep their employees going for ten days or so. Indeed, we learn that some firms have given their employees provisional notice that if paper supplies are not forthcoming they will not be able to keep their workers employed. In that event the scheme of the Government for unemployment pay will come into force.

The great thing in this world is not so much where we are, but in what direction we are moving.

"SAINT BRIDE FOUNDATION CATALOGUE OF THE TECHNICAL REFERENCE LIBRARY OF Works on Printing and the Allied Arts."

This is a most useful volume for the student of printing who desires to consult what has been written and published on the history and technique of the art preservative, and its issue should be welcomed as giving some idea of the immense wealth of printing literature that is stored on the shelves of the St. Bride Technical Library. The catalogue runs to no less than 1,000 pages, and is what may be termed a short-title author catalogue, with title entries for periodicals and anonymous books. During the last twenty years the library has developed from a comparatively small collection of about 6,000 books into one of over 30,000, covering almost every phase of the art, and containing literature and textbooks in every language, as well as an extensive collection of trade periodicals and cata-It also gives details of the William Blades Library, which was the nucleus round which the present library was formed, and of which an interesting account is given in the volume. The catalogue will be of the utmost service as an aid to the student who desires to follow out any special line of reading in connection with the art of printing, and its issue should mark the beginning of a new stage of usefulness for this excellent library, which is so readily available for those who desire to study the literature of the craft.

Printers' Wages in Sweden.

According to the Labour Gazette, as the outcome of a strike of compositors in Sweden, an agreement has been arrived at which includes the following provisions:-

Wages are to be paid at weekly rates as hitherto. For the purpose of the agreement the country is divided into five districts, Stockholm being No. 1. The difference in rates between Districts I. and II. is 10 per cent.; between the other districts 5 per cent. The minimum weekly wages in Stockholm for machine compositors (the highest paid group) on daily newspapers are £5 4s., and in book and job works £5. Hand compositors and pressmen are to receive £4 14s. on daily newspapers, and £4 12s. in book and job works. Assistants in their fifth year receive £3 16s.

Of the above rates 75 per cent. is to be regarded as ordinary wages and 25 per cent. as cost of living bonus. After the lapse of a year the bonus is to be revised in accordance with

the level of prices then prevailing.

The hours of day workers are fixed at 48, while night work is limited to 45 hours per week.

Overtime is as a rule limited to 10 hours per week. It is paid at time and three quarters for the first two hours, and a double time In nightwork on newspapers afterwards. overtime is to be paid at the rate of 4s. 8d. per man per night.

Trade Notes.

The Southend-on-Sea Town Council have passed plans for alterations and additions at the Standard Printing Works, Cliff Townroad.

A NEW weekly journal, called *United India*, is to be started to support the Indian Reform Bill. Among the contributions are articles from Sir Sankaran Nair and Mrs. Annie Besant.

At the last meeting of the York Corporation Town Planning Sub-Committee, the city engineer submitted plans of proposed printing works, near Earswick Station, on the Huntington-road.

TAXATION of newspaper advertisements having been proposed in Germany, the German newspaper publishers have protested strongly to the State Finance Minister, Herr Erzberger, against any such special taxation.

THE Hull members of the National Union of Journalists visited their colleagues at Goole the other night, and held the usual monthly meeting of the Hull and East Riding Branch at the Lowther Hotel. The proceedings throughout promoted a very friendly and loyal feeling amongst the members.

TENDERS WANTED. — For the supply of stationery, printing, books, etc., for the Macclesfield Borough Education Committee; particulars from Mr. Wm. Grieves, Town Hall, Macclesfield. For printing, etc., for the Rural District Council of Carlisle; forms of tender from Mr. J. Alderson Toft, 7, Victoriaplace, Carlisle. For the printing required by the Stranorlar Board of Guardians and Rural District Council; forms of tender from Mr. Geo. M'Laughlin, Stranorlar.

The railway strike has greatly inconvenienced the workers of London, many of whom come from distant suburbs to the city every morning, and have had to struggle along as best they could, fighting for buses and trams, riding bicycles, and, in many instances, walking long miles to get to their work. As a slight recognition of the efforts thus made by the employees of a large firm of printers in the city, the managing director called the men before him on Monday morning and heartily thanked them for the efforts they had made to reach the works and keep the business going.

The National News tells how the strike was responsible for a bride and bridegroom beginning their honeymoon trip in a National News van. "The latter was being loaded with copies of the National News for the journey to Bristol when the bridal couple strolled up. He said he had obtained a situation in Bristol, and unless he could start work next day he would lose it. Could he and his wife travel in our van? Such a request could not be refused. The couple were safely stowed away among the piles of papers, and in a few minutes they were being whirled away on one of the

strangest honeymoon journeys ever undertaken."

THE late Mr. Ashworth Peter Burke, editor of "Burke's Peerage and Baronetage," has left estate of the value of £271.

THE death has occurred of Mr. Frank Foster, who, for a number of years, had been the engineering correspondent of the Manchester Guardian.

A FIRE broke out on Friday in the printing works of the Dublin *Irish Times* and the machinery was seriously injured. The publication of the paper, however, was not interrupted.

The New York Publishers' Association have voted in favour of suspending publication rather than grant the printers' demand for a weekly wage of 50 dollars and a 44-hour week.

THE School of Librarianship, which has been instituted in connection with University College, London, will be opened on Wednesday next, October 8th, by Sir Frederic Kenyon, director and principal librarian of the British Museum.

The first of the new series on conferences on "Scientific Management" takes place at the Institute of Journalists, 2 and 4, Tudor-street. E.C.4, at 5.30 p.m., on Wednesday next, October 8th, when two speakers from Messrs. A. Lloyd and Sons, tin box and canister manufacturers, Cheapside, will give addresses. The meeting will then be open to public discussion. Admission free and no tickets are required.

INDUSTRIAL LEAGUE AND COUNCIL.—The first of the fourth series of lectures on "Industrial Problems," arranged by the Industrial League and Council, takes place at the Guildhall at 4.30 p.m. on Tuesday next, October 7th, when the Rt. Hon. G. H. Roberts, M.P. (Food Controller) will give an address on "Some Trade and Labour Problems." Owing to the great demand for seats early application for tickets should be made to the secretary, Industrial League and Council, 66, Victoria-street, S.W.I.

In connection with a public meeting concerning the closing of a public footpath at Barnes, Mr. H. Leslie Hendriks, managing director of Messrs. Bradbury, Wilkinson and Co., Ltd., bank-note printers and engravers, said his firm desired to acquire the property. The building they proposed to erect would be in the middle of 18 acres. The new works would employ about 700 hands. They made bank-notes for all over the world, and they could not tolerate trespassers on their premises, which had to be guarded night and day. The nearer they were to London the easier it was for the company to transact their business. Making bonds, bank-notes, etc., was very tricky work, as financiers had to be consulted at any moment. A resolution withdrawing the opposition to the closing of the footpath was carried by a large majority.

THE L.C.C. afternoon language classes (for adults) which were organised in 1915 for Press workers and others, and have been so success-

Digitized by GOOGIC

fully conducted during the past four years in Fleet-street, are re-opening for the winter session in the L.C.C. school in Wild-street, Drury-lane. The fee from September till Whitsun is 5s. only, and intending students should apply immediately to the deputy principal, Madam Joly.

THE death has occurred of Mr. H. R. Miles, of Dalton, one of the oldest working journalists on the Huddersfield newspapers.

WE regret to announce the death of Mr. James Culross, managing director of Messrs. Culross and Sproston, Ltd., printers, Leeds.

THE first number of the Jewish Guardian, a new weekly newspaper, is to be published tomorrow (Friday), as an organ of the Anglo-Jewish community.

THERE was a slight improvement during August in the state of employment in the printing, bookbinding and paper trades generally, but it was not so good on the whole as in August of last year. With letterpress printers employment was about the same as last month, being good generally, and some overtime was worked, especially in London; at Leeds some short time was worked. In the lithographic printing trade the state of employment remained good, while in the provinces it was fairly good, and slightly better than in the previous month. Employment in the bookbinding trade showed a slight improvement compared with July, but was still only fair. Some short time was worked in London.

Personal.

MR. T. E. NAYLOR, secretary of the London Society of Compositors, lectured last night on "The Rules and Conduct of Debate," at the Hall, York-street, Walworth, S.E.

MR. ALFRED T. GREGORY, editor of the Tiverton Gazette, has declined an invitation to continue as Mayor of Tiverton for a ninth consecutive term.

The Duraviate.

In describing a new printing plate, just introduced in the United States, our American contemporary, the Inland Printer, says:—"What bids fair to prove the most remarkable development in the printing industry since the introduction of the typesetting and typecasting machines is the production of what, for all practical purposes, is an indestructible non-wearing printing-plate. This new plate is known by the trade name Duraplate, deriving its name from the fact that it is durable and cannot easily be worn out. It is being manufactured by the Duraplate Co, 420, Sansome-street, Philadelphia, Pennsylvania.

"The Duraplate is a phenolic condensation product, a hard infusible substance, somewhat similar in appearance to a talking machine record. Durability, however, is not the only advantage claimed for this new printing plate, for a comparison shows it to weigh 75 per cent. less than an electrotype of the same size.

"This fact, combined with the indestructible feature, makes Duraplates ideal for advertising purposes. It has been stated by the maker that the saving in postage for mailing a Duraplate will often pay for the plate itself, whereas the immunity from damage while in transit not only saves the shipper from all responsibility and worry, but also means a material saving in material used and time spent in packing. If desired, an unblocked Duraplate may be enclosed in an envelope and mailed first-class, like an ordinary letter, at trifling expense. An original may be mailed to a publication the same as a stereotype matrix.

"Furthermore, Duraplates are infusible, and having every detail of an electrotype or original plate, may be stereotyped or electrotyped in the usual manner, and without extra care being exercised. Duplicates of half-tone originals of the finest screen and detail have been made by this new process, and the result compares favourably with the finest lead-

moulded electrotypes.

On long runs, Duraplates have proved to be worthy of the name, tests, we are told, showing that they will outwear the hardest nickelsteel electrotype. Tests made by a scleroscope show the relative hardness and resiliency of various metals to be as follows:

| Duraplate | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ...

"Duraplates being so hard, it is necessary to use special tools in finishing and trimming. In routing and finishing, for instance, the use of an abrasive has proved the fastest and best

method,

"A further advantage is found in the fact that Duraplates have little or no affinity for ink, the ink being practically cleaned off at each impression. This, we are informed, means that every impression will be sharp and clear, and that the disagreeable feature of plates filling up and printing a slur is eliminated.

"At present the new company is confining its efforts to advertising work for newspapers and periodicals. The reason for this is that although the plates are being produced in a commercial way, development work is going on all the time, and the officials have numerous improvements in half-tone printing that they expect to bring forth when orders are accepted for plates for high-grade half-tone and colour printing.

"The well-known firms, the Royal Electrotype Co. and the Stokes and Smith Co., press manufacturers, both of Philadelphia, are

behind the new concern.

Current Topics.

The Railway Strike.

The paralysing effect of the railway strike has been severely felt in the newspaper world, and has added greatly to the toils and worries of those engaged in the production and distribution of daily papers. In London the stoppage of the train service caused much inconvenience, but the enterprise of the great dailies soon had a wonderful service of motors available, and in the early hours of Saturday morning, squadrons of cars were rushing south, east, west, and north. Saturday afternoon and evening saw very lively scenes in Fleet-street and its surroundings, hundreds of motor vehicles being loaded up with newspapers.

many of them weeklies with huge circulations, and destined for despatch to Leeds. Nottingham, Manchester, Birmingham, Crewe. Leicester, and other towns, while an army of motor cycles and bicycles had been commandeered for the suburban districts' delivery. Thus the distribution was effected almost at the usual hours, and the deliveries made without any serious complaints as to lateness. A feature of the emergency was the way the different newspapers assisted each other and co-operated in the matter of distribution. The strike, too, has been responsible for smaller newspapers, and several of the London dailies are coming out with four pages. In the provinces means were also taken to cope with the situation; thus the various newspaper printers in Manchester and district employed an army of vans or cooperated by using motor lorries. The newsagents in several of the towns adjacent to Manchester got their weekly and daily papers through their local wholesale houses cooperating with the Manchester distributing staffs. Motor vans and lorries collected all parcels which were locally distributed afterwards. Meantime the strike goes on and the industries of the country are being paralysed, the whole working community is suffering hardship, and as the days go on the situation will become worse. Is there no way out?

"Big Six" Asks £10 a Week.

THE New York branch of the Typographical Union, otherwise known as "big six," has put in a demand to the employers for a 44-hour week and an increase in wages from \$36 for a 48-hour week to \$50, practically £10 for the shorter week. This advance to take place on October 1st. It is just a year ago since the printers secured the 48-hour week and f_{36} , and the employers naturally do not take kindly to the new demands. The masters argue that as high wages mean approximately higher prices for the necessaries of life it is little use giving the men more money as it will only mean an increase in the prices of the commodities they have to purchase, and the workman who earns \$8 per day will be no better off than when he earned \$4 a day, and got the same amount of food, clothing and other necessaries of life for his day's work. Commenting on the advance claimed our New York contemporary, the Publishers' Weekly, says: - "There are three steps in the distribution of the increased costs that accrue to the printing matter: When the printing wages change, the workman, through his Typographical Union, puts this cost up to the

Digitized by GOOGLE

BRITISH & COLONIAL PRINTER & STATIONER

master printer; the master printer faces the problem by distributing this on new bids and passing it to those who have regular contracts with him; the user of printing, in our trade the publisher, has to find the best way possible to get this increased cost to the public. The recent increases in book prices are only the final step in distributing costs that were placed in the printing shop last November, and the publisher must now look forward to facing these new demands this fall. That such demands were to be presented were known two or three months ago in the trade and commented on in these columns. But the time is drawing closer, and it is time for the publisher to be consulting with the master printer as to the conditions that are to be faced." Were the demands for shorter hours and higher wages showing any symptom of fixity it would not be so bad, as circumstances would adjust themselves, but no sooner is one advance granted than preparations are begun for demanding another, and so there is no finality, much to the disturbance of business, and upsetting of the trade.

Paper Standardisation.

An inquiry as to the present position of the standardisation of paper was put forward at a rally of master printers at Cricklewood last week, it being suggested at the same time that the adoption of standardisation would be a great help to printers in their work. Mr. W. J. Pollock (vice-president of the West and Norm-West London Master Printers Association) stated that a good deal of attention had been given to the subject in conjunction with the wholesale stationers and the mills. Although the matter was a little in doubt, it was expected that a scheme would shortly be launched. His own feeling was that if an agreement could not be reached with the wholesalers and the mills then it rested with the master printers to give their orders as to size and substance as they required them. One house, he mentioned, had sent out cards with details as to thicknesses indicated in so many points. Supplied in such form, the printer could readily tell by the use of a micrometer whether he was getting the material he paid for. Mr. Pollock urged that there was great need of standardisation, and he suggested that if the other parties did not agree, then the master printers should send their orders to the firms who would supply what they wanted. They should apply the point system to paper, as it had been with so much advantage to type. Mr. A. Langley said the question of standardisation had been before the council of the Federation of Master Printers at its last meeting. He understood that the mills were willing to supply on the lines that the wholesale stationers specified. The difficulty in the way was the present stock of the wholesale merchant. It was felt by master printers that the scheme should go through, and be issued immediately, the remedy being in the hands of the printer, who when ordering should intimate that he wanted the paper in a certain way.

L.C.C. Scholarships.

The London County Council is providing courses of instruction in London at day trade schools for boys who intend to enter skilled trades with a view to becoming skilled workers, foremen, and managers. The inworkers, foremen, and managers. struction is specialised to prepare boys for entry into particular trades, to give a knowledge of the underlying principles of the trade and a practical training in trade methods, and to improve their general edution. The Council offers 263 scholarships tenable at these schools. [Proposals are under consideration for increasing facilities for trade school instruction in London, with a consequent increase in the number of scholarships.

By means of these scholarships, boys may secure free education (with a maintenance grant) to prepare them on leaving school to take up either apprenticeships or employment in skilled trades. Skilled employment is more likely to be regular and permanent than employment of an unskilled nature and parents would do well to consider carefully the advantages offered by the scholarships.

The Principals of the trade schools will be glad to advise parents and to assist them, as far as possible, in placing boys who have satisfactorily followed the courses of training. The Council does not, however, guarantee employment, and it is expected that parents will take definite steps towards the end of the course of training to secure suitable positions for their boys in the traces in which they have been trained. The next school year in the trade schools will commence in April, 1920, when successful candidates for these scholarships will begin their training.

Any question in regard to these scholarships should in the first instance be addressed to the head master either of the school at which the cadidate is in attendance or of the school at which he wishes to attend.

THE average man thinks it is a special dispensation of Providence when he gets something good that rightfully belong to somebody else.

DIVIDENDS AND REPORTS.

Lamson Paragon. — The directors of the Lamson Paragon Supply Co. announce an interim dividend of 5 per cent. per annum (6d. per share), less income-tax, on the ordinary shares for the past half-year, payable October 11th.

INTERNATIONAL LINOTYPE.—The directors of International Linotype, Ltd., have declared an interim dividend of 2½ per cent. (£2 10s. per £100 stock) to September 30th, 1919. Dividend warrants will be posted on October 31st next to holders registered October 1st.

WINTERBOTTOM BOOK CLOTH.—The directors of this Manchester company have declared an interim dividend at the rate of 4 per cent. per annum, free of tax.

NEW COMPANIES.

CARRYBOX, LTD.—Registered with a capital of £10,000, in £: shares (5,000 preference), to adopt an indenture of assignment between E. Lloyd and the company, and to manufacture and sell in foreign countries strawboard boxes of all kinds, etc. The subscribers are E. Lloyd and T. Shillitoe. Private company. The subscribers are to adopt the first directors. Registered office, 2, Basinghall-avenue, E.C.

BRYANT CARTON Co., LTD. — Registered with a capital of £26,000, in 25,000 8 per cent. non-cum. preference shares of £1 each, and 20,000 ordinary shares of 1s. each, to take over the business of the Bryant Carton Co., to carry on the business of manufacturers of all kinds of cartons, either of cardboard, wood or other material and packing cases for the same, and to enter into an agreement with the said old company and M. Chater the liquidator thereof. The subscribers are L. C. C. Hathaway and T. J. M. Hume. Private company. The first directors are not named. Registered office, 89-95, Hertford-road, Kingsland, N.

ENGRAVING Co., LTD.—Registered with a capital of £10,000, in £1 shares (5,000 prefer-

ence), to carry on the business of designers, three-colour, half-tone and line and other block-makers, wood, copperplate, brass and general engravers, etc., and to enter into an agreement with W. V. Vale. The subscribers are C. W. Harness and B. Caswell. Private company. Directors, C. W. Harness (permanent) and others to be appointed by the subscribers. Registered office, Gates-street Whitmore, Reans, Wolverhampton.

R. A. BAIRD, LTD. — Registered in Edinburgh with a capital of £5,000, in £1 shares, to carry on the businesses of stationers, printers, etc. The subscribers are R. Smith and J. D. Pringle. Private company. The first directors are R. Smith and J. D. Pringle. Registered office, Municipal-buildings, Greenock.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

STANDARD CATALOGUE Co., LTD.—(A) Issue on October 11th, 1918, of £1,000, and on November 8th, 1918, of £2,000 debentures. parts of a series already registered. (B) Satisfaction to the extent of £32,000 on or before June 30th, 1919, of first debentures dated 1917-1919, securing £40,250. (Both notices filed August 12th, 1919).

COMPANY NOTICES, etc.

The Welsh Church Press and Printing Co., Ltd., a meeting of the Welsh Church Press and Printing Co., Ltd., was held at Lampeter on September 8th, when the following resolutions were passed unanimously:—
"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily."—"That Mr. Charles T. Appleby, of Birmingham, London and Sheffield, be appointed liquidator for the purpose of such winding up."

LONDON ETCHING Co., LTD.—Notice is given that a meeting of the company will be held at London, on October 28th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

BANKRUPTCIES, etc.

Re Henry Fredk. Adlard, printer, 55, Banner-street, City-road, E.C.—The public examination of this debtor, who carried on business as "H. Adlard and Co.," was held at the

Digitized by GOGIC

London Bankruptcy Court on September 23rd before Mr. Registrar Hope. The statement of affairs shows total liabilities £3,935 14s. 7d. (unsecured £2,472 3s. 4d.) and net assets £1,042 14s. 6d. after deducting £63 11s. 3d. for payment of the preferential claims. Replying to Mr. D. Williams, official receiver, the debtor stated that, having served his apprenticeship to a firm of printers and stationers, he, in September, 1894, with a capital of £1,000, commenced a similar business on his own account at St. George's avenue, Aldermanbury, under the style of "H. Adlard and Co." In March, 1896, he removed to 78, Wood-street, and in June, 1904, to 21, Nicholl-square, Aldersgate-street, but since June, 1918, his trading had been conducted at 55, Banner-street. The business yielded him a fair living up to 1912, but in the following year he lost about £1,500 in connection with a scheme for acquiring the Crystal Palace as a permanent Exhibition of Arts and Crafts. He invested £1,000 into the syndicate and was promised the whole of the printing work in connection with the exhibition. That loss was one of the causes of his failure, another being that on the outbreak of war his business came practically to a standstill, and that thereafter until the end of last year he lost money on the Witness further attributed his intrading. solvency to a judgment for £1,000 and costs obtained by his mother in respect of a family dispute and to heavy business removal expenses. The examination was concluded.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.-Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership between Herbert Roy Hollis and Hector Finlayson, carrying on business as selling agents and advertising agents, at 19 to 23, Oxford-street, London, under the style or firm of "Hollis Factory Service," and "Hollis' Advertising Service," has been dissolved by mutual consent as and from July 7th, 1919. All debts due to and owing by the late firm will be received and paid by Hector Finlayson.

THE BANKRUPTCY ACT, 1914. FIRST MEETING AND PUBLIC EXAMINATION.

Tattersall, Benjamin. journeyman printer, 99, Robert Nuttall-strret, Accrington. First meeting, October 8th, at 11 a.m., at the County Court House, Victoria - street, Blackburn. Examination same day and place at 11.15 a.m.

T.A." Activities

At the executive council meeting of the Typographical Association, held in Manchester, the general president (Mr. French) welcomed the new member of the executive,

Mr. J. Morgan (Liverpool).

Negotiations have been in progress to secure improved conditions in Jersey. The proprietor of the Post acted as chairman, and on behalf of the masters offered an increase of 5s. all round and a standard 50-hour week. This offer was refused and the negotiations were broken off, which have, happily, been now resumed and a settlement may be looked for at an early date.

A delegation from the E.C. and members of the Associated News Chapels recently met representatives of the Linotype Users' Association to further discuss the position of linotype operators with regard to hours and wages. It being contended that the operators had gained nothing under the National Agreement. A conference has been arranged to discuss the hours question, the wages to come up under the wages section of the National Agreement.

Nominations are to be invited for a second Parliamentary candidate in addition to Mr. F. O. Roberts, M.P., who has been invited to stand again as the Association's nominee.

The general secretary of the National Society of Printers' Assistants sent a letter to the E.C. regarding the dispute between this society and the "T.A." over the rotary agreement which provides for the transference of N.S.O.P.A. members to the "T.A." on becoming rotary minders. He pointed out that the agreement did not affect the promotion of members but only their admission to the "T.A." A conference is pending to settle the

In recognition of his association with the E.C., Mr. W. T. Harkness was presented with a gold mounted umbrella. A similar token was given to Mr. D. G. Little as a mark of esteem from his former colleagues on the E.C., Mr. Little now being officially connected with the Master Printers' Association

The reciprocity scheme which is in operation between members of the "T.A." and the Scottish "T.A." is to become operative between the "T.A." and members of the Printing Machine Managers' Association on October 1st.

Scottish Printers' Wages.

As we briefly notified in our last issue, the wages demand of the Scottish printers has been settled. of the Α meeting Wages Board for the Printing Industry in Scotland was held in Glasgow last Thursday, when a communication submitted from the secretary of the workers' panel intimating that the employees in the trade had decided by ballot to accept the offer made by the employers of an increase of 7s. per week to all male workers and to women doing the same kind of work as men. This decision affects the members of the following trade unions: The Scottish Typographical Society, the Society of Lithographic Printers, the National Union of Printing and Paper Workers, the Amalgamated Society of Lithographic Artists, the National Society of Operative Printers and Assistants, and the women members of the Edinburgh Typographical Society. The representatives of the trade union federation claimed that the payment of the increase of 7s. should be made retrospective from the week beginning on August 11th. The employers' side of the Board were opposed to making the advance retrospective, but it was ultimately agreed to refer the matter to a meeting of the Alliance of Employers in the Printing and Allied Trades.

Is the War Won?

What's wrong with everything? Haven't we won the war? Surely there must be some reason for this state of disquieting unrestthe strikes and the discontent which are blots, on our good name as a community? There is a reason—and to my mind it seems to mean that we haven't yet won the war! Dig right down deep—cut into the taproot of the main trunk of labour unrest and you will find, perhaps not to your astonishment, a gentleman who calls all his "w's"—"v's." He is the blonde beast whose inglorious army and notorious navy have gone the way of all hollow idols. His ruthless machine is broken his mighty engines of war relegated to the dishonoured scrap heap to which they belong. But have we not forgotten his brains? Have we not overlooked the matchless cunning of these loathsome vassals of the All Highest? And it lies with the real thinkers and commercial men of our community to find the remedy. To my mind, it is not really a question of six hours per day or the payment of so many shillings per hour. The panacea is the urgent necessity of excluding from our midst the pro-German paid agitator who pollutes the air we breathe and whose presence amongst us brands the honest workman with an unsavory nomenclature which he does not deserve. Certainly no easy task. By some it may be deemed impossible. But there it is

Some Paper Topics.

Business continues to be good, and practically all the mills are busy on orders booked some time ago. There is not a great immediate demand for paper, as the orders already placed are sufficient to accommodate current The consumption of paper is distinctly on the increase, however, and there is no sign of slackness ahead. Despite much that has been said and written about the perils of unrestricted import, it is already becoming self-evident that for a long time to come the chief anxiety of the mills will be that of meeting the demands of customers. Foreign paper is coming in in ample volume, but so far the buyer looks in vain for the prophesied decline in price. The truth of the matter is that there is going to be no decline in price of any paper, British or foreign, until the currency of the country approximates more nearly to surface value. In the meantime there are several factors at work which cannot fail to add to the cost of producing and distributing paper. The rates of railway transport will ere long be raised to a profitable basis, and the adjustment will demand some corresponding provision on the part of the papermaker and merchant. The industrial troubles in pulp-producing countries abroad have not yet subsided, and the concessions which have been and still remain to be granted will find their level in a higher price for pulp.

The recovery of the constituents of waste waxed paper is not entirely an American proposition, though it may well be that the company formed at Kalamazoo is the first to exploit the process commercially on a large scale. Our first acquaintance with a method of recovering the waxes and pulp as separate products was made through the medium of these notes, when a subscriber from the London district forwarded samples showing the results of much research and experiment. The specimens augured well for the success of the process, and for all we know the American venture may have some connection with the efforts of the English investigator. question one would naturally ask is whether the available tonnage of waste waxed paper is sufficiently large, and the facilities for collection and transport sufficiently cheap, to guarantee the success of an enterprise based on waxed paper products recovery alone. Incidentally we may add that the investigations with which we came in contact embodied also the recovery of a third by-product in the form of the threads or coarse fabric used for lining or reinforcing waxed packing papers.

Touching the use of waste paper, it is not generally realised to what an extent the boot and shoe trade depended, and no doubt still

depends, upon a leather substitute made from a mixture of suitable paper and board waste amalgamated with leather cuttings. Several small mills in the Midlands were engaged in the production of imitation leather, and from the purely commercial point of view very great success attended their efforts. Principally the product was employed in the manufacture of heels, and the chief requirement, apart from a certain degree of strength, was that the material should shave and trim without breaks or fractures. Inferior stuff failed to answer this test and invariably snipped off at the corners during the shaping of the heel. For this reason the most suitable grade of pulp was one in which the percentage of actual leather fibre ran high. From our own experience we are inclined to believe that there are still great possibilities in store for a pulp leather which will embody the best features in durability, weather resistance and shaving or buffing facility. H.A.M.

Watching Japan.

Of the total imports of paper into Japan 75 per cent. is from Canada, and that to a great extent means British Columbia. If these imports were used in Japan the significance would be lacking, says Paper, N.Y., but the fact that Japan exports large quantities of paper to Great Britain, British India. Australia and even to the United States would suggest that Japan is not manufacturing all that she is sending to those places. B. C. paper men believe that quite a large portion of what B. C. sends to the Orient in the shape of paper is finding its way to the countries mentioned, and classified as the Japanese product. If Japan can, as she is doing, export paper to Britain, there does not appear to be anything in the way of British Columbia doing likewise. So far as the United States is concerned it is noteworthy that the value of paper sent by Japan to the United States was 75 per cent. higher in 1918 than in 1916. Furthermore, Australia absorbed almost five times as much paper and pulp from Japan last year as she took in 1916.

LINOTYPES ON BOARD SHIP.—Printing trade visitors to the Shipping Exhibition at Olympia should be particularly interested in the stand of Messrs. Harrison and Sons. Amongst their exhibits is a Model 4 Linotype and an eight-crown Miehle, both in operation on the Shipbuilding and Shipping Record. A card on the Linotype machine bears some interesting information relating to Linotypes in operation on board ship. The Cunard S.S. Co., Ltd., have installed Linotypes on several of their liners. The U.S.S. "Melville" (flagship) installed a Linotype similar to that exhibited, during the war, and other U.S. battleships also installed Linotypes. Further installations of Linotypes on board ship are under consideration.

Printers and the Railway Strike.

The "Daily Sketch" Censored.

During the progress of the Railway Men's Strike an attempt was made to induce the newspaper printers to take a part in assisting the strikers to gain their objects, but with little success, except in the case of the Daily Shetch, where a two hours' strike took place.

Sketch, where a two hours' strike took place.
Mr. Charlton, of the N.U.R. Executive, speaking for Mr. J. H. Thomas, M.P., at Gladstone Park, Willesden, last week, said that when the Government commenced their poison gas campaign through the press compositors came to them, and said, "Shall we refuse to assist in publishing this?" At that time they refused the assistance of other unions, but on Tuesday night the compositors of the Daily Sketch office declined absolutely to go on printing the copy that was sent out to them. The result was a two hours' strike, which was only settled when the editor of the Da ly Sketch withdrew certain copy.

In view of this public statement the following facts should be put on record.

After a part of the issue of Tuesday had been printed the machines were stopped, on the initiative of the machine assistants' chapel, which took exception to the tone and opinions of the leading article, dealing with the railwaymen's strike.

A deputation from the members of the National Society of Operative Printers' Assistants and the Packers' Union waited upon Sir Edward Hulton and Mr. James Heddle, managing editor. The deputation was joined later by Mr. G. Isaacs, the general secretary of the N.S.O.P.A., who was accompanied by Mr. C. Hollis, the new London secretary.

Mr. Isaacs, who has been working most earnestly throughout the crisis to prevent hasty and ill-considered action on the part of members of his society, at once admitted the illegality of the steps taken by the members of his society in stopping the production of the Daily Sketch.

Sir Edward Hulton naturally refused to admit the right of any section of his employees to dictate the policy of his papers. He declined to alter a syllable or a comma of the leader, which, in point of fact, appeared intact throughout the entire issue.

Mr. Isaacs shared Sir Edward Hulton's firmly expressed opinions on the liberty of the press, and although frankly sympathetic with the point of view of the deputation, he persuaded the printers to carry on and to make up for lost time as much as possible.

The deputation withdrew, the machines were started at once, and all editions were printed off without further hitch.

Exception was also taken to the Government advertisement under the heading "Fight," which appeared in the Daily Sketch and other newspapers. Mr. Isaacs looked upon this advertisement as "a weapon to smash trade unionism." He was assured by Sir Edward Hulton that no paper under his proprietorship would be permitted by him to support any campaign which had for its object interference with trade union principles. He had always recognised the principles of trade unionism as legally and properly applied.

He was quite firm, however, in pointing out the very serious mistake which the machine assistants had made in impeding the production of the paper, and in attempting to interfere with the policy of its leading article. He was, in fact, prepared to close down his publication altogether rather than submit to

BRITISH & COLONIAL PRINTER & STATIONER

dictation from any branch of the industrial departments or from any individual who thought fit to obtrude his views on policy or opinion.

The whole of the facts were at once placed by the proprietors of the Daily Sketch before the Newspaper Proprietors' Association for

their consideration.

In acknowledging receipt of a resolution passed by the machine assistants' chapel criticising "as trade unionists" the editorial references to the strike, Sir Edward Hulton has written to the father of the chapel as follows:

"It is important that your chapel, and the members of any other chapel sharing your views, should understand once and for all that we shall not tolerate any dictation as to the policy or features of this or any other paper published by the firm.

paper published by the firm.

"It is necessary to state this view emphatically, and I hope you will convey it to your members, so that no future misunderstanding of this kind may arise to interrupt our cus-

tomary good relations."

Press Independence.—'The Spectator is responsible for the following:-We must congratulate Lord Northcliffe on the firm stand that he has taken against sinister attempts to interfere with the liberty the Press. Last Thursday's Times contained a letter to him from the Daily Mail machinists protesting "against the treatment that is being meted out to the N.U.R. in the columns of your Press." Lord Northcliffe in his reply went to the root of the matter His papers had, he said truly, given much space to Labour questions. But he had no intention of allowing his papers to be influenced by any one in this or any other matter.
"Rather than be dictated to by any one or any body of men, I will stop the publication of these newspapers." Lord Northcliffe is entirely in the right, and his answer will, we think, discourage any revolutionists who proposed to muzzle the Press through the printing trade unions.

At a meeting of the London District Committee of the Institute of Journalists on Monday it was resolved unanimously that "the London District Committee, while expressing its sincere satisfaction at an honourable settlement of the railway strike, records its strong disapproval of the attempt to apply trade union pressure in certain newspaper offices in order to prevent the free expression of public opinion, and expresses its warm appreciation of the firm action taken by newspapers publishers to maintain, in the public interest, the traditional liberty of the British Press."

A safety writing-ink, patented in Britain consists of a colloidal solution in water of the following ingredients:—Prussian blue, oxalic acid or other solution-maintaining agent, Epsom salts or other colour-fixing agent, and turkey red oil or other water-soluble oil as penetrative agent.

The Irish Wages Agreement.

The Executive Committee of the Typographical Association have placed before their members in this country, for the purpose of ratification by ballot, a copy of the National Wages Agreement for Ireland, drawn up in conference with the recently-formed Irish Master Printers' Association. As the Belfast employers are not connected with the Irish Association, that city is not included in the scheme. The agreement in principle follows the lines of that adopted in England. country is divided into six grades, the rates in which for jobbing, weekly news, and biweekly case compositors range from £2 11s. in grade 6 to £3 10s. per week in grade 1. The rates for case compositors on evening newspapers shall be 2s. 6d. above the jobbing case rate, and for morning and bi-weekly papers issued on the morning of publication, 8s. above the jobbing rate. The linotype and monotype agreements are in accordance with those now in force in this country, and the general rates for overtime are also similar to those in force here. The adoption of the agreement will entail very big wage advances in some of the Irish branches. Castlebar, for instance, will require an advance of £1 35.6d. to raise its rates to those of grade 4, into which it has been placed; Longford and Downpatrick, advances of 18s. 6d.; Ballymena, 16s. 6d.; Ennis, Kells, Fermoy, Navan, Sligo, Tipperary, and Queenstown, all advances of 16s. It is, however, provided that where the grade rates carry an advance of more than 5s. per week, the full rates shall be attained by advances of 5s. every three months, but in no case must the payment of the instalments extend over a period of more than twelve months. In an explanatory note to their members the Typographical Association say that the scheme as a whole is worthy of adoption. They point out that considerable advances will accrue to most of the Irish printers under the agreement, and that in many cases these advances could not have been obtained by any method other than national negotiation.

The Printing Crafts Guild.

A concert to welcome the members of the Guild, students, and other craftsmen returned from war service, arranged by the Printing Crafts Guild in conjunction with the printing department of the College of Technology, Manchester, was held the other Saturday. The large hall was full, many enthusiastic members travelling from such outside districts as Oldham and Stockport regardless of the trouble of getting home again without the assistance of railway trains. The artistes were Mr. Hamilton Harris (bass), Miss Edith Barton (soprano), Miss A. Brocklehurst (contralto), and Mr.

Hubert Read was at the piano.

During the interval, the president (Mr. R. B. Fishenden, M.Sc. Tech.), welcomed all those who had returned from serving their King and country, and afterwards the whole company stood in silence to honour the brave warriors who had made the supreme sacrifice.

Mr. Chas. W. Gamble, director of the photographic department, who has seen much service, spoke earnestly about the past, the present, of the future of the printing and allied industries. The annual meeting of the guild will be held on Saturday, October 18th, 1919.

WER MAC.

Printing, Bookbinding & Kindred trades overseers' association.

Smoking Concert.

Among trade organisations preparations are now in progress for the work of the winter, and in order to inaugurate the activities of the coming months the Printing, Bookbinding and Kindred Trades Overseers' Association held its members' reunion smoker on Tuesday evening last at the "St. Dunstan Room, Anderton's Hotel, Fleet street, E.C. The president (Mr. A. J. Daines) and the vicepresident (Mr. A. W. Hunt) officiated over a large and enthusiastic muster of members. The programme was a lengthy one, and of a first-rate quality throughout. Most of the musical items were selected from the members, revealing the fact that the Association possesses within its ranks many gifted artistes.

Before commencing the musical part of the evening's entertainment the following new member was formally admitted to membership: Mr. B. J. Sansom (Devonshire Pressinstructor at the St. Bride technical class for binding). To Mr. Sansom the president, on behalf of the Association, extended a warm

welcome.

During the evening the chairman took occasion to remark that he was pleased to see so many ex-service members back again amongst them, and he was sure he voiced the feelings of the membership in extending to

them a hearty welcome.

It would be difficult to discriminate the outstanding features in a remarkably good array of talent. The songs of Mr. Petter ("Drake Goes West" and "A Sailor's Paradise") and Mr. Daley ("Nirvana" and "Parted" were very fine indeed. Miss Thring ("Until," "Sympathy" and "Where my Caravan has Rested") received a warm ovation for the nice manner in which she rendered her songs. Miss Lynch ("Before You Come" and "Sink Red Sun") was also loudly applauded. The violin solos of Mr. Cox were heard with pleasing effect in "Blue Bells" and "Intermezzo." Mr. J. Walker, perennially from the land o' cakes, delighted his hearers with "It's nice to get up in the Morning" and "Mary." Mr. Tom Hunt in "At Somerset

Fair" and "Dance with your Uncle Joe" brought forth roars of laughter; while Mr. Gilbert Chester—who acted as accompanist still further sustained the humorous element with some clever sketches at the piano. Other well-merited contributions were given by Messrs. A. W. Hunt, Lee, Carberry, Jones, Brown, Atkins and Eden.

At the conclusion of the programme a hearty vote of thanks was accorded to the artistes on the motion of the president, who expressed the belief that the evening's entertainment

was the best they had ever held.

Members will hear with much regret of the rather sudden death of Mr. J. Dickinson. The deceased gentleman had only recently taken up an appointment as works manager to Messrs. Burrup, Mathieson and Sprague.

Printers' Wages.

There has been no further move in regard to the question of printers' wages throughout the country. It is, however, understood that the Joint Industrial Council will meet next week, when matters may be put on a better footing.

National Wage Settlement.

The Central District Branch of the London Master Printers' Association will resume their meetings at Anderton's Hotel on October 22nd, when Mr. A. E. Goodwin (secretary of the Federation of Master Printers and Kindred Trades) will give an address on "Wages Settlement on a National Basis." Mr. J. J. Keliher, the president, will occupy the chair, and Mr. W. T. Burchell, the hon. organising secretary, will welcome members and visitors.

German Compelition.

At the recent Leipzig Fair there was a great display of German manufactured goods, over 10,000 firms exhibited their wares, and 7,000 foreign buyers were present. A visitor to the fair gives the following notes:—The prices were from 200 to 400 per cent. above pre-war prices, and all branches of German industry were, in his opinion, on the verge of bankruptcy.

In the section dealing with paper and print the only articles available to any extent were art prints of every description, comprising pictures, calendars, post cards, blotting pads and manufactured stationery generally, and excellent colour work was seen in this connection. Production generally is much restricted owing to lack of raw materials. The British manufacturer, our informant states, has little to fear from German competition.

Trade Notes.

WE are informed that the strike in the Norwegian printing industry has been settled.

THE Romford Rural District Council has passed plans for an art metal factory at the Roneo Works, Hornchurch, for Roneo, Ltd.

The late Mr. Peter Hampson, J.P.. of Lower Broughton, newspaper proprietor, has left estate valued at £7,032 gross and £5,807 net.

A SEAPLANE bound from Southampton to Guernsey, carrying newspapers, was wrecked off Alderney in a fog on Sunday.

STATIONERY is among additional articles to be scheduled under the Profiteering Act, as submitted to Sir Auckland Geddes, President of the Board of Trade.

MR. B. A. RAWORTH, for 37 years a member of the editorial staff of *Engineering*, and for the past thirteen years joint editor, has died at Sutton, in his 71st year.

MR. E. F. KANE, editor of the Kilkenny People, and Alderman Nolen, president of the Gaelic Athletic Association, were arrested last week, on a charge of having in their possession firearms and ammunition. They were conveyed under a strong police escort to Cork Prison.

The second issue of Kelnotes, the quarterly house organ of Messrs. J. J. Keliher and Co., Ltd., is an excellent production, and fully maintains the promise of the first issue. The story of the experiences of "A Kelboy at Jutland" is interesting and the whole contents are of a high character.

EMPLOYERS and employed in the Northampton printing and allied trades met at the Town Hall the other day to welcome those who have come back from the war. After tea Mr. Hoare, the president of the Master Printers' Association (the town members of which were the hosts), read over the names of the fallen, all standing in silence.

AMERICAN PRINTING EXHIBITION.—As the result of a vote taken among exhibitors in past New York printing trade shows, there will be a resumption of the New York Exhibition probably in Madison Square Garden, during the 1920 meeting of the American Newspaper Publishers' Association under the management of Mr. Harry Cochrane.

The usual monthly committee meeting of the Bristol Printing and Kindred Trades Federation was held at the Caxton Rooms on October 1st, when the following resolution was unanimously passed:—"That the Bristol Printing and Kindred Trades' Federation strongly urge upon the National Federation the immediate necessity of supporting the railway workers by every means in their power in the fight for better conditions during the present crisis."

MR. E. C. MOYCE, formerly general secretary of the P. M. and O. A., has undergone an operation in St. Bartholomew's Hospital and his condition gives rise to anxiety.

ALBERT JOHN JACKSON, a newspaper worker, has been suffocated at Cardiff, by an escape of gas.

MR. GEORGE WILLIAM CAPEL, who died at Croydon on Tuesday began life as a newsboy, and rose to the position of departmental manager for Messrs. W. H. Smith and Son.

THE British and Foreign Bible Society state that during the year 1918-19 their issues of the Scriptures totalled 8,746,963—less than any total since 1913.

MR. H. Salvin, the Sunderland Daily Echo sales organiser, has been admitted to the local infirmary suffering from a number of injuries received as the result of a collision of one of the Echo's motor cars, in which he was travelling, with another vehicle.

THE fear of being prosecuted for doing private work while employed as a printer by the Midland Railway Co. was stated at an inquest on Friday to have been the reason why Thomas Alfred Crosher, aged 29, of Highgate, cut his throat in the stores department of the Midland Grand Hotel. The coroner recorded a verdict of suicide whilst of unsound mind.

THE Montgomeryshire Express and Radnor Times, an old-established newspaper, has been taken over by the National Press Agency, Ltd., of which Major David Davies, M.P., is the principal owner, and which has taken over several London and provincial publications lately. The Review of Reviews, the Welsh Outlook, and Everyman, as well as important newspapers, are now under the control of this agency.

The L.S.C. Report.—The half-yearly report of the London Society of Compositors shows an increase in the membership of 500. This influx is accounted for mainly by the addition of 32 printing houses to the Fair List. The balance-sheet also testifies to a satisfactory position. Despite some heavy items of expenditure—£9.695 for superannuation benefit, and £2,120 for funerals—there is an increase of £7,478 in the funds of the Society. The total funds now at the credit of the Society amount to £91,016, the highest on record, and it is hoped during the present six months to raise that to £100,000.

Speaking at the anniversary dinner of the Newsvendors' Benevolent Institution at the Mansion House Lord Burnham said "newsvendors have always been the messengers of the gods, but this week they have been the messengers of the Geddeses as well." The Lord Mayor mentioned that the average yearly income of the Institution was £2,300, and the amount paid in pensions nearly £1,500. To compensate for the decline in the value of money, they wanted £750 annually to increase pensions by at least 50 per cent. A generous contribution of £4,000 from Mr. Frank Lloyd for this purpose was gratefully recognised.

BRITISH & COLONIAL PRINTER & STATIONER

TENDERS are wanted for the supply to the Denbighshire County Council of printing circulars, minutes of meetings, placards, etc., supply books, stationery, etc.; particulars from Mr. W. R. Evans, County Offices, Ruthin.

TENDERS ACCEPTED.—For the printing of minutes, reports, etc., and the supply of rate, receipt, and other books, for the Merton and Morden Urban District Council: J. B. Blackmore and Co., High-street, Merton, S.W.19. For the supply of stationery for six months, for the Epsom Guardians: W. Pile, Ltd., High-street, Sutton.

An Australian Book.—That Australia is forging ahead in the matter of printing is emphasised by the publication of "Australia Unlimited," a book of 1,140 pages, with 800 illustrations, and weighing over nine pounds. At one time a considerable amount of books about Australia were produced in Great Britain, but this monster volume is entirely an Australian production, "wholly set up and printed in Australia by the Speciality Press Proprietary, Ltd., and Anderson, Gowan and du Riev, Ltd., of Melbourne. illustrations have been engraved by the Patterson, Shugg Proprietary, Ltd, and the Globe Engraving Co., also of Melbourne. The book is very well produced and is a credit to those concerned in its publication.

THE report of the Newcastle Public Libraries for the year 1918-19 states that the stock of volumes is now 186,071, an increase of 2,483, after replacing 1,056 discarded volumes. The issues of the year exceeded by 16,914 those for the previous year, in which the increase was 30,431, and the readers number 40,463, an increase for the year of 3.787. For the first time since 1911, the issues at the Reference Library show an increase. From 1911, when the issues were 111,717, there was a decline each year, until in March, 1918, the total had fallen to 69,122. In the year 1918-19 the issues rose to 76,344. At all the lending libraries the num-At the Central ber of readers has increased. Library the number is 15,239, as against 15,861 for 1912, when statistics giving the number of readers at the various lending libraries were first published.

A currous incident occurred in Dublin, the other day, in connection with the recent suppression of Sinn Fein periodicals. A motorlorry bearing a military officer and a detective stopped outside the Wood Printing Works. The officer explained to the manager that he had come to return the parts of the machinery which were removed on the occasion of the suppression of Sinn Fein newspapers printed by that company. He pointed out, however, that the return of the machinery would not be made unless the company undertook not to print in future any of the seven suppressed newspapers in Dublin, or any matter that would contravene the common law, the Defence of the Realm Act, the Criminal Law Procedure Act, or any other statutory pro-The manager declined to sign an visions. undertaking, as he considered the document contained too sweeping demands. The officer and detective then withdrew, and drove away in the lorry which contained the parts of the printing machinery.

"A Woman's Soul" by Guy de Maupassant "Madame Bovary" by Gustave Flaubert and "The Mummy's Romance" by Theophile Gautier, will be ready immediately in Greening and Co.'s Lotus Library.

The death has taken place of Sir E. T. Cook, a prominent London journalist, in his sixty-third year. The deceased gentleman joined the staff of the old Pall Mall Gazette under Lord (then Mr John) Morley, and was the righthand man of Mr. W. T. Stead, and succeeded him in the editorship. When the Pall Mall changed hands, E. T. Cook and his staff withdrew, and, with the financial help of Sir G. Newnes, founded the Westminster Gazette, which he edited from 1892 to 1896. He was then appointed editor of the Daily News, which was conducted by him until 1901, and later he became chief leader writer on the Daily Chronicle, a post which he held for ten years.

United Kingdom periodical and magazine publishers and others will be interested in the decision recently made against a well-known American publishing company by the Federal Trade Commission, By this decision the company is not allowed to enforce the "exclusive clause" contracts now outstanding with 447 periodical and newspaper dealers throughout the United States, which provide that these dealers shall not handle competing periodicals without first securing the written consent of the company. The Commission likewise ordered the company not to enter into such contracts, agreements or understandings in future, holding that such contracts constitute an unfair method of competition in restraint of trade, and were in violation of the Clayton Anti-Trust Acts.

Personal.

MR. H. E. HARRY (Merritt and Hatcher) will speak on Monday night at a meeting of the South-East London Master Printers' Association, at 294, Borough High-street, on "The Five Day Week."

MR. A. H. TOMLIN, who for about 30 years has represented the Bradford Daily Telegraph in London, has relinquished that appointment on the transference of the London section of that paper to 172, Fleet-street, where Mr. C. J. Chidley, the London manager of the Yorkshire Observer, will take control of all the papers published by the Bradford and District Newspaper Co.

MR. WILLIAM SEWELL (managing director of the Darlington and Stockton Times) and Mrs. Sewell a few days ago celebrated the fiftieth anniversary of their wedding. The literary, commercial, and printing staffs of the paper presented Mr. and Mrs. Sewell with a handsome case of cutlery in honour of the occasion.

W. H. Everett and Son, Ltd., newsagents, 11, St. Bride-street, E.C.4.

THURSDAY, OCTOBER 9, 1919.

Current Topics.

Printers' Affairs.

Now that the railway strike is out of the way, printers are turning to their own particular concerns; and there are some difficult problems to be handled. There are all sorts of rumours passing through the trade concerning a strike or lock out. It is very much to be hoped, however, that the leaders on both sides will have learned wisdom from the experience of the recent railway upheaval, and that a moderating spirit will prevail. There are alarming influences at work just now, and it would seem as though decks were being cleared for action. It will require the utmost

care to avoid a disturbance in the printing trade, and it is much to be hoped that nothing will occur to disturb peaceful working. An interruption of trade at the present time would be disastrous, and would do untold mischief. It is understood that the Joint Industrial Council for the printing trade will meet shortly, and it is expected that the problems now uppermost in the industry will be taken into consideration. If it can find a way out of the present dead-lock, the Council will render great service, not alone to printers, but to the whole community, and it will have justified its creation.

Printers and the Railway Strike.

THE community might well be proud of the part which the printing trade played in the circumstances created by the railway strike. From the first, Mr. T. E. Naylor, secretary of the L.S.C., was one of the most active of the delegates who sought to bring the Government and the N.U.R. officials together again, with the happy result announced on Sunday evening. The Right Hon-C. W. Bowerman, M.P. (secretary of the Parliamentary Committee of the Trade Union Congress, and a former secretary of the L.S.C.). was also one of the fourteen mediators who saved the country from disaster. The service which was thus rendered must give these leaders of the trade union movement a still higher place in public opinion. They displayed a spirit of moderation at a time of extreme crisis which does them credit, and the nation owes them a great deal. But for the foresight displayed, no one can tell to what serious developments the N.U.R. dispute might have led.

Master Printers' Readiness.

CREDIT is also due to the London Master Printers' Association for the steps they took to meet a position which was very threaten-Happily, the conditions they feared were obviated by the settlement reached on Sunday and the proposed conference with the unions "to discuss what steps could be taken to ameliorate conditions which may shortly arise," was not necessary. All the same, the suggestion is important, for it indicates possibly closer co-operation between the representatives of employers and employed in an emergency. It is to be hoped that the offer of mutual help will continue to be made in the future when other questions will no doubt arise.

Japan Printers' Strike.

GREAT BRITAIN is not the only country that is suffering from labour disputes. America has her own troubles in that way, and so have the continental nations, and so to be in the swim Eastern nations are following the example of the Western peoples, and in Japan, where labour unions and strikes are illegal, the workers have got out of hand and are defying the law, A correspondent of the Manchester Guardian gives some interesting information about the Press strike which took place in Tokio recently, when a member of the Diet, Mr. Yokoyama, organised a newspaper strike-job printers having led the way a few days betore. "The newspapers, including those who preached the patriarchal ideal, had been denouncing the profiteers who underpaid their workmen and they suddenly found themselves-some fourteen of themunable to issue so much as a handbill. There never was a strike which was such a gorgeous success. The newspapers straightway formed an employers' defence league, and signed a no-separate-peace treaty under a £10,000 penalty for infringement. The Opposition, to which Mr. Yokoyama belonged, was carried to such heights of elation that its feet suddenly got cold, and it began to fear that so potent a weapon was altogether too destructive. An announcement was made that his Majesty was greatly concerned and had given orders that he was to be informed of the progress of the strike. All who read the notice knew what this meant, and were not astonished when Mr. Yokoyama, in the full flush of his success, announced to the assembled printers that it was impossible to continue the movement, that their attempt had failed, and that it would be best to return and ask their employers to take them back. It was an indication that the bureaucracy still had the whip hand and was prepared to use it. It was also an intimatiou that those who did not obey would be guilty of the crime of disloyalty to the Emperor," and so the strike came to a speedy end. Everybody in Japan is scrambling pell-mell for money-very much as they are doing in England-and Labour is beginning to awaken very widely to its powers and possibilities.

MESSRS. STANLEY PAUL AND Co. now have two further volumes ready in their 1s. 9d. net novel series, namely Dolf Wyllarde's realistic story of stage life, "The Career of Beauty Darling" which is generally accounted one of her best; and "Jill-All-Alone" by 'Rita, a love story of peculiar charm.

News-Print for England.

News-print paper mills in Canada are liable to withdraw the enormous tonnage now shipped to America and turn it across the sea to England, according to discoveries made by several manufacturers who are returning to Watertown, N.Y., from the meeting of the News-Print Service Bureau held at Montreal.

The local men report that English representatives have been to the mills in Canada in an effort to divert the entire news-print production of the mills there from the United States to England, says the Paper Trade Journal, N.Y. All the surplus pulp is also sought for English mills. It is feared that the Mother Country may ultimately claim the entire output. The tendency for some time has been for United States paper manufacturers to invest their capital in Canadian plants, and many paper mills there are now owned by American capital. It is pointed out the Abitibi Paper Co. utilised practically the last water power site in Canada suitable for a paper mill, and that a limit seems to have been reached along the line of mill building there. It means the limit of expansion and news-print supply. If the output of the mills there is diverted to England it forces a serious situation in the United States.

At present it is found that there is a shortage of cars for shipment of paper and pulp in Canada. This results in the slowing up of delivery and adds to the already troublesome shortage of supply. That the demand exceeds the supply is recognised. Already offers of 5 cents a pound for emergency orders of newsprint are being received at Watertown, but the mills are unable to accept. Higher prices are expected.

The Customer's Paper.

Resolutions have been passed by the Ben Franklin Club, of St. Louis, U.S.A., discouraging the practice of accepting printing from buyers who have purchased paper elsewhere. The resolution adopted by the members of that club is as follows:—

"Whereas, the practice of buyers furnishing their own paper stock is depriving the printer of a legitimate profit and places certain responsibilities on him which would often work a hardship, and

"Whereas, the concensus of opinion expressed by members of the Ben Franklin Club is that this trade abuse should be discouraged; therefore, be it

"Resolved, that the Ben Franklin Club of St. Louis, recommends that all members of the club refuse to give quotations on any job of printing when paper stock is to be furnished by the customer except on certain municipal, State, and Government printing work."

Some Paper Topics.

Our complaint in last week's final paragraph concerning the difficulties of railway transport seems a very trifling thing as compared with the total stoppage which rules us as we write. No matter which way the strike ends, nor how long it may last, its effects, added to the previous state of congestion, will be felt for many months to come. Manufacturers throughout the country are naturally angry about the turn of events and are disposed to blame the railwaymen for plunging the trade of the country into deeper chaos just at the time when every endeavour should have been put forward to straighten out the tangle into which we have been driven. Despite this very human feeling, the fact remains that the only method of rendering service is to judge the issue calmly and without bias on either side. Men do not elect to go on strike pay and executives do not decide to fritter away in a short space of time the capital accumulated over a long period except for some reason and as the result of some deep feeling. Usually there are faults and defects on both sides, and almost always there is an error in tactful handling; hence the natural corollary of a remedy through the middle course. The profound belief of labour leaders of to-day engendered by the revelation of war and the earlier promises of politicians is in a relatively higher standard of living than that which has hitherto been the lot of the working man.

The experiences of the last few months will no doubt be turned to some account in the future promotion and development of manufacture. Apart from the lessons in industrial management, and the handling of the human element, twin subjects with which every administrative official is rapidly becoming more conversant, we have frequently witnessed the advantage and benefit derived by manufacturers whose establishments or mills were planned with due consideration to locality. Coal strikes have temporarily crippled manufacturers whose mills were situated inconveniently for supplies, and transport difficulties have added enormously to the cost of production in outlying mills, while railway strikes will effectively put an end to operations of any sort. The modern mill is planned on a site advantageously selected for highway transport, adopting motor tractors as an alternative to rolling stock in case of neces-Very few mills are better placed than those in Lancashire, where ample supplies of coal, chemicals and power are well backed up excellent main roads, magnificent engineering organisations and canal and seaport facilities second to none.

Dissatisfaction with conditions of employment is by no means confined to trade union employees. The fact of the matter appears to be that in the whirl and confusion of claim and counter-claim, discussion, settlement and re-settlement as between trade unions and masters and federations, the welfare of the clerical, administrative and distributive staff

is being overlooked. In very many cases the operatives are now relatively very much better off than the staff, notwithstanding which the members of the latter are still compelled to maintain their relative standard of living and preserve their social status. Within recent weeks a number of paper salesmen and representatives have confided their grievances to the writer, and from some of the figures named there is an obvious reason for dissatisfaction. In the absence of a big noise, there is the probability that justice may be overlooked, or, at least, overdue, but as the constitution of office and mill staffs precludes the possibility of organisation the matter is one dependent upon the thoughtfulness and fairmindedness of managements.

A prominent wood pulp representative sums the market up in the following fashion: All the mills which in pre-war days used wet mechanical pulp have gone back to it, and the demand is steady, but not rapacious. For dry mechanical there is only a low call, but the price holds good. Formerly the great majority of mills making common writings had compulsory recourse to mechanical to help them out, but with the improved conditions they have got back to the chemical brands as in pre-war days. The biggest demand is for easy-bleaching pulp, for which the esparto mills are placing good inquiries and orders. The deduction is that there is no probability of grass coming along in the near future. Esparto prices are insecure and transport difficulties almost insuperable; hence the iucreased demand for easy-bleaching, which, by the way, has had the result of forcing a high price. Current quotations are, we understand, about £4 in advance of those quoted some time ago The ultimate effect is bound to result in a higher price for E.S. writing and printing papers.

The paper market shows a distinct hardening tendency. It is difficult to-day to secure a good E.S. writing paper at less than 8d. per lb., although a commoner grade is available at 6½d. per lb. Super-calendered printings, which could be secured two months ago at 5½d. per lb., are now quoted 6½d., with a slightly poorer grade quoted at mill 6d. per lb. for making orders. Common English banks are on offer at 7½d. and 8d. per lb., tinted banks at 9d. per lb. Swedish kraft is being booked at £52 per ton, wholesale, against forward delivery. This is below the price of English kraft, but the possibility is that Scandinavian krafts will harden in the next week or two.

BRITISH'S COLONIAL

CUTTING MECHANISM

FOR

Paper and Other Tube Machines.

A British patent in the name of Messrs James Spicer and Sons, Ltd. (communicated by Messrs. A. E. Shirlow and H. W, Hoarse, of Victoria, Australia), relates to improved cutting mechanism specially applicable to paper and other tube machines. The cutters are carried by levers mounted on a rotary member so as to operate in the plane of the cutters and to revolve around the tube feeding mandril to effect the cutting operation by causing the cutters to close upon the tube with an even cut and pressure. For this purpose the

levers and cutters on the rotary member are mounted within a conically flanged disc frame around the tube feeding mandril, and the cutters are carried by arms connected to the levers whilst the latter carry conical rollers resiliently held in contact with the conically flanged disc which is capable of axial reciprocal The rotary member upon which movement. the levers carrying the cutters are mounted comprises a plate formed integral with a sleeve carrying a driving pulley, and the feeding movement of the tube is utilised for pressing against trip or lever mechanism to close a clutch operating the gear which controls the cutting operation, such lever mechanism being also adopted to release the cut portion from the tube after each cutting operation.

Fig. 1 is an elevation of portion of an existing paper tube machine with the improved cutting mechanism, shown partly in section, attached thereto. Fig. 2 is a sectional plan view of Fig. 1, the section being taken on line a-a of Fig. 1, in order to more clearly illustrate the clutch gearing. Fig. 3 is an end elevation, the frame plate being removed for purposes of illustration. Fig. 4 is a detail view of the clutch embodied in the invention.

The paper or other tubing 2 passing from the mandril I (as shown in fine full lines in Fig. 1) a pre-determined distance presses on the upper half of the disc 23 which, using upright 24 as a fulcrum, forces the lever 21 over. by means of the adjustable connecting rod 25, to clutch the gear 18 to the shaft 18a. cam 17 through levers 15 then forces the conical flange of the disc 6 further over the rollers 5, thereby closing the cutters on the paper or other tubing 2^a. The tubing in feeding slightly further is finally parted by being forced up the incline formed by the disc 23 as it assumes the position shown in dotted lines Fig. 1, the severed portion then falls away and allows the clutch gear to return to the previous inoperative position, and the disc and cutters are automatically returned to the normal position.

Any size of tubing can be made by placing the desired mandril in the machine, and any required length can be cut by adjusting the boss 26, to which the lever 22 is pivoted, along the bar 27 and making the required cam adjustment.

The rocking lever 21 is pivotally connected to the sheaf 28, see Fig. 4, which reciprocates the member 29. This member 29 when in the position shown depresses a spring actuated feather 30, keeping the same out of engagement with any of a series of feather ways 31 formed in the bore of the part 32 of the gear 18.

When the tubing engages the disc 23, the member 29 moves away from the part 32 and the feather 30 is forced outward and engages one of the feather ways 31, so imparting motion to the cutting gear.

In operation the tube 2^a to be cut is fed along the mandril 1, and when it reaches the disc 23 it forces the latter outwardly at an angle. The disc or plate 23 using the arm 24 as a fulcrum forces the rod 22 outwardly so throwing, by means of the rod 25, the clutch mechanism into gear, causing the rotation of the gear shaft 18^a and cam 17. The cam 17 being in contact with the roller 16 actuates the short arm of the lever gear 15 which causes the disc 6 to slide into further engagement with the rollers 5 so narrowing the radius of the cutters 6 and causing them to close upon and around the tube 2^a to enable it to be cleanly cut. The angle which the cut end then takes causes it to fall away, and the whole of the parts are returned to the normal position ready for the next outward pressure upon the disc 23.

Do NOT use the present in vain perplexities about the future.

Stationer."

Five-Day Week for Printers.

Strong Advocacy at a Meeting of South-East London Master Printers.

But a few years ago a discussion on the question of a five-day week for the "hands" employed in the printing or any other industry would have been deemed fit subject matter only for a meeting of utopian cranks. The degree to which reconstruction is now in the air is evidenced by the fact that to-day we find master printers meeting to discuss this question, and regarding it as one of the live issues of the moment.

The new L.M.P.A. Secretary, Major Fordyce Birch, was to have superintended the meeting of the Association of Master Printers of South London, which took place on the 13th inst., at 294, Borough High-street. In Major Birch's absence, owing to indisposition. the duties of chairman fell to Mr. C. A. Bates, managing director of Messrs. Johnson, Riddle and Co., Ltd., who discharged them in very able and genial fashion.

Experiences of the Five-Day Week.

The topic of the evening, the "Five Day Week," was introduced by Mr. H. E. Harry, of Messrs. Merritt and Hatcher. He was not going to talk theory, he said, but just to recount his own firm's experience in running a five day week for a period of thirty-two weeks. When the reduction of hours came about last March he had wondered whether the adoption of a five-day week might minimise the expected loss of output. On the question being mooted to the men, they were naturally somewhat suspicious at first, there being some fear of extensions of overtime, or other disadvantages being involved. After a thirty-weeks' trial, however, the house chapel voted, by a majority of three to one, for the continuance of the five day week. "And,"

said Mr. Harry, "the advantages are not all to the employee; there are more advantages to the employer."

On the part of the employee there was the obvious advantage of a full day's leisure on Saturday, in which he could devote himself to allotment working, cycling, or other healthy activity. Whereas, if he worked until one o'clock on Saturday, by the time he was ready to go out it was too late, in winter at least, to indulge in outdoor recreation.

Advantages to the Employer.

Speaking next of the benefit to the employer, Mr. Harry referred to the obvious wastage of time in starting and stopping work. Every stoppage and restart meant wastage, and that was true of every department, but especially of the machine room. This was particularly noticeable on Saturday, when there was a holiday spirit about, and when also time had to be spent in cleaning up. When the week was changed to five days an advantage was at once apparent. The longer average run of actual work brought a greater percentage of output for time spent.

To the employer's advantage also, Mr. Harry said, was the physical benefit brought to the men by the increase of leisure. He had observed an improvement in the men's health, and that on the Monday morning they came in fresher and more fit for their tasks.

Again, said Mr. Harry, if you have Saturday available for any necessary overtime, you will get a far greater percentage of profit on the work done than you could by working your men after a full day's work of eight hours or so.

Another point of advantage was in the

BRITISH & COLONIAL PRINTER & STATIONER

matter of repairs. With a six-day week, one sometimes had to call in the engineer after closing time on Saturday, and he might run all day Sunday, with double-time charge. The five-day week gave Saturday free for this attention.

Some Difficulties and Their Solution.

As regards the objection that jobbing houses could not close on Saturday, Mr. Harry said he did not believe that any house could make a hard and fast rule of being strict to close on Saturday. But they could by putting their office on the five-day week, practically close down on Saturday-if not in all departments, in a good many. And there was no reason why a jobbing house should not close as a rule, and when necessary open for any job of an urgent nature - entertainment tickets or the like. Much could be done, too, in the way of educating customers to send orders earlier. This was so, even in respect of small advertisements. His firm had proved that the five-day week brought no falling off in small "ads," rather an increase.

The house was a jobbing house, a newspaper house, and also printers of periodicals. There was an obvious difficulty in the case of a periodical coming out on Friday, Saturday or Monday. In that case it might not be possible to close down entirely on Saturday. But the experience of the house was that during the thirty-two weeks of five-day week working their jobbing comps' department had been closed every Saturday; the foundry every Saturday; the machine room had been closed for twenty-four Saturdays out of the thirtytwo; the lino operators and the news and journal compositors had not worked on Saturdays for twenty-two Saturdays out of the thirty-two. He thought that showed that the thing could be done if they wanted it to be done. Moreover, during the thirty-two weeks in question, overtime had not exceeded the overtime of the previous thirty-two weeks, nor that of the corresponding thirtytwo weeks of the previous year. From that he judged that they had actually saved the extra hours, getting the same output for forty-eight hours as previously for fifty.

Furthermore, they worked their office with half staff on Saturdays so that there was always somebody available to take any orders or answer customers' queries.

The Five-Day Week Must Come.

In view of the prospect of still further reduction of hours—possibly even to forty four—Mr. Harry expressed the opinion that printers would be bound to accept Saturday closing, whether they liked it or not; so the sooner they began educating their customers the better.

Mr. Harry concluded by saying that on the whole he was convinced that the five-day week was to the benefit of the trade, and he would even like to see the master printers "masters"—the trade unions—make the five-day week compulsory, as that would bring printers together, putting them all in the same boat.

THE DISCUSSION.

Mr. C. A. Bates, who spoke next, very cordially supported the points made by Mr. Harry, and in interesting fashion cited his own firm's experience in corroboration of the various claims put forward on behalf of the five-day week. He hoped there would not be any further reduction in the number of hours worked, as the result would be serious for industry generally. From the "men with aprons" he gathered that there was not a real demand for this, but that the movement for reduction originated with the executive at the top and developed downwards.

The question of the effect of the five-day week on running expenses or establishment charges was raised. Mr. Harry replied that there was, of course, saving in power, but in the winter there would be some increase in

lighting costs.

In respect of meeting Saturday morning calls, the managing director of an important London printing firm said that not 20 per cent. of their customers were even aware of the fact that they were not running their machines on the Saturday, and he had found that one clerk sufficed to attend as the Saturday morning intelligence department.

In terminating the meeting the chairman suitably thanked Mr. Harry for coming and giving his experience for the benefit of brother printers, and also congratulated Mr. E. B. Smith (Joint Hon. Sec. of the Association) for the valuable services he is rendering to the printing craft.

T.A. Assistant Secretary.

Mr. Bottomley, who for the past few years—owing to the failing health of Mr. Waddington—has been performing the duties of Assistant Secretary of the Typographical Association, was last week, by an overwhelming majority, elected Assistant Secretary. It is undoubtedly on account of the very satisfactory way in which the deputy services have been performed, that the permanent appointment has been made.

Mr. Bottomley, who is, we believe, about 48 years of age, was elected organiser for the Association some fifteen years ago. A Manchester man, he has all the Association's affairs at his finger tips, and is a man of keen business acumen. Those who know him best have no doubt as to his carrying out his new duties with great success.

THE Sixty-Fourth Annual Exhibition of the Royal Photographic Society of Great Britain will be held in the Society's House. 35, Russell-square, W.C. The Exhibition will be open daily from 11 a.m. till 9 p.m. from October 13th till November 29th, and the public is invited to view the photographs free of charge, by entering their names and addresses in the signature book.

Printers' Managers and Overseers

PARENT ASSOCIATION.

October Meeting.

There was a large gathering of members at the October meeting of the Parent Association on Tuesday night at the "Old Bell," Holborn, Mr. E. H. Berryman, the president, being in

After the adoption of the minutes of the previous meeting the president read the following nominations for membership:—Mr. G. E. Parker (Temple Press, Ltd.), Mr. W. F. Pratt (Ferrestone Press, Ltd., overseer letterpress—machine), Mr. A. C. Sheen (St. Mary Press, Ltd., overseer, composing).

The nominations were duly accepted.

The president mentioned with regret the unfortunate illness of two well-known members of the Association. The first was Mr. Charles Morley, one of the founders of the Association and its first president. They would all sympathise with him in the accident which had befallen him and through which he was confined to his room. Mr. Berryman was glad to be able to say that Mr. Morley was considerably better and they hoped that in spite of his ripe age, he would be spared to the Association for many years to come.

The second case of illness concerned their old friend, Mr. Moyce, who, the president was sorry to say, was laid aside at St. Bartholomew's Hospital. He had been operated on on the previous day for an internal trouble, and the result was not yet known. Mr. Moyce's condition, however, was very grave indeed. Mr. Berryman was sure that the deepest sympathy of all in that room would go out to Mrs. Moyce and her family.

At the suggestion of the president a resolution of sympathy with Mr. Morley and Mr. Moyce was carried, and the secretary was asked to convey the feelings of the gathering to those

two gentlemen.

The meeting then proceeded to consider the council's report on the expenses of delegates at the recent conference in London. The council were forced to the conclusion that in some cases the expenses were excessive and

reductions were accordingly made.

Mr. Phillips, the general secretary, occupied the attention of the meeting for a considerable time, as he read the lengthy correspondence on this subject which had passed between him and the delegates of certain centres. The meeting was also furnished with figures and other information in order that the members might be able to give the matter full consideration.

Mr. J. C. Pugh presented the case for the council and Mr. S. M. Bateman, chairman of the finance committee, also went fully into

the matter.

Mr. H. Blackwell moved that the claims made by the provincial centres be paid, and Mr. Riddell seconded.

Mr. J. A. B. Reed moved as an amendment, that the decision of the council and of the finance committee be approved. This was seconded by Mr. C. Northam.

A full discussion ensued, members debating

the question from every standpoint.

In the end Mr. Reed's amendment approving the action of the council was carried by a

large majority.

Mr. Blackwell asked two questions on general business which were replied to by the president and secretary respectively.

Trade with Central Europe.

Government's Advice to British Merchants.

In an official notice regarding the conditions under which goods may be sent to Germany, the late enemy territories, the Baltic States, Scandinavia, and other neutral countries in Europe, the Board of Trade state: "During the war it has been necessary to prohibit all trading with the enemy, but with the conclusion of peace with Germany the necessity for this prohibition has ceased. It may be expected that there will be a considerable demand in the late enemy countries for all kinds of goods. As this market is now open to all the world, it is no part of the policy of the Government to discourage British traders from competing therein, and it is desirable that British traders should make every effort to secure a proper footing in Central Europe.'

Particulars are appended regarding the new trading conditions in the countries mentioned, as affected by the raising of the blockade and the removal of the British import restrictions. The principal conditions as regards Germany and the late

Exports.—Any goods may be sent to Germany without licence, except goods on Lists "A" and "B" of prohibited exports. . . It is understood that at present the import of all goods into unoccupied Germany is subject

to import licence for which the German consigned has to make application to the com-

petent authority in Berlin.

enemy countries are as follows:

Imports.—Any goods may be imported from Germany, and paid for, without licence, except goods whose importation from all foreign countries is prohibited. Import prohibitions now apply only to a small number of goods.

THE Montreal Daily Star has appointed a woman news editor. Miss Isabel McCaw, who is still in the twenties, and returned from Serbia early this year, has been chosen for the post. Miss McCaw was formerly a reporter on the paper.

BRITISH & COLONIAL PRINTER & STATIONER

THE

Lloyd Memorial (Caxion) Seaside Home for men and women.

Causton's Day at Deal.

On Saturday, a party representing Sir Joseph Causton and Sons, of Clapham-road, paid a visit to the above deservedly popular institution at Deal to unveil two tablets over beds which had been named by the firm and employees. The party were honoured by the company of Mr. and Mrs. Hildred Causton, the remaining members of the party being Mr. and Mrs. Chas. Cooper, Mr. Gronow, Mr. W. H. Harding, Mr. W. Matthews, Mr. Rossiter, Mr. W. Gawthorpe, Mr. G. Corden, Mr. P. J. Munday, Mrs. Gulliver, Mrs. Dixon, Mr. J. L. Scorgie (chairman of finance committee), and the secretary of the Home, Mr. H. F. Parker.

Mr. J. L. Scorgie, in receiving the party, said his committee welcomed those present not only for the gift in naming these beds, but even more welcome was their help in carrying on the voluntary work connected with the Home. The committee, although a large one, never neglected their duties, and the attendance of the members was most remarkable and proved the deep interest each one took in the welfare of the Home. No institution could show a better return for the money entrusted to their care, and certainly a better investment for Id. per week it would be difficult to find. In addition to this Home some 80 other institutions in various parts of the kingdom were at the disposal of their subscribers and their dependents. With all these other places available, the lure of the sea was so great that the Deal Home proved quite inadequate for the demand made upon This year, even with an annexe of 15 beds, it had been extremely difficult to provide sufficient accommodation, and therefore it was imperative that an extension of the buildings should be proceeded with at the earliest possible moment. The party would notice that radiators had been placed in every bedroom, and there were hot and cold baths on each floor, and many little additions in the furnishing of the rooms were to be found that were not usually associated with institutions of this kind. Without trespassing too far upon their time he would ask Mrs. H. Causton to unveil the tablet over the first bed.

Unveiling the Tablet.

Mrs. Hildred Causton, in unveiling the tablet, made a neat little speech that touched everyone present on account of its evident sincerity. She said it was a genuine pleasure to be associated with the employees in the noble effort to provide convalescent treatment for their less fortunate companions, and in doing so to show respect to one of their managers. She had known Mr. Charles

Cooper for a very long time and could testify to his sterling character and his worthiness, to the horour which his comrades had bestowed upon him by placing his name on this tablet as a life governor of this splendid Convalescent Home of the printing trade. During the war she had given her services for the benefit of the country. She had seen a great many sufferers and knew how much the sick and needy appreciated all that was done for them, and could testify to the fact that no finer work could be found for anyone than that of caring for the suffering ones and of nursing them back to health again. In conclusion, Mrs. H. Causton thanked the employees for giving her the pleasure of unveiling the tablet over the first bed which had been named through the efforts of the employees at Clapham-road.

Mr. Chas. Cooper, by way of reply, thanked Mrs. Hildred Causton for honouring the workers by coming down to Deal for the special purpose of unveiling this tablet, and for the kind allusion to himself. It encouraged them all when their employers could sacrifice time to see the kind of Home they were helping to support. It showed real personal interest in their welfare, and helped to smooth away many difficulties that occurred in the workshop. Both Mr. and Mrs. Hildred Causton took a lively interest in all their workpeople were doing, and he could assure them that such kind actions were greatly appreciated. He therefore would conclude by again thanking them for their presence.

Mr. J. L. Scorgie, in calling upon Mr. Hildred Causton to unveil the tablet over the second bed, said that he should also like to add his tribute of thanks and to endorse Mr. Charles Cooper's remarks.

Memorial to the Fallen.

Mr. Hildred Causton, in unveiling the second tablet, said that it was a splendid idea to perpetuate the memory of those of their comrades who had fallen in the war by placing this tablet over the bed, so that those who reaped the blessings of convalescent treatment may be reminded of the great sacrifice these men had made by giving up their lives for the benefit of their country. When Mr. P. Munday first approached him upon the matter he at once fell in with the idea by offering to find one-half of the money required providing his fellow workers would get the remainder. This was quickly done, thanks to Mr. Munday's energies. It was fitting that a tribute to these gallant men should be equally shared by employer and employee; for that reason it gave him special pleasure to be asked to perform the ceremony to-day. From what he had seen of the Home, he could say that it was an ideal place to recuperate one's health. Every attention had been given to sanitation, cleanliness, and comfort, whilst the matron was a most sympathetic and charming lady. He thanked Mr. Scorgie for the welcome he had given the party, and trusted it would not be long before another bed would be named to afford them an opportunity of again visiting the Home.

Digitized by GOOGLE

Mr. W. H. Harding, in proposing a vote of thanks in the name of the federated chapels, said they were grateful to Mr. Hildred Causton for his kindness in unveiling this tablet in their name. They were all agreed that no better way could be found of perpetuating the name and fame of their comrades who had made the supreme sacrifice than by naming a bed in an institution so worthy of support as the Lloyd Memorial Home. He thought every firm should imitate their action, thus assisting the living whilst commemorating the dead. The first plan of the members of the Federated Chapels was to have a tablet placed on the walls outside the works. When, however, Mr. Munday proposed the naming of a bed in the Deal Home everyone was agreed that that was the best thing to do. Whenever one of the employees occupied the bed over which this tablet stood he would think of those who had worked for the same firm who had given up their lives for the benefit of the homeland and all that was dear to them. He submitted that it was the wisest way of carrying out such a project.

Mr. H. F. Parker, the secretary of the Home, seconded the vote of thanks, and expressed the thanks of the committee for the valuable assistance the employees of Sir Joseph Causton and Sons were giving them. He was certain that when once a shop started subscribing to their Home that they would continue doing so, for better value for the money could not be found. In like manner, he was equally certain that when any one visited their palace by the sea they would bring along a friend next time to share the happiness of a stay at the only seaside home connected with the trade. As Mr. Scorgie justly said, the lure of the sea was great, but greater still was the immense benefit of the ozone in securing quick and permanent recovery of health. He concluded by thanking every member of the party for their attendance and support, particularly Mrs. Hildred Causton, for her most genial company, which had made everyone feel quite happy and con-

The party adjourned for tea, returning to town feeling that a very pleasant time had been spent in visiting the Printers' Seaside Home at Deal.

The Joint Industrial Council,

The second meeting of the Joint Industrial Council for the Printing Trade is to be held on Wednesday next at the Connaught Rooms, with Mr. Alfred F. Blades in the chair. The agenda is quite an innocent looking affair. There is to be an address by Major G. W. Hazledine, of the Board of Trade, and there are letters from the Ministry of Labour and others, while reports are to be received from numerous committees.

An Advertisement is always working.

Standardisation of Paper.

Standardisation of paper still hangs fire; and now it looks as though master printers were to take the bull by the horns. In the discussions which have ensued between the interests concerned, papermakers have taken up the position that it is for the customer to make known his requirements, thus indicating their own willingness to fall into line if neces-Wholesale stationers, on the other hand, are said to be handicapped by the question of stocks. It can be readily understood that for printers standardisation would be a great boon, and would lead to speedier working. The same consideration might apply to the papermaker, if not to the wholesale stationer as well. In the absence of any agreement on the subject, there is a prospect that master printers will try to force matters by submitting their own specifications.

Science and Printers Metals.

Messrs. Fry's Metal Foundry, in pursuance of their progressive policy, have recently initiated a scheme which will prove of considerable benefit to printers. They have recently enlarged their chemical laboratory and have added two trained chemists to their technical staff, enabling them to undertake the assaying of printing metals on a large scale. For all their customers no charge whatever will be made for assaying their printing metals at regular intervals, and advising them of the extent of deterioration of the metal through usage.

For other members of the trade, the charges for assaying printing metals are less than half the usual terms quoted by public analysts, and only cover the cost of chemicals, labour, etc. This special concession to the printing trade should induce printers to treat the whole question of their metals on a scientific basis and by maintaining the quality of their metals at the correct standard, the quality of the printing should be correspondingly improved.

LA FEANCE DE L'EST.—Under this style a limited liability company has just been formed at Metz. The object of the company is the creation and exploitation of a journal and eventually of a printing business. The capital is 100,000 francs. The directors are Messrs. Jean Amos, lawyer, and Antoine Bourguignon, merchant, both of Metz.

THE ESTIENNE SCHOOL. — The evening courses for apprentices and workers in the French printing trade recommenced on October 14th. The teaching includes: Typography, composition, stereotyping, electrotyping, bookbinding, letterpress block printing and lithographic block printing.

Trade Notes.

THE trouble between the L.S.C. and Messrs. Hampton's has been settled.

In writing an advertisement, see how interesting you can make it rather than how many different things you can advertise.

WE understand that Messrs. Spottiswoode, Ballantyne and Co., Ltd, have resigned their "B" membership of the Printing Trades' Alliance.

THE copyright of the Heanor Observer and the printing business associated with that paper has been taken over by the proprietors of the Nuneaton Observer.

The death has occurred of Mr. W. T. Bowen, the manager of the *County Express*, Stourbridge. He had been associated with that paper for about thirty years.

ME. KEELING, who went to Russia as the correspondent of the Westminster Gazette, is a prisoner in the hands of the Bolsheviks at Moscow, and has been so for some time.

It is reported from Moscow thas two prinring offices belonging to the Right Social Revolutionaries and engaged in printing anti-Bolshevist newspapers have been discovered in that city.

On Friday, the Lord Mayor of London, Sir Horace Brooks Marshall, entertained at luncheon at the Mansion House, the members of the Newspaper Conference and other representatives of the press from London and other parts of the country. He thanked the press for the great services rendered him during his year of office.

ALLIED JOURNALISTS' VISIT.—A number of Allied journalists (among them being several who afforded hospitality to the British journalists during the Peace Conference) are visiting England this week as guests of the Government. The provisional programme was as follows:—Tuesday morning, interviews with various Ministers and a luncheon given by Lord Northcliffe in Printing House Square; Wednesday, a visit to the Fleet and a dinner with the Government at the Carlton; Thursday, day spent at Manchester.

A GOVERNMENT NEWSPAPEE.—In case the recent railwaymen's dispute developed into a general strike, and the public were unable to obtain their customary newspapers, arrangements had been made for the production of a Government daily, says a correspondent of the Star. It was to contein no editorial views whatever, but simply a record of what was happening at home and abroad. The editor had been appointed. His name is a household word on both sides the Channel and the Atlantic, and he was prepared, if the emergency had arisen (which happily it did not), with his characteristic enthusiasm to take up his duties. Five million copies would have been circulated by a squadron of 150 aero-

planes. The Government's idea was that the dangers of a general strike would be enormously enhanced if the general public did not know what was going on.

THE International Exporting and Publishing Co., Ltd., 15, Farringdon-avenue, London. is to be wound up voluntarily.

On Monday, the Globe, the oldest London newspaper, appeared in new form. It is leaving its old moorings in the Strand, and settling in Tudor-street. At the helm will be Mr. Robert Donald, formerly editor of the Daily Chronicle.

The statement that Major Waldorf Astor, the controlling proprietor of the Obseraer, had purchased the Financial Times, the Draper's Record, and the printing establishments connected therewith for a sum exceeding half-a-million sterling is denied.

At the recent Leipzig Fair there was a great display of paper carpets, rugs, table-cloths, etc. The prices of these paper textiles were high; for instance, paper rugs, which at a distance looked like the genuine article, cost about double the pre-war price of such goods.

The death has taken place in Manchester of Mr. William Landells, who has been for the past ten years on the staff of the Manchester edition of the Daily Mail. Mr. Landells was the elder son of the late Mr. James Landells, for many years on the staff of The Scotsman.

The booksellers' clerks in Paris have gone on strike. They claim £16 a month for men and £14 for women, an eight-hour day, and a fortnight's holiday. Several important bookshops are closed, and other firms carried on with half-staffs. The strikers claim that 2,000 clerks have left work.

LETTERS of allotment for the issue of 203.541 ordinary shares in Lamson Paragon Supply Co. have been posted. There were over 2,500 applications and the issue was subscribed more than twice over. Applications from shareholders, employees and customers alone amounted to over £200,000.

The will has been proved of Mr. Thomas Perkin Robinson, of Cleevethorpe, Randal, Wakefield, proprietor of the Wakefield Express, Pontefract and Castleford Express and the Norwich Mercury, aged 71. The gross value was £74.944. He left bequests to two journalists, advertisement manager, maker-up, and foreman printer, printer and machinist.

BOWERS BROTHERS, LTD.—At a meeting of the company, held at London, on October 1st, 1919, the following resolution was passed:—
"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and that Mr. Lawrence R. Dicksee, of 296, High Hoborn, W.C.1, be appointed the liquidator for the purposes of such winding-up."

BRITISH & COLONIAL

Personal

SIR ROBERT BLAIR, Education Officer to the L.C.C., will be the guest of the London Master Printers' Association at their next monthly lunch on Wednesday.

MR. J. J. Keliher, President of the Association, will be in the chair.

MR. C. W. BOWERMAN is to be one of the delegates to the labour conference at Washington.

The RIGHT HON. C. W. BOWERMAN, M.P., Mr. W. C. Bustin, compositor and printers' reader, and Mr. A. Buchanan, literary secretary and journalist, have been appointed Justices of the Peace for the County of London.

MR. MEREDITH WHITTAKER, proprietor of the Scarborough Evening News and Mercury, and the chairman of the Linotype Users' Association, has consented to accept nomination for the Mayoralty of Scarborough for the ensuing year. Mr. Whittaker, with a seat on the Scarborough Aldermanic Bench, is the leader of the local Liberal party.

THE members of the Newspaper Conference and other representatives of the London and Provincial Press were entertained at luncheon on Friday last at the Mansion House by the Lord Mayor.

The toast of the Lord Mayor's health was proposed by Sir George Riddell, Vice-Chairman of the Conference, and was supported by Mr. H. Wickham Steed, editor of the *Times*. The Lord Mayor, in responding, thanked the Press for the great services they had rendered him during his year of office.

WE are glad to hear that Mr. E. C. Moyce is somewhat better, the improvement following the operation being maintained.

The conclusion of Mr. A. G. Gardiner's eighteen years' editorship of the Daily News was celebrated on Saturday with a dinner given in his honour by the staff of that journal. Every department was fully represented, and the Star also associated itself with the tribute.

MR. H. W. SMITH, night editor, and one of Mr. Gardiner's oldest colleagues, presided over the gathering, and in eulogising the manner in which Mr. Gardiner had left upon the whole journal the impression of a great personality, he mentioned that he had always regarded Mr. Gardiner's post as one of the chief offices in the Ministry of Truth.

MR. GARDINER was presented by the London staff with a canteen of cutlery, and by the Manchester staff with a clock.

In reviewing present day journalistic tendencies, Mr. Gardiner spoke of the unfortunate dependence of journalism upon advertising interests. He looked forward to the time when a form of journalism, already to be found in Sweden, Germany, and elsewhere, would come into existence in this country—a journalism expressing itself through newspapers produced very cheaply, and able, therefore, to voice more directly than at present the ideas for which the bulk of the people were yearning

A GATHERING of very prominent Liberals including pressmen of world-wide reputation met on Tuesday evening at a complimentary dinner at the National Liberal Club, given in honour of Mr. A. G. Gardiner. Mr. Asquith presided, and Mr. J. A. Spender supported the principal toast. The toast of "The Chairman" was proposed by Sir J. Simon.

LORD Faber, the chairman of directors of the Yorkshire Post and the Yorkshire Evening Post, in a letter to the staffs of these papers, heartily thanks them for their services during the recent railway strike.

MR. R. B. WYATT, formerly on the literary staff of the Northern Echo, Darlington, and now a sub-editor of the Bradford Daily Telegraph, has been presented with a silver teapot by the members of the South Durham and North Yorkshire Branch of the National Union of Journalists, as a token of appreciation of his services in the Darlington district on behalf of the Union.

MR. ALDERMAN WILLIAM JAMES DODGSON, who has been provisionally chosen as Mayor of Workington, filled every position on the railway from porter to temporary station-master before he became a journalist, twenty-eight years ago, since when he has edited the Workington Star.

MR. THOMAS GIBSON, who recently retired from the reporting staff of the Edinburgh Evening News, was at the luncheon at the close of the Edinburgh Town Council, last week, presented with a silver cigar case and silver match-box from the members and officials of Edinburgh Corporation.

The Rouen Journal, which has recently had some trouble with its printers, has been in existence now for 156 years. This is a good age. It is however outnumbered by its neighbour, the Havre Journal, which has been established 168 years. After these two, come:—Le Courrier de Maine-et-Loire, established 144 years; Le Courier du Loiret, 129 years; Le Journal de Lot-et-Garonne, 127; Le Journal de Meurthe et-Moselle, 121; and Le Journal d'Indre et-Loire, 119.

COPIES may be purchased at the Offices, as above or from Messrs. W. H Everett and Son, Ltd., newsagents, 11, St. Bride-street, E.C.4.

THURSDAY, OCTOBER 16, 1919.

Current Topics.

Another Printing Demand.

THE printing trade is not yet on a settled basis with regard to wages, and the intimation that there is to be another memorial in London for an advance of 15s. per week is likely to cause some consternation among the employers. The announcement, perhaps, did not come with a great deal of surprise. Nothing in the way of wages demands does nowadays. Moreover, the position in the country generally was bound to react on London. Even nationally the matter has not yet been cleared up, the forces on either side taking up a determined attitude. The master printers are now, it would seem, being backed

up by the newspaper proprietors, which gives them rather more power than they possessed before.

Need for a Rest.

But there is great need for a rest from the continual demands and memorials. are very unsettling, both to the employers and the employed. When thoughts are being continually centered on questions of cost and of wages, it is hardly possible to attend to the vital question of production. It might be argued that the way to obtain quietude would be to give the unions all they asked: but the course of recent events seems to indicate that the more that is given the more is Indeed, appetite may be said to grow by what it feeds on in this matter of wages as in all others. The source of the trouble has been the increased cost of living, which has been a heavy burden upon every-One cannot but sympathise with those who have had to shoulder the heavier end, and the aspirations which seek a better standard of living are not unworthy, far from it. There still remains, however, the other side of the picture, and that is the cost which a trade can stand. It is undoubtedly a fact that proper remuneration and recognition bring good service, and if master printers can afford higher wages it is doubtless in their interest to pay them. There is, however, a limit beyond which the customer will go, and already there are more than fears that some buyers of print may be driven to other methods to provide their wants. But the great need is now for peace and harmony in industry, and the sooner this condition of affairs is reached the better for the country.

The National Wages Agreement.

It must be a harrassing problem for the master printer at the present moment to realise his costs. It is not only a question of wages, but of the changing prices of materials. Against fluctuations of this sort, no cost system can provide a remedy. Now we have the T.A. taking a ballot of its members on the National Wages Agreement. scheme was evolved with great thought and care and obtained the assent of the unions only after many and long conferences. It would be a sad commentary on the conduct of printing trade affairs if so much time and energy went for naught. The question put to the members of the T.A. was :- " Are you in favour of terminating the National Agree-

Germany's Paper Position.

THE evidence of the Leipzig Fair confirms the assumptions we have hitherto made concerning the position of Germany in the paper market. The conclusion to be arrived at is that the British paper manufacturer has little to be apprehensive about in the way of competition from Germany. Owing to lack of raw materials, the better grades of paper and stationery cannot be produced in Germany, and the export and home orders combined for lower grades only amount to about 33 per cent. of the possible output. It is stated that a great part of this low grade material has been exported to South America. As we have previously indicated, paper mills in Germany are suffering from a lack of raw materials, so that the larger works are only producing to the extent of a third of their maximum capacity. So far as the exhibits at Leipzig went, the only paper products available to any extent are confined practically to art prints, calendars, blotting pads and examples of decorative printing. The writing paper was of the customary German variety of flat paper, no manilla paper being in evidence at all.

A Lesson from America.

THE illuminating report which H.M. Commercial Secretary at Washington forwards to his department in London should be carefully digested by paper manufacturers in this country and especially by the mills which produce wall-papers. There are many points in the report which will strike the reader as significant. The main view to be deduced is that American competition is a very serious matter for wall-paper manufacturers, not only in the United States, but throughout the world, and even in the market at home. The competition is all the more telling because it is based on price and adaptability to customers' needs. While the British article is certainly the better product in the matter of durability and taste, these do not outweigh the advantages which the customer sees in regard to cheapness and variety of design. In America it appears they are constantly changing their wall-papers, so that the question of durability loses its value, and, again, the British papers are 2-in, wider than those which are chiefly required. But the great handicap is that of price, and it would seem to be a necessity on the part of British manufacturers to reduce their costs as much as possible. In these days this is not a simple matter by any means, though it may perhaps be achieved if papers such as those which are

suitable for foreign markets are produced without aiming at too high a grade of product. But even if the home manufacturer is able to reduce his costs in this way, he is handicapped by the cost of freight and a 25 per cent. duty which is placed against wall-paper imports into the United States. This matter of import duty is one which perhaps ought to receive attention on this side, and manufacturers might well bring pressure upon the Government to see that they at least have fair play in regard to handicaps of this sort.

London Printers' Wages Demand.

It is announced through the Press Association that it is the intention of the London Printing and Kindred Trades Federation to address an application to the London Master Printers' and Newspaper Proprietors' Association for an all-round increase of 15s. per week to meet the increased cost of living. The views of the various branches of the trade are being fully ascertained it is added. Those of the members of the Amalgamated Society of Lithographic Artists' Designers and Engravers were expressed at a meeting in a resolution in support of the proposal.

Commenting on the demand of the London printing trades, the London correspondent of the Manchester Guardian says :- "In reference to the fresh demands by London compositors for a further advance in wages, I had some conversation to-day with one concerned in what may be called departmental or trade journals. The position of periodicals of that kind, especially those on a small scale, appears to be much more difficult than that of the great dailies, as the bulk of the weekly and monthly 'class' journals are printed by The latter have in their outside firms. charges not only to make good the increased wages bill, but must try to increase somewhat their own profits on account of the higher cost of living and the general falling off in the value of money. It may be taken that the printers' bills to the proprietors of such journals are now at least 150 per cent. above prewar level, and the end is by no means in sight. It is true that the cost of good paper suitable for fine illustrations is somewhat lower than a year ago, but it is still about three times what it was before the war. In this business, as in others, the fear is that wages will go so high that it will in many cases not be worth while to continue the undertaking. Then high wages will lead to no wages at all, and unemployment will be rampant.

It's easy enough to be pleasant when your motor car is in trim, but the man worth while is the man who will smile when he has to ride back on the rim.

taking and property, present and futureincluding uncalled capital, registered August 23rd, 1919.

COMPANY NOTICES, etc.

WELSH CHURCH PRESS AND PRINTING CO, LTD.—The creditors of the company are required, on or before November 6th, 1919, to send the particulars of their debts or claims to Charles T. Appleby, 26, Corporation-street, Birmingham, liquidator of the company.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES. PARTNERSHIPS DISSOLVED

The partnership between Andrew Chatto, Percy Spalding and Charles Harris Curtis Prentice, of 97-93. St. Martin's-lane, London, and Charlotte Fanny May Tozer, of Colneside, Herschell-road, Walmer. Kent, carrying on business as booksellers and publishers, at St. Martin's-lane, W.C., under the style of "Chatto and Windus," has been dissolved by mutual consent as from September 30th, 1919.

The partnership between John Porter Norman and Albert Hill, carrying on business as printers, at the Mirror Works, Sneinton-street, Nottingham, under the style of "Norman, Hill and Co.," has been dissolved by mutual consent as and from September 30th, 1919. All debts due to and owing by the late firm will be received and paid by John Norman Porter, who will continue to trade at the above address.

THE BANKRUPTCY ACT, 1914. FIRST MEETING AND PUBLIC EXAMINATION.

Hasler, Frederick William (Jun.), general advertiser, 12, Bromsgrove-street, Birmingham. First meeting, October 15th, at 11.30 a.m., at the official receiver's office, 191, Corporation-street, Birmingham. Public examination, November 3rd, at 2.30 p.m., at the Court House, Corporation-street, Birmingham.

Hudson, Eliza (trading as Doriss E. Hudson), waste paper dealer, of 2-4, Dyer-street, Leeds. First meeting, October 14th, at 11 a.m., at the official receiver's offices, 24, Bondstreet, Leeds. Public examination, November 4th, at 11 a.m., at the County Court House, Albion-place, Leeds.

APPLICATION FOR DEBTOR'S DISCHARGE.

Cornforth, Joseph, letterpress printer, Express Printing Works, Chestergate, Maccles-

field. To be heard in the Macclesfield Town Hall, on November 6th, at 11.45 a.m.

Paper Qualities.

Slowly, the wholesale paper people are getting back on to their pre-war brands and qualities and printers are everywhere desirous of reestablishing their stock on a stable basis. There are not wanting signs that users are becoming tired of haphazard buying. In the old days, paper-buying must have been a heavenly business compared with the worry of securing the wants of to-day. It is not a common thing to write a dozen letters and lose a week or two in the endeavour to match a given sample. All this sort of thing makes a rough road for business and helps to account for the anxious and unsettled feeling which characterises trade to-day. A few leading houses have now issued sample sets and to this extent have eased the situation, but it too frequently happens that orders cannot be executed until the mill can produce new stocks, and, finally, the delay in delivery puts the seal on inconvenience. Nevertheless, there is a distinct endeavour being made to re-establish the old stable lines, and that is something. Until the wholesale houses get back to this position they will lose business all along the line, for there are innumerable small dealers and agents who are able to sell substitute lines direct at a lower price than themselves.

House Organs.

The third number of the Falcon, the house journal of Messrs. Spottiswoode, Ballantyne and Co., Ltd., New-street-square, E.C., shows no falling off in the quality of its literary matter which is of a most interesting character, although much of it deals with topics that are germane to the various departments of the house of Spottiswoode. There is a capital account of the annual dinner of the firm at Brighton, and many will be interested in the description of the old hand press on which the first proof sheets of the Waverley novels were pulled. The Falcon has evidently come to stay.

The September Pressman—the neat little house organ of Messrs. Harrison, Jehring and Co., Ltd.—may be called a strike issue. A good many of the "pars" which "The Galley Slave" lifts from "the Galley" deal sternly with the railway strike. Then the Editor, continuing his article on Parliamentary Government, emphasises the need for "Real Representation," and finds occasion to apply the same criticism to the Trades Unions. Next Mr. H. Yule E. Cleland takes up the tale, and spends four pages in deprecating the application of Trades Union influence to political questions.

The City & Guilds of London Institute

The syllabuses for the examinations in technological subjects for the session 1919-1920 organised by the City and Guilds of London Institute have been issued, and contain particulars of the examinations in the various trades dealt with, from which we extract the following relating to the printing section.

TYPOGRAPHY.

With a view to encouraging apprentices to take a continuous course of instruction in this subject, the examinations will be held in three grades, of which Grade I. will be of an elementary character. No certificates will be given on the results of the examination in Grade I., but the candidates' successes will be notified to the centre at which they were examined.

GRADE I.

The examination in Grade I. will consist of a paper of questions only in two sections—(1) for compositors, and (2) for press and machine candidates, but candidates for either section will be expected to show some knowledge of elementary geometry and freehand drawing. The examination will include such subjects as the following:—

SECTION I.—COMPOSITORS' WORK.

Material. — Appliances and material used in the composing and store rooms. Appearance and other necessary attributes of good type, leads, brass rule, etc.; description of the parts of type; characters in a fount; peculiars, accents, etc.; display faces; various cases and lays in use; weight of type and leads; different kinds of furniture and spacing materials; mechanical quoins.

Technical terms generally.

The Point System as applied to type bodies, spacing material, rules, and point lining type. Elementary typographic calculations.

Composition and Distribution.—Laying a fount of type. Rules to remember when setting; habits to acquire and to avoid. Spelling, common errors in. Style: Dividing words, compounding words, the use of figures, numerals, capitals, italics, contractions, etc. Reporters' contractions. Punctuation. Rules for spacing and justifying. Laying up forms and clearing; preparing type for distribution; rules for distributing. Elementary imposition schemes and furnishing of forms. Locking up and unlocking forms. Making corrections; reader's marks; signatures and their uses. Proof presses and proofs. Definition of stereo, electro, woodcut and process blocks.

Section II. - Press and Machine Work.

Technical terms and phrases.

Appliances and materials used in the press and machine rooms; necessary tools for a machine minder; description and parts of hand press; platens and single-cylinder machines.

How to cover a tympan and cut out a

frisket. Pulling clean proofs in one or two colours. Making ready, rolling and pulling off at press. Preparing platens and cylinder machines for make ready; result of overpacking or underpacking cylinders; how to find if form is square to feed edge; levelling the form and blocks. The care and condition The care of inks. Washing of rollers. forms; cleansing wood letter and wood blocks; cleansing and preservation of process Locking up and unlocking forms. Elementary imposition schemes, and furnishing of forms. Signatures and their uses. Definition of stereo, electro, woodcut, and Sizes and sub-divisions of process blocks. papers and cards; number of sheets in quires and reams; easy questions on the various grades of paper.

GRADE II.

All candidates for Grade II. must have passed the examination in Grade I. in a previous year, unless they fulfil the conditions of Regulation II.

The examination in Grade II. will consist of a paper of questions, and of a practical examination for compositors, to be held in a printing office. Candidates who enter under Section I. must pass in both parts of the examination to obtain a certificate.

The examination will be divided into two sections—(1) for compositors and (2) for pressmen or machine minders. Candidates, according to their occupation, may select their questions from Section I. or from Section II.

Candidates will be expected to show a more advanced knowledge of the subjects mentioned in the syllabus for Grade I., and a knowledge of such subjects as the following:

Section I.—Compositors' Work.

Outlines of the history of printing.
Casting off copy for pamphlets, book and jobbing work. MS., typewritten copy, reprint to be reproduced in larger or smaller type, mixed copy. Casting-off copy for display and table work. Various problems in type bodies. leads, etc.

Bookwork.—How to set text, chapter and page heads, preliminary matter, appendices and indices, sidenotes, foot notes, let-in notes. etc. Ratio of page to paper to secure harmony under varying conditions, such as relatively large or small type, leaded, double leaded, or two-column matter. Most suitable type faces and sizes for different classes of books, i.e., novels, scholastic, scientific, juvenile, editions de-luxe. Correct position of page on paper. Making-up — various operations and difficulties; signatures for sheet and half-sheet work, their uses in composing, machine and folding rooms.

Table and Tabular Work.—How to cast off and set. Pedigrees: How to set. Composition of Greek and Hebrew and lay of cases.

Type music: How to set.

Mechanical Composition.—Handling and correcting linotype and monotype set matter, difficulties and dangers and how to overcome them.

Imposition of news, magazine, pamphlet, and book work; sheet, half-sheet, and odd-

BRITISH & COLONIAL

ments; circumstances which should guide you in imposing as 16's, 32's, or for insetting, having regard to thickness of paper, size of page, quality of job, etc.; schemes to suit folding machines and perfecting and rotary printing machines, also for saving labour, such as to fold two up, avoidance of turn in sheet, etc. Making margin for upright and oblong pages, squaring the form; register difficulties and how to overcome them; necessity for chase, furniture, etc., to be square; mechanical quoins, their advantages and disadvantages. Imposing colour blocks with register quoins. Preparing a form for stereotying or electrotyping; use of high spaces.

News and Magazine Work. — General routine of news work; qualifications necessary for a news hand; lifting copy; style of house; uniformity in style of cross-heads, side heads, shoulder heads, etc.; making even; running matter round blocks; making up; paragraph advertisements; displayed advertisements with body founts only, and with the

use of display types.

Display in its various phases for different trades and professions. Setting folders, booklets, brochures, etc. Account book and ruled headings. Shipping and commercial work. Law and Parliamentary. Poster display. Make-up and register of work in two or more colours. The use of ornaments and borders. Tint blocks and embossing. Pencil lay-outs and sketches. Setting curved lines, circles, ovals, etc.

Reading.—Qualifications necessary for a corrector of the press; duties of a reader; rules for guidance of reading department; the rudiments of reading; first proof reading; marking the primer; reading for press; indexing; record of progress of work in hand. Reference books for readers.

Paper.—Hand and machine-made; qualities and weights, equivalent weights; sizes and sub-divisions of printings, writings, and account book papers; sizes and sub-divisions

of cards.

The practical examination will consist mainly of composition from manuscript or printed copy supplied to the candidate. intended to be a test not so much of mere rapidity in "picking up" as of general intelligence and of ability in setting any kind of matter that may fall in a compositor's way, clean setting and good spacing being important; for instance, a piece of bad manuscript, a simply displayed title-page or job, a difficult piece of punctuation, a moderately complex table, classical phrases or proper names, or a foreign paragraph in fairly good hand-The practical test will be held at centres at which at least five candidates present themselves, and at which the necessary arrangements can be made. When the number of candidates is less than five, special arrangements may be made either by transfer of candidates to some other centre, or by the payment by the school authority of the local examiner's fee. The examination will be conducted, as far as possible, under the superintendence of expert assistants, who will be

required to report to the chief examiners as to the manner in which the candidates have set about the several exercises given to them.

Section II.—Press and Machine Work.

Historical.— Outlines of the history of the printing press and machine.

Knowledge of Machines.—The principal working parts of the various platen, cylinder, and perfecting machines, with their functions. Top-feed and under-feed cylinders, automatic feeders. Points to be considered when choosing a machine. Suitability of machines for

various classes of work.

Making Ready.—Jobs, bookwork, posters; making register; use of points; underlaying, interlaying, and overlaying; preparing overlays for woodcuts and process blocks; uses of rubber and other materials as aids to make ready for half-tone blocks. Mechanical underlays, overlays, and interlays, their advantages and disadvantages. Cylinder packing for various classes of work: poster, plate, bookwork, half-tones; making ready for rush work. Setting the rollers and duct. Embossing on cylinder and platen; suitable material for forces; creasing and cutting rules for carton printing. Printing on parchment, silk, and other fabrics.

Rollers. — Composition and casting of; care of; for black and colour work; qualities of a good roller; treatment in hot, cold, and humid weather; renewing the surface;

remedies for various defects.

Inks.—Composition of inks; medium and quick drying; different description of dryers; suitable inks for certain papers; effect of heat and cold upon; how to keep in good condition; covering properties of good ink; coloured inks; inks for cover printing; white inks; metallic inks; gloss inks; bronze ink.

Colour Printing.—Harmony of colours; effective contrasts; rules for the selection of two, three, and four-colour combinations. Grinding and mixing colours; preparation of tints, Colour printing from process blocks. Printing two or more colours at one impression. Effect of overlapping colours. Difficul-

ties of register and their remedies.

Working Off. — Preliminary operations; how to set the rollers and preserve them during run; running up colour; difficulties met with whilst running; causes of slurring, how to avoid and remedy; difficulties connected with paper stretching and how to overcome; how to prevent a crease: keeping colours even; rising furniture or spaces, the cause and cure; preventing set-off; care in backing up; defects of impression which arise during running.

Imposition.—Various schemes for ordinary and inset work; laying down stereo or electro plates for machine or press; mounting blocks and boards; methods of mounting; irregular shapes and sizes of plates, how to securely fasten and insure correct position on sheet.

Paper. — Various sizes, weights, and subdivisions; differences between machine and hand-made; coated and super-calendered; effect of heat and damp upon; avoidance of waste from dirt and careless handling. Quantities required for various jobs.

BRITISH & COLONIAL PRINTER & STATIONER

General.—Methods of drying printed work. Electrotypes; stereotypes; process blocks; methods of manufacture and means of preservation.

With a view to encouraging apprentices to pursue their studies at a technical school, whether the apprentices are regularly indentured or not, the Worshipful Company of Stationers offer prizes of two guineas and one guinea, with a silver medal in each case, to the two candidates working or residing within a radius of 20 miles of Stationers' Hall, Ludgate-hill, E.C., who obtain respectively the highest number of marks in the first class of Grade II. of the Institute's examination in typography, Section I. (compositors' work), and also similarly to the two candidates working or residing within a radius of 20 miles of Stationers' Hall, Ludgate hill, E.C., who obtain respectively the highest number of marks in the first class of Grade II. of Section II. (press and machine work), and who in each of the above cases are under 21 years of age, and have been working as learners at the printing trade for a period of at least two years. Prizes are also offered by the Printers' Managers and Overseers Association in Grade II.

(To be continued),

Paper Imports and Exports.

Effect of War Conditions.

The annual statement of the trade of the United Kingdom with Foreign Countries and British Possessions for 1918, compared with the four preceding years, has just been issued. The period covered embraces the duration of the war, so that the statistics have a special significance. The following figures show the total imports of paper into the United Kingdom, and exports thereupon during the five years:—

	IMPORTS.			
1918	2,091,486 cwts.	£5,131,810		
1917	2,791,573 ,,	4,189,314		
1916	9,376,797 ,,	8,327,405		
1915	11,726,029 ,,	6,647,268		
1914	11,817,417 ,,	6,791,191		
Exports.				
1918	566,216 cwts.	£3,202,660		
1917	914,797 ,,	3,194,672		
1916	2,556,621 ,,	5,195,187		
1915	2,754,684 ,,	2,995,127		
1914	3,124,306 ,,	3,185,939		

American, Scandinavian, Dutch, and Swiss buyers made large purchases at the fair, which on the whole showed the desire of the German nation to recover its lost commercial position.

THERE are five reasons why your goods may not sell. One is they may be poor goods. The other is the price may be high. The other three are you may not advertise them enough.

Anglo-Norwegian Trade.

Paper and Box-Board.

The long hoped for event has taken place, says the official journal of the Norwegian Chamber of Commerce in London, namely, the withdrawal of the restrictions on the import of foreign paper and boards into this country, and once again for the first time since March 1st, 1916, buyers have a free and unrestricted hand in placing orders for their requirements with foreign mills. Contrary to what might have been expected, however, there are no signs of a fall in the market, and prices are being well maintained; as a matter of fact in some special lines there is a decided tendency to a rise in prices. The trade itself, as a natural consequence is much brisker, and there are numerous orders and inquiries in circulation. However, many prospective buyers are no doubt holding back their orders in the hope that, after a while prices will drop, but it is evident that the figures which have been current during the past week or so, are the lowest that will be quoted for some long time to come, and whereas some mills have been quoting prices c.i.f. inclusive, there is now the fall in the rate of exchange to be considered, which will no doubt make a good deal of difference to ruling prices. We give the following approximate figures at which orders for various lines of paper and boards have been placed with Scandinavian mills. M.G. pure sulphite, in substance d.c. 7 lbs., 480s., at £65 per ton net, c.i.f. British ports, subject to exchange, and for d.c. 16 lbs., 48os. and upwards, £47 per ton net, c.i.f. For cap paper, the usual 70 per cent. mechanical quality, in substance d.c. 8 lbs., 480s orders have been placed at about £46 to £47 per ton, and heavier substances of d.c. 16 lbs, and up at £35 to £36 per ton net, c.i.f., plus exchange. Prices for printings and news in the heavier substances of d.c. 16 lbs., 480s and upwards are still firm, and mills are asking £36 per ton net, f.o.b., and corresponding extras for thinner papers. For M.G. envelope paper, 50 per cent. mechanical hard-sized, prices are increasing, and the approximate figure, as quoted by Norwegian and Swedish mills is £39 per ton net, c.i.f. British ports. M.G. and unglazed kraft papers are being offered at price of £45 to £46 per ton net, f.o b., plus difference in exchange. Prices for leather boards and white wood pulp boards remain about the same as those indicated in last mouth's report, whilst strawboards, unlined, based on the usual substance of 8-16 oz. can be bought at price of £15 to £15 10s. per ton net, free delivered ports on this side.

THE National Pulp Corporation of New York are to establish a plant for the reclamation of pulp from old paper stock at Westfield, Mass. Plans have been drawn for a four-unit mill, but only one will be erected at present, costing approximately \$250,000.

WASTE PAPER.

Its Recovery and Re-Manufacture

Do you Collect, Grade, Re-Manufacture or Handle Waste Paper in any way? If so you will find a fund of information in Mr. James Strachan's book on "The Recovery and Re-Manufacture of Waste Paper."

Gummed Tape Makers,

Mill No. 2, CAMBERWELL, SURREY.

BRIDEWELL PLACE, LONDON, E.C.4.

The Hours of Employment Bill.

A Bill to regulate the number of hours of employment has been introduced by Sir Robert Horne, which provides as follows:-

1. The number of working hours in a week (exclusive of recognised intervals for meals) is not to be more than 48 for persons to whom

the Bill applies—(see clause 8).

2. The Minister—(see clause 11)—may make the working hours more or less where there is recommendation by a Joint Industrial Council, Conciliation Board, Trade Board, or an agreement between organisations of employers and workers, or where he thinks it ad-

3. Where persons are employed on shifts the hours in a week are to be the average number of hours per week during the weeks falling within the usual period of alternating shifts

in the district.

4. Any hours in excess are to be regarded as overtime. Overtime may only be worked in accordance with an order of the Minister approving any agreement or of his own motion.

Payment for overtime is to be not less than

25 per cent. above normal.

5. Special orders are only to be made after notice, and objections may be made within 21 days, and an inquiry ordered by the Minister if necessary.

6. Any person contravening the Act or failing to comply with any condition in any order, or conniving at such contravention or failure, is liable to a fine not exceeding £10. Accidents, breakdowns or other emergencies are excepted.

7. Any inspector or official appointed in

writing may prosecute.
8. (1) The Bill is to apply to all persons working under a contract of service or apprenticeship with an employer, whether the contract is expressed, implied, oral, or in writing. But not-

(a) to members of the employer's family dwelling and working in his house;

(b) to domestic and indoor servants, except where employed in connection with

trade for purposes of gain;

(c) to persons holding responsible positions of supervision or management, not usually employed on manual labour, or persons receiving upstanding wages fixed upon a basis of hours equal to other than the statutory working week which cover overtime necessarily worked to enable such persons to perform their duties to their employer and the workers under their charge;

(d) to persons employed in a confidential capacity and not usually on manual labour;

(e) to any master seaman or apprentice of a sea going ship;

(f) to persons whose hours are regulated by the Coal Mines Acts, 1887 to 1914;

(g) to persons employed in agriculture, including apiculture, horticulture, forestry;

(h) so as to prevent a person leaving one employer and commencing with another in

the same week from being employed by the second employer for the hours customarily worked for him.

(2) The Bill is to apply to persons in the employ of the Crown or of any local or other public authority, except those in the naval, military or air service and police.

g. The Minister is to have regard to any general recommendations by the National

Industrial Council.

10. The operation of the above provisions may be suspended by Order in Council in case

of war or imminent national danger.

11. The "Minister" means the Secretary of State in employments to which the Factory Acts, the Coal Mines Acts, the Metalliferous Mines Regulation Act, the Quarries Act, and the Shops Acts apply, and in other trades the Minister of Labour.

The Bill is to come into operation six months after it is passed, but the Minister may suspend its operation as to any class of employment for a further period not exceeding

six months.

Printers' Wages Memorials.

A Crisis Reached in the Country and a Formal Demand in London.

The position in the printing trade with regard to wages has reached something like a crisis. The deadlock which was arrived at in September still exists and no definite step has been made toward a settlement. It was the desire of the Master Printers' Federation that the question should be considered by the Conciliation Committee of the Joint Industrial Council, and four representative employers were selected for that purpose. At the same time the Unions were asked to appoint four delegates to sit on the Conciliation Committee, but so far they have not done so.

This was the position at the end of September. Since then no advance appears to have been made. In fact, the Unions object to the matter being dealt with in the way suggested.

The matter is, we understand, being considered by the Joint Industrial Council, which is sitting as we go to press. By them the question whether the problem should go to the Conciliation Committee is being fully discussed.

On Tuesday the Council of the Federation of Master Printers decided to submit to the Joint Industrial Council a sliding scale arrangement for regulating wages according to the Board of Trade returns as to the cost of living. A similar scheme is in operation in the textile trades, and it is on these lines that the Government are negotiating the settle-ment of wages with the N.U.R.

The Executive Council of the Typographical Association in a statement regarding the ballot which is being taken on the question of the National Wages Agreement, say that much to their regret, the request for a ros. advance in wages has been met by a negative

reply from the employers, who stated that "they had no authority, and were not prepared to assume authority, to negotiate on

the subject."

"The only proposal made by the employers," add the Executive Council, "was that the question should be submitted to the Industrial Council. This proposal we decided not to accept, holding that the Industrial Council was not designed to deal with a national wages question, and that were it otherwise its machinery should not be put into operation until a genuine effort had been made to effect a mutually acceptable settlement of the question at issue. We were informed, however, that not withstanding our position, the matter would be referred to the Industrial Committee. No progress was made, and thus a deadlock was created.

"The Executive Council take a serious view of the situation created by the employers' refusal to agree to a wages advance. The National Wages Agreement was set up after careful preparation and lengthy negotiations, and the Council were hopeful that it would be the means of bringing about the desired advance of wages. As this has not proved to be the case, we are constrained to take the view that the continued existence of the agreement has been gravely endangered.

The Executive Council have therefore decided to place on the members the responsibility of saying whether the agreement shall be terminated. If the agreement is discontinued, the alternative method for dealing with wages movements must be the use of the machinery of the various groups as provided for at the Aberystwyth Delegate Meeting."

The statement is signed on behalf of the

Executive Council by Mr. J. D. French, general president, and Mr. H. Skinner, secretary.

The ballot which is being taken by the T.A. on the question of the National Agreement is not yet concluded.

The London Demand.

Formal application for 15s. a week advance in wages has been submitted by the London printing unions to the London Master Printers' Association, with a request for a conference at an early date.

H.M. Stationery Office.

Dinner of Welcome to the Established Staff.

This happy function took place at Anderton's Hotel on Saturday last, when the Controller, Mr. W. R. Codling, C.B.E., M.V.O., took the chair, supported by Mr. C. W. Howard, M.B.E., in the vice chair, and the heads of the various branches.

The idea was conceived at a general meeting of the technical and clerical members of the permanent staff, and the men "who stayed at home" carried out the stewardship and invited to dinner about one hundred of their colleagues who had "gone forth to fight." Among the latter were fifteen who did not return, and who made the supreme sacrifice, the majority being killed in action. These were remembered by a "silent toast" after their names had been read out and a glowing tribute to their honour paid by the chairman.

The less solemn proceedings of the evening were furnished by the various artistes, including many of exceptional merit, drawn from among the diners themselves, and also the topical speeches, limited in number, but of an essentially high order.

Praise for the Printer.

Lord Robert Cecil, M.P., advocating that workmen might be given a share in the control of industry, intimates that they have proved themselves worthy of confidence by the way in which they respect trade secrets. "Consider," he says in the course of an article in the Globe, "with how many secrets printers are entrusted. Great quantities of highly confidential matter are constantly being printed in commercial negotiations, in legal proceedings, in literary ventures, and in political and diplomatic affairs. And yet I have never heard of an instance in which the printers were accused of indiscretions."

Life is a dull grind to the man who thinks only of the grist.

Messis. Wightman and Co.

Developments Described by Mr. T. J. Mountain.

At their annual meeting in November the shareholders of Messrs. Wightman and Co., Ltd., of Regency-street, Westminster, will be called upon to approve a profit-sharing scheme which is being put into operation by this old-established firm. On the occasion of a dinner given recently by the firm to their older employees, the managing director, Mr. T. J. Mountain, outlined the history of the Wightman printing house and gave some

particulars of this scheme.

Starting at the year 1836, when the business was founded by his grandfather, Mr. Mountain sketched the growth of the firm to its present dimensions. On the retirement of Samuel Wightman, in 1868, control was assumed by his son-in-law, John C. Mountain. who carried on the business successfully till 1886, when he died at the age of 52 years. The present managing director (Mr. T. J. Mountain) then became managing trustee. In 1898 the business was formed into a company, and soon it was found necessary to increase the capacity of the works. The company therefore acquired some old cottage property in Douglas-street, formerly belonging to Samuel Wightman, and built thereon a roomy four-storey building, with every up-todate appliance, including an entire equip-ment of electric motors. This increase in accomodation served well until the last few years, when it became a problem of "marking time" or providing further space. After many deliberations and weighing pros and cons as to the respective advantages of adding to the present works, or going a few miles out and erecting a building under far more ideal conditions than was possible in Westminster, the verdict in favour of the latter scheme was unanimous. It was ultimately decided to purchase a freehold site at Mitcham. The land has a frontage of 300 feet and a total area of 72,000 feet. Here is to be erected as soon as building conditions permit, a factory with every up-to-date appliance, offices in the front, mess-rooms with cooking plant for catering, occupying the whole of the first floor, and caretaker's apartments above. The works themselves will be wholly on the ground floor and lighted from above by means of a hipped roof, thus giving the utmost possible light to every corner of the building. Alongside the main room will be placed the composing and machine departments, store-rooms, foundry. binders' stock-room, waste baling room. heating apparatus, and paper stock-rooms. Especial care is to be taken that ventilation, heating and lighting will be installed on the most approved principles. The site will permit of additions to the buildings as they may become necessary.

On the occasion of the recent gathering referred to, Mr. Mountain outlined the profit-

Digitized by GOOGLE

sharing scheme which is to be submitted to the shareholders. He and his co-directors are agreed on the question of dividing part of the profits with the employees, and they believe the workpeople will appreciate the advantage of having a real interest in the business. The scheme proposed is that, after providing a dividend of 7 per cent. on the ordinary shares, the balance of the appropriated profit shall be shared equally between the shareholders and the employees, those eligible being employees who have attained 21 years of age or who have been not less than 15 months with the company when the bonuses are declared. As things are at present, the scheme would represent about a week and a half's additional pay each year to every qualified person. By a happy arrangement the bonuses will be payable just before the summer and Christmas holidays.

The Victoria House Printing Co.

In reply to a statement in the Morning Post, Mrs. Besant writes to the editor giving a little inside information about the Victoria House Printing Co. and her own connection therewith. She writes:—

"The Victoria House Printing Co., Ltd., was founded by Sir George Newnes, Bart., for the purpose of carrying on a printing business, including the Westminster Gazette. Practi-cally all the shares were held, early in 1916, by Sir Frank Newnes and the trustees of his late father, Sir George. They were all bought by Major Graham Pole and a small group of his English friends. I was in India from 1914 to 1919, and knew nothing of the matter till they very kindly made me a gift of some shares. That is my connection with the company. The company has continued to print That is my connection with the comthe Westminster Gazette, and also prints the Saturday Westminster, Common Sense, the National News, the Daily Herald, the Racing and Football Outlook, and much general printing. The Pelican Press, a branch of the Victoria, is now printing United India, which expresses the views of a villainous combina-tion of Indian agitators, of whom I am proud to be one. Moreover, I am glad to hold shares in a company which prints exceedingly well, which pays trade union wages, and which is always ready to print any worthy pleading for the uplift of the downtrodden, whether in India or in Great Britain, and which has given one thousand shares in trust for its employees, who annually elect, by ballot of all workers, two directors to represent their interests."

THE "FREEMAN'S JOURNAL."—Tenders have been received for the sale of the Freeman's Journal as a going concern under the order of the Court. The tenders, including several from Great Britain and political organisations in Ireland, will be considered by the Court during the present week.

Personal.

COUNCILLOR F. J. WINKLEY, the President of the South-East London Master Printers' Association, was unable to preside at the meeting last week owing to illness.

MR. B. SEVERN, of the composing department of Messrs. Wightman and Co., Ltd., on retiring after 50 years' service with the firm, has been presented with a well-lined letter case and a walking-stick.

MR. T. J. MOUNTAIN, managing director, in making the presentation, mentioned that 45 years ago he and Mr. Severn had worked together "at case."

MR. H. PERRY ROBINSON, who acted for the greater part of the war as correspondent of the Daily News and Times at the British front, has been decorated on behalf of the President of the French Republic with the Chevalier Cross of the Legion of Honour.

Among those who have accepted invitations to support Sir George Riddell at the annual dinner of the Readers' Pension Committee on November 1st, at the Cannon-street Hotel, are Lord Russell (the veteran Liverpool journalist), Sir Auckland Geddes (President of the Board of Trade), Colonel Sir A. R. Hølbrook, K.B.E., Colonel Sir Reginald Rankin, Sir Frank Newnes and Sir J. G. Frazer.

SIR ALEXANDER JEANS entertained the London and country journalists who met at Hoylake last week in a golfing tournament. The Londoners went down rather badly on this occasion.

MR. A. F. BIRD (Newspaper Federation) was presented with a silver salver on behalf of the "Rest" team in recognition of his work as secretary since the inauguration of the competitions.

SIR GEORGE RIDDELL, whose activities on behalf of anything associated with printing are so numerous, was instrumental, together with Sir Alexander Jeans, in initiating meetings between London and country golfing journalists before the war.

MR. E. W. ANDREWS, manager of the paper and pulp department of Messrs. Grace Bros. and Co., Ltd., 144, Leadenhall-street, sailed for Stockholm last week. Messrs. Grace Bros. do a large business in paper and pulp through their Stockholm office, and the object of Mr. Andrews' visit to Norway, Sweden and Denmark is to consolidate the connection between those countries and the United Kingdom.

Trade Notes.

For a series of frauds by collecting money for the insertion of advertisements in directories, of the publishers of which she preended to be the representative, a woman at Edinburgh was sentenced to nine months' imprisonment.

SPEAKING on Wednesday, at the Carlton Hotel, on the occasion of the Government dinner to the Allied journalists visiting England, Sir Auckland Geddes said that if the League of Nations was to be a success the Press must tell the truth.

MR. THOMAS PARKIN ROBINSON, F.J.I., of Wakefield, Yorks, newspaper proprietor, of the Wakefield Express, the Pontefract and Castleford Express, and the Norwich Mercury, and a member of the Council of the Newspaper Society, left £74.944 (net personalty £36,982.)

THERE died in London, last week, a well-known historian and novelist of Wales, in the person of Lieutenant-Colonel Arthur Owen Vaughan, D.S.O., O.B.E., who wrote under the pseudonym "Owen Rhoscomyl." Besides being a literary man, he was a distinguished soldier, and had a most adventurous life.

The second edition of Mr. Ralph C. Hazell's memoir of his late father, Mr. Walter Hazell, is announced by Hodder and Stoughton. This book, with a photogravure, was originally written and printed for private circulation. In response to numerous suggestions, a second edition is now available for public circulation. Any profit which may be realised will be divided between the Children's Fresh Air Mission and the Homes for Little Boys at Farningham and Swanley.

LECTURES ON JOURNALISM.—Numerous applications from all parts of the country and the Empire, and from many foreign lands have been received for admission to the Journalism Diploma Courses, which the London University is starting this session. Among the leading journalists who have consented to give addresses are Sir Owen Seaman, Mr. Hartley Withers, Dr. W. L. Courtney, Mr. Robert Donald, Mr. A. B. Walkley, Mr. J. L. Garvin, Mr. A. G. Gardiner and Mr. J. A. Spender.

WAR MEMORIAL BOOK — The Bury Times has issued a "Bury and District Sailors' and Soldiers' Memorial Book," a well-produced pamphlet containing brief particulars of as far as possible all men from Bury, Radcliffe and district, who gave their lives for their country during the war from its commencement up to the end of 1915. Succeeding pamphlets will carry the record up to the end of the war. This memorial is unique, we fancy, in containing reproductions of over 500 photographs of the men concerned. The cover of the memorial is strikingly printed in silver lettering on a chocolate ground.

AT a luncheon given by the City Livery Club, on Friday, at the Holborn Restaurant, Mr. W. Hill, a Past Master of the Stationers' Company, was about to present a Georgian

silver tankard to the president, Mr. George W. Jones, when it was found that the tankard was missing. It had not been discovered when the company separated.

THE Bolton Corporation has approved plans for extensions to offices, Fairclough-street, for John Dickinson and Co.

MRS. ANNIE BESANT is plaintiff in an action for £1,000 damages for alleged slander against the proprietors of the Daily Graphic, London.

THE British Industries Fair will be held at the Crystal Palace next year. Printing and stationery will again form an important section.

MR. G. W. CAPEL, who died at Croydon recently, began life as a newsboy, and finally became a departmental manager for Messrs. W. H. Smith and Son.

H.M. Consul-General, Trieste, desires to receive trade catalogues for exhibition in the Consulate, with extra copies for distribution. Catalogues should be sent direct to the British Consul-General, Trieste.

The late Mr. James Nicol Dunn, a former president of the Institute of Journalists, editor successively of Black and White, the Morning Post, the Manchester Courier, and the Johannesburg Star, left estate of the gross value of £657, with net personalty £548.

The strike which took place among the members of the warehouse, packing and envelope staffs, at the London offices of Messrs. Alex. Cowan and Sons, Ltd., was settled on Wednesday and those affected returned to work the same day.

ARISING out of the Swansea Parliamentary election, Sir Alfred Mond and his brother, Mr. Robert L. Mond, are bringing a series of six libel actions against Mr. David Davies, the Unionist candidate, and the South Wales Daily Post, of which he is the editor.

At the last meeting of the Council of the London Master Printers' Association, an additional 50 members were elected to the Association, bringing the total membership up to over 900. This a big step towards the 1,000 membership mark, which it is hoped to reach before the end of the year.

The Technical Review is the first issue of the new series of what was formerly the Technical Supplement to the War Office Review of the Foreign Press. It continues the work of that review by giving fortnightly a number of extracts on engineering subjects from home and foreign newspapers and magazines.

Women Journalists.— The Society of Women Journalists held a "victory" banquet at the Criterion Restaurant on the 17th inst. The company, numbering about 150. included many distinguished persons, among them being Viscount and Viscountess Burnham and Viscountess Northcliffe. In the course of his speech the Earl of Athlone referred to the absence of a printed plan of the tables, and remarked that doubtless journalists best knew the cost of paper. Lady Northcliffe is to be the new president of the Society.

Young Journalist's Heroism.

The Bishop of Woolwich has unveiled at Woolwich Cemetery a marble memorial cross erected over the grave of James Harvey Dale, aged 16, a journalistic pupil on the staff of the South Eastern Herald, Greenwich, who was fatally run over by a motor-lorry whilst cycling to the office in May last. Although in great agony when picked up, his first thought was of some important "copy" he had in his pocket, and he handed it to a bystander with the request that he should take it to the office at once, as it was very important. In recognition of his fine spirit a shilling fund was opened by the editor of the Newspaper World, and the £67 realised has been devoted to the erection of the memorial and to assisting in the education of the lad's younger brother.

Viscount Astor as Pressman.

The late Viscount Astor, the multimillionaire, was proprietor of the Pall Mall Gazette, the Observer, and the Pall Mall Magazine, to which he frequently contributed short stories, chiefly of an historical character. Recalling the brilliant staff and style of the Gazette under Viscount Astor's management. the London correspondent of the Manchester Guardian writes:—"Salaries and expenses were on a proper millionaire scale. The history of its all-too-brief career is the golden legend of London journalism. also founded the Pall Mall Budget, a weekly now remembered by poster collectors because of its poster by Grieffenhagen, and the Pall Mall Magazine, which did some fine work in illustrations and maintained a good literary standard, with lapses when the proprietor himself wrote stories."

The Imprint.

At the instance of the Attorney-General, Messrs. Straker Bros., Ltd., of 194-200, Bishopsgate, were summoned at the Guildhall to answer charges of having in April last printed copies of a circular headed "Oil Companies." and a four-page circular entited "Monthly Rubber Share List," without printing upon each copy the name and address of the printer, contrary to the provisions of the Newspapers Printers' Repeal Act, 1869. By consent the case was adjourned for a month.

TENDERS are wanted for the printing of a fiction catalogue for the Rochdale Public Libraries Committee; particulars from the Chief Librarian, Rochdale.

Duich Srawboards

Dutch strawboards are now quoted £14 10s. per ton, basis, free delivered, for forward orders, with £3 ios. extra for heavier weights. Three weeks ago, orders were being accepted at £14 and even £13 10s. per ton. There is at £14 and even £13 10s. per ton. no prospect of any reduction in price this year, and the demand is good. Very few agents are able to hold stocks of strawboard. consignments being sold out before they arrive. For what stocks there are, a higher price is asked, ranging about £18 per ton net; the margin of difference being claimed by the agent to represent the cost of sorting, handling, etc. A more plausible explanation might be given by claiming that the extra profit was taken as recompense for obliging a customer whose needs were too urgent to wait forward delivery. That the high figure is not altogether justified is borne out by the fact that at least one London agent is offering stocks at £15 tos. per ton.

Current Topics.

Increased Production.

PEOPLE must be getting pretty tired of the exhortation to increase production; but the need of it is nevertheless still urgent. While a good deal of talk is proceeding on the subject nothing of a practical nature is being undertaken and the problem is being left apparently to individuals to do as they please in the matter. The atmosphere which prevails at present in almost every industry does not appear to be conducive, either to increased production or harmonious working. Some progress might be made in the desired direction if individual trades would take up the subject in real earnest and promote some

scheme which would lead to the improvement of each industry and a larger output. The attitude to be adopted, however, must have more of sympathy in it than has been apparent hitherto even in the printing trade. The subject is one which the Industrial Council might take up. True it is easy enough for employers to insist upon greater production, but it is probably a difficult matter for those who have always worked conscientiously to add very much to their Human nature after all is not a mechanical machine, but it is still capable of greater efforts if only the proper persuasion and not force are exerted and brought to

Profit Sharing.

LABOUR is out for a greater share, if not of the control, at least of the profits of industry. There are many schemes already in being which provide for a portion of the profits going to those who are employed; but on the part of the union leaders, there is a growing opposition to them. There may be some grounds for this opposition, but, after all, employees do benefit to a greater extent than they have hitherto done, and Lord Leverhulme points out that the trade unionists who have tasted the benefits of co-partnership are not amongst those who oppose it in practice. His Lordship maintains that co-partnership will in no way weaken trade unionism. He contends that as we have to meet the whole world in competition there must be unity between employer and employed. Efforts to secure this unity in the printing trade have been successful in individual cases, though it can hardly be said to be the fact so far as the industry as a whole is concerned. It would seem as though human nature would have to improve a great deal before complete harmony can prevail. Existing controversies with regard to wages scarcely seem to be a favourable sign. For the sake of the printing industry it is to be hoped there will be an end to these controversies some time or other and that there will be a real co-partnership, not merely in words, but in deeds.

British Printing Machinery.

If the printing industry is to share in the increased production which is required, we shall have to rely to a large extent upon machinery, together with the goodwill of all concerned in the factories. Alert minds are continually being directed to improvements in printing mechanism, and the strides which have been made in recent years are pheno-

menal. While British manufacturers have not been responsible for it all, they have done a great deal. They are hampered now, however, by a lack of materials, unrest in the labour world, and other difficulties attending industry in these days. A consideration of this matter raised the question the other day as to the amount of foreign printing machinery imported into this country, but reliable statistics on the point are difficult to obtain.

Imports of Printing Machinery.

BRITISH makers of printing machinery find it difficult, if not impossible, to obtain adequate data as to the extent to which they are meeting competition from overseas. Any one who sets out to investigate our imports of printing machinery stands a good chance of expending a considerable amount of time and energy without gaining the information sought. In casting around for likely sources of information the inquirer possibly bethinks him first of that rich storehouse of knowledge relating to things mechanical-the Patent Office Library. Inquiry there, however, will reveal the fact that the subject of import statistics is regarded by the Library as a non-technical one, and hence extraneous to its scope: so that nothing special to the subject, as for instance the London Customs Bill of Entry, is included among the multitudinous publications available in the Library. Nothing daunted, the investigator might remember next the Government Department Overseas Trade-established for specific purpose of affording our manufacturers and commercial people information likely to assist them in competition for the world's markets. But if he should seek there, he would find nothing on this specific subject, it being explained no doubt that the Customs authorities do not separately mention printing machinery in published returns of imports. Then as a final effort, perhaps, he decides to go to the root of the matter by visiting the Customs authorities themselves, at the river side. But even if he finds his way into the presence of the genial gentleman who presides over the Customs statistical department, this obliging official will have to express himself powerless to assist; for it happens that in past and present records of this country's imports, printing machinery is included in that heterogeneous miscellany entered as "Machinery Unenumerated." This is very unsatisfactory to the British manufacturer who wants to know to what extent printing machinery is being imported, and

from where. We hear, however, that a committee is now sitting to revise the present method of recording imports, and that by the beginning of next year the number of goods specifically mentioned will be greatly increased. We trust that the printing industry will not be overlooked in this connection, and that the trade may soon be freed from its present disabilities in regard to obtaining such statistical data as it may require.

Readers' Pensions.

Now that the war is over, the Readers' Pensions Committee have decided to resume their annual dinners which have been dropped since 1914. Sir George Riddell, who is such a well known personality in all that relates to newspapers and printing, is to preside at the coming function on November 1st, at the Cannon-street Hotel. The valuable work which readers perform for all who are concerned in the publication of printed matter is not realised by the general public, though they benefit by the work as much as do those who are saved from many a sad mistake by the care and intelligence which proof-readers exercise. Although at first sight it may appear that the work of proof-reading is of an absorbingly interesting kind, it is really a terribly monotonous occupation and very trying, both to mind and body, and those who perform the task come very sparingly to the notice of the general public. Readers, indeed, are not among the plutocrats of printing, but the services they render entitle them to every consideration, and the twenty-fifth annual dinner will provide an occasion for rewarding what is in fact public service. There are at present thirty pensioners receiving support at the hands of the Committee, which was formed in 1889. It is due to the officials of the Association that so much useful work has been done in the past in looking after readers who find themselves in poor circumstances at the end of laborious days. Mr. J. Feldwick is the chairman of the committee, Mr. Perkins is now the treasurer, and Mr. C. G. Atherton and Mr. H. M. Gurr are the Secretaries. resumed annual dinner will afford the public an excellent opportunity for rendering tribute to the correctors of the press.

SIR HARRY BRITTAIN, M.P., accompanied by Lady Brittain, left in the "Mauretania" on Saturday to undertake work in the United States and also as a delegate of the Empire Press Union, to confer with Canadian journalists on the arrangements for a second Imperial Press Conference, which is to be held in Canada next year.

DIVIDENDS AND REPORTS.

Associated Newspapers.—Seven per centper annum, 83d. per share, less income taxon ordinary shares for half-year (interim), payable December ist. Last year, dividend same.

Roneo, Ltd.—The report for the year ended June 30th, 1919, states that the net profits amount to £73.050. The amount brought forward was £18.637, less £12,909 for excess profits duty, leaving £5,728, thus making a total to the credit of the revenue account of £78,779. The directors recommend the following appropriation: The payment of a dividend of $12\frac{1}{2}$ per cent. (making 20 per cent. for the year) on the ordinary shares, £25,411; amount to be applied in writing off patents, trade marks, and goodwill, £10,000; balance to be carried forward, £20,907.

NEW COMPANIES.

NATIONAL CHURCH PUBLISHING Co., LTD.—Registered with a capital of £3,000, in £1 shares, to carry on the business of printers, publishers, advertising agents, lithographers, engravers, etc. The subscribers are J. Tagg, and W. Jones. Private company. Table "A" mainly applies.

W. H. STOAKLEY AND CO., LTD.—Registered with a capital of £14,000, in £1 shares, to take over the business carried on at St. George's-road, Wimbledon, as "W. H. Stoakley and Co.," and to carry on the business of proprietors and publishers of newspapers, journals, magazines, books, and other literary works, etc. The subscribers are W. H. Stoakley, W. H. C. Bamford, and T. B. Stoakley, Private company. The first directors are W. H. Stoakley (managing director), W. H. C. Bamford, and T. B. Stoakley. Registered office, 11, St. George's-road, Wimbledon, S.W.19.

British Bank Note Manufacturing Co., Ltd.—Registered with a capital of £5,000 in £10 shares, to carry on the business of engravers and printers of treasury notes and bank notes, postage and revenue stamps, bonds and other securities, cheque printers, etc. The subscribers are Sir Wm. A. Waterlow, K.B.E., and A. G. Gronow. Private company. The first directors are Sir Wm. A. Waterlow, K.B.E.; W. G. Rayner, H. Sweetman, and A. G. Gronow.

A. H. SKINNER AND Co., LTD.—Registered with a capital of £15,000, in £1 shares, to take over the business carried on at Fleet-street, Leicester, as A. H. Skinner and Co.," and to carry on the business of printers, lithographers, engravers, publishers, etc. The subscribers are A. H. Skinner, W. E. Bunny, and J. Haworth. Private company. The first directors are A. H. Skinner, W. E. Bunny, and J. Haworth. Registered office, Fleet-street, I eicester.

Thomas Preston, Ltd.—Registered with a capital of £10,000, in £1 shares, to carry on the business of manufacturers of and dealers in paper bags and papers, paper stainers, decorators, engravers, printers, etc. The subscribers are A. Tyldesley, W. R. Duckworth, and H. Tyldesley. Private company. The first directors are A. Tyldesley, W. R. Duckworth, and H. Tyldesley.

ALFRED J. SHARP, LTD.—Registered with a capital of £1,000, in £1 shares, to take over the business carried on by A. J. Sharp, at 45 and 47, East street, Baker-street, W., and to carry on the business of stationers, printers lithographers, stereotypers, engravers, etc. The subscribers are H. R. Greenwood, and F. D. Hammond. Private company. The subscribers are to appoint the first directors.

GIBBS AND BAMFORTH (WATFORD), LTD.—Registered with a capital of £5,000, in £1 shares, to take over the business of a newspaper proprietor, publisher and printer, carried on by J. E. King, at 42, High-street, Watford. The subscribers are H. S. Gibbs, and J. W. Gibbs. Private company. The first directors are J. Bamforth, H. S. Gibbs, A. A. Gibbs, G. S. Myers, J. W. Gibbs, and J. Baum. Registered office, 42, High-street, Watford.

PEERLESS PHOTO PAPER CO., LTD.—Registered with a capital of £17,500, in 15,000 shares of £1 each, and 50,000 shares of 1s. each, to carry on the business of manufacturers of and dealers in photographic paper, etc. The subscribers are H. A. Nutland and J. A. Ratray. Private company. The first directors are to be appointed by the subscribers.

Carshalton Pencil Syndicate, Ltd.—Registered with a capital of £24,000, in £1 shares, to carry on the business of pen, pencil crayon and papermakers, stationers, etc. The subscribers are R. Shirdy and T. W. Collart. Private company. The first directors are not named.

A. M. Robb, Ltd.—Registered with a capital of £6,000, in £1 shares, to take over the business of a printer and stationer carried on by

The Printing Crafts Guild.

An Unbroken Record During the War.

The twelfth annual general meeting was held in the Municipal College of Technology, Manchester, on Saturday, when Mr. R. B. Fishenden, M.Sc. Tech., occupied the chair.

The report of the Executive Committee for 1918-19 recorded that the total membership is 216, thus creating a new record over session 1917-18, by an advance of 40 members. In 1907-1908, the first year of the Guild, the membership was 110. After a welcome home to the members and fellow-craftsmen who have returned from war service, the report adds: "To those familiar faces that we shall never see again, we say 'adieu.' They have given all that they had to give, and may the future show that their great sacrifice has not been in vain."

In spite of the difficulties in arranging the syllabus for the past session, the result has proved satisfactory in every way, and the large attendance at all meetings has repaid in some measure those who have helped to make the year's work a success. The arrangements for the new year's work are well advanced and the Committee has every hope of maintaining the high standard of the meetings.

The constitution of the Guild was confirmed, and officers and committee elected.

Following the meeting a lantern lecture on "Recent Experiences in Mesopotamia" was given by Mr. James Worthington, in the course of which he acknowledged the great help given by the printing press during the war.

Mr. Thos. Sproat, general secretary of the Amalgamated Society of Lithographic Printers, moved a vote of thanks to the lecturer, and the audience showed their appreciation in an unmistakable manner.

WEE MAC.

Enterprising Printers.

A printing job executed under mysterious circumstances is reported from Westmeath, Ireland. The printing office concerned is one connected with the Westmeath Nationalist, at Mullingar. The office, which contains printing machines and a quantity of type, mostly for job work, was locked up securely as usual on the evening of the 10th inst., but on the morning of the 11th it was evident a person, or some persons, had effected an entry through the door of the fanlight and utilised the type and machine to set up and print copies of a poster recommending the Sinn Fein Loan.

Do NOT let the burden of to-morrow break the back of to-day.

Printers' Managers and Overseers

MANCHESTER & DISTRICT CENTRE.

After the ordinary business of the October meeting the president introduced Mr. Hookway, who came as a substitute owing to the enforced absence of Alderman T. Jackson.

Mr. Hookway, in an interesting address on the subject of the franchise, said the passing of the Act of 1919 led many people away with the mistaken idea that the widening of the Act had reduced responsibility. During the years 1914-1919 the word "Democracy" had constantly been uttered by public speakers; and since 1914 both men and women had been looking forward to better times, both industrially and politically. At the present moment industrial disturbances were very acute, and organised workpeople appeared to have a tendency to resist political action which was against them. He was not in which was against them. favour of direct action if other means could be obtained to achieve the desired ends. Direct action should be used at the ballot box. as it was a legitimate way of procuring one's wishes. In a few weeks time the nation would have an opportunity of making decisions which should eventually be for the good of the community. Mr. Hookway covered the social and political fields, and supplied much food for cogitation.

In the discussion which followed, Messrs. Chas. N. Knowles, R. Bates, E. Fisher, J. H. Nuttall, T. Rignall, the secretary, and several others questioned the speaker, who in reply, furnished further information and expressions of opinion.

WEE MAC.

BIRMINGHAM CENTRE.

The members of the Birmingham Printers' Managers and Overseers Association opened their winter session of meetings at the Birmingham Chamber of Commerce on Tuesday last. Mr. W. E. Martin presided. and an excellent lecture, well illustrated, was given by Mr. A. H. Howell, of Coventry, on stereotyping. He traced the history of the subject from its introduction into this country. half-a-century ago, and mentioned the various developments. On the motion of Mr. Bruff, seconded by Mr. Birch, a vote of thanks was passed.

The question of the closing of a public footpath at Barnes, in connection with the erection of new premises by Messrs. Bradbury, Wilkinson and Co., Ltd., banknote printers and engravers—referred to in our issue of October 2nd—was settled on the 14th inst. at the Surrey Quarter Sessions, when the firm's application for the closing was granted.

Strikes in Paris

The threatening labour situation causes much anxiety in printing circles in Paris. Trouble began with the booksellers' assistants, as announced in our last week's issue. Then newsvendors and distributors came out on strike in sympathy, and on Saturday and Sunday Parisians had much difficulty in getting their customary journals. The newspapers employed taxi cabs, and succeeded eventually in getting fairly satisfactory dis-tribution. In Montmartre there were collisions between the strikers and the non-union men who remained at work. Cyclists carrying bundles were upset, and the papers seized and destroyed, and in the Rue de Montmartre 5,000 newspapers were burnt. The strikers made an exception in the case of the Socialist and trade union papers.

Monday's dispatches report that the newspaper proprietors combined, and made arrangements for distribution, which worked well. Depôts were established in ten districts of Paris, and at these papers were on sale from half-past four until nine o'clock in the It has been suggested that this morning. new method of distribution may take the place of the old arrangements, in which case thousands of people will find it necessary to

turn to other employments. The strikers are doing their utmost to extend the movement. The cyclists attached to the news agencies have left their work, and there is a threat of the machine men in the newspaper offices joining the agitation, and claiming a "dear living" allowance of 5f. a day.

THE OLDEST TRADE PROTECTION OFFICE IN THE UNITED KINGDOM.

ESTABLISHED 1776.

PERRY'S

Trade Protection

(W. R. PERRY, LTD.) 12, Coleman Street, London, E.C.2. Status Inquiries made as to the position and standing of Traders and others.

PERRY'S GAZETTE and LIST OF CREDITORS are published weekly, and are invaluable to every one in business.

The City & Guilds of London Institute

FINAL EXAMINATION.

Separate papers will be set in Section 1. (compositors work) and Section II. (press and machine work). All candidates for either section must hold a certificate in one of the two sections of Grade II.

Candidates will be required to have a more advanced knowledge of the subjects included in the syllabus for the corresponding section of Grade II. Questions will also be set on such subjects as those named below.

SECTION I.—COMPOSITORS' WORK.

I. Composing Department.—Outlines of typecasting; essential qualities of good type; selection of types suitable for certain classes of work; weight of type and material required for a specified work; arrangement of a composing-room, store-room, reading department, standing forms and matter; construction and management of composing machines, their capabilities and limitations. Instructions necessary when putting work in hand; designing and laying out copy.

2. Paper.—Standard sizes and weights of paper. Equivalent weights of standard and odd sizes. Reams to the reel. Market prices and terms for stock papers and makings.

Various classes of paper (hand-made, mould-made, and machine-made). Printings, coated papers, writings banks and loans, plate, drawings, account books, cover papers, blottings, vegetable parchments, imitation parchments, manillas, "safety" cheque papers, wrapping papers, gummed papers.

Technical terms used by papermakers and merchants.—Insides, outsides, retree, job, mill

job, overmake, etc.

Watermarks and mill numbers.

Metals.—Melting points of metals; results of overheating the metal: fluxing and

renovating.

4. Departmental Management.—Costs of hand and machine composition. Running costs of composing machines. Principles of estimating time and material and percentages for handling. General principles of cost-finding: work dockets, time sheets, cost sheets, analysis sheets and book-keeping. Weekly

cost of production and value of output. Framing of works orders. Supervision of work. Keeping track of work in hand. The Factory and Workshops Acts so far as they affect printers. Printing office hygiene.

SECTION II.—PRESS AND MACHINE WORK.

1. Machines.—Construction and management of the hand press and of all types of letterpress machines; considerations governing the selection of machines to suit average run of work in a particular printing office; the process and cost of mechanical and handcut overlays, making ready, and running off work of any description.

2. Power and Transmission.—The care and management of steam engines, gas engines, electric and tube ignition; electric motors, direct driving and in groups; shafting and lubricators; belts and belt fastenings, pulleys, couplings, etc.; grease, oils and other lubricants; how to minimise loss of power in

transmission.

3. Paper and Boards.—The subjects mentioned under paragraph 2 of the syllabus for Section I., and in addition a knowledge will be expected of the following:—

Defects in paper. Cockling and creasing, stretching, lifting, fluffing, the mill edge, spots, air-bubbles, foreign substances, elec-

tricity in paper.

Boards.—Bristol, paste, pulp, wood pulp, art and tinted, millboards and strawboards. Standard sizes: sub-divisions and standard thicknesses. Boards to the hundredweight.

4. Printing Inks.—Properties of good inks; black, coloured, copyable, cheque, double tone, trichromatic, poster, tinting mediums, etc., selecting inks for various purposes and for different papers, covering power of ink on smooth and on rough papers.

5. Illustrations.—Outlines of the methods of reproducing illustrations (original and dupli-

cate)

6. Departmental Management.—The subjects will be similar to those mentioned under the same head in Section I., but special emphasis will be laid on those portions which relate to machine work.

Candidates who hold provisional certificates on the results of the Final Examination in both Section I. and Section II. may present themselves for a further examination in a subse-

LOCKWOOD'S "Boldefigger" Calendars for 1920

Are in exceptionally large demand this year. Stocks are rapidly diminishing, and early application is advisable to avoid disappointment.

GEO. W. LOCKWOOD, Calendar, Atlantic Printing Works,

8a, CITY ROAD, MANCHESTER Digitized by

quent year, on the result of which full Technological certificates will be awarded.*

The examination will include the writing of a short piece of English composition on a subject of general business or technical interest, and questions on such subjects as the following:

Advanced questions on costing and estimating, including estimates for a given piece

of work.

The selection of various forms of motive power for running machinery and the relative

cost of each method.

Details of the processes of electrotyping and stereotyping of a more advanced character than that expected under paragraph 5 of the syllabus for the Final Examination, Section ., including cost of materials and labour.

Metals.—Proportions of basic metals forming suitable alloys for linotype and monotype machines; also for stereotyping, and for backing up electros; how to judge suitability

by the grain.

Illustrations. - Outlines of the history of illustrations used in letterpress printing; woodcuts; line etchings; half-tone process (square or vignetted); combination of line and half-tone; colour, half-tone, and line; the use of line tint screens; two-colour halftone to obtain photogravure effect: threecolour half-tone; theory of colour photography in its application to the production of printing blocks; progressive proofs. selection of the most suitable process for reproducing from a specific original. Difficulties and how to overcome them; most suitable screens for various grades of paper.

Papers.—The manufacture of paper. papermaking machine; fibre-yielding material; warehouse tests for the various celluloses; soft, half, tub, and engine sizing; china clay, its uses and how to determine proportion. The mechanical properties of paper and their quantitative measurement.

Judging papers. How to judge the quality of various classes of papers and their suitability for the purposes to which they are to be put. Bulk, handling, opacity, absorbency,

*Candidates who hold a certificate in the Final or Honours Grade Examination obtained prior to 1917 under the former syllabus will be permitted to pre-sent themselves for the Full Technological Certificate Examination.

and "look-through," strength, tear (straight and across), length of fibre. British and foreign makes and how to detect. The right and wrong sides.

New Type of Newspaper.

The New York Literary Digest has announced what may be a vital change in newspaper production. An entire journal, with a huge circulation, is produced without any typesetting by photographing type-written pages. The first experimental copy of this journal is said by the American correspondent of the Daily News to be quite satisfactory.

National Wage Settlement.

The Present Position. City Master Printers Discuss an Interesting Problem.

Mr. J. J. Keliher, the President, occupied the chair at the meeting of the Central Districts Branch of the London Master Printers' Association, at Anderton's Hotel, on Wednesday evening last week, among the visitors being Mr. Roger Gibb, Minister of Labour, liaison officer for the Joint Industrial Council of the printing and allied trades, and Mr. W. McKenzie of the Government of India Press.

Mr. W. H. Burchell, the Hon. Organising

Mr. W. H. Burchell, the Hon. Organising Secretary, reported that the membership of the branch had increased to 446, which compared with 443 for all the other district associations. They were now feeling the benefit of the work of the organiser (Mr Johnson). The Chairman, in asking Mr. Goodwin to

The Chairman, in asking Mr. Goodwin to speak on the subject of the wages settlement on a national basis, mentioned the success which had attended that gentleman's efforts on behalf of the costing movement.

Mr. A. E. Goodwin (secretary of the Federation of Master Printers) dealt in a singularly interesting and able manner with his subject. He traced the development of collective bargaining until the T.A. organised the country into group areas seven years ago, which had now given place to the scheme for settling wages on a national basis. He mentioned the demands which came from the group areas in cycles, and recounted the negotiations which led to the national wage basis scheme being adopted. It was decided under this scheme that Manchester and Liverpool should be put in Grade I, with a rate of 75s. and a difference of 3s. between the other five grades, making the lowest grade 60s, per week, which was fixed as the minimum for any town in the country. An important proviso was made that any town

or trade union branch not satisfied with the grade could apply to the T.A. Executive, if their members objected, while the employers could appeal to the Federation, and if these executives considered the case worthy. it was then submitted to a Joint Committee and adjudicated upon. There was a considerable number of these applications which had not yet been considered. It was also laid down that if either party desired a general revision of wages for all grades application should be made to this committee. was one of the difficulties of the present position, when they had placed before this Joint Committee a claim for a general revision that the T.A. members in the whole of the towns in England and Wales should receive an advance of 10s., a request being put forward at the same time for a regrading of about 30 towns, and a special advance of 4s. to linotype operators. Reference was made to the special allowances made to linotype and monotype operators, which had been altered by this agreement from a percentage basis to a fixed amount, the amount under the new arrangement being 8s. 6d. in Grade I. towns as against 9s. 41d. under the percentage scheme. The linotype and monotype operators, therefore, regarded this as a grievance instead of realising that this was quite a fair settlement. When the was quite a fair settlement. national wage basis scheme was adopted, it contained a clause that no strike or lock-out should take place until the joint committee had met and come to a decision, and 35 days was to be allowed for that purpose. This was an excellent arrangement as it would enable the committee to consider the whole bearings of the case in a calm atmosphere.

A Little Premature.

Mr. Goodwin then dealt with the history of similar ageements with the binders, the stereotypers, the warehousemen, the lithographers and the four trade unions representing the women workers. The last of these settlements had only been completed about the end of July and early in August came the request from the T. A. for a 10s. general advance, 4s. extra to linotype and monotype operators, and a list of 30 towns to be regraded. The employers felt that this application was a little premature and not at all opportune.

The Conciliation Committee.

After referring to the creation of Alliance areas through the country by the Federation of Master Printers and the formation of the Joint Industrial Council, consisting of 32 members from each side, Mr. Goodwin said that one of the first things the Industrial Council did was to suggest a Conciliation Committee consisting of the whole of the Council, and in the event of any trade dispute both of the parties were to select four members from their side of the Council, and these eight, with the addition of the Chairman and the officials would endeavour to conciliate the parties and suggest a way out of the troubles. This Conciliation Committee would not give a definite finding as in the case of an arbitration, but would simply act as conciliators and suggest certain methods of settling a dispute. The Conciliation Committee had been able to recommend a way out of a difficulty which had arisen in the lithographic trade in the Potteries, and another local dispute with the T. A. had also been submitted to this Committee, but the recommendations had not yet found acceptance.

Negotiations Resumed.

The T. A. Executive were not allowing the National demand for a 10s, increase to go to the Conciliation Committee, and Mr. Goodwin pointed out that their view was that the Conciliation Committee was only intended to deal with local disputes and they were not prepared to give up their own autonomy in this particular matter. The Joint Industrial Council had spent a considerable amount of time on the subject that day trying to find a way out of the difficulty, and the suggestion was put forward that the conference with the T. A should be resumed conditionally upon the T. A. expressing their readiness to consider the future settlement of wages on a sliding scale.

Mr. Goodwin went on to explain this sliding scale method which had been accepted for the textile trade and calico printers. The idea was that an agreement would last for 12 months, and unless the variation in the percentage of increase was 10 per cent. or over, there would be no change in wages at all, and it would only be reviewed at periods of say three months, so that they would know how they were going on for three months at all events, without any disturbance, while if the cost of living increased everyone would know

at the end of that period that there would have to be a further increase in the wages paid, and if a fall took place wages would be reduced.

Dealing with the position in London, Mr. Goodwin mentioned the memorial for the 15s. a week advance for all the male members of the unions. He also referred to the fact that the unions had so far declined to accept the National Wage Basis of settlement for London.

The T. A. Ideals.

Mr. D. G. Little, Labour Secretary to the Federation of Master Printers, gave an interesting impression as an old trade union official himself, of the ideals of the Executive Council of the T. A. He mentioned that the National Scheme had met with a certain amount of hostility from the group areas on account of the success of the group organisa-The Executive were not in love with the position which allowed towns to be always near breaking point, and it was hoped that the National Wage Basis would bring about freedom from such a condition. National Agreement established a method of procedure that provided a guarantee that if they could not come to agreement there was protective machinery to be brought into

Mr. Little explained the reason for the demand of the T. A. within four months of the ratification of the National Agreement, the trouble arising through the dissatisfaction of newspaper employees with the wages and the hours and holidays settlement. With regard to the position of London, he thought it should take its proper place in all National Agreements.

London's Difficulty.

The President, in initiating a discussion, said that the difficulties of London were not generally known. In and around Manchester the conditions were fairly uniform, but in London some of the unions claimed jurisdiction for an area extending 20 miles round, and it was obvious that the conditions in the centre varied a great deal from those further out. They in the centre of London were not averse to pay wages on the highest scale in the country, but five to twenty miles outside London the conditions were such that a man getting the same wages as he would in central London would be really 10s. to 15s. a week better off. The workers in the outlying districts were willing to accept a lower scale of wages, and therefore, many did not join the unions.

Mr. Little said the tault seemed to be in the extent of the area covered by the London unions, and he thought it might be a subject for negotiations with the unions.

Mr. A. E. Goodwin explained that the L.S.C. did not claim more than 15 miles, but some of the newer unions, like the N.S.O. P. and A., claimed 20 miles. He added that he did not think anyone could justify a 155. demand in London on the ground of the increase in the cost of living since the last settlement.

Mr. B. Cahusac and others took part in the

discussion, and the suggestion was made that London itself might be graded after the manner of the national scheme.

Question of Hours.

Mr. Goodwin mentioned the demand from the binders for the reduction of hours from 48 to 44. Mr. Blades, the President of the Federation, had given the binders to understand, however, that the master printers were absolutely firm in resisting the demand for any further reduction of hours, both on national grounds and from the point of view of the industry. It was necessary to increase production, and there was no occasion for this demand. Mr. Goodwin added that the printing industry was among the first to concede the demand for holidays, and a reduction of hours to 48. Everyone realised they were near the danger point, and it was very doubtful how far the demand for printing would continue at the present prices that printers must charge. They could only hope that the whole industry, workpeople and employers, would realise the position before it got any worse.

The Llaison Officer.

Mr. Roger Gibb (Ministry of Labour), at the invitation of the President, explained that he had been appointed liaison officer for the printing, paper and kindred trades. The Ministry of Labour having recently been reorganised, had arranged all the industries of the country into certain groups, and had attached a liaison officer from the Ministry to each group. Mr. Gibb said he wished to make himself acquainted with the point of view of printers, papermakers and others that were included in his section. He first laid stress on the fact that although he wanted to know all about processes, he also wanted to know about their psychology. (A voice: "We have not got any," and laughter.) Mr. Gibb added that he hoped to attend the meetings of the master printers and of the trade unionists.

A Paper Protest.

Mr. Harris (the Romney Press) complained of action on the part of a paper mill in reference to quotations for paper which his firm had received. They sent an order for the paper within a week of the quotations; the price of paper had not gone up, and the order was sent to the mill. The mill, however, dallied with the matter for a week and then informed the customer that they would take one-third of the order at the price quoted, plus 5 per cent., and that the other two-thirds of the order they would take on at the price ruling when the goods were delivered. Mr. Harris said that the Government had helped paper manufacturers during the war and such action as he had indicated did not help industry and was not tair play. The mill had the raw material in the place. If there was much of that sort of thing going on, he thought master printers ought to take the matter up.

During a subsequent discussion, Mr. Keliher referred to the absurd heights to which the wages of casual workers were being forced.

The earnings of some casual labourers upon certain London newspapers was something like £2 for a night's work.

National Wage Basis Approved.

On the motion of Mr. McAra, chairman of the Executive Committee of the Central District Association, a resolution was carried agreeing to the principle of the inclusion of London in the scheme of a national wage basis, with a recommendation to the London Master Printers' Association Council to do all in its power to secure so desirable a proposition on a fair and reasonable basis considering the area involved.

E. Saunders and Son, Lid.

Trouble Over Wages.

About 100 workpeople (warehousemen and girls), have left work at Messrs. E. Saunders and Son, Ltd, wholesale stationers, Little Sutton-street, E.C.1. Whether it is a strike or a lock out depends apparently upon the point of view.

The warehousemen, we are informed, were earning more than the rates fixed by the Trade Board, and the firm declined to pay the excess.

The men were given until last Friday, when the Trade Board was to sit, and the firm undertook to pay whatever rates were fixed by the Board. The warehousemen, however, declined this offer, and demanded the payment forthwith. However, Messrs. Saunders gave the employees a few hours to make up their minds on the subject.

When the men again approached the subject, they stated they would await the decision of the Trade Board on Friday, but insisted that the non-union men should be dismissed. This demand was absolutely refused, and on that the warehousemen said they would not continue their work. They were then "invited" to leave the premises.

The hand-made girls came out in sympathy with the men

The Trade Board on Friday, we learn, upheld the rates paid by the firm.

Unrest Among Linotype (perators.

A meeting of the newly-formed Association of Newspaper Chapels will be held in Leeds on Saturday, when it is understood the principal business will be the consideration of the position of newspaper linotype operators, among whom great dissatisfaction exists with regard to the terms of the National Agreement on hours and wages entered into some months ago. Propositions have been forwarded to the master printers and the newspaper proprietors, with a view to remedying the grievances of the operators.

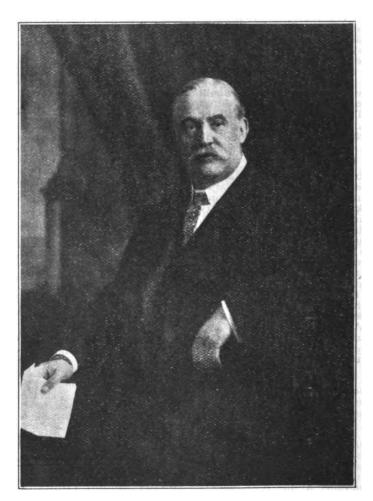

Pioneer of the Linotype.

Death of Sir Joseph Lawrence.

There will be many who regret the passing of Sir Joseph Lawrence, who, in his 72nd year, died suddenly on Friday, in the course

Linotype and Machinery, Limited, and of International Linotype, Limited.

In the year 1889, when the attempt was made to introduce the linotype into this country from America, the art of typesetting had advanced little or nothing since the faroff days when the hands of Caxton and Gutenberg lifted types from cases. This American machine was destined to effect, so far as a very large section of printers' work was con-

Photo, Elliott and Fry, London.

The Late Sir Joseph Lawrence,

of a railway journey home to Kenley. A former Member of Parliament, an ex-Sherifl of the City of London, and at the time of his death an Alderman of the Surrey County Council, Sir Joseph was a man whose abilities made him prominent in many different spheres, but to printers his pre eminence consists in his services to the printing craft in his capacity of pioneer of the linotype composing machine in this country, and chairman of

cerned, a thorough revolution of the craft. To Sir Joseph Lawrence belongs the credit of being the first Britisher to realise this, and his name is assured of an honoured place in typographical history for the foresight, the ability and the courage—against heavy odds in those early days—with which he played a leading part in the linotype's battle for recognition

When an early machine working on the linotype principle was set up in London, and

Sir Joseph was making its merits known, many world-famous people were among the visitors. Sir Henry Irving, brought by Sir Edward Lawson, of the Daily Telegraph, came with some of his friends to see the novelty. A few days later came Mr. Gladstone, and about this visit there is a story worth repeating—a story told by Sir Joseph on the occasion of the presentation made to him at the luncheon in his honour last year, when he celebrated his 70th birthday. Sir Joseph had explained to the G.O.M. that the machine did five things. It assembled matrices, spaced and justified the line, then cast the line of type, and finally dis-tributed the matrices automatically. "Wontributed the matrices automatically derful," said Mr. Gladstone, as he watched the machine working, "It seems almost human. Asked to express an opinion as to the possibilities of the invention, Mr. Gladstone talked freely, giving a very optimistic forecast of the future of the linotype, which he spoke of as * A machine from which I cannot but anticipate effects equally extensive and beneficial to mankind." While he was speaking, a smart young linotype operator from Washington had been setting up his speech on a machine near by and pulled off a proof from a small hand worked Fowler Henkle press and handed it to Gladstone. "Well, I am staggered," said Gladstone, when he found his speech in print so soon, and without a This gave shorthand writer as intermediary. The Globe a headline for its next issue--" Mr. Perhaps this demon-Gladstone Staggered." stration had something to do with the fact that The Globe soon afterwards ordered linotype machines, thus gaining the distinction of being the first British newspaper to adopt the revolutionary innovation.

Labour circles were at first suspicious of the machine which was to do the work of so many men, but though the advent of machinery does sometimes cause temporary dislocation in the world of labour, its ultimate effect must always be to benefit mankind by the increased production that results. Thus Sir Joseph Lawrence was able to claim, when speaking last year at the birthday presentation already mentioned, that the introduction of the linotype has saved 60 per cent. of labour, and has increased the number of men employed in the printing industry, and has

raised their wages.

Thus printers the world over, both masters and men, have cause to take a prominent place among the many who mourn the passing of one of the princes of British industry, a man who leaves the world the better for his life-work.

The funeral took place on Tuesday at Coulsdon Churchyard, preceded by a service at Kenley Church.

SIR A. TREVOR DAWSON, R.N., president of the London Business Houses Amateur Sports Association, is to present the trophies and inedals won for the year 1919, at the Association's annual concert at Anderton's Hotel, on November 14th. Many printing house teams are members of the Association and entered with success into the competitions.

Personal.

LORD BURNHAM is to preside on Saturday afternoon next at a concert to be held at the Central Hall, Westminster, in aid of the Printers' War Memorial Fund of the Caxton Convalescent Home.

SIR FRANK NEWNES was injured in a motor car accident, on Sunday night, at Mitcham, when a tramcar jumped the rails and wrecked the motor car, which was driven by Mr. H. H. Haldin, K.C. Mr. Haldin was rendered unconscious and Sir Frank Newnes received injuries to his head.

MR. J. J. Keliher presided at the monthly lunch of the London Master Printers' Association last Wednesday, when Sir Robert Blair gave an informative address on the Education Act of 1918 and apprenticeship. We are reluctantly obliged to hold over the report.

SIR ROBERT BLAIR was accompanied by Mr. James C. Smail, head of the Technology Branch of the London County Council, and Mr. B. Ingram, organiser of the Continuation Schools.

MEMBERS of the Joint Industrial Council attended the lunch, including the Labour representatives for the first time in the history of the luncheons. Mr. Keliher hoped this was a good augury for the future.

The many friends in the trade of Mr. Henry Featherstone, of 13, Whitefriars-street, Fleet-street, E.C.4, will be glad to learn that he is now making satisfactory progress after his serious illness.

MR. FEATHERSTONE wishes to thank the numerous inquirers after his welfare and expects to be able to attend personally to business in a few days' time.

MR. GEORGE J. MADDICK, as chairman, had a satisfactory report to present to the share-holders of Messrs. A. M. Peebles and Son, Ltd., at their meeting last week.

MR. HOWARD PEEBLES was unable to attend owing to illness.

MR. WILLIAM T. TATTERSALL was re-elected a director of the company.

MR. MADDICK took the opportunity of thanking Mr. R. Gilroy (the mill director), Mr. B. E. Clarke (the secretary) and the employees generally for their efforts in placing the company in the satisfactory position which it occupies to-day.

MESSRS. CHAS. MORGAN AND Co., LTD, inform us that Mr. W. A. J. Foster is now Chairman of the company, and Mr. F. B. Adams has ceased his connection with the firm.

THURSDAY, OCTOBER 30, 1919.

Current Topics.

The Printing Outlook.

The trade is still facing industrial trouble, but at the time of writing the prospects of a smooth and quick settlement are less remote. The memorial before the masters asks for losper week for men and 7s. 6d. per week for girls, on top of the existing wage, while a reduction of hours to 44 per week is also mentioned. Needless to say, the masters on their part refuse to give consideration to the demands and offer as an alternative the sliding scale of wage based on the cost of living, with a fixed minimum guaranteeing for all time an improvement of at least to per cent. over the pre-war wage. Such an arrangement would follow in line

with the principles of wage settlement adopted for and by railway and textile workers. Whether the men can be induced to look favourably upon this scheme remains to be seen. The factor which will probably control any decision made is one of which we have never yet seen a concrete expression of opinion, namely, the relative figure at which trades union leaders would assess the oft-quoted improvement in wage and conditions of labour as establishing the new standard of living.

The Binding Section.

From all points of view the binding trade is about the most chaotic segment of the allied trades. Its workers belong to several different unions, each autocratic in its way, and each set of workers evincing some amount of antipathy against the other. In many parts of the country the female workers (folders, sewers and miscellaneous hands) belong to the Binders' Union, while in others some of them belong to the Paper Workers, whereas in Manchester, at least, there is a separate and individual union embodying every grade of female worker in the printing and binding trades. Cutters in one shop may belong to two different unions and each is jealous of the other infringing his own particular field of service. Friction is rife in almost every establishment, and it may be presumed that this is but a reflection of the spirit animating the respective headquarters of the representative unions.

Chaotic Conditions.

STILL further, the conditions up and down the country have no fixed basis, for whereas in one district girls may be employed in the cheaper grade of binding, in another such an attempt would foment an immediate strike. Even in one town, there may be a few establishments where the girls are permitted to perform certain classes of work which they would on no account be allowed to do in other houses. On the face of it, it is simply absurd and reveals a disturbing lack of principle and uniformity of method in the organisations representing the workers. In the face of such laxity it is not difficult to conceive that little constructive help can be expected from these unions toward the development of the industries which they represent. total absence of progressive knowledge and understanding of the principles underlying modern control and development of manufacture is clearly evinced in the attitude adopted toward time dockets. Until there is a closer sympathy with the necessities of conducting a modern manufacturing business on sound cost-finding principles, the executives of the trades unions concerned will always be in the position of retarding rather than developing the industry which is to a large extent in their care.

Leather Prices Rising.

THE upward trend of leather prices continues, and those users whose stocks were accumulated three months ago must account themselves fortunate. To-day basils are quoted at from 1s. 3d. to 1s. 5d. per square foot, a rise of 2d. per foot as compared with the period indicated. Skivers, which a short time back were available at 8d, to 10d, per square foot, are now quoted 10d. to 1s. 2d. Anglos have changed hands at 2s. 6d. per square foot, but we believe this price is exceptionally low. Calfs are almost unobtainable, except at a price which is beyond the reach of the average consumer. The various types of light fancy leathers are beginning to appear more freely, but the demand is so great that manufacturers are unable to lay stocks in hand. Consequently, every order has to run the risk The near future holds no prospect of delay. of any easing in the situation, either as regards price or availability, and users will be well advised to place orders in hand for their future requirements.

Other Prices.

THREADS and tapes are hardening in price, and there appears to be a temporary scarcity of material. Glue has advanced since we last wrote, to the extent of ios. per cwt., and the possibilities are all against any decline for some time. Other adhesives remain firm, as also does the price of bookcloth, gold leaf calicoes, mulls and other fabrics used in the trade. Strawboards are now quoted £15 to £15 10s. per ton, free delivered, as against £14 a month ago. For heavy weights add £3 10s. per ton. From now onward climatic conditions will serve to maintain a high price for imported boards and delivery may be impeded somewhat. No useful purpose will be served by withholding orders, and buyers should take advantage of a firm price in view of impending changes in the railway goods rates.

A German Offer.

We hear that a prominent boxmaker in London was recently offered a white-lined board at a price per ton considerably below the price asked for English, Scandinavian or Canadian boards of the same character. On

placing the order, the British firm learned that the board was coming from German sources. and they at once cancelled the transaction. The gentleman who declined the German goods remarked, probably with truth, that there may be others who would not be so particular as to their sources of supply. This is the only instance so far where a marked cut in price has been noted, the usual German quotations being either higher than or as high as those of home manufacturers. It is thought that the boards in question must be some old stock line, which it is desired to get rid of. From all accounts German papermakers are in no better position than manufacturers in this or other countries. In fact. Germany, instead of being an exporter of paper and board, is now an importer, and seeing that her own timber resources cannot be available for something like 12 months, she is not likely to be a serious competitor in the paper market of the world within that period Moreover, she has to pay very heavily for all her raw materials, and this must affect quotations if they are made on a fair basis.

Frinting Trade Problems.

The Wages Memorial.

As intimated in our last issue the Joint Industrial Council for the Printing Trade held its second meeting on Wednesday last, with Mr. Alfred F. Blades presiding.

An interesting discussion took place as to provision being made in the scheme for reference of any questions in dispute on Works Advisory Committees being referred to Joint District Committees.

It was agreed that as the Works Committees were intended to be of a purely advisory character this provision was unnecessary, but a resolution was adopted strongly urging the immediate establishment of these Works Advisory Committees wherever possible.

The report of the Conciliation Committee afforded gratifying evidence of the usefulness of the Joint Industrial Council and dealt with two disputes in which strikes had been prevented through the efforts of the Committee.

It was stated, however, that one of the most important trade unions in the printing trade was not prepared to agree that a dispute relating to a claim for a general advance in wages under a National Agreement was a case to be considered by this Committee. Thanks, however, to the discussion which took place and the friendly intervention of other members of the Council, it was eventually arranged that negotiations would be immediately resumed.

The consideration of important proposals relating to health conditions and unemployment in the printing industry was deferred to the next meeting of the Council.

Commercial Intelligence.

BANKRUPTCIES, etc.

Re BARNETT Rosoff, printer and stationer, 77. Brick-lane, Spitalfields, and 13. Hague-street, Bethnal Green, trading as "The Pro-cess Art and Commercial Printing Co."—This debtor attended before Mr. Registrar Mellor at the London Bankruptcy Court on October 21st, for public examination upon accounts showing liabilities £1,011 15s. 9d. against assets valued at £60. Questioned by Mr. J. B. Knight, official receiver, the debtor stated that he was originally a Jewish minister in Russia, and in July, 1915, he commenced business with £100 capital under the style of the Process Art and Commercial Printing Co. Witness attributed his failure and insolvency (I) to the signing of the armistice which brought his business practically to a stand-still and rendered unsaleable his stock of writing pads; and (3) to his liability under a judgment obtained by an employee in an action for damages sustained by the latter, as the result of an accident whilst in his (debtor's) employment.

THE latest periodical for the business man is "Business Organisation and Management," published by Messrs. Isaac Pitman and Sons.

Trade Notes.

A LARGE number of new periodicals are announced.

NEW YORK printers are held up by strikes, which explains the non-arrival of journals from that quarter. The publication of 152 periodicals in New York is temporarily suspended.

TENDER ACCEPTED—For supply of printing and stationery for twelve months ended September 30th, 1920, for the Nottingham Guardians; J. and J. Vice, and W. H. Knapp, Nottingham.

A TEMPORARY public library for Bethnal Green has been opened, but it is intended to raise £5,000, which, added to £20,000 received from the Carnegie Trust, will provide a permanent building.

THE Journalism Committee of the University of London announces that it cannot admit any more students for the journalism diploma courses for the present session after Friday, October 31st.

SIR ERNEST WATERLOW, R.A., son of Mr.A. C. Waterlow, lithographer, died on Saturday, at the age of 69. His father was a younger brother of the late Sir Sydney H. Waterlow, who was Lord Mayor of London, and head of the well-known firm of printers and stationers.

MESSRS. SMYTH-HORNE, LTD—This firm, so well known in the printing and bookbinding trade, have removed from Cursitor-street to more commodious premises at 1-3, Baldwin's Place, Gray's-Inn-road, E.C. (one minute from Holborn). In the new buildings the firm will have ample opportunities for adding to their staff and their stock.

PRINTING OF THE NEXT REGISTER.—The Ministry of Health states that copies of an Order in Council will shortly be forwarded to registration officers fixing the registration dates for the Spring Register, 1920, under the Representation of the People Act, 1918. The dates have been arranged to afford longer time for the revision and printing of the register.

In the Outer House of the Court of Session, Edinburgh, before Lord Anderson, a settlement was intimated in an action by John Fairbairn, Glasgow, against Messrs. Aird and Coghill, Ltd., printers, 24, Douglas-street, Glasgow, and against F. F. and Arthur Wilson, printers, 58, Cadogan-street, Glasgow, for £1,000 damages in respect of the death of the pursuer's son Neil, a bookbinder's assistant, who died as the result of injuries received in a hoist accident in September, 1918, at 24, Douglas-street. Fault was denied. The terms of settlement were not disclosed.

ALBERT E. REED AND Co., LTD.—After having been closed for a week through lack of coal, consequent on the railway strike, the Farncombe Paper Mills (Albert E. Reed and Co., Ltd.), have resumed work, and the whole of the staff are again employed. While the works were closed the directors generously

paid full wages to the papermakers, and half wages to the labourers.

THE Southern Star, Skibbereen, has been suppressed by the military.

MR. J. D. McARA (McAra Printing Co., Ltd.), 46, Pear Tree-street, E.C.1, will be glad to hear from members of the London Master Printers' Association who are interested in the proposed resuscitation of the L.M.P.A. Golf Club.

MR JOHN MORGAN, employed by Sir Horace Marshall's firm for over sixty years, has died, aged seventy-six. During his long term as manager he probably saw more newspapers despatched to newsagents throughout the kingdom than any other man.

A "TIMES" SOCIAL EVENING.—The first of a series of social entertainments for the autumn and winter season was held on Saturday at the St. Bride Foundation Institute, London, E.C., under the joint auspices of The Times Musical and Dramatic Society and Amateur Athletic Association. A large number of the members and friends of these bodies were present. The entertainment took the form of a soirce, and many of the songs, musical items, and dances were encored.

LIBEL ACTION.—In the King's Bench Division, on Tuesday, before the Lord Chief Justice and a special jury, an action was heard in which Sir John Henry Bethell sued Mr. William Mann and Mr. Edward Eve, of East Ham. and Messrs. F. White and Co., printers, of Bedford-row, for libel contained in a leaflet headed "What John Bull thinks of Sir John Bethell." The jury found that the statements in the leaflets were untrue, and that it was published maliciously. Judgment was entered for Sir John Bethell for £1,500, with costs.

DEATH OF MR. R. H. HUXLEY.—On October 14th Mr. R. H. Huxley passed peacefully away. In a few months' time he would have completed 50 years' service as office manager to Messrs. Slater and Palmer, printing ink manufacturers, 4, Wine Office-court, Fleet-street, E.C. He was held in great respect by a large circle of friends in the printing trade, and his decease severs a link with a generation that included in its coterie the renowned Charles Dickens. He was a man much esteemed in the Baptist community, and well known in the circles of the Sunday School Union. He will be greatly missed by a large number of friends and acquaintances.

TENDERS WANTED.—For the printing of forms and blanks, open to London printers; particulars from the superintendent of printing, H.M. Stationery Office, Princes-street, Westminster, S.W.I. For printing the register of electors, voters' lists, etc., for the county of Derby; forms of tender from Mr. N. J. Hughes-Hallett, County Offices, Derby. For the printing of register, electors lists, etc., for the Lancashire Parliamentary County Divisions; tender forms from Mr. H. E. Clare, County Offices, Preston. For printing the lists and register of electors for the Divisions of the County of Stafford; particulars from Mr. E. Joy, County-buildings, Stafford.

Bookbinding Notes and News.

At a recent conference of American bookbinders, held at Cleveland, Ohio, a considerable number of members of the International Brotherhood of Bookbinders of North America were present, and trade matters came up for discussion. The meeting expressed itself as in favour of a general 44-hour week, but deprecated strike action. The use of the union label was insisted upon for the elimination of unfair competition, especially in connection with the manufacture of flexible leather cases. One delegate urged that no woman worker be permitted to work with a glue brush unless she received the same wage scale as paid to the male worker, and this matter was referred to the committee on organisation, who again referred it to the International Executive Council.

In the search for economic production in these days of high prices, some publishers are cutting down their bookbinders' accounts by curtailing the lettering or ornamentation of There are fewer gold lines seen the covers. on the new bindings, and this effects a saving in the quantity of gold leaf used, while to still further economise, a single ink is used for blocking; it may be black or coloured, but costs less money than gold or imitation leaf or than two blockings in colour. This in, say, 5,000 covers of an edition, amounts to a considerable saving to the publisher, whatever the bookbinder may think of it. Die stamped covers, too, are not so many in number, the platen press to a great extent taking the place of the die press.

A recent suggestion in these columns that thin iron plates might take the place of strawboards for book covers has led a correspondent to write that, in his opinion, the sheet metal would be far and away better than the present boards, but he points out the difficulty of getting cloth or paper to adhere to the Glue or paste is practically useless for the work, and even special preparations that adhere to metal are unreliable, while the fastening of the back to the metal sides would present some difficulty. The latter might be overcome by having backs and sides hinged together, but that would take the job out of the binder's hands, and put it in that of the metal worker. The difficulty of finding a suitable adhesive might yet be overcome, and metal covers would present a wide scope for embossed ornament.

The metal cover idea is scarcely original, as in the early days of books, when they were laboriously written by hand, metal, wood, stone, and even earthenware, were used as covering materials. Catullus has described the general style of binding in his time, and has shown us that in Greece and Rome there was a great degree of splendour about the

covers of the books then in use. In England, in the early days of the art, the usual materials used were wood and deer skin, and a couplet from Pope's "Dunciad" plays on this:—

There Caxton sleeps, and Wynkin at his side; One clasped in wood, and one in strong cowhide.

As to the origin and period of the introduction of cloth binding, there has been much discussion, but it is generally admitted that Mr. R. E. Lawson, of Stanhope-street, Blackfriars, London, was the first binder to use This was cloth for the coverings of books. about 1823, and the first volume bound in the new material was a manuscript book of music, which was the property of Mr. Alfred Herbert, a marine artist of some celebrity Five hundred copies of the "Diamond Classics" were afterwards bound in cloth by Mr. Lawson, the cloth being bought in a shop in Wilderness-row, Clerkenwell. Cloth was also used by Mr. Lawson in binding an edition of Shakespeare's plays.

Since then many fabrics have been utilised for book covers, and we may note that a patent has been granted in this country, quite recently, to an Austrian gentleman, Mr. B. Hansel, of Vienna. Under his invention, fabrics for bookbinding, especially calico, are

We thank our many patrons for the cordial support extended to us for many years past and we trust for a continuance in the future.

Our New Premises allow room to add to our staff and stock, and will enable us to give even better attention to the trade requirements than in the past.

SMYTH-HORNE, LIMITED.

waterproofed by first impregnating with hydrolised starch paste, to which suitable fats and soaps are added, and then covering with a dilute oil varnish. The starch paste is made by boiling with the necessary quantity of water 100 kg potash starch, 15 kg. kaolin, 6 kg. cocoa fat, and 4 kg. soap, pigments, mineral earth, or other colours being added to obtain coloured fabrics.

The starch used by the inventor is ordinary potato starch opened up by soda-lye, sulphuric acid being then added to neutralise the alkali. The fabric is coated one or more times with this paste in a sizing machine until the pores are closed; it is then varnished and dried, and may be provided with a grain or other pattern on an embossing machine in the usual way. A varnish for black fabrics is made from 100 kg. boiled linseed oil varnish, 5 kg. Parisian blue, and 3 kg. soot, the mixture being diluted with turpentine or benzine to the desired covering capacity.

The financial advantage of having installed a cost system and based all prices for work on it, is exemplified by an American firm of bookbinders, the Buckhardt Co., of Detriot, the general manager of which is Mr. John C. Buckhardt. The company has just built a new factory at the cost of several hundred thousand dollars, and the success of the firm is attributed to always maintaining prices based on actual cost, and no undercutting.

Liverpool Binderies Amalgamate.

We are advised from Liverpool of the recent amalgamation of two of the oldest and leading trade binderies in the city, Messrs. A. A. and J. Wood, Ltd., and Messrs. Sloane and Co., Ltd., which will in future be conducted under the style of Messrs. Wood and Sloane, Ltd., at 87, Paradise-street. Both houses are well known throughout the country for the reputations they have built on good quality work. By joining forces, an establishment of a unique character has been assured to the

provinces and to the City of Liverpool in particular. The departments of the business are planned on modern lines, and fitted with the best types of machinery and up-to date equipment for producing every class of binding, loose-leaf and card index system goods. A special department takes charge of pamphlet work, which is treated on the most approved lines of maximum output at minimum cost, the latter achieved by method and machinery. As may be expected from the joint resources of the houses now amalgamated, the finishing department lays claim to an equipment and collection of tools which will fit any emergency from a quarter bound book to a presentation album. As a matter of fact, many such albums produced by the firm are in the hands of the Royal Family. The heads of both firms are continuing in office, a fact which assures to customers the same individual and personal attention to their orders and requirements that characterised business with the old firms, and which augurs well for the future of the new amalgamated business.

Papermakers' Difficulties and Paper Prices.

Mr. Geo. J. Maddick (chairman) presided on Thursday, last week, at the 23rd annual general meeting of A. M. Peebles and Son,

Ltd., at the Cannon-street Hotel.

In moving the adoption of the directors' report, which was summarised in our last issue, and the declaration of a dividend of 5 per cent., together with a bonus of 4 per cent., less income-tax, the chairman spoke with pleasure of the satisfactory position of the company. He was sure that the most captious shareholder must be satisfied with the result, more especially as during the past year, they, in common with all papermakers, had passed through a very trying and anxious time. Mr. Maddick went on to refer to the paying off of the loan, the redemption of the mortgage on the Wilkinson property. and the acquisition of the original lease of the Queen Vic-After observing that toria-street premises. the mills had been kept up-to-date, the chairman, glancing to the future, said: There is not a shadow of a doubt that we are face to face with very great uncertainties. We have yet to learn how the great labour problem is going to work out. Coal, which is such an important factor in papermaking, has jumped and jumped and jumped; in fact, everything connected with the maintenance of a paper mill has gone up beyond the wildest dreams, and all repairs, which are unfortunately very necessary, have advanced two and three times in cost.

Mr. John Woodhouse, J.P., seconded the resolution, which was carried unanimously.

Mr. Robert Gilroy spoke of the difficulties of manufacture during the past year. They had found considerable difficulty during the year in obtaining their supplies of raw material, and although in some directions the prices had receded somewhat as compared with 1917 and 1918, they nevertheless found to-day that all the prices were considerably in advance of pre-war times. It had been said by the users of paper that the current prices were too high, but he thought the correct answer to that was that the price of paper must be governed by the cost of production. In the case of esparto, he found that the current prices were five times more than they were in 1914, while in wood pulp generally the same conditions existed, and coal had risen another 6s. per ton. He could assure them that they would do everything possible to counteract the increased cost of produc-They had given considerable time and attention in the past to the question of steam production, and to day he thought they were able to obtain results even better than those of the last 10 or 12 years. It would require a bold man to forecast the future with any degree of certainty, but it seemed to him that if the present prices of raw material continued that, instead of the price of paper showing any reduction, it must inevitably show an upward tendency. During the year they had carried out many improvements in their mill. and their order book at the present time was exceptionally full.

An Unfair Advantage.

Printers and paper users in most of our larger towns join issue in a complaint against the unfair advantage gained by certain houses which combine paper selling with trade printing and account book manufac-ture. In nearly every town there may be one or two such houses, and by acting as wholesalers they are able to buy from the big paper houses at, say, 10 per cent. lower price than the ordinary printer or stationer. In the course of business, the paper and print-house enters into daily competition with the other printers in the town and starts off with a preliminary advantage of 10 per cent. on the paper. This is unfair, and printers are beginning to think that the big paper houses are to blame for serving out what appears to them to be unequal treatment. Of course, we are quite prepared to hear the argument that these trade houses conduct their paper business on its own basis, separate altogether from the printing, and that when they sell paper to their printing side they charge the full retail price. Naturally, but common and practical business experience leads us to the inevitable conclusion that in the face of competition some paring will be done, and as paper presents the best opportunity it will be the 10 per cent, margin that will be pared. We heard one paper man condemn the policy of this unfair advantage most wholeheartedly a few days ago, but our admiration for his principles was dimmed by the fact that for his own people he was selling paper daily to the trade houses under exactly the same conditions.

Educating the Young Printer.

Sir Robert Blair Addresses the Members of the London Master Printers' Association.

There was an unusually large gathering at the monthly lunch of the London Master Printers' Association, on Wednesday last week, when Sir Robert Blair, Education Officer to the London County Council, came to address the members on the Education Act in relation to continuation schools and apprenticeship. As it happened the Joint Industrial Council was meeting the same day and the members, including the labour representatives, were invited to attend the lunch.

Mr. J. J. Keliher, president of the Association, extended a welcome to the visitors and said they had with them for the first time in the history of their monthly luncheons the representatives of the labour side of the trade. They hoped their presence was a good omen for the future carrying on of the industry and he trusted they would have many opportunities of meeting them at the festive board. After a tribute to the value of Sir Robert Blair's services, Mr. Keliher mentioned that as long ago as 1914 Sir Robert had stated that the printing trade, one of the leading trades in London, was entitled to and ought to possess a technical institute. He, the chairman, was glad to say that they had recently formed a very strong committee with such an object in view. The need for a technical institute in the printing trade at the present time was even greater than in 1914, because they had to make up in some way for the lack of apprentices and opportunities for training during the past five years. One way in which Sir Robert could help them in London was to get the right type of boy into the printing trade although the printing trade in itself was educational. If they got a boy with some aptitude for learning mechanics or art, they could develop him and make him a very useful citizen.

Continuation Schools.

Sir Robert Blair, who was cordially received, devoted his attention to the Education Act of 1918 and particularly to the question of continuation schools, directing his observations to the problem of London. showed that Section 10 of the Act laid it down that the local education authority should provide compulsory day continuation schools; there was an obligation on young persons between 14 and 18 years of age to attend for eight hours during the week; and it was in-cumbent upon the employer to give the necessary eight hours off for the boy or girl to receive instruction. In addition to the eight hours the master might be asked to allow up to two hours for going to and leaving the school. Probably the most suitable arrangement would be to give the eight hours in the form of two half days per week which might be a morning and an afternoon. This would enable the young person to go straight to the school from home if it was a morning session and in the case of the afternoon he could return home.

After referring to the extent of the problem which had to be faced in dealing ultimately with 240,000 persons. Sir Robert felt sure that the masters and the local education authority would each do their best to meet the convenience of the other so that the buildings might be kept going all day long and that business might not be dislocated by master printers having to send out all their young people at the same time. The continuation school would have to be provided for in

certain areas and he wished master printers to tell him whether there was any particular area in London in which schools ought to be placed. Also whether there was any particular day or days in the week that were less convenient to them than others; for instance, whether they wanted the school to work on Saturday morning and for the other five weekdays.

A Central Printing School.

With regard to a central school for printing, he hoped the trade would be able to make such a proposal to the London County Council as would enable them to get that institution established. If they had that central school, the continuation schools would be able to provide a very large proportion of the young persons in the central school. But there might be other schools necessary. He would like to be informed if it was better that the school should be provided near the works or near the homes of the students.

Sir Robert went on to show that with regard to the curriculum the education would probably take on a vocational bias. He did not mean they were going to teach trades. For instance, he could imagine a class of boys or girls or both being given a very interesting story of the history of printing. He could imagine the history of printing being handled in such a way that every boy and girl would feel that they were part of a great craft with a splendid history behind it. Sir Robert concluded with a reference to the penalties, to which masters and the boys alike were liable under the Act.

Mr. A. F. Blades, who was obliged to leave with the other members of the Joint Industrial Council in order to continue the proceedings of that body, expressed the thanks of the Council for the very interesting address which Sir Robert Blair had given to them.

Mr. Eaton Hart mentioned that the Bride Printing School was providing in the centre of London just the education they wanted for the printing trade and it was a reproach to the trade that that Institution had not been properly supported. He also spoke of the advantages derived at the Wild-street Continuation School. The teachers at Wild-street had such a knowledge of the necessities of the trade that when the boys attended the technical school they were able to sketch out a job. As to whether the school should be in London or the suburbs he thought that the main school and a sufficient number of schools should be in the centre of London so that the boys should be near their work. It would also be necessary to have institutes in the suburbs for the benefit of the printing offices in these areas. Mr. Hart recalled a scheme which the master printers had pigeon holed whereby a boy going into the printing trade should be educated for the first two years at such a school as they had been talking about, but it had never seen the light of day. Perhaps they would now see if they could not dovetail that scheme into the Fisher proposals.

Mr. J. R. Riddell, Principal of the St. Bride Printing School, agreed with Mr. Hart as to the value of the continuation school training. There was no doubt of men in the printing trade being able to give the instruction applicable to the young printer. The school should be in the centre of London; at least where the work was done. St. Bride's had had no difficulty in getting employers to send their boys for four hours a week and some would like to make it eight hours, but there was not the necessary accommodation at St. Bride's.

Mr. H. B. Cahusac urged that what printers were anxious about was boys receiving instruction which it was difficult to get in a workshop. An apprentice was put on a machine or given odd jobs to do, but he had no opportunity of learning display work as he would in a school. He would like the assurance that such a technical education

would be provided for.

Sir Robert Blair had no doubt that with the co-operation they would get from the master printers and from the schools to which reference had been made, they would be able to work out a form of technical education, particularly in the later years—16-18—which would be of the very best service to the trade, but they had to move a little cautiously in that respect because certain people were looking rather carefully at that matter just now, and trade unions were afraid that they were going to give trade education. It was no part of their business to replace the worker—what they wanted to do was to supplement the workshop.

Mr. Colebrook raised the question of the 200 boys who were recently being educated at the Borough Polytechnic, and Sir Robert Blair said it was obligatory on all of them to find places for all these boys and girls at the

earliest possible moment.

Mr. A. Williamson argued that the training should be under workshop conditions, and that imagination should be stimulated.

Mr. Vincent Pitman suggested that the districts outside that did not come within the area of the London County Council, but in which a good number of the young people working in London resided, should be asked to contribute to the cost of a great central printing school.

Mr. Phelp suggested Saturday morning as convenient for the morning session, and agreed with Mr. Williamson that it was necessary to develop imagination in the young

printer.

Mr. R. A. Austen-Leigh, in proposing a vote of thanks to Sir Robert Blair remarked upon the educational value of the minimum price list which had just been issued. (Laughter.)

Mr. R. J. Lake, with an experience of 50 or 60 years of the apprenticeship system, held that the place for education was the workshop, although that might be supplemented by technical education later on, when long hours were not a deterrent.

Sir Robert Blair briefly acknowledged the vote of thanks.

ODHAMS, LTD., are the publishers of the new sixpenny satirical weekly, Pan.

Readers' Pensions Dinner.

Successful Post-War Revival,

"Literature" and "Journalism."

The marked success of the twenty-fifth annual dinner in aid of the funds of the Readers' Pensions Committee shows that the committee had rightly judged that the time was opportune for the resumption of this popular annual function, of which the war had caused a temporary suspension. After a wartime interval of $5\frac{1}{2}$ years—the last of these events having been held in April, 1914—the first post-war Readers' Pensions dinner took place on Saturday evening last, at the Cannon-street Hotel. And not only did the company, as is usual, include many persons of great eminence in the realms of print, literature and journalism, but the number of those present was greater than in previous years, and included ladies—an innovation welcomed on every side.

The chair was taken by Sir George A. Riddell, Bt., and among those present were—Lady Riddell, the Right Hon. Sir Auckland Geddes, M.P.; the Right Hon. Lord Russell of Liverpool, Mrs. Belloc-Lowndes, Sir F. and Lady Newnes, Mr. and Mrs. F. J. Hillier, Sir Edmund Robbins, K.B.E.; Mr. and Mrs. H. E. Peacock, Mr. E. Phillips Oppenheim, Mrs. Carruthers, Mr. J. Feldwick (Chairman of Committee), Mr. and Miss Feldwick, Rev. Prof. Hermann Gollancz, Lit.D.; Colonel Sir A. R. Holbrook, K.B.E.; Mr. Joseph Mortimer, Mr. H. W. Nevinson, Mr. Charles Garvice, Mr. T. E. Naylor, Mr. C. Atherton (Hon. Sec. of Committee) and Mrs. Atherton, Mr. W. A. Perkins (Treas. of Committee) and Mrs. Perkins, Mr. H. M. Gurr (Hon. Sec. of Committee).

Literature and the Press.

SIR AUCKLAND GEDDES, who proposed the toast of "Literature and the Press," said that the combination of "Literature" and "The Press" in a single toast was a sign of the times. These two half-sisters had had very different origins; a generation ago they were not on speaking terms, but now were approaching each other almost to the point of union. Literature arose out of the need for the expression of emotion, out of the desire of humanity to know about the best and highest things. Journalism arose out of curiosity tempered by fear-at the time when our forefathers waited for the coming of the Armada, and when "news letters" were written to convey the latest information about the terrible Santa Maria and San José. The little muddy stream of the Press eventually joined the far older and purer river of literature, though the two could still be distinguished. He was not sure that the junction of the two streams was making for the good of all. He thought it would be well if the Press got back to what the "news letter'

never was, but was supposed to be—an accurate statement of what was going on—and literature returned to what it once was in the days of its greatest development—an adequate expression of the emotions of humanity.

Shortcomings of the Press.

He hoped the Press would some day tell us what was really going on, instead of, as one sees too often now, the Press indicating what it thinks ought to happen, or ought to have happened, and drawing from that a lesson for its readers. He knew of no organ of the Press to which one could turn at the present moment to get an unprejudiced statement of what is happening in the various parts of the world. It was really extraordinary how quite simple things, well within the knowledge of men in this country, were mis-stated, incompletely stated, or over-stated. We found in the Press efforts to take the place of literature, and in what was meant to be literature we found matter which could best be dealt with by the Press. The interests of the two halfsisters were almost one, but the distinction between them should be held clearly in mind.

The Guardian of Literature,

Lord Russell, in responding, pointed out that you cannot have facts without emotion, and said he thought it natural and justifiable that the Press should employ its literary resources in giving expression to the feelings which events cannot but produce. His experience was that, as a rule, the best journalist was the most literary journalist. He believed that most journalists in this country could look back on their careers with very good consciences, and that they had generally striven to tell the truth. Passing on to speak of printers' readers, Lord Russell said he thought that if there were a class of persons in the average population of this working country who were specially noticeable for marked character, it was the readers on our newspapers. The reader's constant practice of observation, and not only of noticing things, but also of arraigning things, of launching corrections and suggestions, makes many a reader a positive guardian of literature. (Applause.)

The Rev. Professor HERMANN GOLLANCZ also responded, emphasising the high functions of literature in the uplifting of mankind and in the linking together of different races and different ages. He paid a tribute to the Bible, "that book which is not only historical and moral, but a book of literature par excellence."

The First War Bulletin,

The Chairman, in a racy speech proposing "Readers' Pensions," said that with some diffidence—"because Auckland is a very distinguished professor in civil life"—he ventured to question the historical account which he gave of the origin of the Press. As a matter of fact, the first newspaper was printed every day on the walls of Rome by a politician, a politician who was engaged in a great military campaign, and who thought it necessary that the electors at home should know what he was doing from day to day—

Digitized by GOOGLE

Julius Cæsar. We have examples of his journalistic communications: On the Monday, say, "I came"; Tuesday, "I saw (To be continued in our next)"; Wednesday, "I conquered." (Laughter and applause.)

Accuracy of the Press.

Sir George said he differed from Sir Auckland, and thought the Press, with all its faults, was one of the most accurate things in the world. People did not sufficiently appreciate the extraordinary typographical accuracy of This accuracy was due in large measure to the reader, who occupies an unfortunate position between the devil and the deep sea—the author and the sub-editor—one of whom complains that the reader does not do enough, and the other that he does too much. As a test of typographical accuracy, he (Sir George) had recently read through three of the largest daily papers, from cover to cover—estimated as containing 823,000 words-and he was able to discover only 23 typographical errors.

Readers' Pensions.

The Chairman went on to speak of the readers' pensions, and said that the Council of the Printers' Pensions Committee had been discussing the question of the increased cost of living and had decided to increase the whole of the pensions, on an average, 50 per That would involve an additional expenditure of at least £5,000 per annum, and in addition to this the committee was paying, he believed, no less than £5,000 a year for the benefit of the children of printers killed in the war. He took the opportunity to thank Mr. Frank Lloyd for his magnificent subscription to the funds, and hoped an early oc-casion would be found for recording the admiration and respect in which Mr. Lloyd is held in the printing trade. In conclusion, he appealed for present and continued support from all for the worthy object of readers' pensions.

MR. J. FELDWICK (Chairman of the Executive) responded. Speaking of typographical accuracy, he mentioned the satisfactory printing of advertising pages as surprising, few complaints being received from the advertisers—"each a private detective on his own account." (Laughter.) He pointed out the need for increased funds for pensions, and briefly summarised the excellent work done in recent years. The Pensions Committee during the past thirty years has enabled many readers and readers widows to obtain pensions, and has placed in the charge of the Printers' Pension Corporation eight pensions, at a cost of nearly four thousand pounds. The object of the Dinner was to increase the number of pensions, thus assisting the Com-

mittee to continue and extend their work.

MR. JOHN RANDALL proposed "The Visitors," welcoming the ladies present, and referring to the literary eminence to which some of them had attained.

MRS. CARRUTHERS responded briefly in a very telling speech. Referring to Sir Auckland Geddes' criticism of the Press, she said they would eagerly look forward to the day

when he might_float upon the shimmering sea of ink in Fleet street his ideal paper which should contain all those absolute accuracies and plain statements of fact for which politicians are so famous. (Laughter and applause.)

SIR A. R. HOLBROOK, K.B.E., also responded

in a short and humorous speech.

Mr. F. J. HILLIER proposed the toast of "The Chairman," coupling with it the name of Lady Riddell. This was received with musical honours.

THE CHAIRMAN, in responding, mentioned that there is a movement afoot for establishing another charity—to deal with tuberculosis among printers. He assured Mr. Naylor, Mr. Isaacs, and those associated with them, that the project would receive the heartiest support of newspaper proprietors.

A hearty reception was given in the course of the evening to an excellent programme of musical and other items rendered by Misses Doris Smerdon and Daisy Pullen, and Messrs. Lawrence Folker and Edward Beaumont, the accompanist being Mr. Emile Phillipe.

The dinner realised—in addition to Mr. Frank Lloyd's donation of £1,000—the sum of £425.

St. Bride Printing Lectures.

The monthly trade lectures held at St. Bride have always been a feature of the School's activities and those arranged for the present session will certainly maintain the high standard hitherto set up. The lectures take place on the first Friday in each month unless otherwise stated. The first one is to be held at the Institute to-morrow (Friday) evening at 7 p.m., when Mr. T. W. McAra, J.P., Chairman of the St. Bride Foundation Printing School Committee and Secretary of the Newspaper Proprietors' Association, will give an address on "The Origin of English Newspapers and their Development." Those who are acquainted with Mr. McAra's interesting style of oratory know that those present will spend a pleasant and profitable evening. The Chair will be taken by Mr. George Eaton Hart, managing director of St. Clements Press.

Following are the dates and titles of the succeeding lectures: - December 5th, "The Care of Printers' Eyesight"; January 9th. "Scientific Management"; February 6th, "Electricity in the Printing Office"; March 5th, "Legal Points for Printers."

STEAD'S Publishing House has issued an interesting little descriptive catalogue of the firm's publications, consisting chiefly of children's books, including the world-famous series of "Books for the Bairns," the issue of which was begun by Mr. W. T. Stead in 1896. The catalogue is printed by Messrs. W. Mate and Sons (1919), Ltd., Bournemouth.

Trade Notes.

MR. JOHN GRANT, of 31, George IV. Bridge, Edinburgh, has issued his annual catalogue (to the book trade only) of new books at reduced prices.

THE Freeman's Journal has been purchased by Mr. Martin Fitzgerald, a wine and tea merchant, of Dublin, for £32,000. There were four tenders for the property.

MESSRS. E. HULTON AND Co. have subscribed £1,000 towards the new sanatoria to be erected in the Midlands by the National Society of Operative Printers and Assistants.

THE Accrington Observer and Times, long recognised as the motorists' newspaper for East Lancashire, carries over thirty columns of special advertisements in connection with the Olympia Motor Show.

THE Finnish Department of Trade and Industry is assembling manufacturers catalogues which will be kept in the Commercial Museum at Helsingfors. They should be sent to the Finnish Legation, 2, Moreton-gardens, London, S.W.

The Rochdale Observer has increased its size to the pre-war size with a monthly Literary Supplement. The week-end edition of the paper has reached 30,000. A new linotype (model four) is ordered, but cannot be delivered until March, owing to the rush of orders.

DISSOLUTION OF JOINT STOCK COMPANIES.—Notice is given in the London Gazette that names of the undermentioned companies have been struck off the Register, and that such companies are now dissolved:—

Anglo-Iberian News Agency, Ltd. Aviation Publications, Ltd. Thrift Printing and Publishing Co., Ltd. Visigraph Typewriters, Ltd.

In connection with the Printers' Pension election next March, Mr. Chas. H. Roud, Bank of England, and many other influential printers are asking for votes on behalf of Mrs. Sarah McAlister, aged 61. The applicant is the widow of the late George McAlister, who was apprenticed in London, and worked for Messrs. Pardon and Sons, Speaight and Sons, Alexandra and Shepherd, Mathieson and Sons, the Boot and Shoe Journal, and the Bank of England for many years.

DENMARK AND FASHION JOURNALS.—According to revised tariff classifications made by the Danish Customs Department, duty-free import is permitted of tashion journals, consisting of a cover containing loose sheets, chiefly with whole-page pictures of ladies in various costumes, the pictures being numbered and the numbers referring to a separate loose sheet with brief explanatory text. Fashion journals, containing, besides the usual patterns, a picture having no reference to the text and no other connection with it, are subject to a duty of 30 ore per kilog.

Monday was the 16th birthday of the Daily Mirror, whose circulation has risen to over a million copies a day.

A SUCCESSFUL benefit concert was held at Tunbridge Wells on behalf of Mr. Marsh, one of the oldest members of the T. A.

MESSRS. SIMPKIN, MARSHALL AND Co., LTD., have issued a new edition, the fourth, of that very practical and useful booklet "Income Tax Simplified," price 1s. 6d.

CHILDREN employed in West Ham to deliver newspapers must, according to a new by-law, be provided by the newsagent with a "sufficient waterproof garment."

Maggs Bros., 34-35, Conduit-street, London, W., have issued another of their valuable catalogues of rare books. It deals with English literature of the 18th century and contains a large number of attractive entries.

The Austrian trade journal, Papier und Schreibwaren Zeitung, announces the jubilee of the post card. The origin of the post card is attributed to a suggestion made by a Vienna Professor, Dr. Emanuel Herrmann, in January, 1869, this suggestion leading to the publication of the first post card on October 1st, 1860.

The Labour Co-Partnership Association (6, Bloomsbury-square, *London, W.C.I) has issued as a threepenny pamphlet the very informative speeches on "Profit-Sharing and Labour Co-Partnership," delivered by Lord Robt. Cecil, M.P., and the Rt. Hon. J. R. Clynes, M.P., at the annual meeting of the Association last May.

The October issue of Oyez Notes, the house journal of the Solicitors' Law Stationery Society, is a bright and breezy number, and in its new form, with wrapper handsomely printed in two colours, makes a decidedly good impression. Besides humorous contributions, and items chiefly of house interest, it contains a four page technical article introductory to the subject of lithography.

"STICKS AND STONES," the house journal of the Grafton Printing Works (Messrs. Hill, Siffkin and Co., Ltd.), has an interesting October number of which the contents, from both the literary and typographical points of view, are of a high order. The cover bears an effective black-and-white sketch showing the stick and the stone "getting a hustle on"—rolling up their shirt-sleeves preparatorily to tackling a formidable pile of orders by means of increased production.

Some New Periodicals.—Mr. John Murray is to be the publisher of the monthly journal, Discovery, which is to appear in January next. Its purpose is to present in popular form—at the popular price of 6d.—the most recent results of research in all the chief departments of knowledge. It has a strong backing by representatives of the Royal Society, the British Academy and other learned bodies. Conquest is a new monthly issued at 1s. by the Wireless Press. It deals with scientific subjects in popular style.

FORTY-FIRST YEAR.

Printed and Published EVERY THURSDAY by STONHILL & GILLIS,

at 58, Shoe Lane, London, E.C. 4.
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

THURSDAY, NOVEMBER 6, 1919.

Current Topics.

Output.

WHILE costs of production are rising, there is the greater need for concentrated effort on the task of increasing output. The remedy for this is not to be found in reckless restriction of hours. There may be cases where hours are unduly long, but we appear to be in danger of limiting these unduly. While a good deal may be said for workpeople being fresh and alert in a short period of employment, there is such a thing as overstrain, for unless there is "intensive culture," shorter hours are going to reduce production still further. That would be disastrous in the present state of things. A wise foresight requires

to be exerted in this matter from both sides of the trade, else the printing trade will have burdens thrust upon it which it cannot carry.

Printers' Battle in New York.

In some respects life seems to be lived in intenser fashion, things seem to happen on a bigger scale, in the country of Brother Jona-Certainly the unrest than than in our own. that is murmuring in printing circles in this country is drowned beneath the thunder of battle that reaches us from New York City Recent communications report that no less than 75 per cent. of New York's commercial presses have been brought to a standstill, and that some 200 periodicals have suspended publication. The immediate cause of the present conflict appears to have been a recent decision of publishers and employing-printers to employ none but members of local unions in good standing with their respective international bodies affiliated with the American Federation of Labour. This decision outlawed four local unions, which were accused of having broken their contracts and precipitated strikes in violation of agreements to arbitrate. Thus about 10,000 pressmen and other press-room workers found themselves locked out. And the fight grew thicker when about 400 compositors, members of Typograpical Union No. 6, struck work at a number of shops in which negotiations were still pending over their demands for a 44-hour week and an increase of \$14 a week in wages. Thus employer and employed—whose efforts in willing co-operation are the sine qua non of the success of the industry they represent—are indulging in a cat-and-dog encounter, in the course of which each suffers serious hurt, while between them the prize of industrial prosperity is trampled in the dust.

Reduced Paper Output.

REDUCED output of paper is creating something like a scarcity, at least in certain varieties. The position has been accentuated by the recent railway strike and the congestion of transport. But these influences do not account altogether for the restricted supplies, which are a natural consequence of the disturbed industrial conditions combined with the shortage of skilled labour at the mills. So far the adoption of the three-shift system has not been an unmixed blessing, inasmuch as there has not been the labour available to equip it properly. More skilled men were required under the new conditions and they are not yet forthcoming. As a result the rate of production has declined. When the paper-

makers agreed to the scheme under pressure, it was one of their contentions that a period of twelve months should be allowed in which to train men for the extra shift. It would now appear that this view was prompted by a true appreciation of the situation. If it is true that it takes five years to make a good machine-man then the term of 12 months was not an unreasonable one. Another effect of the new system is that in cases where it has been adopted the third shift is inferior to the other two, with a corresponding impress on the quality of the paper. Still another factor in depriving paper mills of labour is the lack of houses providing accommodation, a deficiency which is not likely to be made good yet awhile.

Little Relief from Abroad.

THE demand for paper, which was described in one quarter this week as "tremendous," has not been satisfied to any great extent as yet by foreign imports. Thus the clear-sighted men who prophesied that there was no danger of the British market being flooded with paper from across the seas are justified in the view they took. The world is still in the throes of the aftermath of war, and there are few indications that we are nearing the end of that distressful period. The United States are again held up by strikes. Scandinavia although her particular pulp and paper troubles have been tided over on terms, is still in a disturbed state. Germany, as a paper man remarked this week, "is suffering from the same complaint as we are, but in an aggravated form." An official inquiry into German industrial conditions indicates that wages have risen everywhere, varying from 60 to 400 per cent. on the pre-war scales. A further increase by 50 per cent. is attributed to the introduction of the eight-hour day Moreover, less interest in work is said to be displayed by German workmen, while the abolition of piece work rates has reduced output. So any relief from abroad for the paper stringency is not to be expected yet awhile. We are faced, in fact, with a world shortage of everything and there is not the means of transport at hand to circulate freely such commodities as are available.

The death has taken place at Newhaven, Connecticut, U.S.A., of Mrs. Ella Wheeler Wilcox, the American authoress, whose stories, essays, and poems have achieved a worldwide reputation. The deceased lady was in her sixty fifth year. Just before the war 44,891 copies of her works were sold in England alone.

Printers' Wages Demands.

A Settlement with the T. A.

A conference between the Federation of Master Printers and the representatives of the Typographical Association was held on Tuesday at the Federation offices in London to consider the demand of the unions for a 10s. advance in wages. After full discussion, a settlement was reached on the basis of a 6s. per week increase to take effect from the pay day in the week ending November 15th, with an additional 1s. 6d. on the first pay day in January. It is understood that no further demand will be made within six months of January 1st if conditions remain normal.

Before the memorial was discussed, the proposal as to a sliding scale was put forward by the employers, but this was rejected by the T. A. representatives.

An application from the binders for a 10s. advance and a reduction of hours to 44 is yet to be dealt with.

The London Demand.

We understand that the application of the London Printing Trades Federation for an advance of 15s. will be considered by the Council of the London Master Printers' Association at their meeting next week.

New British Board Mill.

Important Developments by the Thames
Paper Co. in Conjunction with
Lever Bros.

In view of the great demand for paper-boards, the news that a new board mill is to be erected in the North of England will be received with interest. We learn that the Thames Paper Co., Ltd., in conjunction with Messrs. Lever Bros., are establishing a large mill at Bromborough Port, near Liverpool. It will be equipped on a scale similar to the extensive plant at Purfleet, which has a capacity of 1,000 tons a week. The first two machines will be installed in the quickest possible time, and further additions will follow in due course.

An action for damages for libel, in the course of which the plaintiff admitted that he had been convicted of fraud, was disposed of in a verdict for the defendants, the Associated Newspapers, Ltd.

The death has occurred of Mrs. Alice Walker, who was in her 84th year, and who was the head of the firm of Messrs. A. and S. Walker, Ltd., the Manchester stationers.

COMPANY NOTICES, etc.

AUTOMATIC ADVERTISING Co., LTD.—Notice is given that a meeting of the company will be held at London, on December 8th, for the purpose of having the liquidator's accounts showing the manner in which the winding up has been conducted and the property of the

company disposed of, laid before such meeting, and of hearing any explanation that may be given by the liquidator.

BANKRUPTCIES, etc.

AT Leicester Bankruptcy Court W. J. Brawn, printer, Highcross-street, was to have Brawn, printer, Higheross-succe, appeared before Mr. Registrar C. Squire for his bankruptcy. The case had been adjourned from the last Court, and the official receiver, Mr. Evan Barlow, now said the debtor was ill. He had been told that if he could not attend he should send a doctor's certificate. He had not done so. The hearing was further adjourned, the registrar remarking that it must be clearly understood that in such cases the debtor must furnish a medical certificate. If this debtor failed to do so again, he would be dealt with in another wav.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we tind them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records. - Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership between Edgar Henry Harris, of Beaconsfield-road, Clifton, Bristol, wholesale stationer, and James Colmer Eyre, of Fairfax-street Works, Bristol, wholesale stationer, carrying on business as wholesale stationers, at Fairfax street, under the style of Stephens and Eyre. has been dissolved as from December 31st, 1918. Personal.

MR. F. W. TAYLOR, a line operator on the Visitor office staff at Morecambe, has been appointed a magistrate on the new Borough Bench.

MR. OWEN CONNELLAN, past President of the Leeds T.A., and a member of the Executive Council of the parent body, has been returned unopposed to the Leeds City Council.

MR. Tom Spencer, who has been elected to the Leeds City Council, has been for the past 28 years employed as a compositor by Messrs. Wildblood and Ward, printers, Leeds.

MR. F. H. BLAKE, the representative of the Canadian American Machinery Co. in France, has joined the British Chamber of Commerce in Paris.

THE LORD MAYOR of Newcastle-on-Tyne (Mr. A. M. Sutherland) has given £35 to the Press Fund and £15 to the War Distress Fund of the National Union of Journalists.

Among the new members of the Birmingham City Council are Mr. J. J. Atkins, father of the Birmingham Post composing companionship.

LORD NORTHCLIFFE makes a handsome apology to the Duke of Bedford for a criticism which appeared in the Daily Mail regarding the new cottages for the Duke's Woburn estate. The criticism was based on a jocular remark that no front doors for the cottages would "save a lot of gossip."

MR. E. J. PETCH, who for the past 15 years has been on the circulation staff of the Western Mail at Cardiff, has been appointed circulation manager of the Yorkshire Evening News at Leeds.

Among his many activities Lord Leverhulme is financially interested in Colour, a magazine devoted to modern art, and the Organiser, which devotes attention to factory production.

A TELEGRAM from the Prime Minister was among the many congratulatory communicatious received by Sir Alexander Jeans, the founder of the *Liverpool Echo*, on the recent occasion of that journal's fortieth birthday.

SIR WM. ROBERTSON NICHOLL has just accomplished the remarkable achievement of completing the 33rd year passed in the uninterrupted occupation of an editorial chair. Made editor at the launching of the British Weekly in 1886, Sir William has held the helm ever since, and with conspicuous ability has steered the journal to success.

MR. HAROLD RAYMOND has become a member of the firm of Messrs. Chatto and Windus, and Mr. Andrew Chatto, son of the late Andrew Chatto, has retired from the business as from September 30th.

MR. THOMAS GIBSON, foreman of the letterpress and and block-printing department of Messrs. Hudson Scott and Sons, Ltd., Carlisle. who has retired after 50 years' service with the firm, has been presented by the directors with a gold hunter watch, suitably engraved, as a token of respect and appreciation.

MR. STEWART DB LA RUE, chairman of Messrs. Thomas De la Rue and Co., playing card manufacturers and stationers, is reported to be associated with Mr. Ervine T. Bush, in the matter of leasing the island site in the Strand and Aldwych for manufacturers' show-rooms, etc.

The Late Sir Joseph Lawrence.

At the funeral of Sir Joseph Lawrence which took place on October 28th, at Coulsdon Churchyard, the following were among those who attended:—

Lady Lawrence, Mr. and Mrs. Arthur Hungerford Pollen (daughter and son-in-law), Mr. A. J. L. Pollen (grandson), Mr. J. A. L. Pollen (grandson), Mr. and Mrs. Frank Jackson (brother and sister-in-law), Miss Jackson (sister-in-law), Sir Stuart Coates, M.P., Sis Arthur Spurgeon, Sir Sydney Hoare, Bart., Mr. A. W. Reader (representing Mr. Phillip T. Dodge, president of the Linotype Co., of New York), Mrs. A. H. Walker, Mr. Victor E. Walker (representing Mr. A. H. Walker, Mr. A. H deputy chairman of Linotype and Machinery. Ltd), Mr. W. H. Lock (director of Linotype and Machinery, Ltd.), Mrs. W. H. Lock, Mr. E. J. Duveen (representing the Tariff Reform League), Mr. F. G. Pyne (chief Conservative) and Unionist agent, Eastern Division of Surrey), Mr. T. H. Gardiner (representing Worshipful Company of Coachmakers), Mr. Henry Roughton (of Messrs. Hayes, Roughton and Dunn), Mr. C. W. Shortt, Mr. E. L. Booty (representing Linotype and Machinery, Ltd. and International Linotype, Ltd.), Mr. A. E. Pain (representing Linotype and Machinery. Ltd., head office staff), Mr. B. J. Goulding (representing the staff and employees of the Linotype Works), Mr. G. W. Davis and Mr. Ward Cox (representing the selling departments of Linotype and Machinery, Ltd.), Mr. J. L. O'Connell (representing the foreign agencies and branches of Linotype and Machinery, Ltd.). There was also present a contingent of the local Red Cross Society, of which Lady Lawrence is president, and representatives of the Special Constabulary of the Kenley District.

A memorial service to Sir Joseph was held the day following the funeral at St. Margaret's, Westminster, there being a large attendance.

The late Mr. James Crawfurd, of Uddingston, had in his library some rare books on early classical and other literature. library has recently been sold by auction at Glasgow, and among the prices realised were the following: -Hodge's "Select Views in India," folio, red morocco, £12; Fairnbairns "Relics of Ancient Architecture of Glasgow," coloured plates, folio, half morocco. 1849, £10; Buchanan (George), "Scoti Poetie," etc., vellum, with clasps, £5 10s.

LONDON COUNTY COUNCIL.

SUPPLY OF STORES, Etc.

PPLICATIONS are invited from persons and firms and particularly manufacturers for permission to be placed on the lists of persons and firms from whom the Council from time to time invites tenders for the supply of VARIOUS KINDS OF PAPER, SCHOOL AND OFFICE STA-TIONERY, ETC.

Applications must be made on the official form, copies of which, together with a statement giving further information on the subject, including the standard conditions of contract, can be obtained from the Clerk of the London County Council, County Hall, Spring-gardens, S. W. 1.

Particular attention is drawn to the fact that when an application has been made to the Council by a person or firm for permission to be placed on the Council's list and the application has been acceded to, it is not necessary for such person or firm to apply for forms of tender, as in all suitable cases forms of tender will be sent from time to time as issued.

> JAMES BIRD, Clerk of the London County Council.

LONDON COUNTY COUNCIL.

TENDERS are invited under two groups, for the printing of Official Documents, comprising Agenda Papers, Minutes, Reports etc. (Schedules Nos. 204 and 205). The whole of the work must be executed in London.

The specifications forms of tender and contract etc., may be obtained on personal application or by sending a stamped addressed foolscap envelope to the Chief Officer of Stores, L.C.C. Stores, No. 31, Clerkenwell Close, E.C.

Particulars of the Council's Standing Orders as to its conditions of tender and contracts are given in every issue of the London County Council Gazette.

No tender received at the County Hall after 1 p.m. on TUESDAY, 18TH NOVEMBER, 1919, will be considered. The Council does not bind itself to accept any tender.

JAMES BIRD.

Clerk of the London County Council.

Caxion Convalescent Home.

Matinee Concert in Aid of the Funds of the Printers' War Memorial Wing.

A concert in aid of the funds of the new printers' war memorial wing to the Caxton Convalescent Home, Limpsfield, was held on Saturday afternoon last. The handsome and well-appointed building of the Central Hall, Westminster, S.W., was engaged for this event, and there was present a very large gathering of printers and members of the allied trades. Mr. S. J. White (Secretary) expressed regret at the unavoidable absence of Viscount Burnham, who was to have presided, but was unable to do so at the last moment on account of an

urgent call out of town.
The President of the Home, Mr. J. C. Drummond, M.B.E., J.P., in a few words, said he was pleased to see such a large gathering. Their object in holding the concert was to endeavour to supplement the funds being raised for the purpose of erecting the war memorial wing to the Caxton Convalescent Home, Limpsfield, in honour of the men who fell in the great war. They originally required the sum of £4,000, but owing to the increased cost of labour and materials their architect found that in order to equip the new wing satisfactorily a sum of £6,000 would About £4,300 had already been raised towards this amount, and they expected the result of the proceeds of the concert would enable them to place between £200 and £250 to the funds.

The musical programme was a lengthy one, and of an extremely high order, not one single applause. The Central Hall possesses a beautiful organ, and some fine popular classics were rendered by Mr. William Rayment Kirby, Mus.B. (Dunelm), F.R.C.O., whose playing was greatly appreciated. The following artistes entertained the company delightfully:—Mr. Archie Holder, Miss Queenie Elliott, Miss Florence Bostock, Miss Dora Emlyn, Mr. Chas. J. Butler, Mr. Len Williams, Miss Florence Shipton, Miss Peggie Kerslake, Mr. Walter F. Lanham, Miss Majorie Jeffs, Mr. Fred Wildon, Mr. Herbert Williams, Mr. Arthur J. Hill and "Wallie," Mr. Leonard Morris and Miss Daisy Crossley.

The pianist for the afternoon was Miss Gertrude Appleton, whose ability was quite equal to all the demands made upon her. The entertainment was under the direction of Mr. Percy Newport, who was warmly accorded congratulations for the splendid array of talent he had brought together, and for the praiseworthy manner in which all the musical arrangements were carried through.

At the conclusion of the concert expressions were general that the afternoon's entertainment had been of the very best, and the excellent object of the function intensified the satisfaction felt by all concerned.

Chátham Master Printers.

The Chatham and District Master Printers' Association recently met the apprentices for the printing trade at the Masonic Hall, Chatham, twenty-six apprentices and seven masters sitting down to tea. Mr. Edwin Harris, the senior printer in business in the district, gave an excellent lecture on the "origin of printing." Addressing the audience, he went on to show how that the first records were made on stones. The Assyrians engraved on soft materials which were hardened by baking. These bricks Mr. Harris characterised as weighty "copy" which would not blow away. The Chinese, he stated, were the first printers engraving blocks and making palm impressions from them. Printing commenced in Europe during the fifteenth century and sport led the way, for the first work was a production of playing cards in single figures. This was followed by movable types used to print Biblical subjects. It is the general opinion that John Gutenberg was the first to employ movable type, and this first brought the art of printing into practical use. This was in 1448, and in 1453 Peter Schoeffer invented matrices for casting type, and from this period may be considered the real progress of printing. Schoeffer printed upwards of 50 works before his death, which occurred in 1492.

Printers at Football.

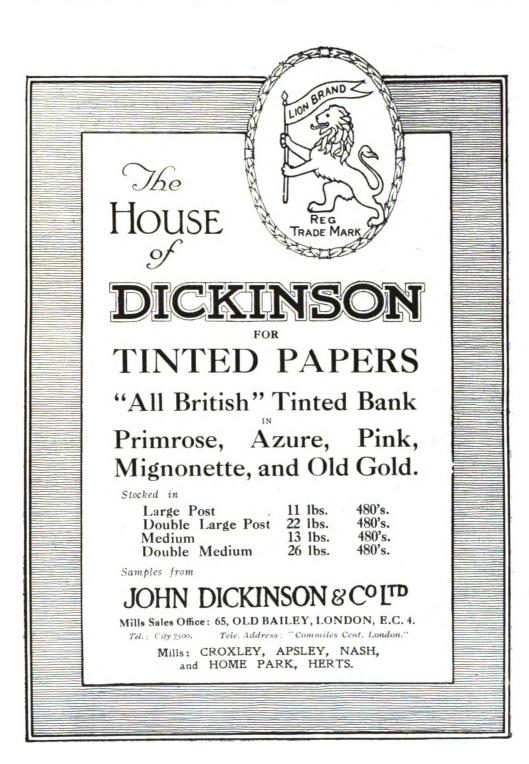

There was played at the Brymay Sports Ground (Leyton) on Saturday, a closely contested match, Brymay v. War Office, in the London Business House League. Lowe was very much to the fore, and, with the aid of some fine passing from Robinson, had shot five goals by the coming of half-time. Thus, in spite of some sporty play by the War Office, the score then stood at five goals to nil in Brymay's favour. In the second half a rush, on the part of the War Office, was countered by Johnstone and McDermott. Robinson tried a shot on his own account, but the referee gave him "off-side." Soon afterwards, Lowe received a good pass from Moore and scored for the sixth time. Then Robinson received a pass, and, making a fine dash for goal, beat the goalkeeper with a well-placed shot. A few seconds later the outside left again received the ball, sprinted up the field and successfully passed to Stephenson, who scored goal number eight. The game thus resulted in Brymay Athletic's favour by eight goals to nil.

Bradbank (Messrs. Bradbury, Wilkinson) played a match on Saturday with Henley, the result, after an interesting contest, being a

draw, two goals each.

THANKS TO JOURNALISTS.—The Lord Mayor of Newcastle (Mr. A. Munro Sutherland) entertained the members of the local Press to dinner on October 18th, and in giving the toast of "The Local Press," expressed very high appreciation of the co-operation of members of the journalistic profession in all matters affecting the betterment of the community. Speeches in appropriate terms were made by Mr. J. W. Taylor (Newcastle Chronicle), Mr. W. H. Musgrave (Newcastle Journal), Mr. E. S. Edwards (North Mail), Mr. J. N. Back (representing newspapers not published in Newcastle), and Mr. T. C. Grant.

PRINTER'S LABOURER'S DEATH.—At Victoria Infirmary, Newcastle, an inquest was resumed into the death of George Robert Dodds, 18, a printer's labourer. The evidence at the previous hearing of Thomas Pattinson, a fore-The evidence at the preman at Messrs. Andrew Reid, Ltd., where deceased wes employed, was that on July 31st, Dodds was polishing a lithographic stone, weighing 8st., and it dropped on his right foot while he was raising the stone. He was taken home and treated for crushed toes. He never returned to work. A doctor who attributed death to blood poisoning, said while the youth was in the Infirmary he related having alighted lamely from a tramcar and subsequently experienced pains from a bruised hip. The jury found that death was due to blood poisoning, probably set up by the accident at work.

History of the Press in England.

Mr. T. W. McAra Outlines Newspaper Origin and Development, at Saint Bride's.

There was an excellent attendance at the St. Bride Printing School on Friday evening to hear the opening lecture of the session, the lecturer being Mr. T. W. McAra, J.P. (chairman St. Bride Printing School Committee), and his subject "The Origin of English Newspapers and their Development." The chair was taken by Mr. Geo Eaton Hart, the managing director of the St. Clements Press.

In a brief introductory address, MR. HART referred to his own lifelong association with newspaper work. As a boy he sold newspapers in the streets, and later was apprenticed in a country newspaper office. He cited some interesting memories of those days, one being his recollection of the "gov'nor" standing at case setting up the leading article without any copy whatever—his composition being done with the speed of an expert comp., and the resulting leaders being forceful and well-finished productions.

The LECTURER began by referring to the vast extent and importance of that present-day newspaperdom in the heart of which the St. Bride Printing School finds itself. pictured what was going on at that moment as the thousands of employees on the big dailies were just getting into the stride for their night's work-tapes clicking out messages from Paris, New York, China. Japan, etc., and sub-editors, machinemen, and the multitudinous other participants all working together at full speed to produce the morning paper for one's breakfast table. The list of costly failures in daily newspapers in recent years—the Tribune, the Daily Citizen, and the rest—showed that experiments in presentday newspaper-promoting should be a sport

confined to millionaires. The great modern newspaper, however, had developed only in the last 70 or 80 years—since the advent of steam-printing, railways and telegraphs had made its production possible. The origin of the Press lay in far remoter times. And in very concise but interesting fashion the lecturer went on to summarise the history of newspaper production.

Origin of the Newspaper.

He referred briefly to ancient progenitors of the newspaper proper, such as the Acta Diurna of Julius Cæsar posted on the walls of Rome, but thought that-since the Mercuries, of which the British Museum possesses copies dating from 1588 are palpable forgeries we must find the immediate predecessors of the newspaper in the "news letters" which were in vogue up to 1717, being weekly jottings written by some man-about-town and sent to well-to-do clients who clubbed to-gether for the purpose. Perhaps the real genesis of our modern newspaper occurred when Nathanial Butter in 1622 made the innovation of printing one of these news-letters, and posting it on a fixed day of the week. It consisted of two pages, room being provided for additions written by hand.

Proceeding to sketch newspaper progress through the stage of "corantos" to the time of repression and prosecution during Cromwell's Protectorate, the lecturer mentioned the galaxy of famous literary men who were newspaper contributors of the period—among them Milton, Dryden, Andrew Marvell and Defoe. He then went on to treat of the beginning of newspaper censorship and the struggle for liberty to deal with poli-

tical matters in the Press; then of the newspaper tax and the Stamp Act of 1712. Following up the subject of Parliamentary intelligence, the lecturer told of the public's complete ignorance, about this time, of what was taking place in the House of Commons, al-though this was the golden age of Parliamentary eloquence and debating power. He sketched the growth of Parliamentary reporting from the early days when Dr. Johnson, in an Exeter-street garret, wrote from memory what he had heard said in Parliament-or what he thought should have been said. Mr. McAra told how Wilkes was largely instrumental, by his bold, brilliant and witty writing on political subjects, in the turning out of the Bute ministry in 1763 in favour of a Government mostly Whig; and how he braved prosecution by his outspoken criticism of the King's Speech, causing a sensation, the magnitude of which is difficult for us in these days of free criticism to realise. The personal character of Wilkes, he said, would not bear investigation, but he rendered inestimable service to liberty, and established the right of the Press to criticise public men, and even the sovereign.

Political Journalism.

Another stage in political journalism was marked by the starting of the Public Advertiser, in which appeared the famous "Letters of Junius," which in strong, picturesque language, outspokenly criticised public men of the time, showing first-hand information on affairs of State, and making such an appeal to the public that the whole country thrilled whenever a letter from "Junius" appeared. The Public Advertiser, said the lecturer, was the first newspaper to be a successful proposition from a commercial point of view. Morning Chronicle, too, carried further the development of Parliamentary reporting, with Henry Woodfall sitting in the gallery during a debate, and then from memory writing out fifteen or sixteen small columns of the speeches.

In the latter part of his lecture, the speaker sketched in an interesting manner the beginning of the modern era in journalism—the introduction, largely due to the Morning Chronicle, of the present-day system of Parliamentary reporting, the repealing of the taxes on knowledge, and their final disappearance under Gladstone in 1861. An interesting outline was given of the more familiar field of nineteenth century journalism; of the growth of the Times, the leading journal of Europe, the Standard, the Daily News, the Daily Telegraph. The Times was given the credit for being the first journal to adopt steam printing, thereby opening the era of vast inspressions running up to the present day figures of 96,000 to 120,000 copies. Then followed a sketch of the immense field of existing journals, London and provincial, dailies, evening papers. weeklies. The lecturer concluded with high praise of the national services rendered by the Press during the war, in spite of the often galling restrictions of censorship, etc. The Press is gradually throwing off these shackles, he said, and is wielding tre-

mendous power. He hoped it might long continue to act for the uplifting of our public life, and to be a terror to evil doers in the body politic.

DISCUSSION

Several persons took part in the discussion when the meeting was thrown open.

Mr. A. Hicks, who proposed a vote of thanks to the lecturer, remarked upon the interesting fashion in which the lecture had linked the present with the past, showing a striking continuity in the traditions of some of our older He expressed the opinion that newspapers. the high efficiency to which printing machinery had now attained would never have been possible without our great dailies, with their enormous financial resources.

Mr. PEDDIE, in seconding the vote of thanks. claimed earlier dates for the origin of the Press in England than any mentioned by the lecturer. He referred to the discovery of a news sheet printed in 1493, and thought the first English newspaper might be said to be that of which copies were discovered in 1913, consisting of single sheets printed on both

sides, bearing dates 1620 to 1622.

The Rev. E. Johnson emphasised the importance of the Press, which he thought "infinitely more powerful than the pulpit.

On the vote being put to the meeting, it was carried with acclamation, as was also a vote of thanks to the chairman.

The next lecture at St. Bride's is to take place on December 5th, the subject being "The Care of Printers' Eyesight.

Sir A. Mond's Libel Action.

The action for alleged libel in the publication of election speeches brought by Sir Alfred Mond against the South Wales Post, Swansea, and its editor, Mr. David Davies, who was the opposing candidate at the last election, was settled before Mr. Justice Lush and a special jury at Cardiff on Saturday. Mr. Llewelyn Williams, K.C., for the defence, announced that Mr. David Davies instructed him to express regret that, in the heat of an election, he had used words which might bear an interpretation he had not foreseen. He unreservedly withdrew any allegation he had made against Sir Alfred Mond's character as a loyal citizen of the country. Sir Edward Carson, in accepting the apology, mentioned that Mr. Davies had agreed to pay the sum of £500 towards the cost of the action.

In another case brought against the newspaper and Mr. Davies by Mr. Robert Mond, an apology was tendered and the record was withdrawn.

As an indirect result of a stokers' and engineers' strike in Berlin, the Berliner Tageblatt could not be printed, and the Lokalanzeiger appeared in reduced size.

Printers' Managers and Overseers ASSOCIATION.

London Association.

Although a social evening was the feature of the monthly meeting of the parent association at the Old Bell, on Tuesday, November 4th, there were many other important matters which engaged the attention of the members, who turned up in large numbers. Mr. E. H. Berryman presided in his usual

genial manner.

Following the adoption of the minutes, which were presented by Mr. Phillips, eleven new members were adopted, representing the longest list for some time. Their names are: Messrs. H. G. Bain (the Merivale Press, overseer, letterpress-machine); E. G. Bausor (Messrs. Geo. Newnes, Ltd., overseer, composing); C. R. Battersby (Bengal Secretariat Press, deputy superintendent Government of Bengal Press, Calcutta); L. H. Bridges (the Merivale Press, Ltd., overseer, composing); A. H. Edwards (Messrs. Haycock Cadle, Ltd., overseer, letterpress-machine); F. A. Farmer (Messrs. Sanders, Phillips and Co., Ltd., general overseer, letterpress), R. T. Farrow (G.E.R. Printing Co., Ltd., overseer, letterpress-machine); John Goodwin (Messrs. Bean, Webley, and Co., overseer, litho department); A. Shepherd (Lochend Printing Co., Ltd., works manager, litho department); O. Thorp (Garden City Press, Ltd., manager); A. R. Vaughan (Illustrated London News and Sketch, Ltd., manager, composing).

In moving the acceptance of the nominations, Mr. Gill expressed indebtedness to the secretary, Mr. Phillips, for the enterprise he had displayed in enlisting new members, his name being associated with most of the nominations that evening. To the candidates who were present Mr. Berryman ex-

tended a very warm welcome.

The meeting then proceeded to nominations for the various offices, which will be dealt with at the December meeting.

Mr. Gill proposed Mr. A. E. Jarvis, the vicepresident, for the position of president, and Mr. Riddell seconded. There was no other nomination.

Mr. Pugh nominated for the position of vice-president one whom the members knew very well, and one who, although he had crossed swords with him many times, always aimed at the betterment of the association. He referred to Mr. Bateman. (Hear, hear.)

This nomination was also unanimous.

Other nominations were as follows:-Trustees, Messrs. J. C. Pugh and E. C. Moyce; treasurer, Mr. C. Durston; general secretary, Mr. G. Phillips; financial secretary, Mr. E. W. Whittle; and hon, technical secretary, Mr. G S. Waller; council (eight vacancies), Messrs. Riddell, Chandler, Gill, Northam, Blackwell, Lapworth, Freeman, Hutchings, Potter, and Campling.

The President made sympathetic reference to the deaths of two old members of the association. Speaking first of the late Mr. Charles Morley, he said that those members who were familiar with the early activities of the association would recall the keen interest which Mr. Morley took in its welfare. The second name was that of Mr. J. W. Brampton. ~ Although not such a prominent member as Mr. Morley, he served on the council some years ago, and took a great interest in the affairs of the association. Still another death was that of Mr. Ebenezer Davey, who had reached the ripe old age of 83 years, and who years ago was an active member of the association. In this connection Mr. Berryman recalled the efforts he made to secure a revision of rules, so as to relieve members who were unable to pay a levy which might be called, with, of course, proper safeguards. While he was making that effort several old members wrote him very pathetic letters, and when the amendment of rules was passed, he received a very grateful letter from Mr. Ebenezer Davey, which was sufficient reward for the efforts which he (the president) had made. He moved that a resolution of condolence be passed with the relatives.

Mr. Bateman associated himself with the remarks of the president. He pointed out that he sat with Mr. Morley on the council, and although they came into collision sometimes in regard to questions that arose, yet they were on very friendly terms, since they

visited one another's houses.

Mr. Gill recalled that he and Mr. Morley had worked together when he, the speaker, was assistant secretary to Mr. Burchell. There was no man in the association who worked harder for it in his early days than had their late friend, Mr. Morley. With regard to Mr. Davey, with whom he had worked for 25 years in the same office, 13 years as fellow overseers, he was a man of sterling merit, although he did not protrude himself very much, and was a valuable member to the association.

The resolution of condolence was carried

unanimously.

The President then referred to the matter of the conference expenses of the provincial delegates, and mentioned that a very courteous and polite letter had been addressed to the writer of a letter, which he called upon the secretary to read.

Mr. Phillips read the letter referred to, and the reply which had been received from Liverpool, and then traversed the points raised in

the reply.

Mr. Burton, one of the oldest Manchester members, supported the action the council had taken.

Mr. Pugh pointed out that the London delegates did not cost the association a penny.

Mr. Blackwell was still of opinion that the expenses should have been paid on this occasion, and that in future a scale of expenses should be laid down.

It was agreed to acknowledge the letter

from the provincial delegate.

After consideration had been given to a letter addressed to Mr. Pugh with regard to

RITISH & COLONIAL NOVEMBER 13, 1919.

the proposed technical institute for printing, the company settled down to a social evening. The members of the association showed themselves quite capable of providing excellent musical and dramatic entertainment. Miss Catling ably presided at the piano, and also contributed a solo, while the following gentlemen entertained the company in a variety of excellent ways: Messrs. Dernie, Curtis, Earle, Spring and Smith.

Printers and Technical Training.

A Strong Council Formed.

The urgent necessity for improved technical training in the Printing and Allied Trades has led to the formation of a Technical Council, representing both masters and men. The Council consists of the following:

Sir George Riddell, Chairman.

Newspaper Proprietors' Association: Messrs. W. Will, T. George, J. Bland and G. Mascord. Master Printers' Federation: Sir W. A. Waterlow and Mr. A. F. Blades.

Association: Master Printers' London Messrs. E. Unwin (Sen.), Howard Hazell, J.P., G. E. Hart and C. A. Bates.

London Printing and Kindred Trades' Federation: The Right Hon. C. W. Bowerman, P.C., M.P., and Messrs. T. E. Naylor, G. A. Isaacs and W. Stevens.

Bookbinders' Section (London Chamber of Commerce): Messrs. Joseph Brown, A. S. Colley, A. E. Calkin and A. J. George.

National Union of Bookbinders and Machine Rulers: Mr. S. Stubbings.

Federation of Master Process Engravers:

Mr. S. Dargavel.

St. Bride Foundation: Messrs. F. Gillett, J.P., C.C., and C. J. Drummond, M.B.E., J.P.

Weekly Newspaper and Periodical Proprietors' Association: Messrs. A. H. Bridge and A. Shewin Thomas.

Printers' Managers and Overseers' Association: Mr. J. C. Pugh.

Association of British Advertising Agents:

Mr. J. Coote. Worshipful Company of Stationers: Mr. E.

J. Layton (Master). Printing Machinery: Mr. Walter Haddon.

Typefounders: Mr. S. H. Caslon.

Colour: Mr. H. C. Bolton. H.M. Stationery Office: Mr. W. R. Codling (Controller).

Stereotypers and Electrotypers: Messrs. W.

Warren and G. E. Holloway. St. Bride Printing School: Messrs. T. W.

McAra, J.P. (Chairman), and J. R. Riddell (Principal).

A meeting took place on Thursday at 6, Bouverie street, E.C., when it was decided to conter with the Education Committee of the London County Council with a view to the provision of improved facilities.

An Advertisement is always working.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

Monthly Meeting.

The monthly general meeting was held on Tuesday week at the headquarters, St. Bride Institute, Bride-lane, E.C.4, the President (Mr. A. J. Daines) occupying the chair, and the Vice-President (Mr. A. W. Hunt) ably supporting him. There was a large muster, and a noticeable feature of the evening was the great interest which members evinced in the affairs of the Association. During the evening Mr. Chris. Atkins (Co-operative Printing Society), gave a short talk on "Street Games,"

which proved highly interesting

The Secretary (Mr. Geo. A. Eden) read the minutes of the September monthly meeting, which were duly confirmed, after which some correspondence was submitted. On behalf of the Association a letter of condolence had been sent to the wife of the late Mr. J Dickinson, and the Secretary said he had received a letter in reply from the deceased gentleman's brother in law thanking the Association for their sympathy. A letter was also received from Mr. F. C. Peacock, acknowledging and expressing thanks for the donation of three guineas which the Association had granted towards the Bookbinders' Pensioners outing. In regard to the question of increased salaries. the Secretary announced that he had received a letter from the London Chamber of Commerce to the effect that in connection with the rise in the cost of living, the position of overseers had been adequately met by the employers generally. From the Master Printers' Federation no further reply had been received with reference to the question since the one sent in answer to the circular some three months ago.

The members next proceeded to the election of the following new members: - Messrs. A. J. Flint (binding), Fullford and Son; J. H. Ozman (binding), G E.R. Printing Works. The President warmly welcomed the new members, reminding them in felicitous terms that they would find in the ranks of the Association

many true friends.

The report and balance-sheet of the October

"smoker" was formally adopted.

Mr. Atkins then delivered his short talk on At the outset he said it was "Street Games." worth while at times to look back in life to the fire and passion of youth, to the days of the old street games. The speaker attributed our reputation as a sporting nation to the old street games indulged in in childhood's days. Quite a number of these old street games were mentioned by name, and the speaker, in an amusing manner, explained the laws and regulations governing them. These old games had made our boys and girls in after life smart I he lecturer said he and quick of perception. thought he would not be very far wrong in saying that the war had been won by the old street games, just as much as the cricket fields of Eton had been credited with the winning of the battle of Waterloo.

A short discussion followed, to which Messrs. F. J. Ibbott, W. Alleston, J. Lee, A. W. Hunt, and the President contributed, each speaker expressing grateful acknowledgment to Mr. Atkins for his happy address.

Overtime and Night-Work.

Agreement between Employers and Unions.

In regard to the agreement reached on August 22nd last concerning overtime and night-work, the following interpretations have been agreed to by the L.M.P.A. and the

L.P.T.F.:-

"Ordinary Overtime Charges" first line to be read as follows: "Overtime shall be paid for at the rate of time and a quarter of the ordinary day time rate for the first two hours, etc." "Saturday Overtime" Clause to be read as follows: "Time and a half for the first three working hours, afterwards double ordinary day time rate." "Saturday Overtime in Five-day Houses" to be read as follows: "First four hours at time and a half; afterwards double ordinary day time rate, etc." "Holiday and Sunday Charges" to be read as follows: "Sunday and Christmas Day, double ordinary day time rate, etc." "Regular Night-work" Clause, Subsection 2, to be read as follows: - " Payment at the rate of time and a half of ordinary day time rate all through." Last line to be read as follows: "Saturdays and Sundays double ordinary day time rate." Regular nightwork.—To be a minimum of 42 hours per week on any four days in such week that the employer wishes. In each case the extra rate is to be charged on the wages the regular man receives; the casual worker is to charge his overtime based on the minimum weekly rate.

It is recommended that adjustments be made as from the first pay-day in September where payments have not been made in accordance with the foregoing. e.g., where an employee has been paid at regular nightwork rate (time and a half), although doing less than 42 hours' work plus meal times per week.

The Men's Federation have agreed to the principle that their members should refund any amount overpaid to them, eg., where a man on night-work has worked 42 hours per week but has claimed and been paid "under protest "ordinary overtime rates.

As regards bookbinders' overtime, the rates for piece workers (including bonus) are: First 2 hours, men, is. 2d.; women, 9d. per hour; next 3 hours, men, is. 6\frac{1}{2}d.; women, is. per hour; afterwards, men, 2s. 4d.; women, 1s.

6d. per hour.

Master Printers & the Wages Demand

W. and N.-W. London Urge Resistance.

A special general meeting of the Association of Master Printers of West and North-West London was held on November 3rd at Westbourne Park Institute, the President (Mr. F. A. Perry) occupying the chair.

After the election of eight new members the meeting proceeded to consider and criticise the new draft rules of the Association, which, with slight modifications and some additions,

were ultimately approved.

There was a very full and free discussion of the various points raised by these rules, and the question of canvassing was gone into very fully, the meeting coming to the opinion that members should not canvass for work they knew was being done by another member.

Time not permitting of the rules of the L. M. P. A. being taken in detail, the con-

sideration of these was deferred.

The new demands advanced by the printing trade unions were discussed, and the meeting unanimously decided they should be resisted, a resolution being passed pledging the Association's support to the L. M. P. A. Council in opposing a demand which was felt to be inopportune and prejudicial to the best interests of the trade.

Printers' Co-operative Buying.

The idea of co-operative buying for printers received very warm approval at the meeting of the South-East London Master Printers' Association on Monday, when an address on the subject was given by Mr. A. Bennett (of Messrs. James Truscott and Sons,

It was the opinion of the meeting that a system of co-operative buying would be of inestimable value to printers. would saving be effected in the amount of capital expended in actual purchases, but great economical advantages would accrue from the maintaining of one London centre to which inquiries as to supplies could be directed, instead of, as at present, every buyer having to hunt around for stocks in-dependently. The opinion was expressed that as soon as supplies are more normal, a start will be made to provide the necessary organisation for co-operative buying, and that the scheme will be widely adopted.

THE wide difference in the shades of the U.S.A. postage stamps (says a writer in the Manchester Guardian), suggests that the Americans have not, even yet, overcome the difficulty their printers experienced when the supply of German dyes was cut off.

THURSDAY, NOVEMBER 13, 1919.

Current Topics.

Printer Mayors.

PRINTERS are coming to take a still larger share in the direction of municipal affairs. From early times they have been well to the front in popular movements, a tribute at once to their sense of public duty and their intelligence. This year there is quite a remarkable number of gentlemen connected with the Press who have gained the distinction of chief citizen in their respective areas. A prominent figure in the list is Alderman Meredith T. Whittaker, proprietor of the Scarborough Mercury, and the energetic and far-sighted Chairman of the Linotype Users' Association. On the other hand, we have Mr. Geo. A.

Isaacs, General Secretary of the N. S. O. P. A., who has been elected Mayor for Southwark. Unkind people might suggest that Mr. Isaacs was placed there to keep him quiet, for we can imagine he was a terror to his opponents on the floor of the Council Chamber. He is a singularly "live wire" even among the virile intellectuals of the Labour movement-Less conspicuous members of the printing trade to become Mayors are Mr. G. Bastin, a Councillor of Bermondsey, and Mr. Ernest King, a member of the Hornsey Council. Journalists also figure in the list as usual. They include Alderman Wm. J. Dodgson, editor of the Workington Star (Workington); Mr. Geo. Lansbury, editor of the Daily Herald (Poplar); and Mr. R. W. Simpson, editor of a local paper at Richmond. Then we have a wholesale stationer in the person of Alderman H. B. Burton, who is re-elected Mayor of Finsbury. So the printing and paper trades are still serving their day and generation well.

Technical Training for the Printer.

This important question is being kept very much to the front by the live representatives of the printing trade, who have formed a technical council in order to insist upon improved technical training for the printing and allied trades. Sir George Riddell and those active members who are supporting him are likely to bring about the desired result without any undue delay. Sir George is just the vigorous personality, and possesses the necessary influence, to bring success to the effort. In this connection a strong, influential and thoroughly representative technical council has been formed to carry the matter through. It represents all phases of the printing and allied trades, and is bound to have A conferweight with the authorities. ence is being arranged with the Education Committee of the London County Council, with a view to bringing about improved facilities for technical training. The idea already has the sympathy of Sir Robert Blair, the chief education officer to the L.C.C., and in view of the coming into operation of the new Education Act, with its proposals for continuation schools, the time is very opportune for pressing for that technical institute which has been promised to the trade for so long.

The Imprint.

RECENT court cases concerning the printers' imprint recall the muddle in which this matter is allowed to continue. There appear to be strong arguments in favour of extending the conpulsion to all classes of print except private stationery. At present, as these cases at law show, there is wide-spread ignorance, even among experts, as to when the imprint must be attached, and it would bring order out of chaos if the law insisted that it should be used in all commercial printing. The imprint, as a matter of fact, is a good advertising medium. It is quite time that printers overcame their natural modesty in this respect, and made greater use of their names. In some instances, of course, it is the customer who objects, and the printer hitherto has been only too willing to accede to his wishes. If the imprint were insisted upon all round, it would dispose of any objections on the part of the customer, and the master printer would get his deserts.

Artificial Silk.

THE development of artificial silk is proceeding apace in various parts of the world. There is little to be added to the common knowledge as regards the situation in this country and America which is dominated by Messrs. Courtauld's, not only by reason of the high quality of the product, but owing to the great and continued activity of this firm in real textile invention. The Belgian works producing artificial silks have rehabilitated themselves very quickly and are already producing on a fair scale. We hear that the Japanese are producing artificial silk also, but it is not regarded as being up to the high grade of perfection reached by the Anglo-American thread. While the Germans are recovering in this connection from their dislocation, they are checked by a very big handicap owing to the exchange rates and they have not reached the level of our product and in other respects are behind the British pioneers. There is a big demand for artificial silk, and its uses are being developed extensively.

Home and Export.

BOTH the home and the export markets present excellent fields for enterprise, and in this connection it is interesting to note that Mr. E. S. Lendrum has purchased the goodwill of the important home and export departments of Edward Lloyd, Ltd., by whom such useful work has been done for the past 30 or 40 years. Under the new inspiration the valuable connections will be extended, and a larger channel will be opened out for British paper products.

The Royal Photographic Society.

The "Derby Process."

An interesting exhibition of photographs scientific and pictorial, is now being held at the Society's rooms, 35, Russell-square, W.C.1. The pictorial section contains much good work, and the exhibits in the scientific section are well worth inspection, especially the colour work, in which various processes are An exhibit that will be of represented. interest to printers is a reproduction of a water colour drawing, in colours, by Messrs. Bemrose, of Derby. It is hung side by side with the original picture and even the closest inspection can scarcely distinguish between the work of the artist and that of the printer, so well is the reproduction executed. picture is described as being by the "Derby Process," and appears to be a species of collotype, but to what extent the colours are locally selected by the process and to what extent by the printer is not divulged. At any rate if it is not too costly a process in working it should be in demand for colour reproductions for which it is excellently suited.

Other pictures are shown by the "Raydex" process in which the local selection is made by the lens and colour filters, and there are two prints by a new process, invented by Mr. S. H. Williams, somewhat on the lines of the "Jolly" process where the selection of colour

is due to the method.

A very interesting exhibit, especially to process engravers, is the series of graticules, line screen reproductions, and other fine scales, shown by Messrs. Julius and Ernest Rheinberg, who worked out the process in order to provide scales for the many instruments of precision in demand during the war, and which are most useful for work in which absolute sharpness of the image is of importance.

The Exhibition is open daily from 11 a.m. to 9 p.m. until November 29th, free of charge, and is well worth a visit from those inte-

rested in illustrative work.

AT a recent meeting of the New York Master Printers' Association, one of the matters brought up for discussion was the proposal that the members of the Association bring their wives and female friends to the meetings. Considerable discussion took place, and it was finally decided by vote that "On account of the dry business discussions that usually occupy most of the time spent at the meetings, it would be no more than a kindness to the ladies to continue the present rule restricting attendance to masculinity."

MR. I. H. WELDON, president of the Provincial Paper Mills Co., Ltd., Toronto, states that if circumstances warrant it his company will erect a paper mill at Port Arthur early next spring.

Trade Notes.

On and from January 1st, inland Press telegrams will cost more.

MISS JEAN MIDDLEMASS, the well-known novelist, died the other day at the age of 86 years.

THE Romford R.D.C. has approved plans for an art metal factory at Hornchurch, for Roneo, Ltd.

A NEW Scottish weekly, The New Tribune, is published from the office of Messrs. Munro and Scott, Perth.

THE Winterbottom Book Cloth Co., Ltd., Manchester, have joined the Swedish Chamber of Commerce for the United Kingdom.

THE Printing and Allied Trades Charity Sports' Association will hold a series of competitions at the Northampton Institute on Monday, December 8th.

AT Nunhead Cemetery, on Saturday, the funeral took place with military honours, of Arthur A. J. W. Grant, age 24, of the Essex Regiment, and a member of the reading staff of the Daily Chronicle.

The tender of Messrs. Wightman and Co, Ltd., has been recommended for acceptance for the supply of 150 copies of the annual pocket book and diary for the Lambeth Borough Council, £79 15s.

LINOTYPE operators, machine-minders, and proof readers employed by the Paris daily newspapers, came out on strike on Tuesday, and the proprietors met the situation by publishing one news sheet under the title of La Presse Parisienne.

The advantages of the Caxton Rotary Perforator are well set forth in an illustrated brochure issued by Messrs. John Haddon and Co., of Salisbury square, E.C.4. The booklet contains specimens of paper and card excellently perforated by this machine.

PRINTERS' LABOURERS' INCOME. TAX.—Among 60 defendants summoned last week before Alderman Sir William Dunn at the Guildhall for non-payment of income-tax were a number of printers' labourers, who stated that they were earning between £5 and £6 weekly.

PRINTING TRADES ALLIANCE.—An application has been received by the employing members of the Printing Trades Alliance for an all-round increase of 12½ per cent. on wages. It has been considered by the Management Committee and referred to the Conciliation Committee with a view to coming to a settlement. Under the Alliance rules, if no agreement is arrived at by the Conciliation Committee, an arbitrator is called in whose decision is binding on both employers and employed.

THE Monotype Recorder (Lanston Monotype Corporation, Ltd.) for the third quarter of 1919 gives special attention to the question of

display by the use of "Monotype" types. There is included a page of specimens printed from "Monotype" job type in sizes from 14 to 36 point.

A SUM of £500 has been contributed to the Newspaper Press Fund as the result of a concert in the Ulster Hall, Belfast, arranged by the Belfast District Committee.

No FEWER than 42,000,000 printed railway tickets were issued during the last twelve months from the 130 automatic machines in use on the Underground railways of London.

A LITHOGRAPHIC artist named Thomas Broadway (74), of Floyer road, Birmingham, was fatally injured through being knocked down by a motor long while waiting to hear an election result at Small Heath. Death followed from pneumonia.

Transmission of News.—The Postmaster-General has agreed to lease certain wires to the Press Association for the transmission of news on the same terms as has been applied for many years past to newspapers. The Association will supply and work the apparatus.

NEWSPAPER PROFITS SEIZED.—The Assize Court at Brussels, which recently sentenced to terms of imprisonment ranging from 20 to two years the staff of La Belgique, one of the newspapers which appeared during the occupation under the ægis of the German censorship, has ordered the total profits of the newspaper, being 5,500,000f. (£220,000), to be paid over to the State.

PITMAN'S "Shorthand and Typewriting Year Book and Diary" for 1920 is now issued. Sir Robert Hadfield, Bart., F.R.S., contributes a pretace, in which he bestows high commendation upon Pitman's shorthand. Articles by experts deal with subjects interesting to students and users of shorthand and typewriting, and the volume includes also a diary and a mass of reference data on cognate matters. Well printed, and in strong cloth boards, the book is published at 1s.

The T.A. AND REDUCTION OF HOURS.—The result of the ballot by the Printing Trades' Federation on the question of pressing for a reduction of working hours to 44 for day work and 40 hours for night work is as follows:—For the reduction, 13,426; against, 2,921. In the large branches many votes were cast against the proposal, it was stated, as a protest against the alleged injustice shown to the linotype operator section in the wages and hours agreement.

PRINTERS IN DANGEROUS BUILDING.—At the Mansion House, Mr. Vickery, Assistant City Solicitor, and Mr. Martin Saunders, district surveyor, complained to the Lord Mayor that a building in Garlick-hill was dangerous to its inmates and applied for an order for their removal under the London Building Act, 1894. Mr. Vickery said that the condition of the walls of the building was such that it might collapse at any moment. In the ground floor and basement 12 people were working; on the second floor were 19 printers.

and on the third floor, 18 bookbinders. The Lord Mayor made an order as requested.

Punch's Almanack.—The issue for 1920 is even brighter and happier than ever. There is really nothing to equal the clean wit of our old friend, and the artistic work was surely never better, in spite of the high place Punch has held in the past. Up-to-date the Almanack is, of course, and the problems now agitating the people of this country are dealt with in delightful fashion.

ARRANGEMENTS have been completed for the amalgamation of the business carried on by Mr. Robt. W. Paul, at New Southgate, London, with the Cambridge Scientific Instrument Co., Ltd. Mr. Paul will join the board of directors, and the manufacture of instruments will be continued both at Cambridge and at New Southgate. Until the end of the year the selling and manufacturing arrangements will be unchanged, but on January 1st, 1920, the name of the company will be altered to the Cambridge and Paul Instrument Co., Ltd., and as soon as possible the head office and show-rooms transferred to London.

Personal.

VISCOUNT BURNHAM, on Monday, at the Savoy Hotel, entertained the French journalists who accompanied their President to London.

MR. J. J. Keliher, President of the London Master Printers' Association, is suffering from a severe chill, and has been confined to the house.

SIR G. ROWLAND BLADES, M.P., one of the representatives of the City of London on the London County Council, is tendering his resignation.

MR. W. T. WALLACE, Director of *The Organiser*, the journal of the new conditions in industry, writes to say that Lord Leverhulme has no interest in that paper as suggested in a paragraph in our last issue.

MR. E. G. ARNOLD, the ex-president of the Federation of Master Printers, is taking a prominent part in the work of the Middle Classes Union, and is to preside at a Leeds meeting on November 21st.

MR. WILLIAM SHAPCOTT, of the lithographic department of Messrs. James Townsend and Sons, Exeter, who is retiring after 38 years' service, was presented with an easy chair by his fellow workmen.

MR. FRANCIS A. PERRY, the President, has issued invitations for the 6th annual meeting of the Association of Master Printers of the West and North-West London, which took place last (Wednesday) night at Slater's Restaurant, Oxford-street, W.

Mr. E. C. Moyce.

We regret to state that Mr. E. C. Moyce, until recently and for so many years general secretary of the P. M. and O. A., passed away in the early hours of Wednesday morning. It will be recalled that he underwent an operation at the beginning of October for an internal trouble, and returned home a week or so later.

Mr. Moyce, who was 58 years of age, was a man of exceptional ability and broad views, while his knowledge of the printing craft was wide and thorough. He had occupied the

The Late Mr. E. C. Moyce.

position of overseer altogether for 25 years, first with the old firm of Southwood Smith and since 1904 with Messrs. Odhams. He was general secretary of the P. M. and O. A. for 21 years, and the success of the organisation owed a great deal to him. It was in June last that a large gathering at the Cannon-street Hotel recognised his valuable work and signalised his retirement by presenting him with an address, a cheque and a gold watch. Always courteous and a perfect gentleman. Mr. Moyce also held strong views, which he manfully maintained when challenged.

The sympathy of a large circle of friends will go out to Mrs. Moyce and her family in their great sorrow.

INDIAN CHRISTMAS CARDS. — The Praja Bandhu Printing Works, Ahmedabad, India, have forwarded samples of their Hindu New Year greeting cards. Printed in English and Gujerati, they are very creditable productions. Generally the designs are ornate yet neat and effective, and the workmanship is good.

Devine the leasehold premises No. 26, 27, 28 and 33, Handyside-arcade, Percy-street, Newcastleon-Tyne, and to carry on the business of stationers, printers, lithographers, stereotypers, proprietors and publishers of newspapers, journals, magazines, books and other literary works, etc. The subscribers are W. P. Baker and F. Devine. Private company. The first directors are W. P. Baker and F. Devine (both permanent governing directors.. Registered office, I. Clayton-street, Newcastle-on-Tyne.

BANKRUPTCIES, etc.

RE HERBERT JAMES GIBBINS, Traveller, 56, Ludgate-hill, E.C.—This debtor attended on November 7th at the London Bankruptcy Court for public examination upon accounts showing liabilities £634 108.4d., and assets nil. Replying to Mr. F. T. Garton. official receiver, the debtor said this was his third failure. He went bankrupt in July, 1893, with liabilities £4,297, and again in November, 1912, when he owed £1,320. No dividend was paid in either case, but he had been discharged from both sets of proceedings. Since the war his earnings were considerably reduced, and since February, 1917, he had been in the hands of moneylenders. Witness joined the army in May, 1918, and was discharged in April last, since which time he had been employed by a firm of printers at a salary of £7 a week and commission; but, as a matter of fact, the salary had been reduced and no commission had been earned. present failure was caused by excess of household and personal expenditure over income, and to heavy interest charges. He first went to moneylenders in January, 1917, and in all borrowed from six firms, paying off the earlier loans by means of subsequent advances. Mr.~, Registrar Francke: Have you lost your position owing to this bankruptcy? The Debtor: No, sir, I have gone back under a new agreement. The examination was concluded.

Gazette.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

NOTICE OF DIVIDEND.

Morris, James Robert, formerly printer and journalist. Third and final dividend of 14s. 2d. in the f (making, with the prior dividends, 20s. in the f) upon new proof, all previous proofs having been expunged by an order of court, dated October 24th, 1919; payable at Official Receiver's Office, 22, Swan-street, Shrewsbury, November 6th, 1919.

Kraft Papers.

Kraft wrappings are stiffening progressively with the lapse of time, to day's quotations running upwards from £53 10s., a figure which does not leave a very wide margin of English krafts of profit for the importer. equal quality are obtainable at the same figure, with about the same time limit for de-livery. Both English and foreign mills are booked to capacity, and this fact alone is sufficient to warrant a well-maintained price. Dutch strawboards are arriving here in large quantities, the bulk of the import being already sold to booked orders. Quotations for forward delivery are based on £14 10s. to £15 per ton, s/o 22 by 32, 8 to 18 ozs. Heavy weights and lined boards subject to the usual extras. For stock deliveries £18 basis is the present price, while for orders booked for boards due for early arrival, £16 per ton has been quoted in certain quarters. boards are being offered from stock at £18 per ton, best quality, and £15 per ton second grade.

Among the newly-elected members of the Birmingham City Council are Mr. C. Combridge, stationer and paper merchant.

PRICE OF FRENCH NEWSPAPERS.—As in England, newspapers in France were obliged to raise their prices during the war, the price of dailies now being 1d., 1½d. and 2d. In view of the demands of the compositors and machine-men, however, and the continued high price of paper, newspaper directors are considering the advisability of further raising the price by an additional halfpenny.

A MARRIAGE has been arranged, and will take place at an early date, between Miss Eily Evangeline, second daughter of Mr. Fred Becker, and Major Matthew Hay, eldest son of Professor Matthew Hay, Aberdeen.

New Paper Machines.

1,000 ft. of "News" per minute.

The Laurentide Paper Co., Grand Mere Canada, is developing its capacity for making news-print paper. They have placed a contract with the Dominion Bridge Co., Montreal, for two 166-inch news-print machines, which are to be housed in a new building 320 ft. long by 90 ft. wide and two storeys in height.

Both machines are to be designed to run up to one thousand feet of paper per minute. They will start, however, at about 650 ft. per minute, and as they become "tuned up "their speed will be increased until they reach the maximum of one thousand feet every minute. The length of the wire will be about 112 ft., and it will be pitched about 4 ft. There will be four presses and 40 dryers each six feet in diameter.

The new machines will bring the total production of the Laurentide plant up to 360 tons of news-print per day.

Printing News Items.

ORGANISED by the Federation of British Industries, a meeting of manufacturers in the area under the jurisdiction of the Education Department of the London County Council will be held on November 26th for the purpose of considering the application of Clause to of the Fisher Act. Sir Robert Hadfield will preside.

Two HUNDRED enraged orchestral players invaded the editorial offices of the Bologna newspaper Resto del Carlino, last week, to protest against a criticism of their performance of Beethoven's Ninth Symphony. The paper's musical critic, Signor Bastianelli, was eventually seized and beaten.

An exhibition of English books will be held at Zurich from December 10th to 28th, containing the best selection of modern English literature. British publishers interested should communicate with Messrs. F. Deaniker, booksellers, 11, In Gassen, Zurich.

SIR JAMES READING FAIRFAX, of Sydney, N.S.W., senior proprietor of the Sydney Morning Herald and the Sydney Mail, left (exclusive of large estates in Australia) personal estate in the United Kingdom valued at £8,347.

On relinquishing the Mayoralty of Tiverton, Devon, after eight years in office, Mr. A. T. Gregory, editor of the *Tiverton Gazette*, is to be presented with the freedom of the borough.

MR. J. W. WHYTE, the esteemed president of the Stationers' Social Society, is announced to preside at the eighth annual autumn dinner at the Adelaide Rooms, Gatti's Restaurant, on Friday, the 14th inst.

PRINTER & STATIONER NOVEMBER 13, 1919.

Important Paper Fusion.

Mr. E. S. Lendrum Makes a Big Purchase.

Home and Export Departments of E. Lloyd, Ltd., Taken Over.

Mr. E. S. Lendrum has purchased the goodwill of the home and export departments of Edward Lloyd, Ltd., which will mean an important development of the concerns with While the which Mr. Lendrum is associated. head offices of Messrs. Lendrum, Ltd., for the continuance of the existing business will remain in Temple-avenue, and the branch offices are maintained at Manchester, Liverpool and Glasgow, the new departure will be directed from 2-4, St. Paul's Churchyard, London, where extensive alterations have been carried out to meet the requirements of the home and export paper business.

The staff of Edward Lloyd in the departmentments concerned are passing over to Mr. Lendrum. Mr. G. H. Hoffman will manage the home section and Mr. T. C. Bailie will

have charge of the export branch.

The business of Edward Lloyd in the directions indicated is one of the oldest in the country, having been established for 35 years. They possess very important connections in India, Japan, the Straits Settlements and Australia, and it will be the aim of Mr. Lendrum to extend still further these important interests. Mr. Lendrum occupies a prominent place in the paper trade of Great Britain, and his energy and enterprise will find ample scope in the further opportunities which are now opened to him.

In the development of the export connections in the East, Mr. Lendrum has secured the services of Mr. E. J. J. Randall, a gentleman who is intimately acquainted with the paper trade in those parts of the globe, and who was formerly the Eastern representative

of Messrs. John Dickinson and Co.

NEW Ink to Help Waste Paper Recovery.

A French invention by Mr. Oscar Piequet relates to manufacture of an ink with all the qualities of ordinary printing inks and also very sensitive to the action of chlorine, which completely removes it. Thus the same results are obtained as with the ordinary printing ink and, in addition, old printed paper can be regenerated and perfectly bleached. This ink is made from dyes styled "sulphur" black and various colours, known in the trade under names intermediate dyes, autogene, pyrogene, auronal, etc. All are obtained by the action of sulphur and sulphides on organic matter. The initial type is the

"Cachou Laval" produced by the action of sulphur on sawdust. Hitherto they have only been employed for textiles. To make printing ink these dyes are rendered fluid with sodium sulphide, transforming them into precipitates or insoluble cakes. The materials employed in printing, i.e., oils and varnishes, can be utilised, but in most cases can be replaced by gum, starch, dextrine, size or formaline size, usually employed for textiles. The ink is applied in the ordinary way, both black and coloured.

To remove it from old paper for pulping, the paper is treated with chlorine in a suitable quantity to bleach perfectly. Writing

inks can be made in the same way.

Papyrus Lodge (No. 2562).

Mr. F. J. Bobeer Farrell, P.M., was installed W.M. of the above Lodge at the Freemasons' Hall, Great Queen-street, W.C., on Wednes-

day last.

There was a large gathering of members and visitors, and the installation ceremony was impressively conducted by the outgoing Master (Mr. Wells). The Papyrus Lodge has been well served by the enthusiasm and thoroughness of its officers, who have included many prominent paper trade men.

The following officers were invested by the W.M.: -E. G. Wells, I.P.M., F. J. Court, S.W. G. A. H. Buchanan, J.W., E. B. Westman, Treasurer, James Bailey, Secretary, W. V. Marchant, S.D., J. de Q. Dodds, J.D., F. E. R. Becker, D.C., C. Newell, A.D.C., G. J. Ralph, Almoner, R. Stanton, Organist, J. V. Tunbridge, Asst. Sec., E. Flygt, I.G., Fred Freeman, Permanent S., A. H. Archibald, S.S., W. Rowlandson, J.S., J. L. Greaves, J.S., and T. Bowler, Tyler.

Prior to the installation, Mr. G. Ralph. P.M., L.R., initiated his two sons—Mr. M. Gordon Ralph and Mr. P. Arthur Ralph.

Imprial Decisions.

Important Ruling as to Share Lists.

The adjourned hearing took place last week of the case mentioned in our issue of the 23rd ult, in which Messrs. Straker Brothers, Ltd., printers, etc., of 194-200, Bishopsgate, were summoned before Sir Louis Newton, at the Guildhall, under the Newspapers, Printers and Reading Rooms Repeal Act, 1869, for having in April last printed certain papers

without an imprint.

It was stated in the summons that these papers were meant to be published and dispersed —namely, 2,500 printed papers headed "Oil Companies," bearing date, and the name and address of "W. and A. Wilson (W. R. Ashton), stock and share brokers, St. George's House, 193–197, Regent-street, W., "such papers not bearing the name and address of the printers thereon. There were similar summonses in connection with a number of circulars called the "Monthly Rubber Share List."

Sir Archibald Bodkin, prosecuting for the Crown, explained the provisions of the Act, which, he said, must not be regarded as a merely formal matter. Ashton, posing as a stock and share broker, had issued fraudulent literature of various kinds for the purpose of inducing people to invest money. Had it not been that the police had also found receipted invoices bearing Strakers' name, there would have been difficulty in tracing the printer, which, in the circumstances, was an important

He (Sir Archibald) did not for a moment wish it to be understood that there was any suggestion against this firm. Strakers' was a well known and eminently respectable house, who, needless to say, would not have been a party to any such undertaking as Ashton's. All that the prosecution alleged against them was that they had not complied with the provisions of this Act. Their managing director, on being seen by the police in connection with the matter, said they were unaware that the printing of their name and address was required on what they regarded as a stockbroker's share and price list. These lists were supplied to stockbrokers all over the country, and firms in the North receiving them objected to the name of a London printer appearing thereon.

Mr. H. Maddocks, for the defence, contended that stocks and shares were articles of commerce and tangible articles of property within the meaning of the section making ex-

ceptions from the Act.

Having listened to the arguments on both sides, Alderman Newton said it was a question of law, of the meaning of a certain section, and he should take time to consider his decision.

When the case came up again, the Alderman dismissed the summons. Notice of appeal was given.

Heavy Fines.

The Polyglot Printing Co., Ltd., Paul-street,

Finsbury, was summoned before Mr. Denman, at the Marlborough Police-court, for publishing printed matter which did not bear the name and address of the printers, and William R. Ashton was summoned for assisting in the alleged offence.

Sir A. Bodkin said that in August Ashton was convicted of fraud, and in his office in Regent-street were found a number of printed circulars and the Financial Weekly Forecast, which did not bear the name of the printers.

Mr. H. Joy, for the Polyglot Co., urged that his clients had put certain initials on the circulars which would clearly indicate to those in the printing trade from where they emanated.

Mr. Denman fined the company £90, with £10 costs, and Ashton £200, with the alterna-

tive of three months' imprisonment.

Printers' Medical Aid.

The 44th quarterly meeting of the Printers' Medical Aid and Sanatoria Association was held at the L.S.C. offices, St. Bride street, when the chair was taken by Mr. W. Vandy, chairman of the committee, in the unavoidable absence of Mr. C.W. Bowerman, M.P., who is away with the labour delegation at

Washington.

Mr. Arthur O'Connor, secretary, presented an encouraging report, which showed that the receipts for the quarter were £1,237 15s. 111d., and the expenditure £965 14s. 4d., while at the end of the quarter the funds stood at £1,065 118. 1d., an increase of £596 over that Letters to the number of of a year ago. 2,084 were issued during the three months, showing a total issue since inception of 43,956 letters. Arrangements had been made, and were being extended, for the issuing of appliances by local makers, the latest arrangement being the supplying of spectacles at Enfield, Tottenham, Stoke Newington, and East Ham, in addition to the firms previously Convalescent homes had been referred to. in great demand and the association had taken full opportunity to send subscribers to the fourteen homes upon their list. hoped to increase that number next year. Good work was also being done in the provinces, and arrangements were being made for the supplying of appliances, etc., locally.

The report was adopted, and the meeting by a unanimous vote endorsed the Committee's proposal to increase the secretary's wage to £6 per week, and that of the

assistant to £3 per week.

A vote of thanks to Mr. Vandy for presiding concluded a very business-like meeting.

For one year, covering the period of reconstruction, printers' type and ink, together with printing and writing paper, and certain articles of stationery are to be admitted into Jugo-Slavia at the minimum tariff.

Anglo-Norwegian Trade.

Paper and Box-Board.

The conditions in the paper and box-board trade, as far as this country is concerned, have not been so flourishing during the last few weeks as might have been anticipated, says the Anglo-Norwegian Trade Journal, but, on the other hand, Scandinavian mills are now reaping the benefit of the great demand for paper, etc., from the overseas markets, practically all mills making paper and box-boards being fully booked up with orders for this year, and, in some instances, up to March and April of next year. In consequence of the many orders forthcoming prices have, in many cases, hardened considerably, other reasons for the rise in prices being the increased cost of raw materials, as well as labour. The Norwegian rate of exchange just now is more favourable, being little over the normal rate, whilst the Swedish rate is gradually improving, although it is not yet up to the normal standard of Kr. 18.16 per £. The following figures indicate approximately the prices quoted by the Scandinavian mills at the present time: - Unglazed and M.G. kraft, £48 to £48 ios. per ton, nett, f.o.b. Norwegian and Swedish ports, whilst for M.G. pure sulphite, in thin substance of d.c. 7 lbs., there has been quite a considerable advance in price, the ruling figure to-day being £65 per ton, nett, f.o.b., which shows an increase of about £4 per ton on the prices existing a month ago, and prices for heavier substances are proportionately higher. For greaseproof, ordinary unbleached qualities, mills are asking £58-£60 per ton, nett, f.o.b. shipping ports. For box boards also there is an increase in prices, and for friction glazed leather boards, recent quotations stand at £31 to £31 10s. per ton of 1,000 kilos., and for wood pulp boards, £26-£27 per 1,000 kilos, nett, f.o.b. All prices are based on normal rate of exchange.

Printers at Football.

Brymay met Rocklight in the London Business Houses League on Saturday at Leyton, winning by 3 goals to o. Lowe, Robinson and Stevenson scored for the home team in the first half. Fast and exciting play followed the change over. Brymay's outside left sprained his ankle and had to be carried off.

Bradbank (Bradbury-Wilkinson) beat Derrick Wanderers at Blackheath by 2 goals to 1. St. Clements Press beat Stills by 3 goals to 0.

THE cylinder press feeders of New York propose as a part of their new contract with the employers that members of the union shall not work in any shop not operating a standard cost finding system. Not a bad proposition.

Wages in the Paper Bag Trade.

At a meeting of the Paper Bag Trade Board (Great Britain) on Friday, it was resolved to fix general minimum time rates of 1s. 1²/₄d. per hour for male workers of 21 years of age and over, and of 8d. per hour for female workers, with lower minimum rates for male and female learners.

The Trade Board also resolved to fix a piece work basis time-rate of $8\frac{1}{2}$ d. per hour for female workers, the effect of which is to require that where a worker is employed on piece-work, each piece-rate paid shall be sufficient to yield, in the circumstances of the case, to an ordinary worker, not less than $8\frac{1}{2}$ d. per hour.

The Trade Board also resolved to fix overtime rates for male and female workers.

The Trade Board have notified the Minister of Labour of the minimum rates of wages fixed and have suggested that the rates fixed should become effective as from November 24th, 1919.

Subject to an Order by the Minister of Labour being made confirming the above rates, statutory notices embodying the decisions of the Trade Board will be sent to all employers in the trade.

Type-Set Stamps. — Recent Lithuanian postage stamps of crude type-set character remind one, says Mr. Fred J. Melville, of some of the rare old stamps of British Guiana and the Hawaiian Islands, which were printed in local newspaper offices. In the first Lithuanian stamps the setting is even simpler than in the Guiana and Hawaiian rarities; there is no ornamentation, just a simple type-set inscription, enclosed within a border formed of cyphers.

Master Rulers & Vellum Binders.

A Vigorous Branch of the L.M.P.A.

A dinner was held at the Talbot Restaurant, London Wall, on Saturday, November 1st, to commemorate the signing of peace, and the first anniversary of the formation of the branch, the chairman, Mr. T. J. Hunt, being host on the occasion for the wines, and Mr. J. Rissen and Mr. J. C. Lake kindly providing

the musical programme.

Over 50 gentlemen sat down to an excellent repast. After the toast of "The King," the CHAIRMAN proposed the toast of " L. M. P. A., and he gave an account of the inception and formation of the organisation and the negotiations with Mr. Lake which led to their being attached to the master printers as a branch. He described the work done by the committees in preparing the various schedules of prices, the time they had devoted to the work, and the harmony dis-The members had played on all occasions. benefited greatly by their work, and now a spirit of good fellowship and trust existed among them in place of the distrust and rivalry which previously obtained. The branch was a great success in every way, financially and otherwise. He referred to the arduous labours of the honorary secretary, Mr. Alexander Willmott, who was their representative on the Labour Committee and safe-Personally he was guarded their interests. proud of what had been done, and hoped that the good feeling shown that evening would always continue for their mutual benefit.

Mr. Johnson responded, and gave some further details of the foundation of the branch, also paying tribute to Mr. Hunt for his unceasing work and masterly chairmanship which had resulted in so successful an organisation, there being nearly 80 members, and to the hon, secretary and committee who had so unselfishly given their time and special ability for the common good of all of them. The great success of the branch had been talked about in the trade so freely that other special branches had come forward to join the parent society or to be affiliated; he cited the cases of the lithographers, the music printers and engravers, and quite recently the bookbinders, who all saw the advantages of the support of a large and powerful organisation, while further negotiations with other bodies were now being carried on. thanked them on behalf of the L. M. P. A. for the hearty manner in which they received the

MR. JOHN RISSEN proposed "Success to the Master Rulers and Vellum Binders Branch." He said he was glad to be present and to meet as friends those who in the old days they treated as rivals who should not be spoken to. He congratulated them on the good spirit prevailing that evening, which meant prosperity to them, instead of the old plan of cutting one another out. They were reaping great benefit from the work of the branch.

MR. HELEY replied, as an original member of the committee, and mentioned the fact that with the great number of meetings of the committee, there was never an absentee from them: all worked together in a labour of love.

Other toasts followed, and it was generally felt that a very pleasant and friendly evening had been spent with advantage to all the members. An excellent musical programme added to the harmony and success of the

hrisimas Card Trade.

There is no doubt that the war struck a severe blow at our trade in Christmas cards. However, the view held in some quarters that the Christmas card habit has gone never to return is doubtless exaggerated. There will be a considerable demand for cards this year, though perhaps less than just before the war. Speaking to a newspaper man the other day, a representative of Messrs. C. W. Faulkner is reported as saying: "The demand from the trade has been greater than we could meet. Prices will be from 2d. to 1s. retail." Patriotic cards are said to be quite out of fashion, while cards in good taste containing quotations from standard authors are in special favour.

Irish Printers Sued

At Omagh Quarter Sessions, William Garmany, engineer, Belfast, sued Messrs. S. D. Montgomery, Ltd., printers, Omagh, Belfast, to recover £5 12s. 6d. for work done.

The plaintiff's case, says the Northern Whig.

was that while one of his workmen was engaged in Omagh he allowed his man to remain to execute some engine repairs for The time sheet showing that the defendants. man had worked 27 hours had been signed by the defendants.

For the defence, Mr. H. M'Cartney, manager for the defendants, said when the time sheet was presented to him the total number of hours on it was 22, yet the actual time worked was about 13½ hours. He admitted signing

the time sheet for the 22 hours.

His Honour said the defendants' manager had affixed his signature to a document which he said was afterwards altered, but to maintain that position he would have to adjudge the plaintiff's man to be guilty of forgery. Defendants were bound by the document, and he could not release them. He gave a decree for £ 5 3s. 6d.

Typewriting machines are likely to be in great request with both English and Arabic lettering.

West & North=West London Master Printers.

Good Progress Reported at the Sixth Annual Meeting.

The sixth annual meeting of the Association of Master Printers of West and North-West London on Wednesday evening last week took the very agreeable form which pleased all who attended the preceding gathering in 1918. Again the members assembled at Slater's Restaurant in Oxford-street, where the brightness of the place and the arrangement of the al fresco tables were pleasing features. Mr. F. A. Perry, the able and energetic president, was in the chair, and there was quite a good gathering. After the coffee and refreshments had been disposed of to the accompaniment of music from below, the company settled down to the more formal proceedings of the meeting.

Mr. J. S. King, the hon. secretary, after presenting the minutes, which were adopted, submitted the sixth annual report of the committee.

The Year's Record.

Twelve months of nominal peace, said the Committee, finds the Association stronger than ever, falsifying the fears of those who thought that when the difficulties of carrying on during war-time and the constant need of advice and assistance had passed, much of the usefulness of the Association would lapse. New occasions bring new duties, and the peace problems confronting the printing trade are just as great as the different difficulties which had to be met during war-time, and it is generally recognised that the need for cooperation is greater than ever. The plan of holding alternate meetings in various parts of the district has met with a considerable measure of success, resulting, with the can-

vassing assistance of Mr. Johnson, the organiser from 24, Holborn, in an addition of over 50 to the membership during the year. There still remain many firms outside, and the Committee again press upon members the duty of personally inviting their neighbours to avail themselves of the advantages of membership, and of testifying to the benefits they have derived from it. The General Election which followed so quickly on the signing of the Armistice found the members of the Association, if not ready to undertake all the work incidental to it, at least prepared with a scale of charges which secured something like a reasonable remuneration for the work they were able to perform.

Good Work Acknowledged.

After referring to interchanges of visits between the district associations, and the value of thus coming into closer touch with one another, the report recalled the presentation to Mr. J. S. King, the Hon. Secretary, on his election to the Mayoralty of Ealing. The Committee expressed their gratitude to Mr. King for the efficient service he has continued to render the Association in the discharge of the secretarial work in spite of the exacting nature of his civic duties. Thanks were also offered to Mr. S. Sidders, Hon. Treasurer, and to Mr. W. J. Pollock, Vice-President.

The Committee placed on record their high appreciation of the way Mr. Perry has discharged the duties of President during the past year. He has entered whole-heartedly into the work, and his able guidance has largely tended to the undoubted success of the year's working and the substantial increase of

members. He has stimulated an increased interest in the work of the Association by holding a series of meetings in the different parts of west and north-west London, which have been well attended.

Standardisation of Paper,

The Committee have not lost sight of the scheme for the standardisation of paper. All important reforms fructify slowly, but there is evidence that the desired end is looming into Members were strongly recommended to continue to press the question of the standardisation on the central authority.

The report also mentioned an agreement, which was extensively signed, not to quote for or execute orders for advertising for which customers stipulated that the necessary paper should be provided by the advertiser.

Concluding, the Committee urged every member to take a more active part in the work of the Association, thereby relieving the executive of some of the burden they have cheerfully borne, and creating a broader basis of knowledge, interest and usefulness, upon which the Association can conduct its operations. Particularly every member is asked to make a point of attending the monthly meetings, so that non-members attending for the first time may rightly appreciate the strength and importance and popularity of the Association, and thereby be encouraged to swell the flowing tide which will ultimately sweep away the yielding barriers of mistrust and jealousy, and bring about a real brotherhood

of master printers. (Applause.) Mr. S. Sidders, the Hon. Treasurer, presented a satisfactory statement of accounts, which showed a substantial balance.

The President's Address.

The President, in moving the adoption of the report, thanked the officers, the committee and the members for the very loyal support they had given him during the last year. In many aspects the year had been a very difficult one. Recalling a prophecy he made that the propaganda meetings in the various districts covered by the Association could produce at least 50 members, he expressed gratification that the 50 had been reached and passed, and he hoped that during the year before them the work would be continued with a like gratifying result. Speaking of the price list which had been produced, he claimed it as a bulky offspring of a very useful little list which the committee of that Association had produced a year ago. The criticism had been levelled against it that it was a price list prepared by large printers for the use of smaller members of the craft. He wished to disabuse their mind on that point. It was quite true that the chairman of the committee which compiled the list was a large city printer, but it was equally true that the bulk of the members of that committee were small suburban printers, whose recommendations. he could assure them, had as much weight as it was possible to give them, and practically everything they suggested was embodied in the price list. Further, the list in draft was

submitted to all the local associations, and had been adopted by them with one or two modifications which were incorporated in the final list.

The Wages Demand.

Referring to the recent demand for an increase of 15s. by the unions, Mr. Perry expressed the hope that the Association would resist the demand. Quoting the case of Ethelred the Unready, who tried to buy off the Danes with doles, Mr. Perry expressed the hope that the Master Printers' Association would not endeavour to secure industrial peace by offering payments which would only meet with disappointment. It was the duty of every section of the community to bear the existing burdens and not try and put them on to the shoulders of a particular section. The time had come when further increases in wages should not be granted, nor should there be any further reduction in hours. Labour should endeavour to secure better conditions, not by higher pay, but by making the wages they now receive have greater purchasing power, which could be done by greater production. In this way would the nation's wealth be increased, the wages received would go further, and the community would be better off than they were to-day.

Major Fordyce Birch, secretary of the L.M.P.A., at the request of the President, offered a few observations, in the course of which he apologised that the amount of work which engaged their attention at 24, Holborn, did not permit of their devoting so much time to visitors as they would like.

Mr. W. J. Pollock, in seconding the adoption of the report, said he thought in that district they could look back with feelings of satisfaction that they had attempted some-thing and had accomplished something. He went on to speak of still more thorough organisation until they had every master printer within their ranks. As to the price list, he believed it would do a great deal towards putting their craft upon a proper and paying basis. Behind the price list was the greatest thing, the costing system, and if nothing else would put a little backbone into master printers, that would.

The report was then adopted unanimously.

Re-Election of President

Mr. Pollock moved that Mr. F. A. Perry be The association had re-elected president. been fortunate in having a number of splendid master printers as their presidents, but Mr. Perry had not been the least in the line. Hear, hear.) They were indebted to him for the very hard work he had put in on their behalf during the past year, and by his eloquent addresses he had assisted the whole craft. In these strenuous times, the committee felt it was well to have at the helm a man of Mr. Perry's experience, as under him there was no fear of the association going slack.

Mr. Scarsbrook seconded the resolution, and also paid a tribute to Mr. Perry's energy and ability. He had gone through all the reconstruction work, and his efforts at 24, Holborn had been well received.

The resolution was cordially carried.

Mr. Perry, in reply, said he would continue to do his best for the association and acknowledged the great assistance he had received from Mr. Pollock, who was an ideal vice-president.

On the motion of Mr. Perry, seconded by Mr. Langley, both of whom spoke in warm terms of Mr. Pollock's services, that gentleman was re-elected to the position of vice-

president.

Mr. Burt proposed Mr. J. S. King again as hon. secretary, and said that gentleman had proved himself equal to his name.

Mr. Philp seconded the resolution, which was carried unanimously, and Mr. King re-

plied.

On the motion of Mr. Jones, seconded by Mr. Searle, Mr. Sidders was re-elected hon.

treasurer

The re-election of Mr. Perry as the representative of the association on the council of

the L.M.P.A. was unanimous.

Mr. H. Searle was appointed publicity secretary, and the following members were appointed to the committee: – Messrs. H. W. Barnard, J. Hastie, J. W. Fowler, R. F. Hunger, J. E. Jones, W. J. Pollock, H. Searle, J. Taylor, G. F. Weston, F. E. Philp, and E. W. Wormold.

Mr. Hastie replied on behalf of the com-

mittee.

The Trade Barometer.

Mr. H. C. Hill, at the request of the chairman, then delivered a short address. He said the succe s of the past year was no surprise to those who knew the earnest and good business men who directed the affairs of that association. In their president they had been peculiarly happy and successful, and the fact that they were re-electing him and the officers, practically en bloc, proved that things were going well. Turning to the affairs of the trade generally, Mr. Hill said they could not say that the barometer was set fair. On the other hand, he was no pessimist as to the future. Referring to the demand for an increase in wages, Mr. Hill said he was looking for some evidence that the trade union leaders would realise the economic position of the trade. If they did they would know that they were very close to a line, a step beyond which would mean injuring the craft and all engaged in it. They must sooner or later come to the breaking point, and he was hoping that the trade unions would recognise that they could not go very much further. It ought to be brought home to the employees that if a product was made too expensive, that would inevitably reduce the demand for it, and that if they reduced the demand then unemployment would inevitably follow. He hoped that the common sense of the men as a whole would have sufficient weight to bring that side of the question home to the trade union leaders. All he could say was that their backs would soon be to the wall and then they would have to fight or go under.

Mr. A. D. Phelp (East and North-East London Association) extended greetings and

congratulations to the hosts on that occasion and urged that the printing craft should be raised to the dignity of being at the top of the tree.

The remainder of the evening was devoted to an excellent musical programme provided by the following: Messrs. Charles Game and Charles Winter, and Misses Louise Watson and Ida Williams.

Printers' Charlty Boxing.

The National Society of Operative Printers and Assistants are organising a "Big Boxing Tournament" at The Ring, Blackfriars-road, on Thursday evening, November 27th, by permission of Mrs. Dick Burge. The object of the tourney is to provide funds to erect a memorial home to perpetuate the memory of the members who gave their lives for their country in the Great War. This will include a sanatorium to fight the scourge of consumption, a convalescent home, and a home for aged members and their wives, who may be enabled to spend the evening of their lives in comfort without the help of charity.

The success of the venture is already assured, thanks to donations of £1,000 from its first president, Viscount Northcliffe, £1,000 from Lord Burnham, £1,000 from Sir Edward Hulton, £1,000 from Sir George Riddell, £1,050 from Sir Samuel Waring, while from other quarters, chiefly from the working class, several hundred pounds have been received. The Federation of Master Printers are also in favour of the scheme, and have appointed a committee to draft an appeal for support to

the general printing trade.

Full particulars may be obtained of the Hon. Sec., W. Kelly, Caxton House, 26, Blackfriars-road, S.E.I.

American News-Print Shortage.

A report from New York states that American newspapers, in face of the shortage of news-print, are urged to make an immediate reduction in the size of their publications and radically to increase their advertising rates.

At a special meeting of the American Newspaper Publishers' Association, the President, Mr. Glass, declared that advances in advertising rates were necessary "to hold back the sluice of advertising that is poured into our offices and bids fair to continue next year."

REUTER announces three death sentences as a result of the trial of the persons connected in the publication and production of the Gazette des Ardennes, the pro-German newspaper which was published in Northern France during the German occupation.

Stationers' Social Society.

Eighth Annual Autumn Dinner,

The Stationers' Social Society has safely weathered the difficulties of the war and is again enjoying those pleasant gatherings which enable paper men to meet one another under less strenuous conditions than obtain in the work-a-day world. Stationers are undoubtedly sociable beings, and they have warmly supported the happy idea of the founders of the Society. Now that the horrors of war are behind us, there is a new opportunity to extend the membership and the usefulness of the institution.

The eighth annual autumn dinner of the Society was held on Friday at Gatti's Restaurant, Strand, London, and it was a very delightful and successful function, even surpassing those which have preceded it. The ornate hall at Gatti's was a scene of great brilliance on Friday night, and Mr. W. J. Whyte, the President, directed the proceedings in his usual agreeable manner. Considerably over one hundred gentlemen attended the dinner, and a happy and genial company they were.

Admirable arrangements had been made for the entertainment of the members and visitors by Mr. R. K. McKenzie and Mr. A. E. Mist, the whole affair being carried out with good taste and excellent judgment. Not only was the cuisine good, but there followed a musical programme of many attractions, while the toast list was kept within the right proportions. There were only three toasts—
"The King," "The Visitors," and "The President.

In asking Mr. McKenzie to propose "The Visitors," Mr. Whyte remarked upon his recent return from the war, and the Hon. Secretary was warmly greeted on rising to speak.

The Visitors.

Mr. McKenzie expressed the pleasure of the committee at seeing so many members and visitors present. The large attendance, he said, was a striking testimony to the regard in which the President was held by a wide circle of friends. The Hon. Secretary mentioned that the Stationers' Social Society was a purely social affair, having no axe to grind and few calls upon its members. He often thought that large and representative as the Society was of the trade with which they were connected, he felt that it could be still more representative if the visitors who were present that night joined their ranks. The members would welcome their help in pushing the machine along and in promoting the amenities of their trade.

Mr. J. L. Greaves responded on behalf of the visitors, and recalled the absence of their old friend, the late Mr. E. Bradshaw, to whose memory he paid a fitting tribute. He went on to say that these gatherings helped them to forget the trials and difficulties of everyday

life. Speaking of the President, he offered Mr. Whyte best wishes for his future, remarking that, although Mr. Whyte was making changes, he did not think he would be lost to the paper trade. The speaker concluded by wishing success to the Stationers' Social Society.

Tribute to the President.

Mr. W. C. Corke proposed the toast of the president, and remarked upon the affectionate regard that was entertained for Mr. Whyte throughout their great trade. He thought there was more than ordinary interest in the occasion of their gathering that night in having Mr. Whyte to preside over them. Not only was it the first gathering of that kind which had taken place since the signing of Peace, but it was fraught with added interest to every friend of Mr. Whyte-and each member of the society deemed it a privilege to be called his friend-because Mr. Whyte was now bringing to a close, perhaps only a temporary close, a very long and honoured association with the paper trade. (Hear, hear.) He thought very few men in that room could claim such a distinguished connection with the trade as their president. It was 45 years ago since Mr. Whyte first became connected with it. He could claim a practical experience in a paper mill, and an almost unique knowledge on the export side of the papermaking industry. Mr. Corke could hardly imagine that there was a man in the trade with such a profound experience of it, nor one who did so much in the pioneer work of their export trade as their president, who could also claim 30 years unbroken association with one firm, which was known not only in Great Britain, but throughout the civilised world and wherever paper was used and dealt in. He meant the firm of Messrs. Edward Lloyd. Ltd. (Applause.) Mr. Whyte had been a director of that concern since it was turned into a public company, and now, after his long and active association with the trade, he deemed it advisable to take a well-earned rest, while he was still in possession of all the vigour of his energies. Mr. Corke felt he would be voicing the sentiments of every member of the society when he expressed to Mr. Whyte their very hearty good wishes to him in his new sphere, whether it be the enjoyment of golf or in some new form of commercial activity, in which he (Mr. Corke) rather suspected Mr. Whyte would eventually find himself. They all hoped Mr. Whyte would live long and enjoy whatever sphere of activity he might take up. (Loud applause.) The toast was drunk with great heartiness,

followed by musical honours and cheers.

A Democratic Society.

The President, whose rising was the signal for another ovation, thanked Mr. Corke for his kind observations, and the company for the manner in which they had received them. He apologised for the fact that his health had not allowed him to take that active part in the affairs of the association which he would have liked to have done. Describing the democratic character of the society, Mr.

Whyte said they found round those tables representatives of every class of paper rubbing shoulders with one another. They could see the maker or representative of "strong linen in the person of their secretary, and they could fancy "Mr. MacEsparto" complaining fancy of the high price of rags. Then they passed from the representative of the pure esparto paper, and came down possibly to the pure sulphite papers, whose representative sat beside Mr. Henry, who made, perhaps, what might be called "browns"—(laughter)—and they could hear "Mr. Brown" say, "Trade is terrible. You know, we were all right until you took our material to make your pure sulphite papers, and now we cannot get anything." Then they came to Mr. Raynham and other people, and so to the common "news," although he did not know why "news" at 4d. per lb. should be termed common. They again complained of the esparto man taking all their mechanical wood to make pure esparto papers in Scotland. (Laughter.) Finally, they reached waste paper, and found their friend Mr. Lendrum taking hold of the scraps of waste. However, Mr. Lendrum thrived very well on a strong constitution, and he was now going into the wholesale stationery trade, in which he (Mr. Whyte), wished him success. plause.) Referring in more serious terms to the recent tribute of silence, the President remarked that the calls of humanity were greater than the calls of antagonism, and the Stationers' Social Society had a great deal to do in furthering that cause. They deal to do in furthering that cause. must have a spiritual feeling towards the development of a social and democratic brotherhood throughout the world, and they could help in their own little way; because the League of Nations called on all for assistance in the cause of brotherhood and comradeship.

Mr. Whyte concluded by remarking that he was leaving the office of president that night. He was afraid he had done little for the society, because he was not gifted with eloquence, and he confessed that in the chair he did not enjoy those social functions so thoroughly as he would do in ordinary circumstances and as he hoped to do in the future. Although he was retiring from his own firm at the end of the year, though there might be some little association with it afterwards, he was not going to retire from the Stationers' Social Society. (Cheers.) He could only thank them for the kind conconsideration they had given him during his term of office.

Between the speeches, the following captivated the company with a varied entertainment which was thoroughly enjoyed by everybody: Misses Ethel Royston (contralto); Madeline Warner ('cello); Gwen Alban; and Messrs. Cedric Walters (baritone); Walter Walters (humorist); Eric Ross; and Herbert Townsend (piano).

Among those who supported the President at the dinner were Messrs. Mason, F. L. Cayzer, E. H. Raynham, E. S. Lendrum, W. C. Corke, J. C. Lake, C. T. Corke, L. J. Brown, H. H. Brown, A. E. Brown, W. A. Kershaw, J. A. Kidd, W. E. Green, P. S. Porteous, H. Spald-

ing, A. E. Brown, W. H. Horsburgh, C. W. Davidson, F. H. House, E. J. Hart, F. L. Talley, A. L. Panton, J. S. M. Stewart, H. Back, G. S. Weeks, A. E. Mist, C. D'Oyley Mears, W. G. McCombie, M. Henry, H. Ling, G. Thomerson, R. L. Jeffery, J. S. Blagden, S. T. Griffin, J. F. Whitburn, S. A. Woodroffe, G. H. Wilkinson, W. H. Collins, M. Hannah, S. Stacey, A. J. Rae, W. J. Cumming, A. F. Kidd, W. M. Thom, A. Cook, E. Barton, J. H. Lowe, A. Heath, R. B. Ferguson, J. L. Greaves, F. J. Walden, A. E. Fidler, H. F. Aguilar, S. J. Green, W. Heaton, A. Griffiths, F. E. Cooper, F. E. Williams, T. G. Larkin, A. E. Bishop, J. S. Ellwood, J. P. Crane, Ridley, W. H. Day, M. Relph, J. Price, G. R. Iago, Lewis, W. H. Baldwin, R. E. Wedgwood, J. W. Taylor, J. Atkins, H. Haxton, W. Bass, T. G. Edwards, T. C. Dyer, and R. K. McKenzie (Hon. Secretary).

The Art of Typography.

The success of Mr. Jacobi's popular work "Printing: A Practical Treatise on the Art of Typography," has been such that edition after edition has been called for, and it is now announced that a sixth edition is in the press, and will shortly be ready. The new issue is brought up to date, and revised in all particulars relating to new machinery and appliances, and forms an indespensable handbook for practical printers who desire to keep abreast of the times in all matters appertaining to their profession. Mr. Jacobi's technical knowledge of the various processes associated with printing is extensive and peculiar. To-day there is no man better fitted for the task of preparing such a text-book for the trade in which he has passed his life. That the new issue will be a success goes without saying, and we may express the hope that still more editions will be called for. The book is published by Messrs. G. Bell and Sons, Ltd., at 10s. 6d. net.

Printing Tenders.

The following tenders are open:

BIRMINGHAM.—By H.M. Stationery Office for printing the lists and registers of electors for the Parliamentary and Municipal Borough of Birmingham. Contracts are intended to cover a period of five years. Forms of tender, etc., from Mr. F. H. C. Wiltshire, registration officer, the Council House, Birmingham.

St. Helens, Lancs.—For printing the year book for the year 1920, for the St. Helens Corporation. Conditions, etc., from Mr. W. H. Andrews, Town Clerk, Town Hall, St. Helens.

WESTMINSTER.—For printing lists and registers of electors, etc., for the Parliamentary Borough of Westminster. Application for tender forms to the Registration Officer, City Hall, Charing-cross-road, W.C.2.

THURSDAY, NOVEMBER 20, 1919.

Current Topics.

Newspaper Difficulties.

British printers and publishers of newspapers should find some consolation in the comparison of their own difficulties with those of Paris and Berlin. A serious crisis is now threatening the German newspaper world. While the cost of every factor of production has increased enormously, circulation has been depressed. For the provincial press the position is calamitous. Several papers have already suspended publication, and many others will have to follow suit. The Berlin Press is also in a very difficult position. Many of the better-known journals are running at a loss equal to pre-war profits. Some

rely on party funds; others, like the Berliner Tageblatt and the Vossische Zeitung, are owned by big publishing firms which can afford a temporary loss in one of their enterprises; while yet others have only been saved by the generosity of private supporters. Such an artificial existence cannot be indefinitely prolonged. Some of the papers will inevitably disappear; most of them will reduce the size and number of editions. It is stated that negotiations are proceeding for the amalgamation of various publications as the only chance of even a nominal continuation.

A National Printing Trade Mark.

It would seem that a good deal of importation of printed matter into this country is being carried on in more or less direct contravention of the spirit, if not the letter, of the Merchandise Marks Act. In addition to the expedient of printing the statement of origin on the extreme margin of a sheet of cards or the like, so that it can be removed by trimming, use is being made of marks so minute and undistinctive as to be practically valueless for their purpose. Some British printers feel that means should be devised to remedy the present state of affairs, and the Federation of Master Printers is accordingly taking the matter up with the Board of Trade. The Federation suggests that perhaps the best way to meet the difficulty would be for every country to adopt a standard "Mark of Distinction," or national trade mark, distinctive enough to show clearly the country of origin, the use of which mark would be made compulsory upon printers. We understand that the Federation (24, Holborn, London, E.C.1) would be glad to receive from those interested any practical suggestions with regard to this important point.

Printing Without Compositors.

ONE interesting outcome of the deadlock between printing employers and employed in New York, has been the attempt, while the "comps" were mostly on strike or locked out, to print without their services. This recalls the many attempts made in the past to dispense with composition by facsimile reproduction of copy—which attempts, however, seem all to have failed completely as regards practical commercial production. There have now been received in this country copies of the *Literary Digest* for October 18th. This issue, comprising over a million copies, of 80 pages each, was printed entirely from photoengraved plates. All the text was first type-

written in columns, and then photographed. While the method is, of course, not a new one, this instance of its use on so large a scale is probably unique. In order to avoid breaking its record of having appeared regularly for 73 years without missing a number, the Dry Goods Economist has been issued in mimeograph form. Both these expedients, however, must be regarded merely as emergency makeshifts.

Personal.

MR. PERCY SQUIRE, managing director of Messrs. John Kidd and Co., Ltd., printing ink mahufacturers, is, we are pleased to hear, recovering from the effects of his recent serious operation.

MR. H. V. KEELING, correspondent in Russia of the Westminster Gazette, has been arrested on a charge of repeated breaches of the laws of Soviet Russia, and condemned "to be kept in prison until the end of the war with Imperialist England."

MR. J. J. KELIHER, President of the London Master Printers' Association, has recovered from his indisposition.

ALTHOUGH the presentation portrait of Mr. R. J. Lake, formerly secretary of the L.M P.A., which was being painted by Mr. Hacker, had been finished before the sudden death of the artist last week, suggestions had been made of some alterations, which, however, have not been effected.

THE RT. HON. LORD ASKWITH, K.C.B, will distribute the prizes, medals and certificates at the annual prize giving and concert of Pitman's School, to be held at the Royal Albert Hall, London, on December 12th, at 7.30. The chair will be occupied by Sir Robert A. Hadfield, Bart., F.R.S.

MR. DAVID Low, of the Sydney Bulletin, has joined the staff of The Star as its cartoonist. His caricatures have been one of the Bulletin's most telling features.

MR. H. BARRETT GREENE, editor of the Staffordshire Sentinel, has been elected "Mayor" of the "Ancient Corporation of Hanley" at the 137th celebration of the "Venison Feast," a local celebration at which the drinking of a "yard" of ale is the qualification for membership.

MR. FRITZ HENRIKSSON, a well-known Swedish journalist who has spent some time in London, was entertained to dinner by his friends in London previous to leaving for Sweden in order to take up his new duties as Chief of the new Press Department of the Swedish Foreign Office.

MUYOKO KOBASHI, lady editor of the Tokio Women's Weekly, is coming over here to study English journalism.

A MR. F. J. HARRIES has written a book to prove that Shakespeare was a Welshman.

LORD GREY of Fallodon, Sir F. E. Younghusband and Professor F. S. Boas have been elected Fellows of the Royal Society of Literature.

In its lengthy existence the City Guild of Vintners has made only two honorary Freemen. The first was the late Duke of Albany, and the second is Sir Horace Marshall, on whom the distinction was conferred on Thursday.

MR. THOMAS M. ATHEY, of Gosforth, New-castle-on-Tyne, for many years sub-editor of local newspapers, has died at the age of 74.

On his retirement from the Chairmanship of the St. Bride Foundation, after sixteen years' service in that capacity, Mr. C. J. Drummond, M.B.E., J.P., has been presented by his fellow. Governors with a beautifully illuminated address to mark "the able and conspicuous services he has rendered to the Foundation, not only during his sixteen years tenure of office as Chairman, but during the whole period of his service as a Governor since the Foundation was instituted." A life size portrait of Mr. Drummond has also been hung in the Board Room.

The Late Mr. E. G. Moyce.

At the funeral of the late Mr. E. C. Moyce, which took place on Monday at Ladywell Cemetery, the high esteem in which Mr. Moyce was held in printing circles was evidenced both by the representatives present and the floral tributes, of which there were many. The firm of Messrs. Odhams was represented by the managing director, Mr. J. S. Elias, and also by members from every department of the house, namely, Messrs. Ernest Smith, G. W. Clark, F. H. Coleman, W. H. Babbage, and L. Goodwin (office,) Messrs. G. Phillips, G. Armstrong, B. Troke, A. Cannell and G. Brockman (composing), A. E. Wood (foundry), J. Rawlings (warehouse), C. E. Franklin (reading), G. Garbett (electrical), W. Reed (engineering), and M. Pyne, G. Martin and T. Daniels (machine). The Printers Managers' Association was represented by Messrs. E. H. Berryman (president), A. E. Jarvis (vice-president), J. C. Pugh (trustee), C. Durston (treasurer), G. Terry, F. J. Caine, W. W. Curtis, S. A. Dawson, W. H. De Wilde, W. H. Gill, C. J. Gray, J. J. Leoche A. Spring W. H. Gill, C. J. Gray, J. J. Jacobs, A. Spring, H. Summerfield, H. Coombs, H. W. Jackson, B. C. Albert, H. F. Bassett, W. C. Davenport, and J. J. Smith.

DIVIDENDS AND REPORTS.

STAR PAPER MILL Co.—The report for the half-year ended October 31st last shows a profit of £23,060, which added to the amount brought forward makes a disposable balance of £38,946, from which has been transferred £10,000 to reserve fund. The directors recommend the payment of the following dividends, namely:—3s. per share, less tax, on the Preference shares, and 5s. with a bonus of 5s. per share, on the Ordinary shares, amounting to £13,632, leaving a balance of £15,314 to be carried forward.

NEW COMPANIES.

"FINANCIAL REPORT" REGISTER OF INVESTORS, LTD.—Registered with a capital of £1,000, in £1 shares, to acquire copyrights, to publish books, newspapers and journals, either by subscription or otherwise, to compile a register of investors, etc. The subscribers are J. H. Harvey and F. George. Private company. The first directors are F. George, J. B. Watson, J. H. Harvey (managing director), R. Wilkinson, P. R. Johnstone and A. H. Johnson. Registered office, 26, Brownstreet, Manchester.

Monarch Music Publishing Co., Ltd.—Registered with a capital of £5,000, in £1 shares, to take over the business carried on by L. M. Rackham, A. F. Hartridge and T. Woodside as the Monarch Music Co. The first directors are L. M. Rackham, A. F. Hartridge and T. L. Woodside.

GUARDIAN PUBLICATIONS, LTD.—Registered with a capital of £10,000, in £1 shares, to take over as from July 1st, 1919, the business of newspaper proprietors and publishers carried on at 29, King-street, Covent-garden, by the Guardian Newspaper, Ltd., and to enter into an agreement with W. J. B. Odhams. The subscribers are W. J. B. Odhams and M. C. Sharp. Private company. The first directors are W. J. B. Odhams and D. W. Odhams (both directors of Odhams, Ltd.) Registered office, 29, King-street, Covent-garden, W.C.

BRITISH METAL PRINTING Co., LTD.—Registered with a capital of £10,000, in £1 shares (6,000 7½ per cent. cum. pref.), to carry on the business of metal printers, printers, stereotypers, lithographers, engravers, die sinkers, etc. The subscribers are W. Rigby, T. Rigby, A. Rigby and W. Brown. Private company. The first directors are W. Rigby, T. Rigby, A. Rigby and W. Brown. Registered office, Britannia Works, Ormond-street, Burv.

EDUCATIONAL AND METAL SUNDRIES, LTD.—Registered with capital of £3,000, in £1 shares, to take over the business carried on at 98, Mott-street, Birmingham, as "Charles Smith," to carry on the business of manufacturers, factors and dealers in stationers' sundries, drawing sets, school sets, compasses, novelties, toys and fancy goods, etc., and to enter into an agreement with G. V. Stringer, The subscribers are G. V. Stringer, W. H. Berry, and H. de W. Shorthouse. Private company. The first directors are G. V. Stringer, W. H. Berry, and H. de W. Shorthouse. Registered office, 98, Mott-street, Birmingham.

COLLINSON AND SONS' BILLPOSTING Co., LTD.—Registered with a capital of £5,000, in £1 shares, to acquire the business of billposting carried on by the Corporation of Preston, and to adopt an agreement between the Mayor, Aldermen and Burgesses of the Borough of Preston of the one part, and W. H. Collinson of the other part. The subscribers are W. H. Collinson, J. E. Collinson, W. H. Collinson, junr., and F. Collinson, Private company. The first directors are W. H., J. E., and W. H. Collinson, junr., and F. Collinson. Registered office, Preston.

Webster's Publications, Ltd. — Registered with a capital of £100,000, in £1 shares, to take over the goodwill of the sporting paper known as the Racing and Football Outlook, and of Sports Pictures, the Week End Special, and other associated publications, and the businesses connected therewith, carried on by A. Webster, at 70 and 79-83, Temple-chambers, Temple-avenue, E.C. The subscribers are E. Winn, and E. A. H. White. Private company. The first directors are A. Webster (permanent governing director and chairman), G. F. Allison, and J. J. Brebner. Registered office, 70 and 79-83, Temple-chambers, Temple-avenue, E.C.

CORFE AND SECCOMBE, LTD.—Registered with a capital of £6,200, in 6,000 ordinary shares of £1 each, and 4,000 deferred shares of 1s. each, to acquire the business carried on by a company of the same name, at 22-4, Heneage-lane, E.C., and to carry on the business of printers, lithographers, publishers, stationers, etc. The subscribers are R. C. H. Corfe, and E. A. J. Seccombe. Private company. Permanent director, R. C. H. Corfe. Registered office, 22-4, Heneage-lane, Bury-street, E.C.

JOHN W. HANNAY AND Co., LTD. — Under this title Messrs. John W. Hannay and Co., paper stock merchants, etc., 54, James-street, Bridgeton, Glasgow, have registered their

business as a private company, with a capital of £30,000, in £1 shares. The subscribers are J. W. Hannay and A. K. Jackson, paper stock merchants, 54, James street, Bridgeton, Glasgow.

COMPANY NOTICES, etc.

Notice is given that a general meeting of the Welsh Church Press and Printing Co., Ltd., will be held at Lampeter, Cardigan, on December 11th, for the purpose of having the liquidator's accounts, showing the manner in which the winding-up has been conducted and the property of the company disposed of, laid before such meeting.

BANKRUPTCIES. etc.

Re CHARLES STEEL, formerly trading as Steel, Brendon and Co., printers' agents, Lloyd's-avenue, Fenchurch-street, E.C. bankrupt applied on November 18th at the London Bankruptcy Court for an order of discharge. He failed in August, 1911, with provable debts £1,307 11s. 5d., and no assets whatever. The Official Receiver reported that the bankrupt entered into partnership with Charles Brendon, and they traded together until 1908, at High-street, Clapham. In that year Brendon withdrew from the firm and the bankrupt removed the business to the City. Being in want of funds, he borrowed from his traveller, Mr. E. S. Edwards, at intervals, sums amounting to £600, and in October, 1910, at the latter's request, he gave him as security a charge over the book debts. A Receiver was appointed in March, 1911, who thereupon commenced to collect the book debts; shortly afterwards the landlord distrained for rent and these bankruptcy proceedings followed. Bad debts and loss on trading were the causes assigned for the failure. The application was opposed by the Official Receiver on the grounds of (1) insufficiency of assets to equal 10s. in the f on the amount of the liabilities; (2) trading with knowledge of insolvency; and (3) contributing to the bankruptcy by rash and hazardous speculation, the applicant having lost £300 on the Stock Exchange. Mr. Registrar Mellor upheld the report and suspended the discharge for two years, taking into consideration the fact that the failure dated back to 1911.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records. - Ed.]

ENGLAND AND WALES. PARTNERSHIPS DISSOLVED.

The partnership between Harry Godwin Chance, Harriett Bland, George Heighington

Bland and Llywelyn Bland, carrying on business as newspaper proprietors, publishers and printers, at St. John's-lane, Gloucester, under the name or style of "Chance and Bland," has been dissolved by mutual consent as from September 30th last so far as regards Llywelyn Bland. All debts due and owing to or by the late firm will be received or paid by the remaining partners, who will continue to carry on the business under the same style or firm as heretofore.

The partnership lately subsisting between Herbert Brown and Thomas J. Canavan in the city of Cardiff, trading as the "Technical Tracing and Printing Co.," is dissolved by mutual consent. All debts due to and owing by the late firm will be received and paid by Thomas James Canavan, who will continue to carry on the business under the present style of the Technical Tracing and Printing Company.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

Trade Notes.

EXCEPT under licence, type metal, linotype metal and strawboard, may not be imported into Australia.

LADY SAMUEL, wife of Sir Marcus Samuel, has presented to Maidstone Museum her collection of Baxter prints, numbering 250.

A copy of the York Missal, dated 1517, has been sold at Sotheby's for £200. Only eight other copies are known to exist, of which six are in institutions.

THE Bournemouth Visitors' Directory remarks that election literature issued by a Labour candidate for local municipal honours, bore the imprint of a Midland printer.

ONE of the best known citizens of Leeds, Mr. Fred R. Spark, died on Sunday, at the age of 88. An experienced journalist, Mr. Spark founded and owned the now defunct Leeds Express.

It is understood that the directors of the Blackpool Gazette and the Blackpool Herald have entered into an agreement by which they will combine and issue one paper three times per week.

NEWSPAPER LIBEL ACTION. - The four libel actions, brought against the Daily News, Ltd., by Mr. Austen Chamberlain (Chancellor of the Exchequer), Mr. Walter Long (First Lord of the Admiralty), Sir Eric Geddes (Minister of Transport), and Sir Auckland Geddes (President of the Board of Trade), were settled last week, on apologies and payment of 1,000 guineas to charities, as well as the plaintiffs' costs.

"WINTER'S PIE, 1919."—That ever-welcome annual, "Winter's Pie," will be published on Monday, December 1st, and, judging by the list of eminent authors and artists who have contributed to its pages, it will undoubtedly come as a cheery gleam. There are stories by Harry Graham, Sir Henry Lucy, W. Pett Ridge, G. B. Burgin, Geo. R. Sims, Keble Howard, William Le Queux, Hamilton Fyfe, . D. Symon, Arthur Lambton, and A. A. Thomson. Drawings by eminent artists are a feature of the issue.

THE death of Mr. H. M. Dorling, Clerk of the Course at Epsom and Brighton, recalls the fact that the deceased was a grandson of Mr. William Dorling, who established the first printing business in Epsom in 1821, and who shortly afterwards began the publication of Dorling's Race Card, which has been printed ever since by the Dorling family. In the time of Mr. Henry Dorling the Race Card was printed for many years at the Grand Stand Buildings, and reference to this is made by Charles Dickens, in an article he wrote for Household Words in 1851. In addition to his business connected with racing and his printing works, he was a wholesale paper merchant and had offices in London.

THE death has occurred suddenly of Mr. Thomas Olman Todd, at Hampstead. Mr.

Todd, who was a son of the late Mr. J. D. Todd, printer, Sans-street, Sunderland, became assistant editor of the Freemason.

THE death is announced of Mr. James Edward Smettem, aged 64, who was librarian at the Newcastle Chronicle office.

Mr. Samuel Perry, who was for a good many years on the printing staff of the $\overline{D}aily$ Chronicle, has died somewhat suddenly at his residence in Westminster-bridge-road.

THE S.P.C.K. intend shortly to publish a new monthly journal with the title: Theology: Monthly Journal of Historic Christianity. The editor will be the Rev. E. Gordon Selwyn, lately Warden of Radley.

THE death has occurred at Bo'ness of Mr. Wm. Greig Livingston, partner of the firm of Messrs. Strachan and Livingston, proprietors and publishers of the Fife Free Press and Kirkcaldy Times, at the advanced age of 82.

BINDERS AND A SLIDING SCALE.—The Federation of Master Printers met the Bookbinders in conference yesterday (Wednesday), when the Binders' application for a 44-hour week and an increase of wages was discussed. At the last conference, the Federation submitted an offer of a sliding scale, and this the Bin lers agreed to consider.

MILLER AUTOMATIC FEEDER.-A striking success has attended the "at home" which the Lanston Monotype Corporation, Ltd., arranged at Birmingham for the Miller Automatic Feeder. In the first week 20 machines were sold, and the exhibition at Birmingham bids fair to be far more successful even than the Bristol display, which is saying a great deal.

To the number of printer mayors mentioned in our last week's issue must be added the name of Alderman Thomas Rothwell, now Mayor of Bury. Mr. Rothwell, who is a native of Bury, served his apprenticeship to a local letterpress printer, and was later a journeyman at the office of the Radeliffe Observer. He is chairman of the Bury Master Printers' Association.

N. S. O. P. AND A.—The ink and roller section has reached a provisional settlement as to wages. Four grades are established according to work, the wages being: Grade I, £3 175.6d.; Grade 2, £3 75. 6d.; Grade 3, £3 3s.; Grade 4, £2 175. 6d. The rates for vanmen vary according to weight of van from £2 17s. 6d. to £3 14s. An increase has also been granted to boys and girls.

Offer to Buy "Financial Times."—Shareholders of the Financial Times have received from the secretary a circular setting forth an offer that has been made for the purchase of the preference and ordinary shares of the company by Messrs. W. E. and J. G. Berry, proprietors of the Sunday Times. To the preference shareholders the offer is 16s. 3d. per share, and for ordinary shares £2 8s. 6d. each. These terms are conditional on the acceptance by the holders of 125,000 of the preference and (or) ordinary shares.

THE Stationery Office, finding Harrow is in the London area, and subject to the payment of London rates, are said to have abandoned the idea of setting up a printing plant there and to have decided upon Camberwell instead.

READERS' RE-UNION.—The members of the Whitefriars Press, Tonbridge, reading staff met at the Hare and Hounds Hotel, Bidborough, to celebrate the return of the exservice members. After an enjoyable dinner, Mr. Fursland proposed "Our Returned Members," who were accorded a hearty welcome.

L.S.C. PIECE SCALE.—The London Society of Compositors' proposals for a revision of the piece rate for book, general and weekly newspaper composition is coming under consideration by the London Master Printers' Association. The proposals include the merging of the present war bonus in the price per 1,000, an allowance based upon the reduction of hours to 48, an alteration of the method of adjusting the variations of price paid for larger and smaller sizes of type, and sundry other matters. Such proposals as affecting machine composition are now being dealt with, and a committee is to sit to consider the effect of these suggestions upon hand composition prices.

PHOTOGRAPHIC RAW BASE PAPER.—In a resolution forwarded to the President of the Board of Trade relating to industry during

the reconstruction period and the removal of restrictions, the Federation of British Industries mentions photographic raw base papers as among the industries which say they have suffered particularly from German competition in the past and anticipate similar competition in the future. This industry also considers that it comes within the definition of a key industry.

EMPLOYMENT IN THE ALLIED TRADES.—In the paper, printing, and bookbinding trades generally, employment during September was about the same as in the previous month. It was not so good as in September of last year. With letterpress printers employment remained good on the whole. The usual amount of overtime was worked in London, and in the provinces a little overtime was occasionally reported. In the lithographic printing trade the state of employment was good, and there was a slight improvement in the provinces. Employment in the bookbinding trade further improved in September, and from several provincial centres it was reported as good, a little overtime being worked. In London it remained only fair, and some short time was reported. In the paper trade employment remained good on the whole, and in one or two instances a shortage of skilled labour was reported. A few mills complained of difficulty in obtaining coal, and the railway strike resulted in some mills being closed on this account.

THE death has occurred at Bo'ness of Mr. Wm. Greig Livingston, partner of the firm of Messrs. Strachan and Livingston, proprietors and publishers of the Fife Free Press and Kirkcaldy Times, at the advanced age of 82.

BINDERS AND A SLIDING SCALE.—The Federation of Master Printers met the Bookbinders in conference yesterday (Wednesday), when the Binders' application for a 44-hour week and an increase of wages was discussed. At the last conference, the Federation submitted an offer of a sliding scale, and this the Bin lers agreed to consider.

MILLER AUTOMATIC FEEDER.—A striking success has attended the "at home" which the Lanston Monotype Corporation, Ltd, arranged at Birmingham for the Miller Automatic Feeder. In the first week 20 machines were sold, and the exhibition at Birmingham bids fair to be far more successful even than the Bristol display, which is saying a great

To the number of printer mayors mentioned in our last week's issue must be added the name of Alderman Thomas Rothwell, now Mayor of Bury. Mr. Rothwell, who is a native of Bury, served his apprenticeship to a local letterpress printer, and was later a journeyman at the office of the Radcliffe Observer. He is chairman of the Bury Master Printers' Association.

N. S. O. P. AND A.—The ink and roller section has reached a provisional settlement as to wages. Four grades are established according to work, the wages being: Grade 1, £3 175.6d.; Grade 2, £3 75. 6d.; Grade 3, £3 35.; Grade 4, £2 175. 6d. The rates for vanmen vary according to weight of van from £2 17s. 6d. to £3 14s. An increase has also been granted to boys and girls.

Offer to Buy "Financial Times."—Shareholders of the Financial Times have received from the secretary a circular setting forth an offer that has been made for the purchase of the preference and ordinary shares of the company by Messrs. W. E. and J. G. Berry. To the proprietors of the Sunday Times. preference shareholders the offer is 16s. 3d. per share, and for ordinary shares £2 8s. 6d. each. These terms are conditional on the acceptance by the holders of 125,000 of the preference and (or) ordinary shares.

THE Stationery Office, finding Harrow is in the London area, and subject to the payment of London rates, are said to have abandoned the idea of setting up a printing plant there and to have decided upon Camberwell instead.

READERS' RE-UNION.—The members of the Whitefriars Press, Tonbridge, reading staff met at the Hare and Hounds Hotel, Bidborough, to celebrate the return of the exservice members. After an enjoyable dinner, Mr. Fursland proposed "Our Returned Members," who were accorded a hearty welcome.

L.S.C. PIECE SCALE.—The London Society of Compositors' proposals for a revision of the piece rate for book, general and weekly newspaper composition is coming under consideration by the London Master Printers' Association. The proposals include the merging of the present war bonus in the price per 1,000, an allowance based upon the reduction of hours to 48, an alteration of the method of adjusting the variations of price paid for larger and smaller sizes of type, and sundry other matters. Such proposals as affecting machine composition are now being dealt with, and a committee is to sit to consider the effect of these suggestions upon hand composition prices.

PHOTOGRAPHIC RAW BASE PAPER.—In a resolution forwarded to the President of the Board of Trade relating to industry during

the reconstruction period and the removal of restrictions, the Federation of British Industries mentions photographic raw base papers as among the industries which say they have suffered particularly from German competition in the past and anticipate similar competition in the future. This industry also considers that it comes within the definition of a key industry.

EMPLOYMENT IN THE ALLIED TRADES.—In the paper, printing, and bookbinding trades generally, employment during September was about the same as in the previous month. It was not so good as in September of last year. With letterpress printers employment remained good on the whole. The usual amount of overtime was worked in London, and in the provinces a little overtime was occasionally reported. In the lithographic printing trade the state of employment was good, and there was a slight improvement in the provinces. Employment in the bookbinding trade further improved in September, and from several provincial centres it was re-ported as good, a little overtime being worked. In London it remained only fair, and some short time was reported. In the paper trade employment remained good on the whole, and in one or two instances a shortage of skilled labour was reported. A few mills complained of difficulty in obtaining coal, and the railway strike resulted in some mills being closed on this account.

The Lithographers' Concert.

Successful Rally for Pensions Auxiliary,

The effort made to aid the funds of the Lithographers' Auxiliary, allied Printers' Pension, Almshouse and Orphan Asylum Corporation, by the holding of a grand Bohemian concert on Monday, at the Cannon-street Hotel, met with an excellent response, and had very gratifying results. The Grand Hall was crowded, and, with the popular president of the Auxiliary, Mr. Laurence H. Blades in the chair, and a most excellent programme of musical and other items, the evening was a very enjoyable one, and the financial result proved highly satisfactory.

In mentioning briefly the artistes contributing to the programme, a high place must be given to the Elite Male Quartette—comprising Messrs. F. Crawford, J. W. Cottrell, S. Cottrell and H. Bray. In unaccompanied part-songs, some serious and some humorous, these four gentlemen acquitted themselves excellently, and received hearty applause. Separately, too, each had acceptable contributions to

make.

Much appreciated also was the instrumental trio-Miss Amy Britton, piano, Mr. W. G. Britton, 'cello, and Mr. A. E. Cox, violin. Mr. Britton showed himself also an accomplished 'cello soloist. Mrs. Laurence Blades, wife of the president, was heartily received in the rendering of several songs. "Wilkie," the "Humanette," gave a very clever living

marionette display.

The President, when the "half-time" period was reached, made a short speech expressing his gratification in presiding over so excellent a gathering met for so worthy a purpose, and one more successful than any similar gathering with which he had had to do since becoming connected with the Lithographers' Auxiliary. He expressed special pleasure at receiving assistance for the Auxiliary from what might sometimes be considered "oppo-sition firms" to his own, also from sources not directly associated with lithography.

Mr. T. E. Naylor, secretary of the Society of Compositors, on being asked to speak, congratulated the president upon the success of his appeal on behalf of the Auxiliary. He went on to explain the work of the Printers' Pension Corporation, which, he said, was supported chiefly by those who expect to be assisted when old age creeps upon them. It was a self-help institution. They would realise what splendid work it was doing when he told them that the list of pensioners already included 600 old men and women. Moreover, in view of the all-round increase in the cost of living, the council of the Corporation had recently decided to increase the pensions in every case by 50 per cent. (Hear, hear.) That 50 per cent. increase meant added liabilities of £5,000 a year.

Continuing, Mr. Naylor said that the Corporation not only interested themselves in pensions, but had also erected almshouses, at Wood Green, where they now had about 30 old men and women spending the declining years of their lives in pleasant surroundings. Still another activity was the work of looking after the children of printers who had passed away, and as the result of that, some 16 to 20 boys and girls were now receiving education with maintenance and being looked after in every respect by the Corporation. Nor did the work stop there. The Corporation realised their responsibility-shared by the general public-in connection with the men associated with the printing trades who had fallen in the war. So the Corporation had issued an appeal for help that will provide financial assistance for the widows and Mr. Naylor pressed orphans of these men. this appeal upon all those present, then addressing particularly trades unionists in the audience, mentioned that the union with which he had the honour to be associated was endeavouring to persuade its members to subscribe to the extent of 10s. per member to assist these widows and orphans. He hoped, as a result of that appeal, that at the end of the year, in one union alone among 15 or 16, they would be able to write a cheque for no less a sum than $f_{4,000}$. (Applause). He wished the other unions to go and do likewise. He believed that altogether there were over a thousand persons receiving benefit from the Corporation, which had to expend on these different benefits the huge total of £25,000 per year.

Concluding, Mr. Naylor remarked that whatever different sections of the printing craft they might represent, they were all members of one great trade, the trade of trades, the trade that is responsible for spreading the light of civilisation throughout the world. He thanked them for their united efforts for the cause, and finished by asking the company to express their thanks to the president and Mrs. Laurence Blades for their presence and assistance—an appeal which brought a response of

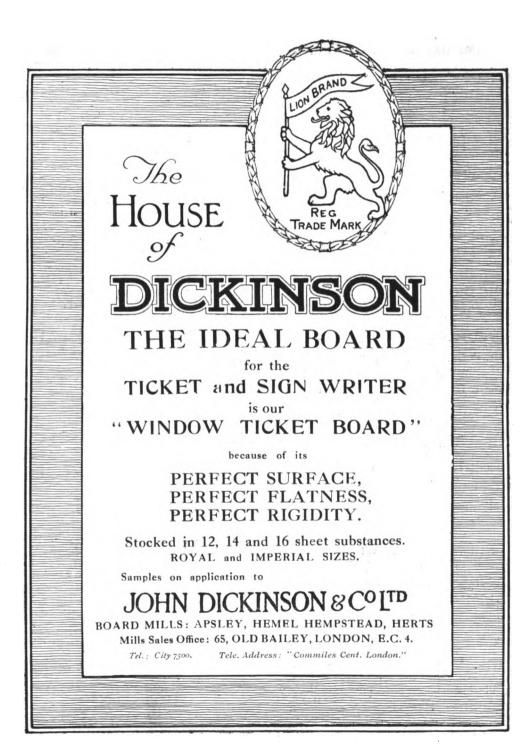

very hearty acclamation.

LONDON COUNTY COUNCIL.

TENDERS are invited for the printing of accounts in substract (5 yearly issues), Schedule No. The form of tender provided for a sliding scale of prices to meet variations in rates of wages, etc. The specification, form of tender and contract, etc., may be obtained on personal application or by sending a stamped addressed foolscap envelope to the Chief Officer of Stores, L. C.C. Stores, No. 31, Clerkenwell-close, E.C. I. Particulars of the Council's Standing Orders as to its conditions of tender and contract are given in every issue of the London County Council Gazette. No tender received at the County Hall after 1 p.m. on Tuesday, December 2nd, 1919, will be considered.

JAMES BIRD, Clerk of the London County Council.

Master Printers of North London.

Meeting of the Association.

In conformity with the wishes of members, each district served by the above-named Association is to take its turn as the place of meeting. Thus, the Association's meeting on November 10th was held at the Tottenham Municipal Buildings—in one of the committee rooms kindly made available by the Council.

The proceedings commenced with a few words of welcome by one of the Councillors on behalf of the Chairman and his colleagues. This kindly thought was much appreciated, and promises well for the future success of many meetings it is hoped to hold in this part of North London.

Mr. G B. Moore, the chairman, was unfortunately detained on other business, and in his absence Mr. H. C. Hill was voted to fill the

vacant seat.

Business of a formal nature having been disposed of, three new members were elected: Messrs. C. Cook, A. Webb, and A. Wilkinson.

Mr. J. Johnson, organiser to the London Master Printers, next gave a report of his work in North London, and spoke most hopefully on the prospects of many more adherents to the cause in this district.

Mr. Phelp, paying a visit "from the East," gave much valuable information as to the work being done in East London, and the manner in which some of the difficulties

encountered had been overcome.

Draft rules for the District Associations next came up for consideration, with a recommendation from the West and North-West Association. After lengthy discussion it was agreed to refer these matters to the committee to report upon, with a resolution that before they became operative the whole of the districts should be given an opportunity of meeting together at 24, Holborn, to confer upon them.

Messrs. Briar, Curtis, Greenway, Hunt, Maffuniades, Malcolm, Orchard, Wilson and Woodfield took part in the discussion.

Mr. Hill, as usual, gave valuable advice on the various subjects considered, and impressed upon the meeting the many advantages which are to be obtained by joining the local association.

Meetings will be held at Finsbury-park and Finchley in December and January.

Copies of the new jobbing price list were quickly snapped up.

ALLEGED U.S. TYPEWRITER COMBINE. -Practically all of the larger typewriter and calculating machine companies, seventeen in all, have been cited by the Federal Trade Commission to answer to complaints charging unfair competition. It is alleged the companies have maintained systems of rebates and discounts tending to restrict free competition and create monopolies.

THE WORLD'S

Trade Review

IS PUBLISHED EVERY FRIDAY AT 58, Shoe Lane, London.

What is there for you in the lifting of the veil over One November Week in my Office?

Completed: Six important inventories, averaging about fifty crowded typed folio sheets, including those of a large provincial daily paper and the plant of the well-known head of a Master Printers' Association. Four provincial, two metropolitan.

> The sixth annual revision of a large specialist printing plant, for greater safety in present price upheaval.

Forwarded: Revision for this year of two inventories of plants of ex-Presidents of the Master Printers' Federation.

> Negotiation with solicitors re proposed sale of large printing businesses.

> Negotiation (distinct) re purchase of a large printing business.

> Attendance on metropolitan daily paper lately inventoried and certified by me; approx. 700 folios; itemised schedule.

> Assistance to a firm exporting to printers in Russia; and to the Far East.

> Attention to printing requests from Australia, France, and America.

THESE little unconventional confidences may help to explain how the experienced and—may I claim?—able, certainly wholehearted and strenuous staff working with me have valued in the past year over £1,000,000 more plant than the average of the preceding five years.

I will gladly attend a non-committal interview and quote terms and submit dummy specimen sheets or in any way try to help you to safeguard your interest and your workpeople's, which is yours, is it not?

HEECOLONIAL NOVEMBER 20, 1919.

Charles Morgan and Co., Lid.

Mr. Wm. A. J. Foster, Chairman of Charles Morgan and Co., Ltd., wholesale paper merchants, 58-60, Cannon-street, E.C., has received the following warm tribute from the employees of Eynsford Paper Mills, dated November 10th, 1919:-

"We, the employees of the Eynsford Paper Mills, wish to express to you our regret that you have severed your connection with the above mill. We recognise the fact that the position the mill holds in the paper trade to-day is largely due to your keen business abilities. We also appreciate the kindness shown on many occasions, and in spite of the misunderstandings, which unfortunately are bound to arise in relations between employer and employed, we believe you always had the welfare of the workers at heart.

"We felt we would like to express our appreciation in a tangible form, and at once set to work in the endeavour to present a testimonial to you before you left. In this we were disappointed, and the delay has been caused by unsuccessful efforts to obtain what we wanted. We now, however, ask your acceptance of this ring, as a token of our goodwill in the hope that when you wear it, it may bring happy memories of your connec-

tion with the employees of Eynsford Mill.
"Signed on behalf of the employees:— Rivers, L. Phillips, E. Roberts, E. Baker, F. B. Warner, James Rivers, Frank Husser, Arthur E. Bowers, Edward Ford, John Venton (com-

mittee).'

Paper Mill Fire.

£10,000 Damage.

Damage to the extent of nearly £10,000 was caused by a fire which broke out on Friday at the Slitheroe Paper Mills, Rishworth, near Sowerby Bridge, the property of Messrs.

Whiteley Bros. The night staff were working at the time. The fire brigades were engaged for several hours fighting the flames, and though the main building was gutted a good deal of valuable property adjoining was sayed. One of the firemen was injured.

Openings for British Paper, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 4, Queen Anne's Gate-buildings, London, S.W.I, to whom further inquiries should be addressed with the reference number quoted.

EGYPT.

A firm in Alexandria and Cairo is open to accept an agency for paper. (Reference No. 947.)

A gentleman resident in Egypt desires agency for wall-papers. (Reference No. 948.)

Belgium. Belgian firms wish to establish business relations with firms in this country able to supply machinery for printing wall-paper for use in wall-paper factory.

Greece and Peru.

Agents in Greece and Peru wish to represent British paper houses in their respective countries. (Reference Nos. 958 and 981 respectively.)

ITALY.

A firm of agents in Milan desires to get into touch with United Kingdom manufacturers and exporters of paper, cardboard, etc., with a view to undertaking agencies. (Reference No. 101**0**.)

Printers' Technical Institute.

Deputation to the London County Council makes a Strong Appeal.

Printers will be pleased to hear that the Committee appointed by the trade organisation to obtain improved technical training facilities for those engaged in the printing and kindred trades, are quietly but persistently fulfilling the purpose for which they were appointed. This was clearly demonstrated at a meeting of the Higher Education Sub-Committee of the L.C.C. on Thursday last week, when an influential deputation, representative of the printing industry and under the leadership of Sir George Riddell, attended to impress upon the education authority the importance of setting up a technical institute to meet the needs of all sections of the industry.

The following were nominated to lay the case before the Sub Committee:—Sir George Riddell, Newspaper Proprietors; Mr. A. F. Blades, Federation of Master Printers; Mr. T. E. Naylor, Printing Trade Unions; and Alderman F. Gillett, Chairman St. Bride Foundation. Each of these gentlemen put up a strong case for the need of immediate action being taken to enable those engaged in the printing industry to receive the supplementary training necessary to make them efficient and to place the industry in a favourable position in relation to foreign competition.

The following points were brought forward: That a better educated and scientifically trained workman is a national necessity if the products of the printing press are to be improved in this country; that at least 50,000 organised workers are employed in the printing industry in London; that existing printing technical schools could only accommodate

approximately 1,000 of these; that a building of some 50,000 square feet of floor space is necessary to meet present day requirements. Such a building, it is estimated, would cost about £125,000; that the proposed institute should embrace every section of the industry so that it would be possible not only to provide the technical training required by the craftsman, but also include specialised courses of instruction required by employers and managers to enable them to acquire the scientific knowledge so necessary to make the craft successful. Suggestions were submitted in relation to possible sites both on the North and South sides of the river.

The Chairman of the Sub-Committee, Mr. H. C. Gooch, assured the deputation that there was no difference of opinion between them in regard to the urgent need for improving the existing training facilities for those engaged in the printing and kindred trades. Probably they knew that the Council had this matter frequently under consideration since 1914, and that, although he had no authority to say that the proposed technical institute would be set up immediately, he could assure them that the matter would not be allowed to drop and that the suggestion of a site on the south side might make it possible to get something done sooner than would otherwise be the case.

Sir George Riddell, in thanking the Higher Education Sub-Committee for their courtesy in receiving them, expressed the hope that something would be done without delay even if it were only to agree upon a site and draw up the necessary plans. To the printing industry it was a vital necessity that better

facilities should be provided at the earliest possible moment for a supplementary training

of those engaged in the industry.

We are pleased to learn that the official representatives elected by the various printing trade organisations to consider the whole question of technical training now constituted into a Printing and Kindred Trades Technical Council are pushing this matter forward in every way possible. With the backing of the whole printing industry and the driving force within the Council, we are hopeful that something will at last be done to remove the stigma that technical training for printers is the Cinderella of London's technical education.

Bookbinders' Wages.

An Advance Agreed Upon.

At a conference between the National Union of Bookbinders and Machine Rulers and the Federation of Master Printers of the United Kingdom, on November 19th, 1919, the following agreement was reached:—

"That an advance in wages to all towns of 6s. per week should be paid on and from the pay day in the week ending November 29th and a further advance of 1s. 6d. per week on the pay day in the week ending January 10th,

1020

"The advance of 6s. and 1s. 6d. above referred to shall be paid to all journeymen members of the above Union. It was also agreed that these advances of 6s. and 1s. 6d. shall apply to all other members who are not in receipt of 20s. above the minimum rates, but to those who are receiving at present 20s. above the minimum these advances shall not apply under this Agreement."

It was also agreed:—"That where difficulties arise over the recording of time on work it is agreed by the Union's representatives that efforts shall be made in the direction of having the model time sheet adopted in any such

district."

Increased Pensions for Printers.

The Council of the Printers' Pension Corporation have unanimously decided to increase all pensions by an average of 50 per cent., at an increased cost annually of £5,000, subject to ratification by the subscribers at their next meeting. This is in addition to this Institution's increased expenditure of £5,000 in weekly grants to the children of printers killed in the war. The number of beneficiaries in the care of this old-established Corporation is now cansiderably over one thousand. The total amount to be paid in benefits under these new departures will be £23,000 per annum.

The Marbling of Paper.

An Interesting Process Described.

One of the few remaining handicrafts in connection with the printing trade, the marbling of the paper which is more especially used in binding account books, is well exemplified at the works of Mr. E. J. Huttley, Great Queen-street, London. Mr. Huttley has been for the great part of a long life engaged in the business-he was apprenticed to it in 1853—and he still finds plenty of work for himself and the staff working under him, the difficulty being not so much to get the work as to get the experienced workmen. This latter point will be well understood when it is realised that a seven years' apprenticeship has always been considered necessary for the education of a youth in this peculiar process; indeed, Mr. Huttley himself says that he is still a learner, and every week adds something to his knowledge and efficiency.

In this process there is no absolute uniformity such as is produced by lithography or printing. Every sheet of paper that is finished stands alone and has its distinctive peculiarities of curve and colour. There are, however, hundreds of patterns, each one of which can be repeated as to its general effect, many firms of binders having their own exclusive design which they have used for many

vears

In this process a shallow tank of liquid size sufficiently wide to admit of two large sheets of paper being placed on its surface is one of the first requisites. The liquid is then sprinkled with the required colours, which appear on the surface in spots of various sizes. a long comb of the same width as the tank is drawn through the liquid, sometimes with appropriate waving in one drection or crossways, when the familiar effect begins to appear. Much technical skill, however, is still required for the placing of the paper on the surface of the liquid and then lifting it by means of a rod across the middle, before hanging it in the drying frame. The running of colours, and smudging in any way, have, of course, to be avoided, and that cannot be done without much practice and experience. When properly dried, the sheets of paper have still to be polished; this is done by means of a stone fixed to a treadle machine.

When we see the finished product, and are told of the low price which it fetches in the market to-day, having to compete with inferior machine-made articles, the wonder remains with us that this method of marbling still holds its own. But Mr, Huttley has something of the artistic spirit which would prevent him from producing an inferior article even if he could make more money by it; and such men are worthy of all the support that

can be given to them.

Printing Trades' War Memorial.

The Committee who are promoting this memorial held a meeting at St. Bride Foundation Institute, E.C., on Friday evening, when further donations to the movement were announced, including 300 guineas from the late Lord Mayor, Sir Horace Brooks Marshall; £250 from the London Society of Compositors; £100, Printing Staff, Bank of England; £30 (second donation) from National Society of Operative Printers and Assistants; £25, Mr. Henry Burt; £20, Mrs. George McCorquodale (in memory of members of the staff of Messrs. McCorquodale); £20, Messrs. George Mann and Co.; £10 12s., employees of Messrs. Eyre and Spottiswoode, Shacklewell-lane; £ 10 10s., Messrs. Jordan and Sons; £ 10 (second donation), Mr. R. T. Billing, Guildford; £8 4s. 9d., Publishing Staff, Messrs. Horace Marshall and Son; £5 5s., Sir George Wyatt Truscott, Bart.; and £5, Composing Department, Daily Express.

The total donations now received and pro-

mised amount to £4,325.

Tenders for the erection of the memorial wing to the Caxton Home were received, and referred to a sub-committee for final selection. It is estimated that a further £2,500 will be

required to complete the work.

Over 1,500 names have been sent in for the Roll of Honour, which includes particulars of men who have fallen in all branches of the printing, bookbinding and kindred industries.

The Hon. Secretary, Mr. S. J. White, at the office of the Fund, 3, Cursitor-street, E.C.4, will welcome further donations, and all inquiries should be sent to that address.

Care of the Printer's Eyesight."

On Friday, December 5th, at 7 p.m., Mr. J. H. Sutcliffe, F.B.O.A., Director of Examinations, British Optical Association, and Superintendent of the Army Spectacle Depot, is due to lecture for the St. Bride Foundation Printing School, on a subject which will appeal strongly to all printers, "The Care of the Printer's Eyesight." The following points will be dealt with:-Importance of having the eyes properly tested for the printer's calling; why certain forms of slightly defective sight interfere with good printing; different effects of short-sight, long-sight and astigmatism; colour perception, colour-shade description; local and diffused illumination of the composing, machine and clerical departments; eye-shades; spectacles, the best and worst forms for adult printers; a plea for standardised type faces for army and civilian eyesight test types. The chair will be taken by Mr. T. W. McAra, J.P.

CHILE has under consideration a proposal to increase the duty levied upon paper and cardboard and wares thereof, and books.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

THERE were three fatal accidents in the printing, paper, etc., trades during October.

According to Messrs. Raphael Tuck and Sons, this year's demand for Christmas and New Year cards is extremely heavy.

At the age of 60 years the death has occurred of Mr. W. H. Parkes, a native of Sheerness, who commenced his journalistic career on the Sheerness Times.

CONSTABULARY raided the printing offices of the *People*, a Sinn Fein newspaper recently started in Limerick. A military engineer dismantled vital parts of the machinery, which were removed by the police.

The Management Committee of the Printing Trades Alliance are pleased to announce that the appeal on behalf of the wife and nine children of the late Bernard Armstrong amounted to £56 6s. 4d. Mrs. Armstrong wishes to convey her thanks for the practical sympathy shown by the members of the Alliance.

According to the Labour Gazette, there were nine disputes in the printing, paper, etc., trades from January to October, 1918, involving 2,000 workpeople and representing an aggregate duration in working days of 44,000. In the same period this year there were eleven disputes, involving 8,000 workpeople and representing 105,000 working days.

WAGES AND HOURS.—Changes in the rates of wages which operated in October, resulted in a net increase of £34,300 per week in the printing, paper, etc., trades, the number of workpeople affected being 136,000. Changes in the hours showed an aggregate reduction in weekly hours for the same trades of 740,000 and the number of workpeople affected was 187,000.

PRINTERS' DINNER TO RETURNED SOLDIERS.—On Saturday evening a dinner was given by Messrs. E. J. Arnold and Son, printers, Leeds, to the members of the staff who had returned to the firm after service with the forces. Altogether 192 members had joined up, of whom seven had been killed, and 110 attended Saturday's function. Mr. E. G. Arnold, the managing director, presided, supported by Mr. H. Wood, a director, and the Deputy Lord Mayor of Leeds (Alderman Frank Fountain).

In the second issue (November) of Messrs. Pitman's new monthly magazine, Business Organisation and Management, there are numerous articles which will appeal to all keen business men. Of special interest to those connected with the paper trade is an article on "Scandinavian Exchanges," by Mr. W. F. Spalding, a specialist on the subject of foreign exchange. The writer seeks to make plain the working of exchange between the three Scandinavian centres and London, a matter, as he says, which is "always puzzling to people on this side," and "rather incomprehensible to some of the Scandinavians themselves."

THE Paris printers' strike, which was said to be coming to an end, is still proceeding.

November 22ND was the 40th anniversary of the death of Mr. John T. Delane, editor of The Times from 1841 to 1877.

A STRIKE affecting all the printers in Londonderry prevented the publication of the Sentinel newspaper Saturday morning.

The sum raised on behalf of the Printers' Pension Corporation by the Lithographers' Auxiliary concert reported in our last issue amounted to over £325.

MR. R. W. Bowers, a well-known Southwark printer, of Blackfriars-road, has just died. He founded the London Thirteen Club, and was described as The Historian of Southwark.

MESSRS. CHARLES STRAKER AND SONS, LTD., have secured the contract for the printing of the Stepney quinquennial valuation at £314. their tender being £12 below that of the Stepney Press.

THE Co-operative Printing Society has just completed fifty years of business life, and the directors have invited the shareholders and employees in Manchester, London and Newcastle to join with them in celebrating the occasion.

MR. C. A. BATES, managing director of Messrs. Johnson Riddle and Co., was soloist, and Mr. A. L. Gunn, a co-director, was organist at a simple but impressive service held at St. Peter's Church, Southwark, on the occasion of the anniversary of the Armistice, when the management and employees of Messrs. Johnson Riddle and Co. were present to do honour to the thirteen employees who have made the great sacrifice during the war, and also to carry out His Majesty the King's request to respect the memory of the glorious dead.

"ABDULLA" ALMANAC.—Abdulla and Co., Ltd., cigarette specialists, are issuing a very ornate almanac for 1920. Mounted in a stiff board, 15 by 12 inches, each sheet is devoted to a month, the top half being adorned by an appropriate picture. The illustrations are a striking feature of the almanac, and depict scenes in various countries of the world by eminent artists. The eight coloured pictures are beautiful reproductions, as indeed also are the black and white studies. Altogether the almanac is artistic and useful. Messrs. Abdulla are offeriug 20,000 for sale at 1s. 4d. for the benefit of the British Red Cross Society.

The death has occurred in Glasgow of Mr. William Kinnaird Rose, a well known journalist and a member of the Scottish Bar. After a period of service on an Ayrshire newspaper he joined the staff of the Scotsman, and represented that journal as a war correspondent with the Russian Army in the Russo-Turkish War. He was afterwards editor of the Brisbane Courier for several years, and returned to this country in 1891. He acted as a war correspondent in the Greeco-Turkish War and in Lord Kitchener's Soudan campaign. On his return from Egypt Mr. Rose settled in London and joined a reporting staff in the Press Gallery of the House of Commons.

THE Graphic is about to celebrate its jubilee. The first number appeared on December 4th, 1869.

SIR H. S. FOSTER has been elected president of the Institute of Patentees, vice Sir Joseph Lawrence, deceased.

SIR EDWARD T. COOK, formerly editor successively of the Pall Mall Gazette, the Westminster Gazette, and the Daily News, left property of the gross value of £11,168.

MR. HARTLEY WITHERS, editor of the Economist, delivered a lecture on "Journalism and Finance" to the students of the Journalism Diploma Course, at the University of London, South Kensington, on Tuesday.

THE National Union of Printing and Paper Trade Workers require £1,000 for the Comforts Fund of the Alfred Evans Memorial Home at Carshalton. Mr. G. Larcey, 220, Blackfriars-road, S.E.I, is the Secretary of the Home Committee.

NEWSPAPER WORKERS' REUNION. - The proprietors of the Manchester Guardian and the proprietors of the Manchester Even ng News on Saturday night entertained the members of the staffs and their friends at the Midland Theatre, Manchester. Mr. C. P. Scott spoke a few words of welcome to the guests, who numbered about 800. He explained that the desire of the proprietors was not only to come socially into contact with all those concerned in the production of the papers, but also to celebrate the victorious end of the war and to welcome back those members of the staffs who had been away on military service. Mr. T. Evans, of the Manchester Evening News, also said a few words. An agreeable evening was passed with music, dancing and whist.

Employment in Kindred Trades.

The state of employment during October in the paper, printing and bookbinding trades generally continued about the same as in the previous month. It was not so good on the whole as in October of last year. Compared with September, employment with letterpress printers showed a slight decline in London and in a few provincial towns, particularly Newcastle, Birmingham, and Bristol, but elsewhere it remained approximately the same. Although a considerable amount of overtime was still worked in London, some men were unable to obtain employment; in the provinces overtime was occasionally worked. In the lithographic printing trade employment in a few provincial centres was reported to be slightly better, but on the whole the state of employment was about the same as in September.

There was a further slight improvement in the state of employment in the bookbinding trade, and in some provincial towns it was reported as being good, a little overtime being worked.

Mr. John Parnell Mayne.

We regret to record the death, at the age of 76, of Mr. John Parnell Mayne, which occurred at Princes square, Bayswater, on November 13th. The deceased gentleman was senior partner in the firm of Warrington November 13th. and Co., manufacturing printers and stationers, of 23, Garrick-street, London, with which business he had been associated for many years, and where his genial presence and mature experience and advice will be greatly missed by his partners and the staff. He was a member of the Federation of Master Printers and of the Ulster Lodge (No. 2972) of Freemasons, and his loss will be felt by a large circle of relations, friends and trade acquaintances. Mr. Mayne was a native of Belfast, but had spent the greater part of his life in London, and leaves a widow, two sons and six daughters to mourn his loss.

Perhaps he was most widely known in the trade as having filled various senior positions in the factory of Messrs. Sir Joseph Causton and Sons, Ltd., from 1871 to 1900, ultimately being in charge of their Southwark-street Works; and when the directors decided on removing their factory to Clapham. he was selected as their technical adviser, under the architect, in the laying out and equipping of the new works, in connection with which he went to the United States and the Continent to study the latest innovations in foreign printing and machinery.

THE death took place at Ashton-under-Lyne, on Monday, of Mr. Edward Hobson Andrew, of the firm of J. Andrew and Co., publishers of the Ashton under Lyne Reporter series of newspapers and the Cotton Factory Times.

Mr. Thomas Common, a well-known Edinburgh printer, died in a train while going to business on Tuesday.

The death is announced of Mr. Joseph Logan, bookbinder, of Edinburgh, and formerly of Glasgow. He was 69 years of

MR. JULIUS BENN, brother of Sir John Benn, and director of Benn Brothers, Ltd., publishers, has died at the age of 67.

THE death is announced of Mr. William Raby, of the firm of W. Raby and Co., printers and stationers, Market-street, Longton, at the age of 69.

Newspapers, periodicals, musical publications and books can be imported into, transported through, or exported from Polish territory without a permit.

THE only difference between the difficult and the impossible is that the impossible takes a little more time.

THURSDAY, NOVEMBER 27, 1919.

Current Topics.

Printers' Wages.

MASTER PRINTERS are greatly concerned over the recent demands for increased wages. The matter has been settled so far as provincial England is concerned, but the problem in London, where the memorial asks for 15s. more, is giving rise to serious cogitation. A conference between the London Master Printers' Association and the London printing trade unions failed to agree on the question of increased wages, and it has been decided by the employers to call a general meeting of the Association in order to place the case before the members. This meeting is to be held next week, when, in all probability, there

will be some plain speaking. Scotland also is again facing a similar position, and the Dundee, Edinburgh and Glasgow branches of the Scottish Typographical Association have forwarded resolutions to the Executive Council requesting that an application be made to the Employers' Alliance for an increase of 10s. per week on present wages. The executive now have the matter under consideration.

A Sliding Scale in Contracts.

In these times of unprecedented commercial uncertainty, when much good business is hindered by the fear of possible big rises or falls in costs of production, special interest attaches to the action of the L.C.C. in allowing printing contractors to protect themselves by inserting a sliding scale clause in their tenders. In L.C.C. Schedule No. 208-a form of tender for the printing of accounts in abstract, 1919-1924 - the offer of such an arrangement is made in the following terms: "The Council is prepared to incorporate in the contract clauses providing that the cost of any increases in wages or decreases in hours of labour agreed between associations of employers and trade unions during the tenure of the contract shall be borne by the Council, and that, on the other hand, any reduction in cost due to such agreements between associations of employers and trade unions shall be credited to the Council."

Unemployed German Printers.

INFORMATION is forthcoming as to the percentage of unemployed printers in Germany, the figure having increased since the Armistice. Among book and jobbing printers, out of a trade union membership of 58,423, the percentage of unemployment in September was 40, comparing with 44 in August and with 0.7 in September of 1918. While in regard to work generally, there was an improvement in September as compared with August this year, in regard to printers and lithographers (Soc. Dem.) there was an adverse tendency. Although out of a membership of 26,282 only 0.6 per cent. were unemployed in August, by the following month the figure had increased to 5'4, comparing with o'l in September of 1918. On the other hand employment among lithographers improved, the figure of 110 in August falling to 6.4 in September (1918, 0.7). Bookbinders, who numbered 64,363, were also better employed in September, the unemployment percentage of 27 comparing with 30 in August. In September, 1918, the figure was 1'o. On the whole, as the figures in the Labour Gazette show, the labour

Digitized by GOOGLE

market in Germany during September presented unmistakable signs of increased activity. But according to the Borsen Zeitung the local improvements proved only that "the situation in the German labour market in the middle of October is still unsteady and generally unfavourable." The position is described as particularly unsatisfactory in regard to paper and printing.

The Position in the United Kingdom.

In the United Kingdom, out of a trade union membership of 82,558 in the printing, bookbinding and paper industries, there were 1,221 unemployed at the end of October, a percentage of 1.5, the increase of unemployment being 0'2 as compared with the month before and 1'2 as against the same period a According to information furnished by employers, there were 30,073 persons employed in the printing, bookbinding and paper trades for the week ended October 25th last, increases of 1.7 compared with a month before, and of 266 as against the position a year ago. The amount of earnings is put at £79,000, increases for the same periods re-The trade unions spectively of 2'9 and 56'9. returned a membership in the printing trade at the end of October of 63,365, of whom 1.5 per cent. were unemployed, as against 1.2 per cent. in September and 0'3 in October last year. Of 11,665 union members in the bookbinding section the percentage of unemployment was 2'0 in October, 2'3 in September, and o i in October, 1918. Information received by the Labour Gazette from employers gave 11,017 workpeople under "printing" for the week ended October 25th, increases of 2'4 and 38'4 compared with a month and a year ago respectively. On the same authority the workpeople under the heading of bookbinding were 5,556, increases of 1.2 and 25.1. The wages paid to the 11,017 printers is put at £32,191, and to the 5,556 bookbinders £11,109. Compared with a year ago the wages figures show respective advances of 65.6 and 40.9.

Personal.

THE LORD CHANCELLOR will be the principal guest at a dinner of the British International Association of Journalists to be held at the House of Commons on December 5th.

THE presentation to Sir George Toulmin, Member of Parliament for Bury from 1902 to 1918, by his friends and supporters has been provisionally fixed to take place on December 4th. The gifts to Sir George will include a valuable piece of silver plate and an illuminated address in album form. There will also be a presentation to Lady Toulmin.

VISCOUNT BURNHAM presided last week at a dinner given at the Carlton Hotel by the Newspaper Proprietors' Association to Mr. F. J. Hillier (of the Daily News) and to Mrs. Hillier.

LORD BURNHAM, in tendering Mr. Hillier the hearty thanks and sincere respect of the Association for his work on their behalf, presented a service of silver-plate to Mr. and Mrs. Hillier and a diamond ring to Mrs. Hillier.

BOTH Mr. A. F. Blades and Mr. G. A. Isaacs, who were to have debated the question of the Whitley Council in the printing trade, at the Institute of Journalists, on Tuesday, were unable to fulfil their engagements. Mr. Blades was unfortunately unwell, and His Worship, the Mayor of Southwark, had an important trade matter to attend to.

MR. A. E. GOODWIN, secretary of the Federation of Master Printers, ably filled the breach, and reviewed the work of the Industrial Council for the Printing Trade.

MR. ROBERT YOUNG, Ex-General Secretary of the A.S.E., was present and spoke. A full report will be given in our next issue.

On the occasion of his recent retirement from the position of chief of the Greenock staff of the Glasgow Herald, which he had occupied for more than 30 years, Mr. Robert M. Smith was entertained by local journalists and friends, and presented with a gold watch and with a diamond ring for Mrs. Smith.

SIR EVAN SPICER has resigned the presidency of the Dulwich Liberal Association.

MR. ISRABL DAVIS, chairman of H. R. Baines and Co., Ltd., proprietors of the *Graphic*, the Daily Graphic and the Bystander, has sold his entire holding, and has resigned his office as a director.

MESSRS. BERRY, the proprietors of the Sunday Times, have, it is understood, acquired Mr. Davis's shares and other additional shares.

The remaining directors of H. R. Baine's and Co, Ltd.—namely, Mr. Carmichael Thomas, Mr. William Will, Mr. Peter Neil McFarlane and Mr. G. Sparkes—are prepared to sell their holdings at £32 per share, on the condition that the same price is offered to all the shareholders, a condition accepted by the purchasers.

MR. Tom J. Bowman has been presented by the companionship of the Yorkshire Post with a rosewood clock on his retirement from the composing-room staff of that journal after a service of upwards of thirty years.

Bradbank (Bradbury, Wilkinson), in the second round of the football cup in the Business Houses League, met Still's on Saturday at The Elms, Walthamstow, the result being a draw, two goals each. The match will have to be replayed.

St. Clements Press beat National Insurance by 3-2, and Brymay overcame the War Office by 2 to 1.

City and Guilds of London

The Bookbinding Examinations.

The syllabus for the session 1919-20 of the City and Guilds of London Institute covering the bookbinding examinations is as follows:—

The examination will consist of two parts—A. Forwarding; and B. Finishing. Candidates cannot be examined in both parts in the same year. The examination in each part will be both practical and written. The examination will be held at any school supplied with the necessary tools and appliances, or at any centre at which arrangements can be made for the loan of a bookbinder's shop.

A .- Forwarding.

GRADE I.

The written examination in Grade I. will include questions founded on the following subjects:—

- I. Sizes and quality of paper, boards and books.
 - 2. Glue, paste, their preparation and use.
 - 3. Folding, refolding, pulling to pieces.
- 4. End papers, their use, various styles, and how to make them.
- 5. Preparing for sewing, the methods of sewing and marking up different styles of sewing.
- 6. Preparation of boards, glueing up, rounding backing drawing in and wessing
- ing backing, drawing in, and pressing.
 7. Cutting in and out board, different methods employed.
- 8. Styles of edge decoration, materials used,
- sprinkling, marbling, and plain edge gilding.

 9. Headbanding, lining up and preparing for covering.
- 10. Materials used in covering books and methods of working.
 - Siding and pasting down.
 Tools used in forwarding.
 - 13. Cost of cloth and half-leather binding.
- (2.) Practical Examination.—Candidates will be expected to show proficiency in any two of the following operations:—

Pulling to pieces, sewing, folding, making end papers, rounding, backing, cutting in boards, lining up, covering (cloth or halfbound), siding, and pasting down.

Sheets or books are provided by the Institute for each candidate, but presses and all

appliances for forwarding must be provided by the school.

FINAL EXAMINATION.

Candidates for the final examination at centres outside England and Wales must hold a certificate in Grade 1.

- (1.) Written Examination.—The final examination may include more difficult questions in the above subjects, and in addition a knowledge will be required of:—
- 1. Restoration of paper of old books and MSS., causes of stains, and methods of removing.
- 2. Use of paper splitting, map mounting, plate inlaying, interleaving, and guarding (linen), and how done.

- 3. End papers and joints, silk end papers, silk and leather doublures.
 - 4. Flexible work, worked headbands.
- 5. Colours used in edge decoration; edge gilding.
 - 6. Workshop equipment and organisation.
 - 7. Cost of materials used by bookbinders. 8. Cost of different styles of binding.

Candidates for the final examination will be expected to be able to work out in detail estimates for any given work showing the time and materials needed and their cost.

- (2.) Practical Examination.—Candidates will be expected to show proficiency in any two of the following operations:—
 - 1. Washing and sizing, and staining.
 - 2. Making and putting in a morocco joint.
 - 3. Forwarding a flexible book.
- 4. Covering a whole-bound morroco book and generally to show a knowledge of extra forwarding.

Sheets or books are provided by the Institute for each candidate, but presses and all appliances for forwarding must be provided by the school.

(3.) Specimen Work.—Candidates for the final examination will also be required to submit a specimen of their work done in the twelve months previous to examination, which must be forwarded so as to reach London not later than April 26th.

A certificate signed by the candidate's employer or by the class teacher and a member of the school committee, stating that the work has been executed by the candidate himself, without assistance, must be forwarded with the specimen. In cases where the work has been executed at the candidate's own residence, a statutory declaration will be required. Forms for either the certificate or the declaration may be obtained on application to the Institute.

The Ford Paper Works, Ltd..

Certain reports having been circulated in the trade that the Ford Paper Works were about to undergo changes of proprietorshipand control, we have been asked to state that there is no truth in these rumours, no changes whatever in the status of the company being contemplated.

The company remains under the same direction as heretofore, the directors being Messrs. Lewis Evans, L. G. Chater, R. C. Wakefield and Geo Clapperton, whilst the management of the mill is in the hands of Mr. J. A. Haswell, who was associated with the late Mr. J. P. Cornett in the management for many years.

Messrs. Dunster and Wakefield are the selling agents for the company.

An additional large papermaking machine is now in course of erection at the works by Messrs. J. Bertram and Sons, Edinburgh, and the directors hope to have this machine running in the early part of the New Year.

Bookbinding Notes and News.

It is almost certain that by the time these notes appear in print the result of the conference on the Binders' Memorial will be known. In all probability, the agreement will be in line with that adopted in the case of the T.A, for, although there has been some talk of considering a sliding scale, it is clear that the members of the allied trade unions have no love for the principle. It is to be feared that there is a great deal of difference between the respective viewpoints of workers and employers in regard to the ultimate wage of industry. A sliding scale which at the best guarantees 10 per cent. above pre-war levels may represent one point of view, probably a negotiable one; but it does not coincide with what workers are looking forward to. ultimate aim of the trade unions is a factor which is not likely to be clearly revealed until the cost of living takes a reverse direction. Then the situation will become appreciably plain, though, perhaps, no less difficult.

In last month's notes reference was made to the imperative necessity of a change of attitude on the part of the binding trades union in regard to the use of time dockets. The very foundation of accurate cost-finding is the time docket, and it is not to the credit of an intelligent body of workers' officials that they should have failed hitherto to realise that by persistently opposing and preventing the application of the true principles of cost-finding they were lowering the status of the trade itself and impeding its development. However, there is solid ground for assuming that one of the best things that will emerge from the present negotiations is an understanding on the question of filling up time dockets. We have no sympathy with the management which regards the time docket as a trap for the worker, and we have none for the worker who thinks the time docket a trap which is best evaded by tampering and putting it out The correct appreciation of the of action. time docket is that which assumes it to be a medium for ascertaining the truth as to the cost of work, so that a true charge may be made to the customer.

The cost of labour is not the only factor which has an upward tendency. Materials of all kinds used in bookbinding are advancing only too rapidly. have reached a price as high as that charged during the worst months of the war. Occasionally an extra cheap parcel finds its way on the market, but such opportunities for the buyer are rare. Basils are quoted from 1s. 3d. to is. 6d. per foot for good skins; and is. 8d. per foot for stout covers and diced basils; skivers and pastegrains range from 10d. to is. id. per square foot. Anglos have been sold recently at 2s. 6d. per square foot, which represents extremely good value. Rough

Persians, to take the place of calfs, are quoted 3s. 9d. to 4s. per foot. Pigskin is worth to-day 3s. 6d. per foot. Glue has risen rapidly during the last few weeks, and good Scotch glue, which had fallen to 75s. per cwt., has now gone back to 90s. Non-frothing glue averages about the same price. The tendency is still upward, and it is unwise to postpone buying. On the other hand, the best service which all buyers can render to themselves and the public is to limit their demands. It is precisely the heavy demand which helps to create scarcity, delay and high price.

Bookcloths have advanced 2d. per yard, and before many days have gone all labric goods will advance considerably. At the present time good pasting calicoes are available at 9d. per yard. Strawboards are quoted £15 10s. per ton for forward delivery, and £18 per ton for stock supplies. Millboards (machine-made) are quoted at £45 per ton, hand-made at 525.6d. per cwt. Marble paper is still scarce, and good use is being made of the Scottish makes, which look exceedingly well on the books and cost less than the foreigner, which is inferior in substance and character, and infinitely more difficult to work.

The coming British Industries Fair, to be held at the Crystal Palace in March next, offers an excellent opportunity for bookbinding firms to show specimens of their work to prospective buyers, and it is a matter of surprise that in the Fairs of the previous four years so little advantage has been taken of the opportunities afforded to bring before the many thousands of visitors to these shows the art of the bookbinder with a view to extended business. True, bookbinding was in evidence at a few of the stalls, but generally as a side line to some exhibit of manufactured stationery, or shown by large publishing firms who do their own binding in their own works. Bookbinding as a separate branch of the trade was badly represented, although the section devoted to paper and print afforded plenty of scope for purely bookbinding exhibits. At these Fairs buyers attend from all parts of the country and also from abroad, and there are great possibilities of securing extensive orders if British bookbinders would show what they can do in the way of edition and fine binding. The coming Fair will exceed the previous shows in size and extent of exhibits, and as it is to be held in a building that offers greater facilities for the display of goods than the premises occupied in former years it is certainly worth while for bookbinding firms to consider the advisability of showing what they can do, not only in the better class of work but in the cheaper bindings that are ordered in quantities by publishers.

The high cost of labour and material in European countries have, it is rumoured, led
Digitized by

BRITISH & COLONIAL PRINTER & STATIONER

to a number of continental publishers sending their books to China to get bound, for it seems that in that country there are a number of firms, run by Germans with cheap native labour, who can cut prices to 75 per cent. less than the work would cost in Europe. Of course it is only books that are not urgently wanted for publication that could be sent for binding to such a distance, and in the face of the existing high freights we should have thought that the game was not worth the candle. Still, the heathen Chinee with his cheap living and willingness to work long hours for low wages may yet become a formidable competitor to our highly-paid, shorttime workers, and in the demands for increases in wages by workmen this possibility should not be lost sight of. The "yellow peril," so much talked of, may yet prove to be a serious menace to European labour.

The bookselling and general business of Messrs. George Robertson and Co., Ltd., of Melbourne, is not to be closed down, as was rumoured. The goodwill and stock have been purchased by a new company, and it is intended to carry on the business in the same premises at Elizabeth street, Melbourne, which were occupied by the old firm. The new company is to trade under the style of the old company. For the convenience of their British trade a London office is to be opened at 128, Fleet-street, E.C.4.

All over the United States the demands for increased wages continue, and there is no finality in these advances, for no sooner are they granted than steps are taken by the various unions to formulate fresh demands. In fact, the conditions in the industrial world in the States are much the same as in this country, the workmen continuing to cry "give," and this may continue until a time is reached when the employer will find it more profitable to close down his business and dismiss his workers than to keep on granting advances of wages, as a time must come when the customer will refuse to pay the high rates that it will be necessary to charge for work. The latest demand recorded is that of the bookbinders of Kansas City, who went on strike for a considerable advance on present rates. Fortunately, in this case the demands were not pressed in full, and the workers went back to their toil on consideration of receiving \$35 a week, and the women helpers \$16. The original demand was for \$44 for the men and \$22 for the women, these wages being for a forty-eight hour week. It is a far cry to Kansas City, but it is an example of the general demand for increased wages that is taking place all over the civilised world.

The serious question is, where will these demands for increased wages end? Will they keep on until the bookbinder has to shut up his business or until publishers dispense with board-covered books, and issue their volumes in paper covers? They might do a

worse thing, for the public would welcome such a change if it cheapened books to the purchaser. Before this happens, however, it is to be hoped that in seeking for so many advances the workers may realise that they are killing the goose that lays the golden eggs, and determine on a policy that will lead to the saving of the trade, and by increased production, instead of restricted effort, permit business to be carried on as a paying proposition for both employers and workmen.

The catalogues of books for sale by Messrs. Maggs Brothers, Conduit-street, W., are always noticeable for the excellent manner in which they are compiled and printed. Their latest issue, No. 382, is devoted to "English Literature of the 18th Century," and apart from the importance of the choice works offered, it is of great interest to bookbinders, as many of the volumes are in richly decorated covers, many of them being the work of masters of the art. Thus in No. 2,373 there is a Bible which is a very beautiful example of embroidered binding of the time of Charles 1., which is ascribed to the nuns of Little Gidding. It has a ground work of white satin with both covers and side decorated with a floral device worked in coloured silks and with gold and silver ornamentation throughout, the edges being gauffred, and silk end leaves. Another Bible, printed by John Baskett, 1715-21, is in two folio volumes, and is beautifully bound in full contemporary dark blue morocco extra, the sides and backs being elaborately gilt. Book lovers as well as bookbinders will be interested in the extremely rare first edition of "Joe Miller's Jests," 1739. The binding is in full polished levant morocco, extra, with gilt back and edges. This is a fine example of Riviere's binding, and it is interesting to note that the copy in the collection of Robert Hoe (of newspaper rotary machine fame) realised \$310 at the sale of that gentleman's library.

Among other notable bindings that figure in the interesting collection is one of crimson morocco entirely covered with gold tooled scrolled borders and frames, sprays and small ornaments. It is the handiwork of a Scottish bookbinder, circa 1770. "Eusebia Triumphans," No. 2,869 in the catalogue, "Eusebia is in a contemporary binding of morocco with gold panelled sides, in the centre of each cover there is a dove carrying an olive branch, enclosed by a ribbon with the motto, "Honi soit qui mal y pense," and surmounted by a crown and the rose and thistle. Of interest, too, is the copy of "Irene Triumphans"; it is the volume specially bound by the author for James, second Duke of Ormonde - the "Great Duke" who was attainted in 1714and is in morocco with the Duke's Arms in gold in the centre of each cover, and with gold panelled borders. Many excellent examples of bindings by good workers of their day figure among the volumes, the whole collec-tion being of the greatest interest to book lovers.

Some Bookbinding Patents.

A device for binding sheets of music, etc., patented by Mr. A. R. Walter, comprises a pair of gummed leaves a combined with a staple c to be passed through and bent down upon the sheets A, the back portions of the

leaves a being provided with an eyelet b, so that the bound units may be threaded upon a split ring e.

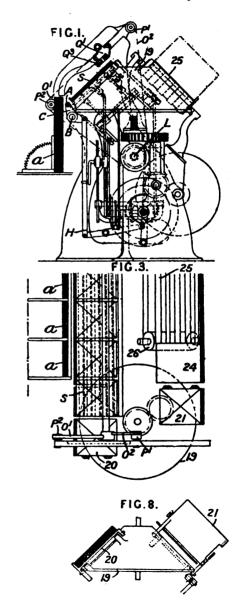

A loose-leaf ledger, divided into alphabetical divisions, is provided with indexing means whereby each account is given a number, the first figure or figures of which indicate the initial letter of the first name or surname, or the initial letter itself may be used, whilst further numerals correspond with the divisions of the alphabet containing the remaining initials. A is preferably represented by the

number 10, F by 15, K by 20, O by 25, T by 30, and Y by 35, and an index, Fig. 2, showing these numbers, together with divisions of the alphabet suitable for obtaining the additional numerals, may be provided. Each accountform may have small coloured portions t on one edge to act as a sight check against incorrect positioning of the accounts within the ledger. The invention is patented by Mr. A. Gilbert.

In an appliance patented by Mr. G. Spiess signature or sheet gatherers are arranged with the sheet gathering table and the pile con-

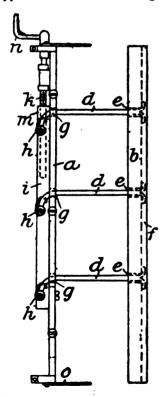

veyer table side by side but oppositely inclined after the manner of the two sides of a roof. As shown, the gathering-table S is alongside the conveyer 25, and the piles of sheets are transferred from the end of the table S to the conveyer by an intermittingly rotating conical carrier 19 on a vertical shaft. Sheets from each of a series of piles a are

separated by a suction bar A in arms C of a shaft B rocked by a rod H and cam, etc., and the separated sheets are taken and deposited simultaneously on the table S by grippers Q^0 on a carriage Q^1 operated by bands Q^1 , Q^2 passing round guide pulleys P^1_{\perp} P^2 and con-

nected to sheaves on a shaft L rocked by a Ťhe rack and pinion operated by a cam. table S is formed of bars and the sheets are moved along it, step by step, to effect the gathering, by a reciprocating and rising and falling rake or carrier which rises through the bars of the table S to engage the sheets, lift them, and carry them forward. At the end of the table S the piles are transferred on to one of two plates 20, 21, hinged to the conical table 19, by a second reciprocating and rising and falling rake device. As shown in Figs. 3 and 8, the plate 20 is in position to receive a pile from the table S, after which the conical table 19 makes a semi-rotation, the plate 20 being during this movement turned up into the vertical position, as shown by the plate 21 in Fig. 8 so as to transfer the pile on edge to a guide 24. Each pile pushes the previously de-livered piles along the guide 24 and on to the conveyer table 25 which may consist of end-less travelling bands on rollers 26. The inclined position of the conveyer permits of inspection of the marks on the rear edges of the different sheets or signatures which indicate when they are assembled in proper order.

Mr. J. H. Shepherd and O. J. Parish have patented an improvement in loose leaf binders of the type in which sheets having keyhole

slots are engaged on thongs or flat straps cooperating with clamping bars and tensioned by means of a sliding bar and screw-and-nut mechanism. The thongs d are secured at one end to the lower clamping-bar b. and after passing through holes e in the bar b and holes g in the upper clamping-bar a, are secured at the other end to a bar i which is traversed longitudinally of the binding by screw-andnut mechanism n, k, m. The thongs are secured to the bars b by knots, screws, or otherwise, and the bar b may be provided with a groove f so that the fastenings do not project beyond the face of the bar. The thongs may be secured by screws h to the bar i. The bar i is mounted upon the bar a and guided thereon in a groove, or by projections entering slots. Pivoted plates o serve for attaching the bar a to the covers.

The Colonial Market.

British Goods for Our British Kindred.

British trade with the Colonies has, during the past five years, been almost negligible, not only on account of the want of shipping facilities, but because our home manufacturers, especially the producers of machinery, have been engaged on war work and are but just beginning to get back to the conditions of production that were normal before the great upheaval. So far, delayed home orders claim their attention, but in the near future colonial indents will have to be looked for if we want to keep the foreigner from securing the large and profitable field of overseas trade with our own Colonies; and this export business must be cultivated if British producers desire to increase their selling capacity. Overseas business is woefully neglected sometimes, even by firms who have a good article to sell; it means more trouble, more attention to particular requirements of the various localities, and perhaps entails a considerable correspondence; but there is profit in it if properly attended to.

in Pre-War Days.

Even before the war our trade with our own Colonies did not attain to the extent it should, and so orders that ought to have come to home firms too often fell into the hands of foreign houses, and especially those of Germany and the United States, the two countries that were then our greatest competitors and that now bid fair to make a big effort to oust us from what we are conservative enough to look upon as our own special preserves. One might think that British Colonists would favour British-made goods, and so in most cases they do, if the price is favourable; and here our Continental competitors scored, especially in the matter of manufactured stationery and fancy goods, by following British patterns and imitating them at a lower price, using inferior material and workmanship, but keeping the finished appearance of the article up to the standard of the higherpriced British make. Our American competitors produced and offered a good article at a price sometimes in excess of the British production, and sold them freely, and the reason for this was said to be the better methods of packing.

Adaptability to Markets.

Unfortunately, there is, or was, a want of adaptability that was characteristic of many of our home firms, and this is much to be regretted. The factory turns out machines of a certain class. Does a colonial buyer desire one, he must take it as it is; no modifications will be made, even if the purchaser desires something a little different to suit his special work. Taking the Australian Colonies, for example, this want of adaptability has created a very strong feeling among purchasers of machinery, and there are many firms in Britain that have learned from experience what Australian prejudice means to their manufactures. Other British houses have found their products sought after and popular solely because they studied the market and the individual customer's needs, and met these to the best of their ability. We could men-tion the names of some of these successful houses, but those in the trade will readily call them to mind. Greater adaptability to his market is characteristic of our foreign competitor. His agents go well into the matter with buyers; they are ready to consult the wishes of smaller men, and are always on the look out for new trade, even if that trade should be small at the beginning, and they are always willing to modify their stock patterns to accommodate a customer's

Markets.

, or was, a want of maracteristic of many and this is much to be turns out machines of a colonial buyer desire sit is; no modifications if the purchaser desires different to suit his special ie Australian Colonies, for want of adaptability has ong feeling among purchasers and there are many firms in have learned from experience ian prejudice means to their Other British houses have products sought after and popular use they studied the market and dual customer's needs, and met these e names of some of these successful but those in the trade will readily call to mind. Greater adaptability to his et is characteristic of our foreign com-.tor. His agents go well into the matter th buyers; they are ready to consult the ishes of smaller men, and are always on the look out for new trade, even if that trade should be small at the beginning, and they are always willing to modify their stock patterns to accommodate a customer's

Suiting the Market.

In the face of these conditions, it behoves the British manufacturer who desires to cultivate a colonial trade to put his energies into the work, and determine to meet the conditions of his market. The military aspect of the Great War is over, but the trade war is but just beginning, and the issue is still in doubt. British commerce will have to face European and American competition in the world's markets, and that competition is going to be as severe as any that this country has ever known; so that unless energetic action is speedily taken by our home firms they may find themselves out in the cold, and their products supplanted by those made by foreign labour. No doubt the desire to place orders with the Mother Country is strong in colonial buyers, but they will not allow sentiment to interfere with business, and so they purchase the most attractive goods from the cheapest seller. British firms that are intending to enter the colonial field with machinery or other supplies will always find a good market for the best articles they can send out. There is a very wide field for business in our various colonies, and the British manufacturer should not let it pass into foreign hands; but, as we have already pointed out, he must adapt his goods to his market, or but little business will be done.

How to Secure the Trade.

There are many ways of securing colonial orders and of bringing British products to the attention of the overseas buyer. One way is by the issue of circulars and booklets descriptive of the wares offered for sale. We do not say this is a good way, but it is a way that appeals to many, and in this connection we may note that if this method of attempting to obtain business is adopted it must be done well or not at all. The ordinary common printed circular setting forth in bald type on an inferior paper the merits of the article offered is quite useless in securing colonial business. Even for British customers, who are accustomed to this kind of thing, it has lost its effect, and if trade is wanted the printed matter sent out must be of the highest class; and, if in the form of an illustrated booklet, well got-up and printed on superior stock, then so much the better. Half-tone blocks should be freely used to illustrate the machines or the goods offered, but they should be of the best, and the work should be done by the best printer one can find. Here, too, the foreigner can teach us something, for his circulars and booklets are artistically produced and attractive in appearance. It might make many of our home firms gasp with astonishment if they were told the price that some of these foreign productions cost. But when it is considered that they have a pulling power in securing orders that cheaper examples of printing do not possess, the cost sinks into insignificance.

The Trade Journal.

Another method of securing business is by advertising in trade journals. These publi-

cations go direct to prospective purchasers and are an invaluable means of drawing attention to whatever is offered. In many cases the buyer in a distant colony or small possession has no other source of information as to what is new in his trade. His name does not appear in any business directory, but he may be carrying on a good business and to him his trade journal is the medium of communication with the Homeland and keeps him posted as to what is going on in the world beyond his ken. We do not wish to blow our own trumpet, but, as will be seen from the advertising pages of this issue, our advertisers are among the best houses in the trade, many of them having experience in the filling of colonial orders and knowing colonial requirements, and as in sending out these special issues we endeavour to reach every good house connected with printing or stationery goods throughout the widely spread British colonies we may fairly claim to be a good medium for bringing British manufactures before the distant buyer. Our great object is to promote as much as possible a mutuality of interests, and our chief wish is to be useful to both our advertisers and subscribers, in which spirit we send out our journal in an endeavour to bring together the right people abroad and the right people at home for mutual advantage and for mutual service. That our efforts have not been in vain is exemplified by the fact that many of our advertisers have had their announcements in our pages for over forty years continuously. Therefore we claim the trade journal as one means of securing colonial business.

Colonial Supply Houses.

Some home manufacturers prefer to take advantage of the facilities offered by one or more of the supply houses that are already in existence in the most important colonial cities. These firms handle printers machinery, type, paper and other supplies, and really act as selling agents for British firms. although some of them handle foreign productions as well. These houses have built up a reputation for fair-dealing and may be trusted to handle the agencies they take up in a proper manner. Especially are they useful for the smaller classes of appliances and for material, but in the case of the larger machines it generally pays best to send out a representative from the home firm to cover the colonial ground and take orders direct. The agent's selling commission is then saved, and direct personal relations are established which often lead to good business being done. As we have said, those who desire to utilise the agent with already established connections will find reliable houses in Australia. New Zealand, South Africa, Canada, India and other places, which are always ready to take up the sale of any up-to-date machinery. One thing, however, must be remembered; that is, that the agent's selling commission has to be added to the selling price of the article, and it will be wise to consider if this will not make it too expensive for the ultimate purchaser.

STEREO. LINO AND MONOTYPE Printers' Leads, Clumps & Metal Furniture.

LETTERS FROM SATISFIED CUSTOMERS.

Messrs. LINGARD, Sheffield, write:

"I am perfectly satisfied with furniture and clumps you have made me out of practically waste.

Messrs. WHITTAKER & SON, Stalybridge, write:

"Some weeks ago you cast for us old furniture into new, and we are delighted with it."

Messrs, DUTSON, Southport, write:

"Parcel of furniture and leads came to hand to-day, and we are extremely pleased and at the earliest opportunity will send another lot. We are well satisfied with the work."

Messra. APPELBEB, Deptford, S.E., write:
"Thanks for metal furniture, which arrived yesterday. We are very pleased with it. A very useful assortment."

Mesers. GROSVENOR PRINTING WORKS, Tunbridge Wells, write:

"We are simply delighted with the metal furniture and would strongly recommend any firm to do the same as we have done. We feel certain they would be as pleased as we are. The comps. are simply charmed with such useful material."

COLONIAL DECEMBER 4, 1919

Co-operative Selling.

There are many ways of ensuring good selling results, and the manufacturer should think well which is the best to adopt, which is the most economical and at the same time cer-It has been suggested by a colonial correspondent that British manufacturers of machinery requiring special skill or knowledge for the most successful handling should co-operate for the colonial markets and establish joint selling houses, equipped with machines in running order, with operators in attendance to demonstrate their working and to prove the makers' claims for the appliance. The salesman in attendance, it is suggested, should have powers to make special terms with buyers, and as the success of a machine often depends on its being first introduced to a reputable firm, they should have power to make concessions in price to first users, as in the matter of buying new machinery printers (even in this country) are like a flock of sheep; where one goes the others follow. So when one reputable firm shows its appreciation of a new machine by purchasing it, most of the others argue that it must be worth installing or so-and-so would never have gone to the expense of buying, and they come then to the conclusion that they themselves must have one in their own works. During the past thirty years many excellent appliances of a labour-saving character have been offered to printers. Many of the highest merit have failed to establish themselves through not securing an initial customer and have passed out of ken, while others, perhaps not so meritorious, have been purchased by a leading firm and immediately thereafter have achieved phenomenal sales owing to this sheep-like attribute of the trade.

Even at the best, British houses cannot hope to exclude altogether from the colonial markets the foreign seller, for there will always be certain lines on which he will cut the price, and when a low figure is offered there are many buyers who will sink their patriotism and purchase, but as a manufacturing nation desirous of extending our overseas trade we must take care that we perfect our methods of production and salesmanship, so that we may attain to that progress and development that will make our goods sought after, not only in our own colonies, but in foreign countries. There is a wide field open for business, and the British manufacturer will not, we feel sure, let its cultivation pass into foreign hands.

UNEMPLOYMENT FIGURES.—Returns of unemployment in Lancashire and Cheshire for the week ended October 10th show that the railway strike has been followed by a general increase in the unemployment figures. In the paper manufacturing and printing trades, however, unemployment increased only slightly among men, while a very marked decrease was shown among women. The figures for men are: September 26th, 526; October; 10th, 590; and for women: September 26th, 488; October 10th, 192.

Paper Prices Hardening.

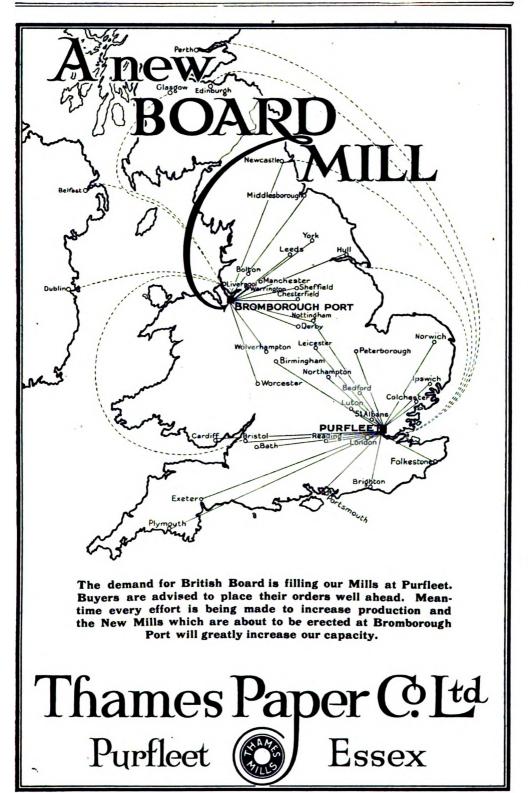

The market still evinces the hardening tendency which has characterised trade for the last month or two. Both foreign and English papers are being perceptibly advanced, and the only class of paper as yet unaffected is the high-grade writing and book-paper section. A local mill, with orders on its books for the next four months, has arranged an advance of $\frac{1}{4}$ of a penny per lb.; this following on a recent advance of id. per lb. on all printings and E.S. writings. Generally speaking, it may be said that the ultimate settling price of these classes of paper will represent an advance of \(\frac{1}{2} \)d. to Id. per lb. over the low water level which was

reached about May or June last.

Considering that the great majority of the mills are members of the Federation and that almost all the paper houses belong to the Association representing the wholesaler's interests, it is strange that the prime conditions of trading should so hopelessly lack any approach to uniformity. In the matter of discounts, there is no trace of a co-ordinated policy, some mills and houses trading entirely on a nett basis, others on 21 per cent. and others again on 5 per cent. Add to this the fact that prompt cash, one month or three months' credit, variously obtains in various quarters and it will become obvious that neither the maker, the distributor, nor the purchaser knows exactly where he stands. Turning to the matter of carriage terms, the condition is even worse. Some houses maintain their pre-war custom of paying carriage on consignments over £1 in value, and in some cases £2. Considering that the price of the product has doubled and trebled, it would be interesting to compare the relative value of the money factor against a weight basis. According to custom (and in those three words we have the history and development of the paper trade) in various parts of the country. carriage is paid on 3 cwts., 5 cwts., 1 ton or I ton. When every individual house sets its own custom, there is no trade custom. But the paper trade of the future will not thrive on custom. What is required is principle and policy arranged and carried out in common by the trade. Carriage charges are trading expenses, chargeable and recoverable by the mill or house in question. The very fact of chaos proves that scientific cost-finding has no place in the paper trade.

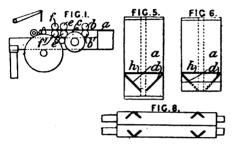

A BELFAST printer, Mr. Herbert Strain. lecturing on the art of printing, referred to the ancient method of printing upon bricks. He mentioned the discovery of impressed bricks which proved to be election handbills and tradesmen's bills. The butcher, the baker. the candlestick-maker, he said, served their bills on bricks, and there need have been no shortage of houses, as a man could soon have built a fine mansion out of his bills, paid or

Digitized by GOOGLE

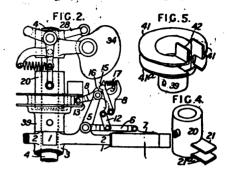

Making Paper Bags.

A British patent has been granted to Messrs. E. S. and A. Robinson and Mr. S. Duerden, of Bristol, relating to flat-bottomed or satchel-shaped bags which are formed from one piece of material having infolded side gussets or tucks and a folded bottom closure extending practically straight across the width of the bag. In order to avoid the difficulties which attend the creasing of the finished bag when varying thicknesses of paper have to be acted on owing to the presence of the folded closing-flap, the

diagonal and transverse creases d, h, Figs. 5 and 6, which facilitate the opening of the bag into its rectangular form are formed in the paper tube or web from which the bag is made before the blank is severed. The paper tube a, Fig. 1, is forwarded by rollers b, b^1 to a cutting device c and the severed end passes forwards to rollers e, e^1 , f, f^1 which form the diagonal and transverse creases after which the tube is severed at the required length and the end is pasted and folded. When the paper web is creased before being formed into a tube, the rollers for making the diagonal creases may be so arranged, Fig. 8, that the creases will occur only inside the gusset portion of the tube.

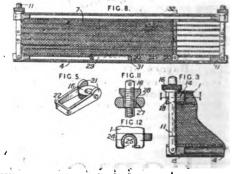

A British patent has been granted to Messrs. W. Rose and Rose Bros., Gainsborough, concerning apparatus for making paper and like bags or containers of the kind having a number of mandrels or formers radially arranged on an intermittingly rotated sleeve or shaft, each former having a presser foot or bar adapted to exert pressure on the longitudinal seam of the bag. The presser-foot is provided with operating means which readily indicates whether the required pressure is being exerted and is adapted to maintain the pressure for a predetermined time. The formers I are carried by arms 2 on a sleeve 3 which can turn on a shaft 4, each former being provided with a presser foot 7 pivoted by a link 6 to a bracket 5. Pressure is applied by means of a-block or die 13 to which is pivoted one end of a lever 8 carried by the bracket 5. To the other end of the lever 8 is pivoted a lever 9, one arm of which is connected by links 12 to the link 6 which carries the presserfoot. Lugs 15, 16 on the levers 9, 8 are held in contact by a spring 17 when the pressure is released, and are caused to separate when the pressure is applied, so that the relative position of the lugs indicates whether the desired pressure is being exerted. The block 13 is moved vertically to operate the presser-foot by a sleeve 20 loosely mounted on the shaft 4 and having jaws 21, 21°, Fig. 4, between

which the block is carried by the rotation of the shaft. The sleeve 20 may be reciprocated by a cam 34 and a lever 28. The block 13 may be held in its lower position so that pressure is maintained during a complete or partial rotation of the sleeve 3 by means of stationary piece 39, Fig. 5, having flanges 41, 41° interrupted by a gap 42 through which pass the jaws 21, 21° on the sleeve 20.

Printing Surfaces.

A printing surface for copying documents, drawings or other matter is prepared by applying to a metal or other plate a sheet of paper, etc., coated on one or both sides with a sensitive or sensitisable colloid composition heating the plate to melt the composition and allowing the latter to cool and set.

When the sheet is coated on one side only it is stripped off, leaving the composition upon the plate, but if the sheet is coated on both sides the exposed coating forms the printing surface. The drawing, writing, or design may be formed on the composition by the application of an unwashed blue print or

DECEMBER 4. 1919. BRITISH& COLONIAL PRINTER & STATIONER

bichromate print, the composition being sensitised with a ferrous salt, or the composition may be sensitised with bichromate of potash, and exposed to a negative of the design or the printing surface may be exposed to direct contact with a drawing, writing, etc., prepared with alum, formalin or aniline ink. The patentee is Mr. J. McCafferty.

Present-Day German Printing.

While it seems clear that the printing and paper trades have little to fear at present from German competition, recent communications indicate nevertheless that in Germany printers are very active in the production of press work of all kinds. Mr. Geo. Renwick writing from Germany to the Daily Chronicle, gives some interesting intimations of what is apparently a boom in printing. "A study of the great book centre, Leipzig," he says, "is very interesting. Never, I am assured, have books and pamphlets been produced in such quantities. The ponderous volumes now being issued by the prominent figures under the old regime - Ludendorff, Tirpitz, and others -are, though somewhat expensive for the German, less expensive than similar sized volumes published in England - say, for example, Lord Jellicoe's recent work. 'Cheap editions' flow from the printing presses in almost undiminished floods, and the number of pamphlets is simply extraordinary. Pamphleteering on political and economic subjects is going on to an extent never before known in any country, and the amount of excellent paper available is enormous."
"Munich, city of art," he continues, "is a

"Munich, city of art," he continues, "is a surprise in more ways than one. The war and the revolution have not destroyed its world-famous trade in applied art. When one is fresh from Berlin, with its riot of posters in the maddest futurism and cubism, it is a relief to one's eyes and nerves to see Munich's artistic posters and the beautiful art productions in the shops.

"In England the poster designer was, during the greater part of the war, restricted to the use of three colours, and to a small size of That was bad for the art, and almost disastrous for the colour-printing trade. Not so in Munich. I have spent most of the forenoon in the studio of one of the city's foremost poster artists, and I have seen war work in four aud five colours, on large sheets and on paper, I am sure, superior to what was then available in England. The printing of beautiful post cards and of magnificent reproductions of great pictures appears to have suffered little or no decline. Germany's colour printing trade, I am assured, has survived much better than was expected, and is ready to spread its work over the world again."

EXPORT of lead or antimony scrap from Argentina is still prohibited.

Central Europe.

German paper exporters appear to be feeling their way for business in the United Naturally there is a strong disinclination on the part of people on this side to have any dealings with our former enemies, but we have now the Government giving advice to British merchants as to how to secure a footing in Central Europe. question of renewing business relations, especially with Germans, is likely to prove a source of some heart-burning. In some cases, of course, private interest often sways judgment. But there will have to come a time when a definite line is taken. During the war, it was policy to inflame passions against the enemy. Now it appears from Government announcements that trading with our late enemies is to be encouraged. True they rather make a distinction between buying and selling. It would take a strong conscience to brace a dealer sufficiently to decline selling to anybody who offered the price, and purchasers are not likely to be too inquisitive as to the origin of an article if the price is a temptation. So far as paper is concerned, the tentative offers which have been made do not appear to be of a very sub-stantial order Further than that, the uncertainty as to the course of the rate of exchange renders business with Germany and other continental countries a matter of difficulty.

To Increase Production.

Attention is being drawn by the Higher Production Council to what is known as the Priestman Scheme of Co-operative Production. The scheme is based on the principle of securing increased production through the co-operative effort of all concerned in the industry, obtained by a common interest in the The standard average output per month is ascertained, and for purposes of illustration this standard is expressed by 100 If production is increased to, say, 130, under the Priestman system, everyone, from the manager to the apprentice, including the office staff, receives 30 per cent. increase on his wages for the four following pay days. Thus a man whose weekly rate of pay is 50s. would receive for the four following pay days 65s. Where this scheme operates, the result is said to have been so satisfactory that the percentage of increased output has been as high as 80 per cent., and never below 21 per cent. above the standard. The average increase, taken from the time it was first introduced, is 50 per cent. Four hundred and fifty employees were paid last year additional wages to the extent of £24,000, and, according to the Works Committee, it has produced a feeling of good fellowship between the work. men themselves and a better understanding between the men and management.

The Miehle Press.

The Founders of the Business.

The story of how the American business of the Miehle printing press was founded is thus told by a contributor in the Hamilton Spectator, a Canadian paper: - "The intent of this article is to tell of a visit the writer made to Grimsby (Canada) the other day to make the acquaintance of John Hewitt, who was born on a farm within sight of Grimsby, about 79 years ago, but who was never intended for the life of a farmer. When a youth he quit the plough and went into the town of Grimsby and learned the trade of saddler and harness-maker. Here, again, dear old mother Nature made a mistake, for John Hewitt was never destined to pull wax-ends during his The sequel will bear us out in what we are telling the readers of these 'Saturday Musings,' for John learned to be a good carpenter as well as a first-class harness-maker, and then added one or two more trades to his repertoire. One thing is certain, and that is if he had remained on that Grimsby farm where he was born he would not have seen as much of this world or have come into the prominence as a manufacturer of the celebrated Miehle printing press that has made his name known in every first-class printing shop in Canada and the United States, and even in foreign countries.

"John Hewitt tarried in Grimsby till about the year 1866, when, hearing much of what a great city Chicago was bound to be some day, he decided to pack up his bag, invested his savings in a railway ticket, and off to the future great city of the west. And he made no mistake, for fortune smiled upon him from the day that he first walked up Clark-street. Chicago seemed to be the Mecca of Canadian boys in those days, and one could not throw a stone in the streets without hitting one of them, especially one of the printer boys from Hamilton. John Hewitt soon got acquainted with these old boys who had preceded him to the land of promise, and it made life pleasant for him. And then a younger brother, C. T. Hewitt, soon followed John, and together the brothers mapped out a course for their future. They were no lag-gards by the wayside, but everything they touched prospered in their hands and in time they had a comfortable bank account to their credit.

"They were seized with the wanderlust, and Pittsburgh held out the beckoning hand and bid them come to the smoky city. There they entered upon a new line of business and became interested in a branch of the iron industry, which proved very profitable, and they remained in that city for a number of years. But their hearts were in Chicago, and back they had to go to that city, and they made no mistake in so doing. They had capital to begin with now, and everything they touched added largely to their bank account. We will not try to follow the Hewitt boys through their successful career, because it would fill

the columns of the Spectator. It was the printing press that made the boys millionaires. A foreigner named Miehle had invented a printing press that was one of the best in the market, and while he had mechanical genius, he had no ability to finance the workshop that was necessary to put such an expensive machine on the market. Miehle organised a company, but it was not equal to the job, and the result was that that company had to borrow capital to keep the wheels going around. John Hewitt was somewhat of a mechanical genius himself, and he could see the outcome of this printing press if properly managed. At first the company began to borrow small sums to tide over the Saturday pay list, and John was persuaded to help From small borrowings the them out. amounts grew larger. The press was a great success, but the company could not supply the demand. The company got deeper and deeper into John's bank account until finally the time came for a reckoning, and the result was that John Hewitt, to save himself, was compelled to take over the plant and put it on a workable basis. In that way John Hewitt became the owner of the patents of one of the best printing presses to be found in hundreds of print shops in Canada and the United States. He gave the business his undivided attention, and with his brother's assistance they made fortunes for both of them, and are now living on Millionaire-avenue, with elegant country homes in the old town of Grimsby.

American Paper Man in Europe.

Mr. Geo. A. Galliver, President of the American Writing Paper Co., Holyoke, Mass., left Southampton on Saturday on his return home. He has had a very busy week or two in Europe. We were fortunate enough to have a few words with him on the telephone, in the course of which he was pleased to express his appreciation of the World's Paper Trade Review.

Mr. Galliver finds the condition of the paper trade in this country much the same as it is in the United States—mills full of orders and unable to keep pace with the demand.

Asked if the mining and printing strikes were injuring the paper trade in the States, he remarked that the trouble was rather in the nature of a relief, since it enabled the manufacturers to catch up with orders.

His own machines, he heard by cable, were going full time trying to overtake the demand for book and fine writing papers. They do not touch news-print, which, as in this country. is finding a ready market.

During his stay in Europe Mr. Galliver visited Germany and Austria. He reports that although the Germans are "pretty blue" over the terms of the peace treaty, they are coming through all right.

Paper mills in that country are doing very well. They have their own coal, but they are held up by labour troubles.

Trade Notes.

A TRADE dispute last week delayed the publication of Nature.

A BRANCH of the Typographical Association has been formed in Dover.

THE late Mr. John Alexander Blackie, of Glasgow, the publisher, left estate of the total value of £95,404.

AFTER 50 years of existence as a periodical, the Literary World has been absorbed by the Christian World and will form in future a literary supplement published at intervals.

A STRIKE of newspaper employees was declared in Madrid at midnight on Sunday, but three hours later an agreement was reached and work was resumed, pending the result of negotiations.

THE many friends of Mr. A. Langley (Messrs. Langley and Sons, Ltd.), will sympathise with him in the death of his mother, Mrs. Mary A. Langley, widow of the late Charles Langley, of Euston, St. Pancras. The deceased lady had reached her 82nd year, and she passed away recently at the residence of her son-inlaw at Deal.

"GRAPHIC" CHANGE OF CONTROL.—It is officially announced that the offer to shareholders of Messrs. H. R. Baines and Co., Ltd. (proprietors of the Graphic publications) has been accepted by over 95 per cent., and the control of the publications has consequently passed to Messrs. William E. Berry and J. Gomer Berry, proprietors of the Sunday Times. The purchase does not involve any change in the personnel of the staff.

WINNING POSTERS.—In connection with the business poster competition at the recent Grocers' Exhibition and Market held at the Royal Agricultural Hall, London, the first prize, £3 3s. and diploma, has been awarded to Messrs. McLagan and Cumming, of Warriston-road, Edinburgh, for their poster "A Chip of the Old Block." The second prize, diploma, also goes to Messrs. McLagan and Cumming, for their poster "A Baby with Cocoa"; while the 3rd prize, diploma, is won by Messrs. C. W. Faulkner and Co., of 79, Golden-lane, London, for their poster "Devonshire Cider.

TENDERS WANTED.—For supply of printing and stationery for one year ending December 31st, 1920, for the Trainways Committee, Portsmouth; tenders to the Town Clerk, Town Hall, by 12 noon, December 15th.—For the supply of (a) school materials (b) printing and stationery (c) printing of minutes, for the Wakefield Education Committee; tenders to Mr. P. Glover, Director and Secretary, Education Department, Town Hall, Wakefield, by January 12th.—Tenders are invited by H.M. Stationery Office for printing the lists and registers of electors for the Parliamentary Borough of Wednesbury; forms of tender, etc., from Mr. T. Jones, Registration Officer, the Town Hall, Wednesbury.

In France the cost of novels has increased from 30 to as much as 100 per cent.

PLANS for extensions to the printing works of the Herald Press, Ltd., Dudley, have been passed by the Dudley Town Council.

Printing plates, spare parts (of iron) for typewriters may be exported from or pass in transit through Germany without special export licence.

THE Society of Women Journalists is offering three prizes of £10, £5 and £3 for the best articles on any phase of "Reconstruction." Men as well as women may compete.

On Tuesday, December 16th, at 8.15 p.m. in the Lecture Hall, Institute of Journalists, Tudor street, Mr. Edwin Drew will give his lecture on "Fleet-street Poets" whom he has met in the last 50 years.

THE "PRESSMAN" for October-November. the excellently printed house organ of Messrs. Harrison, Jehring and Co., Ltd., deals largely with labour questions, but is relieved by a bright little article on "Optimism" by H. Yule Cleland.

THE Advertisers' Golfing Society will in future be known as the Newspaper Golfing Society. The bye laws have been altered to have the effect that only those actively engaged in the business of newspaper or periodical production or advertising should be eligible for membership.

IMPORTATION OF STATIONERY.—At a council meeting of the Stationery Association the resolution was unanimously "That in the opinion of the council passed:of the Stationers' Association of the United Kingdom the buying and importation of manufactured goods from enemy countries in the stationery and allied trades should not be resumed until his Majesty's Government have clearly defined their trade policy.'

W. H. DORMAN AND Co., LTD.—Among the objects of W. H. Dorman and Co., Ltd., registered with a capital of £700,000, is the manufacture of an important series of printing machines which for many years past have been extensively in use in many parts of the world. The chairman of the directors is Mr. Walter Haddon, proprietor of John Haddon and Co., Salisbury-square, London, E.C.4. This week the public have been invited to subscribe to an issue of 250,000 8 per cent. cumulative participating preference shares at £1 each and 50,000 ordinary shares at £1 each.

DAILY GRAPHIC" HELD UP .- The failure of the Daily Graphic to appear at its usual time last Thursday was due to a dispute as to whether certain work should be done by members of the Machine Minders' Society or by members of the National Society of Operative Printers and Assistants. Neither union. would give way, notwithstanding the intervention of the management of the firm. The paper was ultimately produced on an understanding that a conference would be heldduring the day between representatives of the two unions and the Newspaper Proprietors' Association. The conference decided, we

Digitized by GOOGLE

understand, that the work over which the dispute arose should be carried out as hitherto.

THOMAS OWEN AND Co., LTD.—An interim dividend has been paid of 2s. per share, less tax, on the ordinary shares for the past half-year.

PRESS telegrams are now accepted for transmission to Latvia (Lettland) and Lithuania between the hours of 6 p.m. and 9 a.m. at the rate 2\frac{3}{4}d. per word, with a minimum charge of 10d. per telegram.

Among the powers for which the Cardiff Corporation are to apply to Parliament is that of prohibiting "the carrying or distribution in that city of pictures, prints, boards, placards, or notices except in an approved form and manner."

HALF-CROWN notes have been printed by Messrs. de la Rue, and arrangements have been made for a large issue at short notice if and when desired. The notes are similar in pattern to the present 10s. notes, but are somewhat smaller in size.

MR. W. WHYTE, JUN., has opened up business under the title of Wm. Whyte and Sons, paper mills agents, at 92, Fleet-street, E.C. Mr. Whyte has been appointed agent for Sociéte Anonyme Anciens Etablissement Louis de Naeyer, Willebroeck, Antwerp.

Paris Strike Ends.—Paris printers, having decided by 760 votes to 450 to resume work, the publication of the evening newspapers commenced on Monday and the morning dailies on Tuesday. The men are apparently returning to work on the same terms as before the strike.

The National Union of Bookshop and Bookstall Employees is now established. Practically the whole of the outside staff of Messrs. W. H. Smith and Son are already members, and considerable concessions for them have been obtained. The Hon. Secretary is Mr. E. H. Reeve, Railway Bookstall, Aldershot.

FIVE-SHILLING NOTES.—Five-shilling notes are expected soon to be in circulation. The Chancellor of the Exchequer has stated that a number of these notes were being printed, and it is now understood that they are ready for issuing. So far the secret of the size and design of these new notes has been well kept by the Treasury, and the exact date of their issue is also uncertain.

British Trade with U.S.A.—At a conference of members of the principal trade sections of the London Chamber of Commerce it was resolved "that in view of the serious effect, due to the fall in the exchange value of the fi on the prices of essential commodities imported from the United States of America and the consequent increase in the cost of living, every effort should be made to remedy the position by increasing the export to that country of British manufactured goods, especially those of a luxurious character for which there is a great demand at the present time, and which, owing to the exchange position, can now be marketed in the United States of America on exceptionally favourable terms."

Personal.

SIR HORACE MARSHALL has been re-appointed Master of the Spectacle Makers' Company.

Two well-known figures in Fleet-street, where they worked as colleagues for over 40 years, have gone into retirement—Mr. Hugh Dellow and Mr. William Longstaff. After a preliminary journalistic career in the North Country, they came to London, Mr. Dellow in 1875 and Mr. Longstaff in 1874, as the representatives of the Newcastle Chronicle, which was then being personally conducted with such singular ability by the late Mr. Joseph Cowen, as it is now by his soq, Colonel Joseph Cowen.

THE Newcastle Chronicle has developed the transmission of news by private wire with great insight, until now the whole of its general and foreign news is sent direct from the London office to Newcastle by the most modern instruments.

Mr. A. E. Jarvis (Messrs. Eyre and Spottiswoode), was on Tuesday unanimously elected President of the Printers' Managers and Overseers Association (Parent Centre), and Mr. S. M. Bateman, Vice-President.

MR. G. PHILLIPS, the General Secretary, has been appointed general overseer of the composing department of Messrs. Odhams, embodying the duties of the late Mr. E. C. Moyce. In consequence of his increased duties, he has been obliged to resign the General Secretaryship of P. M. and O. A. Nominations for a successor will be taken at the January meeting.

MR. T. E. NAYLOR, secretary of the London Society of Compositors, has been nominated for the chairmanship of the London Labour Party.

MR. R. M. LANCASTER, J.P., has retired, on the grounds of indifferent health, after a service of nearly 30 years, as secretary of the Leeds T.A. He succeeded to the secretaryship on the retirement of Mr. Atach, and has taken a prominent part in the public life of Leeds.

MR. HERBERT SHACKLETON, a member of the staff of the Darwen News, who served in France with the Grenadier Guards, was married last week.

MR. A. S. SKINNIDER, who has acted as chief reporter in Paisley for the Glasgow Herald during a period of over 32 years, besides representing the Evening Times and the Bulletin, has retired from journalism.

MR. SKINNIDER has been entertained by his fellow journalists and a number of the leading public men in the town, and was pre-

sented with a wallet of Treasury notes and an escritoire, together with a case of fruit cutlery for Mrs. Skinnider.

The chair was occupied by Mr. H. C. Watson, editor of Paisley Daily Express, and the presentation was made by Provost Lang, who recalled that Mr. Skinnider had been connected with journalism for over 40 years.

THE dinner on Saturday given by the combined circulation staffs of the Daily News and the Star, and attended also by representatives of the editorial, printing and other departments of the two journals, proved a very cheery function.

MR. H. MURCH paid some well-deserved compliments to the circulation department and to Mr. J. W. White, its chief, who replied; Mr. C. H. Belson proposed the toast of "The Firm," and Mr. Cyril Kew that of "The Visitors," for whom a reply was made by Mr. T. W. McAra, of the Newspaper Proprietors' Association.

Miss Marguerite Cody, representing the Daily News, was one of the lady journalists who created a new precedent in the House of Commons by being present in the Press Gallery on Monday. The occasion was Lady Astor's first appearance in the House.

In fact, there were two, or three, lady journalists altogether in the Press Gallery.

The many friends in the trade of Mr. Fred Berry, C.C. (Messrs. Thomson Bros., Ltd.), will be glad to learn that he has recovered from his recent illness, and has resumed his business and civic activities.

MR. NICHOLAS P. ANDREW (of Messrs. Andrew and Suter, well known for their specialities for the paper box trade and for machinery for making corrugated board), was re-elected chairman of Messrs. Dennis Brothers, Ltd., at the annual meeting held in London.

A HIGH tribute was paid to the services and enterprise of Mr. Andrew, who has been largely instrumental in bringing to a successful issue the many important developments associated with Messrs. Dennis Brothers, Ltd.

FRIENDS in this country of Mr. J. L. McNicol, a Scottish papermaker who is now Assistant News-Print Controller at Ottawa, will learn with interest that his son, Mr. Gilbert Mc Nicol, was recently married in Canada. As a wedding gift, the management and employees of the Don Valley Paper Mills, Toronto, Ontario, presented him, through Mr. C. Nelson Gain, sales manager of the company, with a handsome rocking chair and table. Mr. Gilbert McNicol has been on the staff of the Don Valley Paper Mills for a considerable time.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 4, Queen Anne's Gate-buildings, London, S.W.I, to whom further inquiries should be addressed with the reference number quoted.

PERU.

A firm of good standing in Lima are desirous of representing British manufacturers of wall-paper, wrapping paper, brown paper, and printing paper for newspapers. (Reference No. 1,081).

ITALY.

A firm in Bologna wishes to establish connections with the United Kingdom houses for business in paper. Inquiries to Secretary, British Chamber of Commerce for Italy, 7, Via Carlo Felice, Genoa.

CANADA.

A manufacturers' agent in Montreal desires to represent United Kingdom manufacturers of paper, lithographs, lithographed cartons, playing cards, stationery specialities, etc., in the City of Montreal and the Ottawa Valley, on a commission, or a salary and commission basis. (Reference No. 1030).

A Canadian firm of manufacturers' agents, who have just opened an office in London, wish to get into touch with purchasers of collapsible cardboard boxes of all kinds, visible card index systems and paper bags. Replies to office of High Commissioner for Canada, 19, Victoria-street, London S.W.I.

Westinghouse Morse Brake Co., Ltd.

For many years the Westinghouse Brake Co., Ltd., devoted a separate department of their works to the manufacture of Westinghouse Morse rocker joint chain drives, but lately the facilities have proved inadequate to meet the demands which the advantages of the rocker joint chain drives have created. To cope successfully with this increasing business, a new company, The Westinghouse Morse Chain Co., Ltd., has been formed, and a modern commodious factory acquired at Letchworth, Herts.

Mr. Edward Flex, who, as manager of the chain department, has become personally known to a large number of customers throughout the country, will act as general manager of the new company. He will be assisted by his present expert staff, and thus a continuity of personal attention will be secured.

Mr. Flex states that the modern specialised plant, with which the factory is equipped, will ensure both the selection of the best materials and the most up-to-date methods of accurate manufacture; whilst the facilities for rapid production on a large scale will enable quick deliveries to be made.

Stabilising the Printing Trade.

Work of the Whitley Council.

At the meeting held on the 25th ult., at the Institute of Journalists, to discuss the "Work of the Whitley Council for the Printing Trade," the principal speakers were to have been Mr. Alfred F. Blades and Mr. G. A. Isaacs, representing respectively the employers' and the workers' points of view. Both speakers, however, found themselves unable to attend, Mr. Blades on account of indisposition and Mr. Isaacs owing to an urgent matter of trade union business.

In the circumstances Mr. A. E. Goodwin, secretary of the Federation of Master Printers and joint secretary of the Industrial Council for the Printing Trade, was asked to introduce the subject by reviewing the work of the Industrial Council, and this he did in very able fashion

Successful Working of Councils.

The Chairman, Mr. Robert Tootill. M.P., said that just before coming to the meeting he had had the benefit of a conversation with Mr. Whitley himself (Deputy Speaker of the House of Commons), who had informed him that the reports of the operations of the fiftyone Whitley Councils now in existence were exceedingly favourable from every point of view, though naturally on account of differences in personnel, some Councils were more active than others. Speaking as an active trade unionist of 48 years' standing, Mr. Tootill said he hailed the introduction of the Whitley Councils as a piece of machinery which, in his judgment, ought to form part of the constitution of trade union organisations. He spoke of their value as a means for adjusting differences before a dispute had reached the length of a strike, and, above all, of preventing anything in the nature of an ill-considered, premature lightning strike. thought the adoption of Whitley Councils would do much to reduce the suspicion and prejudice which had existed in the past between capital and labour, as a result of which distrust the industrial world was suffering to day.

Mr. Goodwin explained that although he had known of Mr. Blades' inability to attend, he had come fully expecting that Mr. George Isaacs, one of the most prominent labour leaders in the printing trade, would have been present to emphasise the labour point of view. Mr. Goodwin therefore made clear his own position as secretary of the Federation and joint secretary of the Joint Industrial Council.

Initial Steps in Printing Trade.

The printing industry, said Mr. Goodwin, had a very difficult task to face when it started to organise itself. It should be realised that one of the difficulties was that in the printing industry they had employers employing a large number of workers, running in some

instances into thousands, and they had also the small printer working by himself or employing just two or three men. Then they had the workers in the printing trade split up into no fewer than 23 different trade unions. So that the situation was a somewhat different one from that of many other industries. But it was not at all surprising that the printing industry-recognised as the handmaiden of all industries, without whose aid no forward movement could make progress—was amongst the first to take a leading part in the Whitley Council movement. As a matter of fact, said Mr. Goodwin, we claim to be the pioneers in this movement, and to have put forward the idea of the Whitley Councils long before the Whitley Committee itself met. It was a matter of regret that instead of being at the top of the list of the Councils formed, the printing industry came about fortieth on the list. The delay was due to the attempt to bring within the scope of the Council all the workers and all the employers in the industry. But for the delay in forming this industrial council the story of its working would have been more interesting, or at any rate more lengthy.

Up to the present, Mr. Goodwin continued, there have been only two meetings of the Council. The time spent in drafting a constitution was not by any means wasted. The committee that drafted the "Betterment Scheme" had created a favourable atmosphere in which to launch the Industrial Council. The fact that representatives of the employers and the trade unions sat together for months did a great deal to break down difficulties, and to create a common understanding between employers and the workers.

Objects of the Council.

Mr. Goodwin mentioned that the objects of the Industrial Council for the printing trade had been very clearly set forth in the scheme, and he said that many of their statements of the objects had been copied bodily by some of the other industrial councils that have been formed. Object No. 3, as stated, gave, he thought, a fair idea of the scheme:
"To promote good relationship between
employers and employed; to secure cooperation and the recognition of mutual interests; to encourage direct contact between employers and workers; to devise ways and means of settling any differences that may arise; to resist the action of those who would injure the fair standard of prices and wages by disposing of their goods or labour at less than the standard mutually agreed upon; and to do all things possible for the betterment of the trade and the improvement of its conditions." That would appear to most of them a fairly comprehensive object of the council. They would notice that in the foreground was set the promoting of good relationship. This suggested that good relationship did already exist. He had previously mentioned that the preliminary meetings of the leaders did a great deal of good in this direction. It was significant that throughout the most difficult periods of

the past five years there had been no serious disturbances in the printing world such as had been witnessed in other industries.

Good Work of Conciliation Committee.

As soon as the Council was formed certain committees were appointed. The conciliation committee was the one which both sides re-

garded as of most importance.

To this committee, composed of representatives of both sides, two disputes have been referred, and in both cases unanimous The most recommendations were made. striking evidence of the value of this committee, and of the Whitley principle, is the fact that in this committee the trade union representatives and the employers' representatives did not look at the questions in dispute from a trade union or an employers' point of view, but from a judicial standpoint, with an evident desire to come to a fair and equitable decision. And in one instance when a vote was taken, there was cross-voting-showing clearly to what a large extent each side had succeeded in recognising the other's point of view.

Mr. Goodwin referred next to clause 5 for the official scheme, which declares that another object of the Industrial Council is:—
"To assist in the maintenance of such selling prices as will afford reasonable remuneration to both employers and employees." He knew, he said, that this object had been subjected to somewhat ill-informed criticism in certain quarters, but it was simply an amplification of the principle expressed in the previous clause, "to resist the action of those who would injure the fair standard of prices and wages by disposing of their goods or labour at less than the standard mutually agreed upon." Surely there could be no objection, provided the standard was a fair one.

The Importance of Costing.

Some critics had suggested, he said, that the public or the consumers should also be represented, in order to see that there was no combination to raise prices unduly. But the printing industry was extremely fortunate in having given a lead to all other industries by, some seven years ago, setting forth a scheme of scientific costing. This established a definite standard which would protect the public from profiteering, protect the employers from bankruptcy, and protect the employees from being sweated. By this system it was possible to establish certain rates which could be definitely proved to do no more than cover the cost of the processes concerned. He thought that if this principle of standardising costs were applied to all industries, the dangers which might be feared in Whitley Councils would entirely disappear.

Other Activities of the Council.

The Council had also taken in hand, said Mr. Goodwin, the problem of unemployment. A sub-committee had prepared a most useful report, which, however, as it had not yet been adopted by the Council, he was not entitled to describe in detail. It recommended the

establishment of a joint unemployment fund, which would be a definite charge on the in-

dustry as a whole.

Then the Council had appointed a Health Committee to suggest ways and means to improve conditions and check the serious loss of life in the printing world. It was probably a unique experience that, at the last Council of the Master Printers, a labour leader-Mr. Isaacs--had been invited to lay before the Council, and appeal for employers' co-operation in, a scheme which the trade union had evolved as a war memorial, making provision for printing workers in illness and old age. The late Mr. Walter Hazell had been one who, as an employer, took this matter up with great enthusiasm. The chief problem which the Health Committee had had to face was, of course, the prevalence of tuberculosis. Mr. Goodwin said he was not prepared with exact figures, but he understood that the averages of deaths from tuberculosis out somewhat as follows:—in worked the general community, about one in ten; in the whole of the printing industry, one in six; in the machine-room, one in two. This pointed, of course, to the need of research as to the cause of this high death-rate. These particular facts, strange to say, did not apply to this country alone; in America, in Germany, wherever statistics were available, this alarming death-rate in the machine-room was shown to be in existence.

In conclusion, Mr Goodwin said that although the Council had only met twice, he thought they could express their pride at being associated with a joint industrial council which had made a good start, with great ideals, and with a good band of workers desirous of seeing the printing industry in this country carried on in such a way as to set an example to the rest of the world. While printing offices all over the world-in New York, Paris, Copenhagen, etc.—were in a condition of serious unrest, it was gratifying to know that British printers had so far been able to adjust their differences amicably. To that, the Joint Industrial Council had contributed a great deal. Not much progress had yet been made with the organisation of district or town committees, and comparatively few works advisory committees had been set up, but from the few centres where these had been started. quite satisfactory reports had come to hand. Thus there was excellent promise for the future, and they could expect to see the Whitley Council scheme benefiting not only their own day and generation, but also the printers who would follow in their steps.

(The discussion which followed will be given next week.)

PAPER, stationery, and printing are to form an important section at the British Industries Fair, at the Crystal Palace, next year from February 23rd to March 5th.

Speech is silvern, silence is golden; but to say one thing and mean another is Britannia

Metal.

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., newsagents, 11, St. Bride-street, E.C.4.

THURSDAY, DECEMBER 4, 1919.

Current Topics.

The Printing Situation.

COMPARED with the disturbed state of affairs in Paris and New York the condition of things in this country so far as the printing industry is concerned is a matter for satisfaction. The waters are not unruffled, but the records of the past give so much hope in respect of future industrial peace, and there has already been shown so much of good feeling on the part both of employers and employed in the British printing trade, that we believe present differences should not prove insuperable. As we go to press the serious matter of the demand for a 15s. advance in the London rate awaits settlement. Some pessimistic views on the

subject have been expressed, but if precipitate action on either side is avoided, we have every hope that matters may be peacefully adjusted, and the meeting this week result in an amicable settlement.

Novel Printers' Pensions Effort.

THE importance of making provision for those printers to whom old age brings a loss of the means of livelihood, also for the wives and children of necessitous printers, and the widows and orphans of printers deceased, is a matter so widely recognised and so capably kept before the trade by the Printers' Pension Corporation, that it needs no emphasising here. And we do not doubt that deserved support will be given to the Stereotypers' and Electrotypers' Auxiliary in connection with their smoking concert arranged to take place at Cannon-street Hotel, on Monday, December 29th. Worthy of special mention, however, is the novel scheme which is being put into operation by Mr. John Fry, the printers' metal specialist, who is to occupy the chair at the coming concert. Mr. Fry asks printers to send during November or December-or promise to send at an early date—to the nearest Fry's Metal Foundry (London, Manchester, Bristol, Glasgow or Dublin) one cwt. of dross (or more if possible) for the benefit of the funds of the Printers' Pension Corporation -Stereotypers' and Electrotypers' Auxiliary. This is less difficult than sending cash, says Mr. Fry, and he earnestly hopes that printers. realising the good cause of this charity will respond nobly. The Foundry will credit this dross at the high price of 21s. per cwt., a price specially increased for this charitable cause only, and they will send sacks and pay carriage to their nearest foundry. Mr. Fry undertakes that there will be no deductions whatever for expenses; advertising, printing, and other disbursements will be defrayed by Thus an easy means of helping a most deserving charity is placed ready to the printer's hand. We hope many printing houses will take advantage of Mr. Fry's offer, and thus enable the Stereotypers' and Electrotypers' Auxiliary to hand over a substantial sum to the Printers' Pension Corporation.

Brisk Business.

Business is more than brisk in the papermaking and printing trades; it is almost overwhelming. There is a great scarcity of paper, due to the extremely heavy consumption. Paper is being used up as fast as it is

Digitized by GOOGLE

made, if not faster, and mills are months overdue with orders in hand. The prospect of smooth running business must be post-dated a long time hence. Meantime, the congestion on the railways is adding tremendously to the difficulty of keeping pace with the growth of business. The matter has reached the serious stage, and requires to be taken in hand by some competent authority. While the railways in this country are supposed to be short of rolling stock, nearly twenty thousand of our wagons are over in France. It is now over a year since the war finished, and it is time we had wound up our affairs in the war areas. If the railway stock could be brought back to this country at the same speed that it was sent out, our manufacturers and consumers would benefit, and the wheels of trade would revolve more smoothly. The natural handicap of heavy demand and low production is a sufficient burden for our industry to bear without the additional load of an almost hopeless state of affairs in the transport world.

Prices of Paper.

THE hardening tendency in paper values evidences itself in all quarters. Printings and common writings are chiefly making the pace. It is difficult to secure a good making of S.C. or M.F. printing under 7d. to 71d. per lb., and many of the Scottish mills are quoting 8d. per lb. for fine esparto printings. Esparto writings from the mill are now costing 81d. per lb., while wholesale houses are levelling their prices round about 9d. to 9\fmathbb{1}d. It is no secret that many wholesalers are finding themselves out of it at the present time, and it is only the scarcity of paper and inability of mills to give quick delivery that is driving orders their way. Few of them have got on to their regular makes, and they are picking up whatever lots they can lay their hands on. Compared with mill figures, their prices are high, very high, in fact. On the other hand, mills are now going direct to users in a way they never did in pre-war days, and this not only for large making orders, but for small lots also.

English and Foreign Paper.

In the market some of the current prices comprise £55 to £60 per ton for foreign kraft, and £53 to £58 per ton for English kraft. The best English krafts have improved so much that users have now almost forgotten their earlier attachment to the Scandinavian variety. Manillas are offered at 6d. to 6½d. per lb. for makings which have been sold

extensively by merchants at 8d, to 9d, per 1b. Rope browns are quoted £35 per ton; dark browns £27 to £30. Railway buffs are securable at 54d. per lb.; common English bank at 7 d.; better grade at 8d.; named papers at 10 d.; and best class white banks and bonds at is. 3d. per lb. Tub-sized writings and account book papers are settled at is. to is. id. per lb., and large makings for bank contracts have been accepted at 11d, per lb. The demand for hand-made papers has grown so extensively despite the war prophecies of its extinction that all the vats are booked up for months ahead. Stocks are practically nil, and cannot be entertained as a plausible idea for at least six months.

Demand for British Paper.

We are now fairly in the midst of a paper boom. Demand is steadily growing, and the scarcity of supplies is becoming more apparent. As consumption grows, which it is doing and must continue to do, the pressure on the mills must increase. Printers are crying out for supplies, and papermakers are unable to undertake all the orders which are forthcoming. One hears very rosy predictions as to the future of the paper trade, as, indeed, of the general commerce of the country, and the prospects give every indication that these will be fulfilled. They certainly will if we can get the increased production which is so necessary. We believe the better output will gradually come with the passing of unrest in other sections of industry and the establishment of the three-shift system. The process, however, may be slow, because so much depends upon outside conditions. But with patience and persistence we shall come out all right both as a nation and a trade.

Scarcity of News-Print.

WHILE every class of paper finds a ready market now, there is a particular call for news-print, not alone in this country, but throughout the world. So much so that there is almost a scarcity. This, at least, is true in the United States, where it is feared that some of the smaller newspapers may find themselves starved out. On this side of the Atlantic the position is not quite so acute, though the pressure is steadily increasing. Whether supplies will be able to keep pace with demand remains to be seen. At the moment, however, there is no surplus in spite of the imports which help to swell home production.

COMPANY NOTICES, etc.

Avonmouth NEWSPAPER Co., At a meeting of the company held at Bristol on October 24th, the following resolution was passed; and at a subsequent meeting on November 14th, was duly confirmed, viz :- "That the company be wound up voluntarily; and that William Morley, of Eastfield-road, Westbury-upon-Trym, Bristol, accountant, be appointed liquidator of the company.

NEW COMPANIES.

CHAMBERS PRESS, LTD.—Registered with a capital of £3,000, in £1 shares (1,000 pref.), to carry on the business of printers, publishers, papermakers, stationers, etc., and to enter into an agreement with J. Amey and J. W. Amey. The subscribers are J. W. Amey and H. G. Hamshar. Private company. The first directors are not named. Registered office: 5, Chichester House, Chichester-rents, Chancerylane, W.C.2.

THOMAS E. HOLMES AND CO., LTD.—Registered with a capital of £2,500, in £1 shares, to carry on the business of mechanical engineers and turners in vulcanite, steel, brass, ivory, bone, wood and other substances, printers, stationers, etc. The subscribers are J. Hart and F. W. Cheeseman. Private company. The first directors are not named. Registered office: 18, Southwark-bridge-road, S.E.

JORDAN GASKELL, LTD.—Registered with a capital of £7,000, in £1 shares, to carry on the business of proprietors and publishers of newspapers, journals, magazines, books, literary works and other publications, etc. Agreement between Jordan-Gaskell, Ltd., of the one part and E. Huskinson and F. Gaskell of the other part. Subscribers are J. F. Seacombe

and H. J. Gay. Private company. First directors: F. Gaskell and E. Huskinson.

METROPOLITAN CARBON AND RIBBON Co., LTD. - Registered with a capital of £2,000. in £1 shares, to carry on the business of manufacturers of and dealers in carbon papers, ribbons, and all other accessories for typewriting machines, stationery, etc. The subscribers are D. J. O'Brien, F. M. O'Brien. Private company. First directors: D. J. O'Brien. F. M. O'Brien and A. H. Sutton Registered office: Brantwood-road, Tottenham, N.17.

T. M. WOODHEAD'S SUCCESSORS, LTD.—Registered with a capital of £10,000, in £1 shares, to take over the business of printers and artistic stationery manufacturers, lately carried on by T. M. Woodhead at Wharfestreet, Bradford, and now carried on by G. G. Walker at Peckover-street, Bradford, as "T. M. Woodhead's Successors." The subscribers are G. G. Walker, G. H. Green and G. D. Shand. Private company. The first directors are G. G. Walker (permanent governing directors), G. H. Green.

"PAN," LTD.—Registered with a capital of £25,000, in £1 shares, to carry on the weekly newspaper known as Pan, and to carry on the business of newspaper, journal, periodical and magazine proprietors, printers, etc. subscribers are W. J. B. Odhams, and J. S. Elias. Private company. The first directors are J. S. Elias, W. J. B. Odhams, and D. W. Odhams. Registered office, 93-4, Long-acre, W.C.2.

A. W. MATTHEWS, LTD.—Registered with a capital of £5,000, in £1 shares (2,000 pref.), to act as agents for manufacturers and commercial houses for the buying and selling of general merchandise, and to carry on the business of merchants and agents for the supply of strawboards, paper, cardboard, boxmakers' supplies, natural and synthetic essences. The subscribers are A. W. Matthews, and Alice L. Stewart. Private company. A. W. Matthews is permanent managing director and chairman. Registered office, 11a, Wormwood-street, E.C.2.

PRESS SERVICES, LTD.—Registered with a capital of £500, in £1 shares, to take over the business of a press and commercial photographic service now or recently carried on by H. F. Baldwin, at 47, Fleet-street, E.C., as the "Baldwin Photographic Press Service." The subscribers are W. G. Gilbert, R. E. Norman. and H. F. Roberts. Private company. Permanent directors - W. G. Gilbert, H. F. Roberts, and R. E. Norman (manager and secretary.) Registered office, 47, Fleet-street, E.C.

HENRY T. KING (NORWICH), LTD.- Registered with a capital of £6,000, in £1 shares (3,000 7½ per cent. cum. pref.), to carry on the business of wholesale and retail stationers. printers, booksellers, publishers, lithographers. picture framers, manufacturers of and dealers in fancy goods, etc. The subscribers are H. T. King, and L. L. King. Private company. First directors—H. T. King (managing di-Private company. rector), and L. L. King (both permanent). Registered office - 11, Royal-arcade, Norwich.

DECEMBER 4, 1919. BRITISH & COLONIAL PRINTER & STATIONER

British-American Timber Trust, Ltd.—Registered with a capital of £5,000, in is shares, to carry on the business of lumbermen, sawmill owners, wood pulp manufacturers, shipping and forwarding agents, etc. The subscribers are D. Brown, and F. B. Woodruff. Private company. First directors by subscribers. Registered office, 59, St. Mary-axe, E.C.

E. D. HAWKSEY, LTD.—Registered with a capital of £800, in £1 shares, to take over the business carried on at 71, Market-street, Manchester, as "Edward Davis Hawksey," to carry on the business of artists, engravers, and general illustrators, etc., and to adopt agreements (a) with said E. D. Hawksey, and (b) with W. Pearson and T. C. Kay. The subscribers are W. Pearson, T. C. Kay, and E. D. Hawksey. Private company. The first directors are W. Pearson, T. C. Kay, and E. D. Hawksey. Registered office, 71, Market-street, Manchester.

W. F. PARROTT, LTD.—Registered with a capital of £5,000, in £1 shares, to carry on the business of printers, stationers, lithographers. etc., and to enter into an agreement with H. E. Webster, Harriett A. Parrott, Lilian M. Parrott and H. W. Parrott. The subscribers are Mrs. H. A Parrott and Lilian M. Parrott. Private company. The first directors are Mrs. H. A. Parrott, Lilian M. Parrott and J. W. Thomson. Registered office, The Causeway, Teddington, Middlesex.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

BRISTOL PRINTING AND PUBLISHING Co., LTD.—Mortgage on 11, Small-street, Bristol, registered October 6th, 1919, to secure all moneys due or to become due from company to the National Provincial Union Bank of England, Ltd.

HEREFORDSHIRE PRESS AND PRINTING Co., LTD. - Satisfaction registered September 17th, 1919, of two charges for £1,000 each, both registered June, 1919.

GEE AND WATSON, LTD. — Satisfaction registered October 15th, 1919, of charges for (a) £1,000, registered September, 1912, and (b) £300, registered March, 1916.

BANKRUPTCIES, etc.

Re CHARLES STEEL (formerly trading as Steel, Brendon and Co.), printers' agent, Lloyd's avenue, Fenchurch-street, E.C.—This case came before Mr. Registrar Mellor at the London Bankruptcy Court on December 2nd for a rehearing of the application for discharge. The bankrupt failed in August, 1911, and recently applied for an order, which was suspended for two years on statutory grounds. He now asked for the order to be varied and

offered to consent to judgment for £50, which would be satisfied by an immediate payment of that sum into Court. His Honour made an order in those terms and now rescinded the receiving order.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership between Joseph Henry Lee and William Carey Freeman, carrying on business as printers and bookbinders, at 14, Chatham-street, Leicester, under the style of Lee and Freeman, has been dissolved by mutual consent as from November 8th, 1919. All debts due to and owing by the late firm will be received and paid by Joseph Henry Lee.

The partnership heretofore subsisting between Percie C. Cooper, Algernon M. Cooper and H. De Horne Cooper, carrying on business as printers, lithographers, manufacturers, photomechanical printers, photographers, publishers and stationers, at Cranfield Works, Cranfield-road, Brockley, in the county of London, under the style or firm of the "Cranfield Press" has been dissolved by mutual consent as from November 1st, 1919, so far as concerns Algernon Morris Cooper, who retires from the said firm. All debts due and owing by the late firm will be received and paid respectively by Harry de Horne Cooper and Percie Cyril Cooper, who will continue to carry on the business under the style or firm of Alfred H. Cooper and Sons.

ADJUDICATION.

Lake, Alfred Blunt, journalist, Rydal Leasowe-road, Wallasey, in the county of Chester. Date of order November 20th. Date of filing petition October 15th, 1919.

THE BANKRUPTCY ACT, 1914. FIRST MEETING AND PUBLIC EXAMINATION.

Lake, Alfred Blunt, journalist, Rydal, Leasowe-road, Wallasey. First meeting December 9th, at 11.30 a.m., at Union Marine-buildings, 11, Dale-street, Liverpool. Examination December 18th, at 11 a.m., at the Court House, Pilgrim-street, Birkenhead. ORDER MADE ON APPLICATION FOR DISCHARGE.

Lindsey, George, printer who carried on business at 44-46, Scrutton-street, London, E.C. Discharge suspended for two years, bankrupt to be discharged as from October 14th, 1921.

BRITISH & COLONIAL PRINTER & STATIONER

Artificial Daylight.

An invention which is expected to prove of great commercial value was exhibited by Mr. L. C. Martin, of the Optical Engineering Department of the Imperial College of Science and Technology, at a meeting of the Illuminating Engineering Society, held at the Royal Society of Arts offices in John-street on Tuesday night. It is an apparatus giving an artificial light which acts on colours in the same way as does daylight. In certain branches of industry, where colour matching is important it is impossible for work to be carried on after daylight has failed, because of the different hues taken on by materials under ordinary artificial light. It is now claimed that delicate colour work can be executed at night by means of the new device. The invention was that of Mr. Sheringham, a well-known artist, and it has been developed by Mr. Martin, assisted by Major A. Klein, a camouflage expert.

The apparatus is surprisingly simple, and it is possible to obtain results with an electric lamp of 300 candle-power. Below the bulb an opaque reflector is fitted in such a way that the rays are projected upwards against a screen of various colours arranged in small patches according to a formula. The light which falls from the screen presents coloured

material in its daylight hue.

When an ordinary light was introduced by the application of a white reflector, a very great difference was noticeable; blues appeared almost black, and violets took on a warmer reddish tint.

It was explained by Mr. Martin that it was necessary to make use of arrangements to reflect the whole of the light from the coloured surface, thus producing a type of indirect lighting unit which should have great possibilities in connection with shop window lighting and other commercial and industrial uses. Many such purposes had been suggested, including the manufacture and matching of artificial eyes, and the examination of patients with a view to medical diagnosis.

Relief Maps.

A process of making relief maps, pictures, designs, etc., patented by Mr. K. Wenshow, consists in placing a pattern in a frame, rendering it elastic by impregnation or otherwise, covering its back with a plastic mass while it is in an inverted position. allowing it to bag under the weight of the mass, and then embossing it with hand-tools or a matrix. The pattern of paper, silk, linen, etc., is clamped in a frame in an inverted position, and a plastic mass resting on the pattern causes it to bag. The relief is then produced on the pattern from below by hand-tools or by a matrix. A cover frame having a perforated hinged part may be placed on the frame, and the whole is then inverted and the

pattern is produced from above. Instead of the cover frame a matrix may be used. After a pattern has been transformed into a relief, the plastic mass may be allowed to harden to form a matrix for the production of other matrices, between which patterns may be forced to form reliefs without the use of a plastic mass.

Silvertown Roller Covering.

Rubber-covered rollers are used in the machines of a hundred industries. The covering of the rollers is a process requiring the greatest skill and care, since the continued efficiency of the machine depends absolutely upon the resilience and durability of the

roller coverings.

The manufacture of the rubber covering and its attachment to machine rollers and spindles is a field which the famous Indiarubber, Gutta Percha and Telegraph Works Co., Ltd. (the Silvertown Co.) have made peculiarly their own for nearly half-a-century. At their Silvertown works they possess all the necessary facilities for covering the rollers of printing and other machines with the utmost efficiency and despatch. One of the features of the special Silvertown covering process is the provision of a hard rubber attachment between the softer rubber jacket This intermediate and the metal roller. layer of hard rubber obviates any possibility of detachment.

The importance of ensuring maximum durability in the roller coverings will be apparent to every user. The Silvertown methods of manufacture and attachment. backed and guaranteed as they are by 50 years of practical experience and research, ensure the most satisfactory roller covering service and minimise the chances of machinery breakdowns.

The Silvertown Co., of Silvertown, London, E., are prepared to re-cover old rollers of all sizes and kinds, from the smallest spindle to the largest cylinder. There are numerous different grades of rubber covering available in any thickness. Information with regard to prices, etc., is given in the Silvertown price list No. 1.

Italy and News-Print Import.

Temporary Suspension of Customs Duty on Newspaper Paper.

An Italian Royal Decree of October 21st provides that white paper in rolls, for newspapers, may, up to December 31st, 1919, be imported into Italy from any country free from Customs duty. The Italian Minister of Finance will lay down rules for the purpose of verifying the real destination of the paper and its employment in the printing of newspapers.

Digitized by GOOGIC

P. Garnett and Son, Ltd.

New Company to Carry on the Old Otley Paper Business.

P. Garnett and Son, Ltd., was registered as a private company on November 17th. The capital is £60,000, in 20,000 7½ per cent. cumulative preference shares of £1 each and 40,000 ordinary shares of £1 each. The object of the company is to acquire the business of papermakers carried on by H. W. T. Garnett, F. W. Tennant and C. L. Jones, as personal representatives of the late P. P. R. Garnett, at Wharfeside, Otley, Yorks, as P. Garnett and Son. The subscribers (each with one share) are:—

J. W. T. Garnett, Greenholme, Burley-in-Wharfedale, via Leeds, papermaker.

F. W. Tennant, Commercial - buildings, Park-row, Leeds, stockbroker.

R. A. Barton, Wharfeside, Otley, near Leeds, papermaker.

H. Spalding, 56, Ludgate-hill, E.C., paper-

makers' agent.

The first directors are J. W. Garnett (permanent chairman), subject to holding £10,000 shares of either class), F. W. Tennant, R. A. Barton and H. Spalding. Qualifications of ordinary directors, £1,000. Secretary (protem.), H. W. T. Garnett. Registered office, Wharfeside, Otley, Yorks.

Claim for Paper Supplies.

At Glamorgan Assizes, Cardiff, the Lamson Paragon Supply Co., Ltd., London, sued Messrs. Fred Morgan and Co., wholesale grocers and provision dealers, of Swansea, for £310 3s. 2d. for goods supplied. The plaintiffs declared that they received through their Swansea representative an order for a special kind of greased paper, and the goods were despatched to the defendants in the ordinary course of business. The defendants repudiated the order and returned the goods.

The defendants stated that they never ordered the goods, and never authorised any-

body to do so on their behalf.

Evidence was given by Mr. Quick, Swansea representative of the plaintiffs' firm, to the effect that he offered a quantity of the paper to the defendants at 2s. 2d. per lb. and a counter offer of 2s. was made, but that the original offer was eventually accepted.

Mr. Morgan, in evidence, denied this, and the judge said he was not satisfied that there was any contract. In his opinion there was no acceptance of a definite contract. He, therefore, gave judgment for the defendants, with costs.

THERE has been issued from the office of the Sphere and Tatler, Ltd., a new monthly publication, Eve, at the price of 1s.

Largest News-Print Machines.

The directors of the Abitibi Paper Co. Iroquois Falls, recently made a careful inspection of their plant and commented especially on the way in which all operations are being co-ordinated scientifically on the new system of control, enabling the foreman to learn at once the constancy and consistency of the flow of his product, and the general standard of efficiency prevailing throughout the plant. This was more forcefully impressed upon them by the fact that the plant is now producing over 235 tons of paper daily, and has in addition a substantial surplus of sulphite and ground-wood pulp to dispose of commercially.

The additional mill buildings, now under construction, provide for the installation of additional news-print machines, 232 inches wide, the largest in the world, which, when running, will bring the total capacity of the mill up to about 450 tons per day. A large portion of this machinery is already de-

livered on the grounds.

From its inception the company has made it an object to provide its employees with the best possible living conditions. With this end in view, the town of Iroquois Falls has been planned and laid out, and is now being developed. All dwellings are provided with hot air furnaces, sewerage connections, hot and cold water and electric lights, and surrounded by large garden space.

Paper Box Trade Board (Ireland).

The Paper Box Trade Board (Ireland) have issued a notice of proposal, to vary the general minimum time rates for male workers other than learners from 8d. to 1s. 1½d. an hour, and for female workers from 5d. to 7½d. an hour, with corresponding increases in the general minimum time rates for male and female learners. They also propose to fix for female workers a piece-work basis time rate of 8d. an hour.

Objections to the above proposals may be lodged with the Trade Board within two months from November 4th, 1919. Objections should be in writing, and should be addressed to the Secretary, Paper Box Trade Board (Ireland), Lord Edward-street, Dublin.

Irish Paper Strike Ended.

The strike which began three months ago at the Abbey-street Works, Dublin, of Messrs. S. Irwin and Son, paper manufacturers, and extended to the mill staff at Rathfarnham, has ended, and work was resumed on Monday. The dispute arose over the dismissal of three or four girls for unsatisfactory work, resulting in the entire suspension of the firm's business. Sir J. Irwin informs us that the principle for which he contended has been vindicated, and he considers the settlement which has just been effected, as the result of negotiations between the I.T.W.U. and I.W.W.U., and himself entirely satisfactory and calculated to lead to a resumption of amicable relations.

"As the question of wages did not enter into the dispute," says Sir John Irwin, J.P., "all my workers have agreed to return as they went out, and my right as an employer to dispense with the services of inefficient workers has been maintained."

Messrs. S. Irwin and Son regret the inconvenience caused to their customers by their inability to deliver mill No. 32 (Irish) makes of paper during the strike, but this is now being speedily remedied.

Harmsworth in Newfoundland.

Important negotiations, of which the correspondent of the Paper Trade Journal, N.Y., is not at liberty to give particulars, are now proceeding between Canadian pulp and paper men and American capitalists, with the object of establishing a huge new pulp and paper undertaking in Newfoundland that will rival the Harmsworth enterprise.

An Advertisement is always working.

Printed or Coated Paper.

Paper Hangings.

The extent to which paper hangings were imported into this country during the past five years is shown by the following figures:—

1918	cwts.	£ —
1917	339 "	2,291
1916	2,170 ,,	9,471
1915	3,400 ,,	12,730
1914	37,896 ,,	90,869

Comparing 1914 with 1918, the sources of supply and the quantities were as under:—

			1914 Cwts.	1918 Cwts.
Germany			24,720	_
Belgium	•••	•••	9,024	_

Competition in Box-Boards.

One view of Canada's chances of competing successfully with Scandinavia in the matter of such products as box-boards is voiced by the importing firm of James Webster and Bro., Ltd., Liverpool and London. In reference to an inquiry they had sent to the Dominion, they state:—Import restrictions having been withdrawn altogether from box-boards, we are afraid it will not be very much use prosecuting this matter further. We had come to the conclusion that instead of import restrictions being withdrawn, they would have been developed further, hence our inquiries. Meantime, Canada could not compete with Scandinavia, and it does not appear to us worth our while to pursue the matter further."

Strawboards.

The imports of strawboards into the United Kingdom during the past five years were as follows:-

1918	591,381 cwts.	£637,052
1917	955.745 ,,	514,558
1916	3,140,796 ,,	1,189,056
1915	3,822,605 ,,	986,461
1914	3,209,128 ,,	858,577

Details as to the sources of supply and the comparative quantities for the two years 1914 and 1918, read thus:

			1914. C wts.	1918. Cwts.

STATIONERY AND PROFITEERING.-Among the many charges of profiteering that have been brought before the special tribunals and committees up and down the country, very few have had any connection with paper and print, and of these few none, so far as we have heard, resulted in the accusation being up-The Finsbury Profiteering Committee held. were recently considering a complaint by a local resident that he had been charged 2s. 9d. for a pocket book exactly similar to one for which he had paid is. 101d. at another local shop. The Town Clerk pointed out that stationery was not yet scheduled. The Board of Trade have informed the Finsbury Profiteering Committee that they have now under consideration the question of placing stationery in the Schedule under the Act.

French Paper Market.

Business is almost null in all kinds of paper There is, however, reason to believe that the critical period which commenced some months ago is coming to an end, says La Papeterie. Then with the second demobilisation now terminating the economic equilibrium of the country will be re-established. On the other hand, the stocks accumulated by buyers are being got rid of and the haste of speculators to dispose of their paper is a good augury. In some cases, following the example of the Government, paper is sold in regular auctions.

The object of the recently founded Société Pâtes à Papier, Becker and Co., is the manufacture and sale of all kinds of paper pulp and the sale of all kinds of paper. The company's offices are at 82, Boulevard Haussmann, and their capital is fixed at a million francs in 16,000 shares of 100 francs, in which 2,500 fully paid go to the French Paperstock Co., Ltd. Amongst the administrators are Mr. F. E. R. Becker, 34, Ludgatehill, London; and Mr. R. J. Triggs, director of the French Paperstock Co., Ltd., in London.

THE Société des Anciens Etablissements Cauvin-Yvose was lately formed to carry on business in everything directly or indirectly relating to the textile and paper industries, and will continue the work of the firm Cauvin-Yvose. The offices are at 55, Rue de Lyon, Paris. The capital is fixed at 15,000,000 francs in shares of 500 francs.

THE Papeteries Raynal et de Brienne has been formed to carry on the industry and trade of paper, printed matter, cardboard, envelopes, stationery, etc. The capital is 1,800,000 francs and the offices are at 21, Rue Eucher Girardin. Roanne.

MR. H. A. VERNET, the late Paper Controller, will be the guest at the dinner of the Papermakers' Association on February 5th.

Germany's Printing Position.

Employment in Germany in October fails to carry on the improvement of which signs

were showing in September.

"Apart from a few local improvements, which proved merely temporary, the situation in the German labour market in the middle of October," says Borsen Zeitung, "is still unsteady and generally unfavourable. Delayed production and suspension of work in factories, necessitated by the persistent lack of coal and raw materials, as well as by strikes and wage agitations, continue to influence the labour market generally. The fuel supply is so inadequate that in large and small industries alike complaints are being made of the inability of manufacturers to meet the demand for goods. Extensions of works are impossible; in some cases restrictions have had to be introduced. The prevailing shortage of houses influences the labour market to a considerable extent, and makes it impossible to adjust local inequalities between supply and demand in the labour market. A certain dislocation has been caused by the return of prisoners of war and refugees. It has, however, been possible up to the present in the main to find suitable employment for nearly all prisoners of war. The available supply of labour has been increased by the closing down of war departments and munition factories, and by further demobilisations from the army. At the same time a falling off in the number of vacant situations has been noticed in certain localities. In spite of these unfavourable conditions there are on the whole increased indications in certain localities of a recovery and of gradually increasing power of production in industry. In places where the supply of coal and raw materials is adequate employment has increased. Numerous factories have succeeded, thanks to the good sense of the workers, in re-introducing piecework, and thereby increasing production.

The situation is described as especially unsatisfactory in certain industries, among which

are specified paper and printing.

Markets for Paper Board.

According to figures which have been made public by the Department of Commerce, Washington, there was \$398,241 worth of 2-paper board exported from the United States during August. The chief markets were:—Denmark, \$3,448; Netherlands, \$1,720; Turkey-in-Europe, \$4,000; England, \$24,565; Scotland, \$384; Canada, \$79,298; Panama, \$1,540; Mexico, \$8,415; Cuba, \$19,503; Dominican Republic, \$6,448; Argentina, \$86,155; Brazil, \$21,656; Chile, \$1,167; Colombia, \$1,704; Peru, \$1,513; Uruguay, \$4,030; China, \$33,691; British India, \$6,716; Hongkong, \$4,551; Japan, \$51,339; Australia, \$22,283; New Zealand, \$936; Philippine Islands, \$3,463; British South Africa, \$5,392.

The French Paper Market.

The advance in the price of coal and of waste papers would justify an increase on all kinds of paper in France. Meanwhile, certain houses, believing this advance to be only for a limited period, are selling at the same prices, although it seems to be well proved that the increase on coal will be progressive, and a shortage is feared. In packing and wrapping papers some important shipments from Scandinavia have been announced. Concerning printing and writing papers, there is little business being done, and the demand is rather quiet. The demand for boards is active, but the transport crisis and the lack of labour occasion long delays. There is the same difficulty with makers of paper sacks. who have not sufficient labour to be able to give satisfaction to the demands made upon them.

Business is extremely active in all kinds of paper in the Lyons region, says La Papeterie. The mills are unable to satisfy the demands. Consequently paper does not remain long at the depots of the mills; very often it is sent direct from the station to the client. The advance in price is general. One large firm who had accepted an order for writing paper at a quoted price, consented the following week to make the same kind of paper only on the condition of an advance of 40 frs. per 100 kilos.

Colonial Notes and News.

AUSTRALASIA.

One of the most important items of news in the printing world is the amalgamation of the Gordon and Gotch businesses. At a recent meeting of Gordon and Gotch (Sydney), Ltd., it was resolved that it was expedient to effect an amalgamation of this company with Gordon and Gotch Proprietary, Ltd., which carries on business in the State of Victoria and elsewhere, and with Gordon and Gotch (Queensland), Ltd., which carries on business in Queensland and elsewhere. A new company, called Gordon and Gotch (Australasia), Ltd., has now been registered, and acquires all three businesses. It may also be noted in this connection that Mr. C. D. Paterson, advertising manager of the Commonwealth Bank of Australia, has resigned to take a similar position with the firm of Messrs. Gordon and Gotch. Mr. Paterson has handled the advertising campaign of the various Comonwealth war loans.

A NEW company has been formed to carry on the business of Messrs. Geo. Robertson and Co. Pty. Ltd., booksellers, publishers, etc. The nominal capital has been fixed at £50,000, in shares of £1 each. Of that amount more than £35,000 has already been placed. Mr. J. M. Gillespie has been elected chairman of the board of the new company, which conducts operations as from July 1st last, under the old title, and in the premises in Elizabeth-street, which for some years was occupied by the old company. The lending library, which was transferred to Collins-street some months ago, is to be taken back to the premises in Elizabeth-street.

The report of Admiral Lord Jellicoe on the naval mission to Australia was printed at the Government Printing Office, Sydney. In an official letter of thanks to Mr. Gullick, the Government Printer, Lord Jellicoe stated that he was much impressed with the great accuracy of the printing and also the rapidity with which so great an undertaking was completed at short notice.

An exhibition of the posters that are being issued in connection with the new Peace Loan has been held in Sydney. There were no English posters on view, for, as Mr. J. Denison Miller, governor, explained, "in England they had neither paper for posters nor men to print them during the critical years of the war." The series of Australian posters on view demonstrated the various stages of the war campaign. Now comes the final appeal for the Peace Loan, and the series of posters now being issued are by far and away the best of the series, showing the steady advance in lithographic art and three-colour printing which has taken place in Australia during the past four years.

The high quality of Australian lithographic poster work was remarked upon at a recent meeting of the Sydney Municipal Council, when it was moved that the request of the Railway Commissioners for permission to erect advertising hoardings on the vacant sites reserved for the purpose of the city railway be acceded to. Alderman Wm. Brooks said Australia was just awaking to the wonderful possibilities of advertising, and the lithographic work turned out in Sydney was now equal to the best in the world.

It is interesting to notice, nevertheless, that however excellent Australia's posters may be from the printer's point of view, there are some people who think their quality in respect of moral standards needs a correcting hand. There recently waited upon the Chief Secretary (Sir George Fuller), a deputation which was under the auspices of the Council for Civic and Moral Advancement, and representative of all the Protestant Churches in New South Wales, the Jewish Church, the Salvation Army, and some other organisations, its purpose being to urge that legislation dealing with the censorship of objectionable posters, advertisements, and handbills, especially in connection with moving pictures, should be immediately introduced and rushed through all stages in the House. Sir George Fuller expressed agreement with the views of the deputation, and promised the preparation of a bill embodying practically the views put

In a case that came before the Industrial Arbitration Court, at Sydney, before Judge Curlewis, the Master Printers and Connected Trades Association sought a variation of the award governing the cardboard box-makers' industry. His Honour varied the award by making a flat rate of £3 7s. 6d. a week for guillotine hands, and by deleting the extra rates provided for youths engaged on guillotines.

Periodical journals and magazines, containing advertising matter . . . provided they also contain bona fide literary matter, and are not distributed free of charge, are admitted into New Zealand free of duty whether British Dominion or foreign goods. (Tariff No. 355).

SOUTH AFRICA.

A GENERAL meeting of the Federation of Master Printers of South Africa was held recently, when representatives were present from the following affidiated societies: The Associated Master Printers, Cape Town; the Associated Master Printers, Johannesburg; the Associated Master Printers, Durban; the Port Elizabeth and Uitenhage Associated Master Printers; and the East London Master Printers Association.

In the absence of the President, the Vice-President, Mr. J. W. Miller took the chair and heartily welcomed the members attending the meeting. In the course of his remarks, the chairman said that in his opinion the conference should agree to at least double the subscription of the affiliated organisations of the Federation, for the reason that the present rate of sixpence per factory employee did not total up to £100 per annum. If the Master Printers of South Africa were to take the business of the Federation seriously, to be properly represented at the various Government conferences, to carry on propaganda work, to meet the Typographical Union on equal terms, and to generally perform the work of the Federation in a fitting manner, it was quite impossible to attempt to do so on £100 per year. He thought the larger master printers should be asked to assist the funds of the Federation with suitable donations.

REFERRING to the work of the Federation Mr. Miller said he felt that their work on the Factory Act, the Wages, the Apprenticeship and Improvers' Act, and the manner in which the Federation was obtaining recognition by the Government, railways, and other public bodies, all pointed to the fact that a good deal had been done towards building up a suitable structure.

AFTER some discussion it was unanimously agreed that the following gentlemen be elected for the ensuing year:—President, Mr. J. W. Miller (Johannesburg); Vice-Presidents, Mr. A. B. Godbold (Cape Town); Mr. N. de Villiers (Cape Town). The following were elected as members of the Council: —Messrs. E. T. M. Notcutt (Cape Town), A. W. Townsend (Cape Town), Geo. Constable (Transvaal), A. Downing (Transvaal), I. Wallach (Transvaal), D. M. Ollemans (Bloemfontein), W. A. Wilson (Durban), G. A. Riches (Durban), N. Harris (Port Elizabeth) and C. J. Smith (East London).

A LENGTHY discussion took place on the revision of the customs tariff. Mr. N. E. Harris (Port Elizabeth) said that whereas a few years ago there was no tariff, and the industry was stagnant, later on they got a protective tariff which had been altered a good deal since, but not improved. To-day the workmen were asking for such high wages that it was necessary for the Government of the country to reconsider the whole position from an industrial South African point of view, and ensure a sound protective tariff. From the industrial statistics issued in June, 1919, he found that the gross value of the output of the printing industry per annum was over £2,250,000, of which sum £800,000 represented the value of materials used, so that the difference of roughly £1,500,000 represented the value added by process of manufacture within the Union, a very large percentage of which would be wages. Judging from these figures the printing industry was one of the best in South Africa.

AFTER discussion, Mr. D. W. Small moved "That the Congress recommends to the Government the imposition of a 33\frac{1}{2} per cent. duty on all printed matter, with the usual exceptions in so far as educational works, etc., are concerned." This was seconded by Mr. de Villiers and carried unanimously.

Mr. R. Muir proposed, Mr. Geo. Constable seconded, and it was agreed: -" That this Federation supports the movement in England towards the standardisation of sizes and weights of paper."

MR. R. Muir proposed, Mr. Geo. Constable seconded, and it was agreed:—"That the practice of using customer's paper be discontinued after January 1st, 1920.

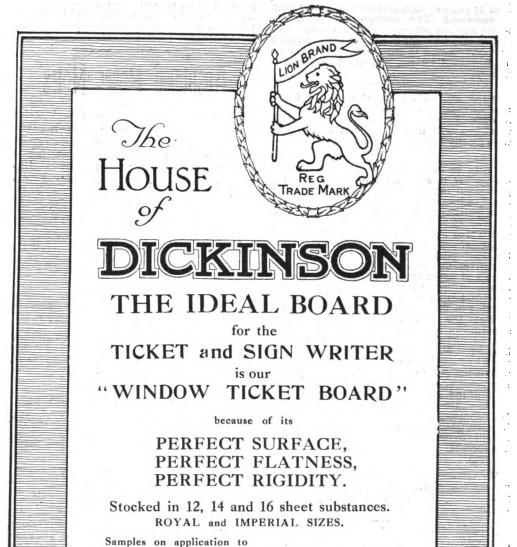

MR. D. M. OLLEMANS proposed, Mr. N. Harris seconded, and it was agreed: "That it be an instruction to the Council to meet representatives of the Press Union and the Stationers' Association at an early date with a view to the formation of an amalgamated federation with a general secretary and equipment to thoroughly organise the printing and allied trades in South Africa."

INDIA.

THE employees of Messrs. Thacker, Spink and Co.'s printing works, Calcutta, struck work recently. The men petitioned a few days previous to the strike for an increase in wages, but the company could not see their way to grant it on the ground that an increase on establishment charges would leave no margin of profit to the company. The manager posted a notice at the gate intimating that the men would be paid their wages the following morning, and further stated that those men who wished to resume work subsequently to this strike would only do so on the terms settled by the company.

An up-to-date scheme for the manufacture of paper is being established by Mr. W. C. Banerjee, of Messrs. Banerjee and Co. W. Griffin, who, in 1886, was assistant manager at the Lucknow Paper Mill, and in 1909. manager of the Imperial Paper Mills of Bengal, has expressed the opinion that a really modern paper mill in India, escaping the faults and failings of older establishments, and capable of producing a larger output, cannot fail to work advantageously while making substantial profits.

THE Lucknow mill has two machines, the Titaghur mill eight, and the Raneegunge mill three. In spite of its unfavourable situation, the Lucknow mill has continued to pay a dividend of 8 per cent. during the war and has made steady progress and maintained its position in the markets. Mills in Bengal. therefore, which are situated under more favourable circumstances, must have done better; and yet the present position of the

paper mills in India is much the same as it was in England a decade since. The majority of the machines in use in India are over 25 years of age, and some are more than 50 years old. The machines are narrow in width and not adapted to fast running. The speeds vary from 150 to 250 feet per minute on thin papers, and in most cases better results are obtained by not exceeding 200 feet per

If the new mill is fitted with the latest type of machines and the best and latest appliances for effecting economy in working, importers will find it difficult to compete with locally manufactured paper.

PAPER in India soon becomes brittle and useless. It is almost impossible to keep a permanent record. The principal enemies of paper in India are insects and oxidation, due principally to chemicals that have been allowed to remain in the pulp, and whose destructive action is increased by heat and moisture. Among the insects most active in the destruction of paper are the cockroach, the silver fish and the weevil. The lower classes of paper seem to be immune from the attack of insects, but the impurities they contain hasten their decay, which goes on whether in use or in store, but when expessed to light the decay is most rapid. The destruction of books by weevils is principally due to the attraction of the paste used in Especially is this the case if the paste has not been prepared with a suitable poison, but poison in the paste will only keep these insects at bay for a while. The Government of India are making an inquiry into the causes of the perishing of paper in India, and Mr. Chapman, Librarian of the Imperial Library, Calcutta, is visiting all the libraries in India to find out how to preserve old books and records.

MR. RAITT, the Government expert, has reviewed the whole question of the proposed pulp factory in the vicinity of Jogigopa, Assam.

CAUSTIC soda is now being made just outside Calcutta and this can easily be sent to Jogigopa either by rail or river. Good lime is available in Sylhet, Assam, at the foot of the scarp of the Khasia Hills.

THE labour question in Assam is always a very difficult one, but in recent years there has been an influx of Bengali Mahomedans known as Bhaties, who would be available from October to January to cut grass. Moreover, it appears that the supply of labour will be greater in the near future.

THE question of coal is a serious one. But coal can be obtained either by rail from the Bengal (Ranegunge) coalfields or by river from the Assam coalfields.

THOROUGH investigation having been made by the Government, there now appears to be nothing to hinder the manufacture of paper pulp in Assam, and from the reports one gathers that the undertaking could be made to give a good margin of profit, making it a sound commercial undertaking.

Australian Paper Notes.

High Cost of Paper - Newspapers Raise their Prices-Alleged American Paper Combine - Government and Newsprint — The Preference to Britain— Australian Paper Possibilities--Unemployment Levy-Bank Note Print-

(From Our Sydney Correspondent.)

THE high cost of paper in Australia is reflected in the fact that important journals are raising their prices on account of the magnitude of this item of their expenditure.

THE Daily Telegraph (Sydney), in announcing change of price from id. to 11d., remarks: "The cost of printing paper, which has increased so enormously since the outbreak of the war, is still between 300 and 400 per cent. above the pre-war price, and the indications are that this high rate will be maintained for some considerable time."

THE Sydney Morning Herald, in making a similar announcement of increased price, mentions greatly increased costs, and says, "by far the most important of these is the increase in the price of paper."

THE last-named journal remarks:—"We have been reluctant to make this increase, and have refrained from making it as long as possible, although the Australian Press has been almost the only one in the world to carry on through the war at the old rates."

What effect the increased price will produce on circulation is, of course, not known, but the Sydney Morning Herald has published certified figures showing its circulation for the first six months of this year. These indicate fairly regular and substantial improvement. In January the circulation was 158,563; in June, 168,310.

Relief from the operations of a paper-producing combine said to exist in the United States and Canada, was sought by a deputation representing the provincial Press of Australia, which recently waited on the Minister for Customs at Melbourne. The requests put forward were: (1) That news printing paper be admitted free as the raw material of the newspaper trade; (2) that if, for the purposes of revenue, a duty must be imposed, it should not be more than 5 per cent.; (3)

that in any case no preference be granted to Canadian paper until a searching inquiry has been held into the methods of the American and Canadian paper combine in "cornering "shipping, extorting unjust profits, and generally acting in restraint of trade.

In the course of the interview it was stated that there were in Australia more than 700 provincial newspapers employing 25,000 men.

MR. T. M. SHAKESPEARE, the Secretary of the New South Wales Country Press Association, said news-print could not be made in Australia. Nine tenths of Australia's news-print supplies came from the Powell River Mill, which belonged to Mr. Johnson, the American lumber king.

The combine, said Mr. Shakespeare, after being blocked in America, had established itself in Canada, and had introduced American methods of control. Before the war there had been independent mill owners in America, but the combine now controlled shipping by securing the whole of the freight on lines running to Australia. Thus they had been able to raise the export of Canadian news print from £8 17s. 4d. a ton before the war to £19 12s. in 1919. The profit exacted was fully 100 per cent. more than in pre-war days.

THE Minister of Customs (Mr. Massy Greene), in replying, said that he could not tell the deputation what the Government intended to do in the matter. He fully appreciated the possible danger of news-print being unduly exploited if the Government did anything which would play into the hands of the news-print trust. He said that apparently there was no immediate likelihood of news-print being manufactured in Australia. Whatever might be done in the establishment of the industry with imported raw material, which was, he supposed, a possibility, they had not the material in Australia.

MR. GREENE added that it was quite clear, not only by what the deputation had stated, but also by facts known to Parliament, that the preference to Great Britain was inoperative. Consequently, news-print proprietors were paying to per cent. on all the news-print they were using. The policy of the Government, he said, was to give preference to Great Britain where effective generally. It would do all it could to carry on Australia's trade within the Empire, but if it gave preference either to Great Britain or to other parts of the Empire it would take care not to play into the hands of any combine. The question of the printing ink duty would be looked into.

WHETHER or not the production in Australia of sheet paper is practicable, there seems little doubt that pulp could be produced suitable for making sacking, twine, etc., and there is a good deal of talk at pre-

sent about the formation of a new Australian industry.

COLONEL W. J. OLDERSHAW has drawn attention to the fact that shortly after the war commenced an English company conducted experiments with Swedish paper pulp from pine trees. The experiments proved entirely successful. Out of the paper thread made from the pulp the company was enabled to manufacture carpets, rugs, bag material and binder twines.

It is argued that in Queensland, where sugar cane in vast quantity—thousands of tons per annum—is wastefully thrown away each year, Australia is losing the value of a rich product. This cane is said to be suitable for the manufacture of paper yarn of considerable textile strength, and the materials from which highly serviceable cornsacks, woolpacks and bags of every description could be cheaply manufactured.

VERY much to the fore at present is the subject of the popularisation of Australian made goods. A big and influentially-backed campaign is in progress, and multitudinous placards urge the reduction of imports.

SCHEMES are under consideration for the acquisition of premises for note-printing purposes in Melbourne, Sydney or Cambarra.

An important industrial measure has been introduced in the Legislative Assembly. The Bill provides for insurance against unemployment, and requires employers to provide the necessary fund. There is to be created in the Treasury a fund, to be called the Unemployment Insurance Fund, and it is set out that the Minister shall each year in aid of this fund make and levy assessment on every employer. The assessment payable by each employer, in respect of the year ended June, 1920, shall be a sum equal to £2 for each worker employed by him during the year 1919.

Trade Mark Registration in Brazil.

H.M. Acting Consul-General at Rio de Janeiro states that the local authority charged with the registration of trade marks, the Junta Commercial of Rio de Janeiro, have decided that in view of the cessation of difficulties in regard to postal communication, foreign marks may no longer be admitted to registration without the production of an official certificate of registration in the country of origin. This appears to be a reversion to pre-war practice, says the Board of Trade Journal.

An Advertisement is always working.

Make good by using Kidd's Inks.

The price of ink doesn't matter much so long as you use the best, the proportion of cost for ink on any job being so little.

Here is proof from an estimate of a certain job in the Sept. issue of a well-known printing trade journal.

					-	£57	5	3
Ink	•••	•••	•••	•••	•••		2	9
Paper Warehous	e, Bind	ing an	ıd Mat	erial	•••	2		
Paper	•••		•••	•••		8	2	0
Machinin	g	•••	•••	•••	• • •	8	15	2
							8	
						~	ъ.	ч.

Remember quality is the strong point about Kidd's Inks and you can afford to use their most expensive grades now that you know how little in proportion ink really does cost.

Printing Progress in China.

In printing and lithographing great progress has been made in China since 1900, as the native press has come to assume an important place, and the demand for modern text books and printed material of all descriptions is rapidly increasing. The Commercial Press at Shanghai is probably the largest industrial concern in China, and is a Chinese corporation which has been signally successful. It employs over 2,000 men and women, and has 57 branches and numerous agencies all over the country. It prints and binds books and all sorts of printed matter, manufactures type, laboratory apparatus, toys and stationery, and makes maps, calendars and numerous other articles. Owing to the success of this concern, several other Chinese plants of a similar description have sprung up and are sharing with the Commercial Press in the ever-increasing business which modern developments in China make possible.

A New Chinese Alphabet.

In line with China's scientific progress is the reported adoption by the Chinese Government and the missionary body of a new and simplified form of Chinese writing. The general acceptance of such a scheme would be a great boon; the present difficult system of writing practically imposes illiteracy upon the masses.

The early Buddhist missionaries introduced into China a system which was subsequently used by the Chinese themselves, and the present simplification is based on this Buddhist innovation. It employs only 39 symbols. Those familiar with the scheme, which bears resemblances to the Japanese Kana, believe its adoption will mark an epoch in China's history.—The Trans-Pacific.

ADVICE TO

Brilish Traders with California.

The British Consul at Los Angeles, California, states that his office is inundated with trade papers and circulars from the United Kingdom, which are useless in this part of the United States. He points out that price lists should always be in dollars and cents, and in order to commence business with American houses, attractive circulars should be sent, giving the price (free of duty and carriage), in dollars and cents, for a small shipment. The average merchant in these parts will not take the trouble to find out what the carriage will be, and so will not give any orders, but if tempted with a lump

sum to cover everything, he will probably give a trial order, out of which much business might subsequently develop.

Japanese Vellum.

Striking Facts as to its Strength.

Messrs. Lepard and Smiths, Ltd., inform us that they are now the principal importers of Japanese vellum and tissue papers. Of the former material they furnish us with some striking facts concerning its manufacture and quality. Through their branch in Japan they have become the leading buyers of Japanese vellum on the spot.

Concerning its manufacture, we learn that the vellum is beaten and made entirely by hand by the peasants in their homes, from the inner bark of the mulberry tree. The finish of the paper is produced by means of pressure and friction, and at Messrs. Lepard and Smiths' branch in Yokohama they have a specially trained staff who sort and examine with the minutest care the finished article before it is shipped. They are thus enabled to select only the very best of this vellum that is made. It is known as "Genro" quality in Japan and throughout the world, the word genro" meaning in Japanese "highest class," super excellent," in fact, as applied to the "super excellent," people, the word is used to name the highest noblemen in the Japanese Empire, and although a monarchy, the "genro" really control the destinies of Japan.

The information concerning Japanese vellum would be far from complete without a reference to the strength of the material. It is well known that Japanese vellum is the strongest article of its class that has ever been made, or, it is suggested, that ever will be made. It is stated that the mechanical tensile strength testing machine has yet to be made which will test the breaking strain of the "Genro" vellum. Suffice it to say that one sheet has sufficient strength to hold the suspended weight of over one ton.

London Printers' Wages.

The Demand Meets with Strong Opposition at a General Meeting of L. M. P. A.

At the special general meeting of the London Master Printers' Association on Thursday, at Stationers' Hall, a record attendance filled the hall to overflowing—evidence of the importance that the employers attached to the subject in hand. The meeting was called "To consider the request from the London Printing Trades Federation for a wage increase of 15s. weekly, and the Proposals of the Council for dealing with this demand."

Mr. J. J. Keliher, President of the Association, was in the chair, and opened the meeting by introducing the Association's new secretary, Major H. Fordyce Birch, who was cordially received.

President Explains the Position.

Mr. Keliher proceeded to recount briefly the history of the present demand. It had arisen, he said, from action taken outside London. The Association had taken every opportunity to urge upon labour that wage questions should be made national ones. It had been stated that master printers had believed when they rendered all the assistance they could to the establishment of a Whitley Council that they were thereby setting up a ruling body in the printing trade to which all matters of this kind could be referred, and dealt with nation-The Federation of London Unions appeared to lend a sympathetic ear to that, and promised to bring it before their members. But after an interval of some months, the Association had only recently received from that Federation an intimation that the members refused to refer the wage question to a national body.

Mr. Keliher proceeded to trace the state of affairs in recent months, mentioning the T.A.'s demand in August, leading to the recent advances to unskilled and female workers. He pointed out that wages in Manchester were now £4 2s. 6d. He told of the origination of the present London demand on October 21st. The demand had to be submitted to the L.M.P.A. council, who referred it to their Labour Committee to arrange a conference, which took place on November 19th. He described this conference somewhat in detail, and explained that eventually the representatives of the Association felt the demand was so excessive and insistent that it would have to be referred back to the council. Accordingly, a special meeting of the council and labour committee was held on November 24th, and after prolonged discussion it was decided to call this meeting. He mentioned that on November 28th they received a letter from the secretary of the men's federation. complaining of delay, and insisting, on behalf of his federation, that the 15s. demanded would have to be retrospective to November 10th Eventually it was arranged to hold another conference with labour on December 5th.

The chairman concluded by emphasing the seriousness of the situation. He said a further increase of wages coming so soon after the last considerable increase would have a drastic effect upon the demands of their customers, and that many publications just managing to exist would "go under." He indicated also the very difficult position which would result in case of refusal. The matter was then left to the meeting for discussion.

Ar. R. C. Hazeli's Resolution,

Mr. Ralph C. Hazell, who opened the discussion, said he was one of those who believed that unless a greater spirit of reasonableness prevailed on both sides, a strike must come sooner or later. (Hear, hear). When that time came he hoped they would be prepared to face it in the right and proper spirit, but before they committed themselves hastily to any course of action that might precipitate a strike, they had to make sure of two points: (1) whether they had an absolutely good case, and (2) whether they were sure that they were in a position to present a united front.

As to the first point he thought that what the president had told them as to Manchester wages being \pounds_4 2s. 6d. per week as against a London wage of \pounds_3 17s. 6d., pointed to the fact that, whatever they might think about the merits of the settlement in the provinces, there were some discrepancies entitling members of the men's Federation to press for some adjustment. He mentioned also the recent advances of wages under the national agreement. In the circumstances he thought it more than questionable that at the moment they had a good case upon which to start a

fight

Then as to the second essential point, a united front, he said the periodical houses were not likely to be able to take an absolutely firm stand in the matter of overtime until they were backed up by the daily newspapers. That day might come sooner than they thought. He mentioned the bitter struggle in New York, and the long Paris strike, closing in favour of the employers. Until that time came, he for one would not be prepared to vote in favour of an absolute negation of the demands of the men. It was quite true that some master printers were hard hit by the high cost of labour; the Association might do more in the way of interchanging trade work and helping smaller printers. Nevertheless, generally speaking, the trade was prosperous, and there was something to be said for the workers receiving some share of that prosperity. He begged to move the following resolution:—"This general meeting of members of the L.M.P.A. considers that the demands made by the London Unions are excessive and opposed to the best interest of the trade. It empowers the Council to negotiate a settlement, due regard being paid to the wages now in force in other districts." The demand of 15s. for the men, and particularly that of 10s. for the women, they felt to be absolutely excessive, and they were prepared to resist this demand in the most vigorous possible manner. He ventured to submit, however, that, difficult as the position was, if it were handled wisely and in a spirit of good temper on both sides, a reasonable and amicable settlement might be arrived at. (Applause.)

Mr. Hugh Collingridge, who seconded the resolution, said he believed the resolution

represented the opinion of them all.

The Chairman then mentioned that four members had sent in notices of resolutions, and suggested that, unless they wished to withdraw them in favour of Mr. Hazell's pro-

position, they might put them in the form of amendments.

Mr. T. J. Hunt opposed the suggestion of leaving the matter to the committee. "What," he said, "do the men ask 15s. for? Because they want something less. Turn it over to the labour committee, and that is what they will get." He saw no reason why there should be any difference between wages in London and in the large provincial towns. The cost of living was absolutely the same. He wanted so see a firmer attitude adopted towards the men. Outside, members were all fire and energy, but when they were brought together they were like a lot of soft soap. He moved:—

"That from January 1st, 1920, the minimum wages for men be £4 per week, for 48 hours,

and for women £2 2s. per week."

Sir William Waterlow strongly objected to general demands and insisted that applications ought to be made only by individual unions; at any rate the London unions should be dealt with individually. He hoped the Council would make a strong point of this. He also complained of the great discrepancies between women's wages in different branches of the craft and said that women in the printing industry were being paid more than what was recognised as adequate in other trades. He detailed the very large increases granted to women since the beginning of the war. He hoped the meeting would fix maximum increases that should be given, and not leave it to the Council to give more under pressure.

The Chairman explained the effect of Government policy in putting up wages during the war, and pointed out that it had been agreed that women doing men's work should

receive men's wages.

Several other speakers expressed agreement with Sir Wm. Waterlow's suggestion that a limit of increase should be fixed by the meeting, and the Council not allowed to exceed it

in the negotiations.

Mr. J. E. Francis (Athenæum Press) moved:
—"That a certain percentage of the suggested rise be withheld until it is agreed that no employee be obliged by reason of a trade union rule to refuse to do any work connected with the business of printing, so long as the maximum rate for the class of work is offered, and such minimum is not less than the employee's usual rate of pay." He emphasised the great disadvantage felt by small printers in being unable to change a man from one kind of work to another.

The Chairman explained that this matter could not be brought up incidentally, but must be made a specific subject of a conference. He hoped they might some day be strong enough to enforce the principle, but at the moment there was no hope of doing so.

Mr. Vincent Brooks said there would eventually come an awakening, when advances would have reached the limit. With regard to the question of setting the Council a maximum figure, as one of the seniors among them he advised them strongly to let the committee have the fullest power.

Mr. A. F. Phelp complained that the meet-

ing was reaching no conclusion because they were continually being brought back to "Leave it our hands." Why call them there? Why not just send round a note that at a certain date they had got to pay so much

more? (Laughter).

Mr. Howard Hazell said that as a result of the lengthy discussion, opinions had been expressed that would have considerable weight with the labour committee in their negotiations, but he considered it an advantage that they should not be expressed in a formal resolution. The labour committee had the interests of printers at heart. They should be trusted to do their best.

Mr. Eaton Hart supported Mr. Hazell's view entirely. If they tied the hands of their committee they would be doing the very worst thing possible for the industry.

The Voting.

When the Chairman rose to put the resolution, Mr. Hart demanded that his amendment be put first. On the amendment being put, about 10 members voted in its favour, an overwhelming majority being against.

The resolution moved by Mr. Hazell, and seconded by Mr. Collingridge, was then put to the meeting and carried unanimously.

An informal vote of thanks to the chairman terminated the proceedings.

Provisional Agreement.

As a result of a meeting between the Labour Committee of the London Master Printers' Association and the representatives of the Unions on Friday, a provisional agreement was arrived at for an increase of 7s. 6d. for men, 3s. 6d. for women, and 1s. 9d. for juniors, to take effect from the pay day next week. This, of course, is subject to ratification by both sides.

Personal.

At a gathering of Bury Liberals, on Thursday, presentations were made to Sir George and Lady Toulmin, to mark their services to the borough during the sixteen years Sir George was its Parliamentary representative. The gifts to Sir George were an illuminated address in album form, and four silver entree dishes. The gift to Lady Toulmin was a case of ivory-backed brushes and hand mirror, each article bearing her initials.

The directorate of the Financial Times, Ltd., as now constituted, consists of Mr. William E. Berry (chairman), Mr. J. Gomer Berry (deputy chairman), Mr. George Eaton Hart, Mr. H. A. Randall, and Mr. R. J. Barrett (managing director).

MR. WILLIAM E. BERRY and Mr. J. Gomer Berry, who have acquired the controlling interest in the Financial Times, Ltd., and the St. Clements Press, Ltd., are the proprietors of the Sunday Times, and they have recently

purchased the Graphic, the Daily Graphic and the Bystander.

THE wedding has been solemnised at Harlow of Mr. Ernest J. Copley, printer and stationer, of Bishop Stortford.

Among the 38 M.P.'s and others who played Capablanca at chess at St. Stephen's, on Tuesday, were several representatives of the Press, including Mr. A. Emery (Press Association), Mr. E. M. Amphlett (the Times), Mr. W. Merriman (Daily Telegraph), and Mr. Frank Grant (Press Association).

MR. H. H. TETLEY, a well-known master printer of Bradford, and ex-Lord Mayor of that city, has, as the result of a by election in the Lister Hills Ward, been elected a member of the Bradford City Council.

MR. GEORGE BURNS NEWTON, Technical Assistant to the Controller of Printing in Egypt, has been appointed a member of the Civil Division of the Most Excellent Order of the British Empire.

M. OLA VINBERG, a Swedish journalist, who is stated to have gone to Copenhagen as the representative of the Manchester Guardian and Social Demokraten, of Stockholm, to interview M. Litvinoff, has been expelled from the country by the police, says Politiken.

MR. J. W. CARLEY, factory organiser and manager to Messrs. Alfred Couldrey and Co., Ltd., printers, will deliver a lecture on January 9th, at St. Bride's, on "The Factors of Scientific Management." Mr. W. Howard Hazell, J.P., is to preside.

At the dinner and annual general meeting of the South-West Master Printers' Association, on Monday, Mr. Spring was elected president, Mr. Wise vice-president, Mr. R. Kent hon. treasurer, and Mr. C. V. Mold hon. secretary.

Among the visitors was Major H. Fordyce Birch, secretary of the L.M.P.A., who addressed the gathering. A report will appear in next week's issue

MR. SHELDON LEICESTER, who has done excellent work in the cause of technology at Battersea Polytechnic, has resumed his duties as instructor of the papermaking and paper testing classes.

MR. LEICESTER, who has a thorough knowledge of the German language, has recently terminated two and a-half years' service as Lieut.-Interpreter (Northern Command).

MR. D. R. Davey has also been responsible for some good work in the successful conduct of classes (advanced) at the Battersea Polytechnic

Trade Notes.

MADRID is without newspapers, in consequence of the printers' strike.

THE death has taken place of Mr. J. Couch, for many years connected with the Globe and the People.

THE Christmas issue of Pearson's Magazine is full of good and seasonable things. In addition to Admiral Sims' Revelations, a host of excellent matter includes George Robey's inimitable description of "My Peace Bonfire."

AT Watford Police Court on Saturday, an employee of Messrs. Wateriow Bros. and Layton, Ltd., printers of Government Treasury notes, was remanded on a charge of stealing, on October 31st, 17 sheets, and on November 27th and 28th, 48 sheets, each containing 21 £1 Treasury notes.

A PROPOSITION is being brought forward by the Leeds Typographical Society that application be made to the Joint Labour Committee governing the printing trade to promote Leeds from grade 2 to grade 1 under the National Wages Agreement. Under the existing grading, grade 1 comprises Manchester and Liverpool.

The death is announced of Mr. John Richards, one of the oldest and best known printers in Cardiff. For many years Mr. Richards was a jobbing printer and afterwards entered business on his own account. He was a former president of the Cardiff branch of the Typographical Association and attended the first conference of the T. A.

Invitations are issued by the National Society of Operative Printers and Assistants for a dinner and re-union of all members who joined the Society in 1889 and are still members. The function will be held on Monday next at the Bridge House Hotel, London Bridge, and there is permitted a wide choice of dress—from evening costume to overalls.

The Ingram interest in the Illustrated London News and Sketch has been acquired by Sir John Ellerman, Bart., says The Times. The Illustrated London News was established by Mr. Herbert Ingram in 1842; the Sketch was founded 26 years ago. A company was formed some 20 years ago in which the Ingram family held just over one-third of the shares, which Sir John Ellerman has just bought.

BEFORE the Lord Chief Justice, in the King's Bench Division on Friday, a settlement was announced of a libel action which was brought by Colonel Bersey, of the Royal Flying Corps (now the Royal Air Force), against the Saturday Review. Learned counsel for the plaintiff said that the words complained of referred to a recent Committee of Inquiry into certain matters in the W.R.A.F., and the defendants charged the plaintiff with "jobbery," "corruption," and "cynical robbery." The defendants apologised, and, in addition to paying costs, sent £100 to a fund

for the benefit of demobilised members of the W.R.A.F.

TENDER WANTED.—For the printing required by the Suffolk Agricultural Association for 1920. Application to the Secretary. Mr. W. K. Bond, 6, Butter-market, lpswich.

An informative lecture on "The Care of the Printer's Eyesight" was given at St. Bride's, on Friday, by Mr. J. H. Sutcliffe. Our report of the proceedings is unavoidably held over.

The directors of Ilford, Ltd., propose that the capital be increased to £500,000 by the creation of 120,000 ordinary shares of £1 each, ranking for dividend and in all other respects pari passu with the existing ordinary shares.

MESSRS. HARRISON AND SONS, St. Martin's-lane, London, W.C.2, have issued a useful work under the title of "A Study of Trade Organisations and Combinations in the United Kingdom."

THE CO-OP. PRINTING SOCIETY JUBILEE.—In his December circular to the Northumberland miners Mr. W. Straker draws attention to the fact that this is the jubilee year of the Co-operative Printing Society, established in 1869 in Manchester, where it still has its headquarters. In the half-century branches have sprung up in different parts of the country, the London branch being founded in 1886.

MESSRS. MAGGS BROS., book and print sellers, of 34 and 35, Conduit-street, W., have issued another of their substantial and well-printed catalogues. The December issue covers a valuable collection of books, dealing chiefly with travel and topography. Perhaps the most notable volume listed therein is a copy of Waldeseemuller's "Cosmographiæ Introductio," printed in 1507 in Latin, and said to be the first book printed at Saint Dié in Lorraine.

PAPERMAKER'S FORTUNE. — Mr. Frederick Knight, of Whateley Hall, Castle Bromwich, Lord of the Manor of Rowington, late of Messrs. Smith, Stone and Knight (Limited), paper manufacturers, of Birmingham and Saltley, who died on June 17th, aged 82, left estate of the gross value of £179.000, with net personalty £157,783. The testator left £500 to the Birmingham General Hospital; £250 each to the Birmingham and Midland Hospital for Women, the Birmingham and Midland Eye Hospital, the Birmingham and Midland Ear and Throat Hospital, and the Royal Orphanage, Wolverhampton; and some legacies to servants.

STRIKE ENDS AT MACMILLAN'S.—The fortnight's strike at Macmillan's publishing house came to an end on Monday, when the 48 members of the National Union of Printing and Paper Workers returned to work. We understand that by the terms of settlement Messrs. Macmillan agree to pay schedule rates as arranged with the Oxford University Press, with any increases granted by the Book Publishers' Employment Circle; to re-

instate all hands in their former positions; to remove from the presence of the union men the non-union workers who had taken their places; and to put no obstacle in the way of any employee joining the union.

An employee of Messrs. Cunliffe and Ward, wall-paper printers, Blackburn, got his arm caught between two cog wheels of a printing machine, the limb being practically torn off.

A Printing Exhibition.

A comprehensive exhibition of "Design and Workmanship in Printing" was held at the Bradford School of Art, under the ægis of the Design and Industries Association Printing Exhibitions Committee. The aim of the exhibition was to inculcate a desire for a higher standard in the art and design of printing, and to educate the public to the requirement of a well-designed and well-made article. Not only is the scheme applicable to printing, but it also includes textiles, furniture, pottery, metal work, etc., and claims that even cheap articles should be well made and beautiful, because beauty of design is bound up with simplicity and fitness for purpose. The Bradford exhibition included a great array of pictorial posters, many with vivid colour schemes which at once attracted the eye, while some were neatly tasteful in their somewhat sombre black and white schemes and sepia tones, and were as attractive and distinctive in their style as the brighter hued designs. Included amongst the exhibits were schemes and designs for programmes, menus, book covers, box covers, etc.

The opening ceremony was performed by Mr. E. W. Humphries, president of the Yorkshire Federation of Master Printers, who stated that he had always held the view that art students should be trained to make beautiful the everyday, common things of

dife.

Presentation to a Colour Printer.

Mr. S. J. Stone, foreman of the colour printing-room of Messrs. E. S. and A. Robinson, Ltd., Bedminster Works, Bristol, has just retired, and as a mark of the good feeling entertained towards him by the staff he was presented with an easy chair and umbrella, and an easy chair for Mrs. Stone.

Owing to Mr. Stone's health a public presentation was not advisable and the gifts were sent with a covering letter expressing regret at his retirement and the loss of a friend, and recalling his efforts in starting the departmental sick club, the great amount of work he gave to it, and the success which followed his efforts, also the many kindly acts he had shown towards all.

Printing, Bookbinding & Kindred trades overseers' association.

Monthly Meeting.

This association held its monthly general meeting on Tuesday, at the headquarters, St. Bride Institute, Bride-lane, E.C.4. Mr. A. J. Daines (president) was in the chair, and Mr. A. W. Hunt (vice-president) ably supported him, there being an exceptionally large muster of members. Delight was expressed at the appearance of several old and popular members of the association, notably Messrs. F. C. Peacock and J. Dixon.

The Secretary having read the minutes of the November meeting, which were duly confirmed, proceeded to submit to the notice of the meeting two or three items of corres-

pondence.

Mr. S. J. White, secretary of the Caxton Convalescent Home, Limpsfield, wrote reminding the association that it granted £2 last year in aid of the funds of the home, and that a repetition this year would be welcomed. On the motion of Mr. J. Lee, seconded by Mr. J. Walker, a further sum of three guineas was voted towards the upkeep of the home.

With regard to the proposed Printers' Technical Institute, it was unanimously agreed to ask the secretary to press the originators of the scheme to allow a representative of the association to be placed on the committee.

A discussion followed on the question of whether the association should be represented on the Industrial Council for the Printing Trade, and on the motion of Mr. J. Walker, seconded by Mr. Chris. Atkins, it was agreed to ask the secretary to put the matter in the right quarters.

The following new member was unanimously elected: Mr. A. C. Ware (gold blocking), Chas. Letts. A warm welcome was extended to the new member by the President.

The next item on the agenda was the election of two auditors, Messrs. A. H. Smith and W. T. Lingham being unanimously elected.

Before the meeting closed a discussion ensued on the point as to whether the association should continue to hold its meetings at St. Bride, especially as their engagement would, unless renewed, expire at the end of the year. By an overwhelming vote it was decided to renew the engagement for another twelve months at St. Bride.

Messrs. Henry and Leigh Slater, Ltd., the well-known firm of paper stainers and paste-board manufacturers, are removing their London offices from No. 15, Queenstreet, to 2-4, Tudor-street, E.C.4, and will be in possession of the new premises from December 8th.

Current Topics.

London Printers' Wage Settlement.

THERE is cause for some gratification to London printers, both masters and men, in the fact that a pacific settlement has brought to an end the latest wages dispute, and thus avoided destructive action from which, in many parts of the world, the trade has already suffered too much. On another page we report the deliberations of the master printers at their general meeting held the day before the final conference with the men. To this we are able to add, as we go to press, a state-of the terms provisionally agreed to, but at the time of writing still awaiting confirmation. The advances granted seem to represent

areasonablecompromise between the interests concerned, so that this agreement should serve to calm the typographical atmosphere of London for the time being, and, let us hope, to keep it calm until such time as more satisfactory means have been evolved than exist at present for the settlement of disputes in the printing trade.

The Cost of Industrial Strife.

That the strike is apt to prove a two edged weapon-rebounding to wound its wielder and others, as well as him at whom the blow is aimed—is made dramatically plain to-day by the news that comes both from Paris and New York. The three-weeks' strike in the French capital has caused serious and widespread inconvenience, deprivation and suffering. The newspaper proprietors have doubtless lost heavily through the suspension of publications and the expense of the emergency measures employed. The strikers, with both personal savings and union strike funds depleted, return to work apparently with nothing gained to counterweigh their losses in the fight. And while the industrial community and the general public have also suffered loss and inconvenience, from the interruption of a normal circulation of news, those upon whom most hardship has been inflicted are those of whom many are least able to bear it, the newsvendors. From New York, also, comes evidence that, whatever the issue of the conflict there, the city is sure at least of a very heavy financial loss occasioned by the stoppage, and, worse still, is said to be sure of a permanent annual deficit of not less than several million dollars, on account of the sixty odd publications which the strike has driven from the capital to print in other cities, many of which publications, it is certain, will never move back to New York. Further, some 3,000 printing employees in New York are dependent for their livelihood upon those sixty publications that have been ousted from the city | Is it not high time that trade disputes were submitted to some saner means of settlement than the appeal to force-Surely the Whitley the strike or lock-out? scheme, and any other schemes that may be thoughtworth investigating, should now receive the most strenuous attention of both employers and employed. For an appeal to force does not test the balance of right, but tests only the balance of might. A trial of strength is, by its very nature, an expedient detrimental alike to the immediate participants in a dispute, to the trade they represent, and to the whole social organism.

DECEMBER 11, 1919. BRITISH & COLONIAL PRINTER & STATIONER

Manchester School of Technology.

In the course of a statement supporting the appeal for a fund of £150,000 to extend the Manchester College of Technology, Mr. Maxwell Garnett, Principal of the College, points out that before the war there were only 5,000 full-time students of science and technology in the United Kingdom, in comparison with 17,000 in Germany and 34,000 in the United States. The number of full time students in the Universities and Higher Technical Colleges was in 1914, 5 per 10,000 of the population in England, in the United States 10 per 10,000, in Scotland 17 per 10,000, in Germany 14 per 10,000; and the English deficiency was most marked in applied science and techno-"If," Mr. Maxwell Garnett writes, "during the next critical years, British industries are denied an increase in their highly trained personnel, they may be damaged beyond hope of recovery." Considering what this excellent institution is doing for printing. the appeal should not fail to find response in craft circles.

Paper Demand.

THE demand for paper will be in excess of the supply for another twelve to eighteen months. during which period there will be no vigorous tumbling down in paper prices. Very possibly, as the wheels of industry begin to run more smoothly, it will become possible to make slight reductions at intervals, and this is what we look forward to rather than any drastic cutting down. In the course of time repairs will have been effected on existing plant and new machinery will be gradually installed, Some of the labour which is very much unskilled at present will become more adept and the inherent possibilities of a well organised three shift system will begin to be realised. Shipping will in the course of another few months become appreciably less difficult and thereby ease the situation in regard to material and imported paper. Coal, which is already reduced in price to the domestic user, must inevitably offer a corresponding advantage to the industrial consumer, and in turn this will affect the price of all the chemicals used in the manufacture of paper, not to mention the immediate influence of a reduced coal bill in the paper mill. In wages we look to no decline, but we should expect from the joint efforts of management and labour a better production at less cost. All this will take time, and the progress will be very gradual, but none the less sure. If it matures within two years, we would have reason for great satisfaction.

Reasonable Offers of Paper.

In the midst of increasing prices, one drops across several very reasonable offers, the following among others: -Railway buffs and manillas at 5d. per lb., mill makings; foreign glazed tints for forward delivery at 4 d. per lb.; cream laids and woves, writings, at 61d. per lb.; fine M.F. printings at 61d. per lb.; M.G. litho poster at 7d. lb.; self-coloured unglazed printings or end papers at 8d. per lb.; M.F. white fine printing at 5d. per lb.; English, banks at 7 d. per lb.; coated art paper at 9 d. per lb.; friction glazed leatherboards at £36 per ton; Dutch strawboards at £15 10s. per ton (basis); British grey boards at £25 per ton; leatherboards at £36 per ton; Scandinavian kraft at £56 ios. per ton; S.C. varnishable litho, 61d. per lb. We hear it is difficult to find any wholesale house asking less than 8d. to 9d. per lb. for fine white printings and 9\frac{1}{2}d. to 10d. for fine E.S. writings. The Scottish mills are quoting 8d. per lb. for esparto printings and od. per lb. for writings. Corresponding English makes are not quite so good, but the prices are from 1d. to 2d. per lb. cheaper. British krafts are quoted £53 to £57 at the mill and from £58 to £60 by the wholesale houses. For Swedish kraft the wholesale houses are quoting £65 to £70 per ton for small orders.

Edward Lloyd, Ltd.

Removal of Offices.

Messrs. Edward Lloyd, Ltd., will shortly be vacating their London offices at 12, Salisbury-square, Fleet-street, E.C.4, and as soon as alterations are completed their business will be conducted at 4 to 7, Salisbury-court, Fleet-street, E.C.4. The vacation of the old offices takes place under an agreement with the United Newspapers, Ltd., following the recent sale of the newspapers.

The extensive paper mills of Messrs Edward Lloyd, Ltd., are situated at Sittingbourne, Keni, and at Vittingfos, Norway, the production amounting to 150,000 tons per annum.

The firm also have mechanical wood pulp mills at Honefos and Vittingfos, Norway, with a production of 80,000 tons per annum.

REFERRING to paper money, it is stated that five-shilling notes have been prepared, but the issue of such notes—and still more of notes to take the place of smaller silver coins—is not regarded favourably, for the reason that small denomination paper is not suitable for the great wear and tear to which the constant passing from hand-to hand and from till-to-till would subject it.

Messis. John Swain & Son, Ltd.

Unique Gathering of Old Employees.

On Friday evening, November 28th, the fourth annual dinner of a group of old employees of Messrs. John Swain and Son, Ltd., took place at the Imperial Restaurant, London. The idea of the annual gathering is rather unique, as it was originated first in a tittle merry-making given by their oldest out-door representative, Mr. Wm. Brett Plummer, which proved so successful that their secretary, Mr. F. H. Carpenter, took the matter up and suggested it should be perpetuated. And so it came about that Messrs. Plummer and Carpenter founded and cemented "The Old Boy's Brigade," which constituted a meeting once a year towards the end of each November in a purely social and friendly way of all employees of the London branch who had been with the firm no less a period than ten years.

The inaugural dinner was in 1911, but during the late war, the annual festivity was natur-

ally held in abeyance. Consequently a lapse of time intervened, during which eight of the old members unfortunately gave up their lives in defence of their country and for the love of their homeland. But 57 nevertheless sat down to dinner on the above-mentioned occasion. Mr. George J. Moss (from the office) very ably presided, supported loyally by Mr. W. Stanning (from the works).

The toast of "The Firm" was proposed by the Chairman, that of the "Old Boys Brigade" by Mr. Wm. Brett Plummer, and last, but not least, that of "Our Absent Comrades," which represented the "Old Boys" who had fallen or were otherwise taken away, by Mr. F. H. Carpenter, when all present stood silent for a few seconds in memory of those who had gone

over to the great majority.

The items of the menu which was an excellent one, were wittily introduced on the card. Native oysters, for instance, were described as being "deep etched—no beard." The roast. Yorkshire and vegetables were "mounted separately and vignetted nicely." The poultry course was set down as "a stereotyped dish, but well 'backed up." "'Stippled' and 'mealy'" was the Christmas pudding á la

The "Boys of the Old Bris"

DECEMBER 11, 1919. BRITISH & COLONIAL PRINTER & STATIONER

flambeau. The cheddar was "cut flush top and bottom," with celery "sweated on," while the dessert was "three-colour" and the coffee "black and white." Swain's special "Silver Electro" plate was to be put on the tables, "not to be taken away." None of it has been reported missing, however, and in spite of a threatened search it is satisfactory to learn that everybody responded to the roll call at the end of the evening "in quite a clear and distinct voice."

The Christmas pudding, which is always a special feature of the dinner, was brought in aflame. All lights were switched off, cigarettes crushed under foot; the room was in perfect darkness, only illumined by the pale blue flickering spirituous flare which danced around the raisin compound, and its entrance was enthusiastically applauded, for the "old boys" always congratulate themselves upon having the "first taste" of this ancient Christmas luxury before anybody else has even thought of it, let alone stirred it. There were no diamond rings in it, no gold watches or chains, no sovereigns or Treasury notes, and no horseshoes—which perhaps was fortunate. It went down very well notwith-

standing, and was unanimously voted excel-

The dinner was quite unofficial—none of the directors being present, not having been invited. Perhaps they may be asked on some tuture occasion. Who knows?

Among those present were the following veterans, who wore special decorations and who are proud to have served so many years with the firm:—Messrs. W. Stanning (43 years), Ellis (43 years), Young (41 years), Cattermole and Boulton (38 years each). Cox (34 years), James (33 years), Gascoine (30 years), and many others who have to their credit 20 to 30 years service each.

The total number of collective years of service in the firm of those present at the dinner reached exactly 1,176 years, a record, perhaps, that no other existing "process engraving" firm in the world can boast.

The accompanying block was specially produced for the occasion, the top line of portraits representing the latest eligible additions.

DIVIDENDS AND REPORTS.

"INISH TIMES," LTD.—The report of the Irish Times, Ltd., for the year ended September 30th, 1919, states that the profit, after payment of salaries, wages, management expenses, etc., and providing for bad and doubtful debts and income-tax £9.361, amounted to £39,642, and the balance brought forward, £7.158, makes £46,800. The directors have written off depreciation on premises, plant, etc., £2,410, and propose placing to general reserve £3,000, and paying a final dividend of 10 per cent., free of tax, on the ordinary shares for the half year ended September 30th, 1919 (an interim dividend of 10 per cent. for the half-year to March 31st has already been paid), carrying forward £12,024.

"LADY'S PICTORIAL," PUBLISHING. - The report of the Lady's Pictorial and Sporting and Dramatic Publishing Co. for the year ended September 30th. 1919, states that there is a profit of £3,388, as against £379 during the previous year. This result has been achieved in spite of the still further serious increase in the cost of printing, engraving, etc., and is due to the fact that there has been a large improvement in the revenue from advertisements, while the circulation of the publications has been well maintained. Under the circumstances the directors have no option but to recommend the suspension of payment of the preference dividend until an improvement in labour conditions takes place. their report the auditors state that the approximate value of the reserve fund investments is estimated at £15,450.

llford.—For the year ended October 31stafter making allowance for depreciation and provision for doubtful debts, the net profit is £45,154, and £11,488 was brought forward. The directors have paid a dividend on the 6 per cent. preference, and recommend that £10,000 be written off goodwill, £5,000 set aside for depreciation of investments, £4,000 placed to reserve fund, a dividend of 8 per cent. on the ordinary for the year, against 6 per cent. for the previous year, leaving £11,042 to be carried forward.

NEW COMPANIES.

SUNDAY STAGE AND SPORT ILLUSTRATED, LTD.—Registered with a capital of £5,000, in £1 shares, to carry on the business of printers and publishers of newspapers, magazines, books, periodicals, etc. The subscribers are R. Warner and Jessie Smith. Private company. The first directors are not named.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

Notice is given that the partnership heretofore subsisting between Charles James Herbert Jefferies and his brother, William Thierry Jefferies, who carried on business as wholesale and retail stationers, printers and bookbinders, at 41, Baldwin-street, Bristol, under the style or firm of Jefferies, Sons and Co., has been dissolved by mutual consent as from June 30th, 1919. All debts due to and owing by the late firm will be received and paid by Charles James Herbert Jefferies, who will continue to carry on the said business alone.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

Thompson, A. (male), carrying on business as A. Thompson and Co., at Trevelyan-buildings, 52. Corporation-street, Manchester, papermakers' agent. Date of order, December 1st, 1919, made on creditor's petition.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Heel, James Horatio, printer, carrying on business as the Spa Printing Co., Tremontroad, Llandrindod Wells. Date of order, November 6th, 1919. Discharge suspended for three years. Bankrupt to be discharged as from November 6th, 1922.

News-Print Agreement

An important conference was held in Montreal recently between committees representing Canadian newspaper publishers and manufacturers of news-print.

It is reported that the committees approved a continuation of the \$69 price to the end of the year, with the understanding that during the first six months of 1920 the price, if increased, shall not exceed \$80 per ton. The recommendations of these committees will have to be accepted by their principals before coming into force.

Printers' Managers and Overseers ASSOCIATION.

Parent Association.

There was a very large gathering for the annual general meeting held on Tuesday, December 2nd, at the "Old Bell," Holborn, Mr. E. H. Berryman, the retiring president, occupying the chair during the earlier part of

the proceedings.

Mr. G. Phillips, the General Secretary, read a letter which, he said, settled the difference with regard to delegates' expenses at the recent conference. From Liverpool came a letter on behalf of the Liverpool, Manchester, Yorkshire, and Leicester Centres, which stated that in view of the sad loss the Association had sustained by the death of their chief, Mr. E. C. Moyce, and in honour of that gentleman, it had been decided to abide by the decision of the Finance Committee and to withdraw from any contentious communication in regard to this matter.

The Chairman described this as a very satisfactory settlement, and the members present

indicated their approval.

The following new members were elected: -Mr. J. Beamish (Messrs. S. Straker and Sons, Litho. Overseer); Mr. C. Butcher (Messrs. Page and Thomas, Ltd., Letterpress-

Machine); Mr. C. Cowderoy (Messrs. S. Straker and Sons, Letterpress-Machine); Mr. W. J. Davis ("The Englishman," Ltd., Works Manager); Mr. A. Drummond (Messrs. Wood and Rozelaar, Works Manager); Mr. D. Hughes (Messrs. Cassell and Co., Ltd., Overseer, News Department); Mr. J. R. F. Kimpton (Messrs Haycock Cadle I td. Works Kimpton (Messrs. Haycock-Cadle, Ltd., Works Manager); Mr. J. Lloyd (Weekly Graphic and Bystander, Overseer—Composing); Mr. W. H. Mann (Messrs. Geo. Pulman and Sons, Ltd., Overseer — Composing); Mr. F. W. Martin (Lancet, Overseer—Composing); Mr. W. H. Slaughter (Messrs Kelly and Kelly (Overseer —Composing); and Mr. A. J. Taylor (London Printing Alliance, Manager – Litho).

Mr. Berryman, on behalf of the members,

extended a cordial welcome to the new-

The Late Mr. E. C. Moyce.

The President referred in sympathetic terms to the loss sustained by the death of Mr. E. C. Moyce. The work Mr. Moyce did in helping to build up the Association to its present position of prosperity was a monument that would stand in his honour, more lasting perhaps than praise. Accordingly, Mr. Berryman contented himself by moving, "That this meeting of the Association desires to place upon record its profound regret at the loss sustained by the death of Mr. E. C. Moyce."

Mr. A E. Jarvis, president elect, remarking that only good could be said of their late

Digitized by GOOGIC

friend, seconded the resolution, which was passed in silence, the members standing.

The 26th annual report, which was taken at this stage, showed a balance of £448 odd. The number of members now attached to the Parent Association stands at 639, an increase on the year of 39. While this record was described as quite good, the council impressed upon all that it was necessary to increase the membership. During the year 50 members had been admitted, and four had been transferred to the Parent Association, while 10 had left London to join the provincial centres. Reference was then made to the death of eight members.

Referring to the retirement of Mr. Berryman from the position of president, the report remarked that his usefulness commenced many years ago and he had earned deserved popularity by the keen interest he had always taken in the Association's affairs and his ready help when work of any kind was to be done. The council placed on record their full sense of appreciation for his

past services.

Thanks were then extended to Mr. G. S. Waller, Hon. Technical Secretary, and other members who had assisted in the work of technical education. Referring to the efforts being made to secure better facilities for students as a craft the report remarked that the importance of the printing industry to London is indisputable and recognition for its demand for efficient training of appren-

tices cannot be too strongly urged. Mr. Berryman, in introducing the report and balance-sheet, mentioned that the latter related to the local fund and alluded to a deficit on certain social items. He thought, however, that the members would acquit the council of any undue extravagance during the war, and at the conclusion of hostilities it was felt that some celebration should be held. Both the whist drive and the Bohemian concert were certainly very enjoyable affairs. Their social functions had generally left a deficit, and if the present sum of £80 was spread over the three years, during which they had no gathering of the kind, then the deficit would not exceed that of 12 or 15 years The speaker went on to refer to the large accession of members during the past 12 months, and remarked that there was every prospect that their new colleagues would bring fresh ideas into their councils, which would make for the welfare of the Associa-

Mr. W. H. Wicken moved the adoption of the report and balance-sheet, and Mr. J. Stevenson seconded.

Mr. Bateman raised one or two questions on the whist drive, to which Mr. Whittle, who acted as steward, replied.

Mr. Pugh observed that the Association was run for social intercourse and they could not expect every event that was arranged to show a profit. The report and balance-sheet were then adopted.

The question of the amount to be allocated to prizes for technical students was left in the hands of the council, who will report to a general meeting of the Association.

Election of Officers.

Coming to the election of officers, Mr. Berryman mentioned that there was no competition for any office. He should like to be the first to congratulate Mr. Jarvis on his accession to the presidency. As a representative of the letterpress side of the craft, he welcomed Mr. Jarvis from the litho section. Their new president was full worthy of the honour which the members had conferred upon him and he had the distinction of representing a house that always held a great name in the printing trade. In congratulating Mr. Jarvis, Mr. Berryman described him as a very fine fellow, who carried the enthusiasm of youth into the serene region of old age (laughter), and seemed likely to go on for a

great number of years yet. (Applause). Mr. A. E. Jarvis (Messrs. Eyre and Spottiswoode) then took the presidential chair amid loud applause. In returning thanks, he said he should strive as far as in him lay to follow in the footsteps of his predecessor and he asked for the assistance of the members in upholding the dignity of the Association and

extending its usefulness.

Mr. Jarvis had pleasure in introducing Mr. S. M. Bateman as the unanimously-elected vice - president, an old member who had done so much for the benefit of the association; Mr. Bateman's wisdom would be a great help

to them. (Applause.)

Mr. Bateman, in acknowledging the honour conferred upon him, remarked that in the new president and vice-president the association had two of the most "cantankerous chaps" in the association-(laughter)-but he was sure they would work harmoniously together. He referred to his previous occupancy of the office of vice president.

The President then introduced Mr. Pugh on his re election as trustee, and Mr. Durston as the treasurer, both these gentlemen acknowledging their election in suitable terms.

General Secretary's Resignation.

The President mentioned the re-election of Mr. Phillips as general secretary without opposition, and Mr. Phillips was received with cordial applause upon rising to respond. He stated that he had just completed his first year as general secretary, and the first was always the most difficult period. He went on to acknowledge the assistance afforded him by Mr. Berryman, whose advice was always forthcoming when sought, and he expressed appreciation of the help and consideration he had received from the council and members of the association. Mr. Phillips went on to say that now, owing to the death of Mr. Moyce, he had been appointed by his firm to take over the department recently controlled by that gentleman in addition to his own. That appointment he had accepted, which meant increased responsibilities and duties. He was sorry, therefore, that he should have to resign from the position of general secre-He did so with a great amount of regret, because he was just getting into the He felt, however, that he had a very good lieutenant in Mr. Whittle, the financial secretary. Although no nominations would

Digitized by GOOGIC

be put up that night, he must ask them to accept his resignation and appoint a general

secretary.

Replying to Mr. Gill, who asked what the procedure would be in obtaining nominations or recommendations for filling the office of general secretary, the president intimated that every member of the Association would be notified of Mr. Phillips' resignation and that at the general meeting they would have nominations and proceed to election. There would be no rushing of the matter, but it was necessary to have a secretary very quickly as Mr. Phillips had stated that it was impossible for him to carry on after the end of the year. There would be no need for the centres to confirm the appointment, because they would have the right to nominate any member they wished from the London branch only. They would accept from the provinces nominations in writing.

On Mr. Pugh remarking that this would be a breach of the rules, the President said that in a case like that, he thought he would have to take that measure, and he should rule, if necessary, that nominations from the centres in writing would be accepted, it being understood, of course, that the gentlemen nominated

gave their consent.

Mr. Phillips' resignation was then formally

accepted.

Mr. Whittle and Mr. Waller returned thanks for their re-election as Financial Secretary and Technical Secretary respectively.

The following were elected to the Council, without the necessity of a vote:—Messrs. H. Blackwell, E. H. Campling, G. H. T. Freeman, W. H. Gill, E. Hutchins, T. B. Lapworth, C. Northam, H. T. Potter and J. R. Riddell, six of whom had not previously held office.

Mr. Phillips moved the recommendation of the Council, that Mr. E. H. Berryman be appointed editor of the Association's journal,

and Mr. Reed seconded.

Mr. Gill, on being informed that the consent of the centres must be forthcoming before the position could be filled, supported the recommendation heartily, because he knew of no man in the Association more capable of following their late lamented friend, Mr. Moyce.

The resolution was carried unanimously

and heartily.

Mr. Berryman acknowledged his election in

appropriate terms.

The meeting was then made special for the purpose of electing a trustee in the place of the late Mr. Moyce, and on the motion of Mr. T. E. Smith, seconded by Mr. Blackwell and cordially supported by Mr. Bateman and Mr. Whittle, Mr. Phillips was unanimously elected to fill the vacancy.

Mr. Phillips was very warmly received on rising to acknowledge his appointment, and he pointed out that he had served the Association in one office or another ever since

1909

The meeting then proceeded to discuss

general business.

A discussion then took place on the question of holding an annual dinner. Mr. Whittle proposed that this be done, and that ladies be invited.

The President: I think you are asking for trouble, but there is the proposition. (Loud laughter.)

Various views were expressed as to the advisability or otherwise of extending invitations to ladies, and eventually it was agreed to hold the annual dinner without them.

The suggestion was made by Mr. Pugh that a Bohemian concert be held, and this it was understood, was approved, the question of the musical programme being deferred.

Death Benefits.

Mr. Freeman made the suggestion that aged members in need might be allowed to have the benefit of part of the money which would otherwise be paid to their relatives on their death. For instance, if a member could have £25 out of the £50 before he died it would be conferring a more direct benefit upon him.

Mr. Pugh mentioned the difficulty as to where the money was coming from. He thought it would be much better, as had been suggested some time ago by Mr. Phillips, that the members should subscribe to a pension fund of their own. With a membership of over 1,000, he thought it could be done.

Mr. Bateman recalled that on a former occasion he mentioned something of a similar kind to what Mr. Phillips had in mind. He agreed with Mr. Pugh that it was a matter

worthy of consideration.

Mr. Phillips said it was a good many years ago that he first suggested this matter. It required careful working out, and he would take the opportunity of asking the council to appoint a pensions committee to go into the matter. He hoped at some future date that he would have something tangible to place before them, so that every member would get a pension at a certain age without applying elsewhere several times without success.

The President announced that Mr. H. J. Frost and Mr. J. C. Pugh were to take the chair on December 13th, at the Green Man, Upton Park, in connection with the East Ham Auxiliary in support of the Printers' Pension

Corporation.

After jocular proposals had been put forward as to forming a golf club and a boxing club, Mr. Pugh proposed a hearty vote of thanks to the retiring president, to whose services on behalf of the association he paid a very warm tribute.

Mr. Jarvis insisted upon seconding the resolution, and described Mr. Berryman as an ideal

chairman.

Mr. Bateman and Mr. Phillips cordially supported the resolution, which was unani-

mously carried,

Mr. Berryman replied that his compensation for any trouble he had taken during his year of office had been that he had made many friends, and he thought he could claim that he had no enemies. (Hear, hear.) He was indebted to the members for all the kindness they had shown to him.

OVER 4,050 persons are employed in the Government Printing Office at Washington, U.S.A., which, it is claimed, is the most complete establishment of its kind in the world.

Stabilising the Printing Trade.

The following is the discussion which ensued at the Whitley Council conference reported in our last issue:—

On the meeting being thrown open for discussion, Mr. Howard Hazell pointed out that the conditions under which most printing businesses operate to-day, prevented that personal touch between employer and employed that was so beneficial in the old days when a master printer used to know his few employees by their Christian names. emphasised the value of any scheme that enabled masters and men to meet round a table and frankly discuss difficulties together before the difficulties had become acute. The constitution of the scheme was important, but of far greater importance was the spirit with which members came together. He assured them that on the part of the Master Printers there was the right spirit-the desire to work with the men as best they could to find some reasonable and equitable way out of difficulties as they arose. He believed there was the same spirit on the part of the men. Conferences of employers and employed should not be confined to times when dispute had arisen, but there would be great benefit in meeting together for the furtherance of any common object they had in view.

In reply to a question as to the possibility of having unorganised workers represented on the Industrial Council, Mr. Goodwin said that the basis of the scheme presupposed organisation on both sides. The Council as it stands represents on the one hand the federated employers (including some nonunion houses), and on the other hand only workers organised in recognised trade unions. He could not see how unorganised workers could be represented.

Mr. McCarley complained that the scheme, while providing representation for capital and labour, denied representation to an im-

portant third party-management.

Mr. Goodwin replied that in the printing industry there were very few persons of the capitalist class not exercising direct management in their businesses. So that there was not felt a need for a triangular arrangement such has had been suggested—apart from the practical difficulty of determining how management was to be represented. The works advisory committees, however, would give adequate representation to the management, and he thought that the scheme as it stands provides means for utilising all the brains in the printing industry.

Inanswer to a question as to whether the professional side—journalists and newspaper proprietors—were represented, Mr. John Ames, the secretary of the Industrial League, said that the Joint Industrial Council dealt only with commercial printers, exclusive of

the newspaper industry. Steps were being taken to form a joint industrial council for the newspaper industry, but the chief difficulty had been with regard to the Institute of Journalists, a body including both employers and employed. They claimed the right to be represented in a joint industrial council for the newspaper industry, but the federated trade unions took up the position that the Institute, including as it does employers as well as employed, was not a recognised trade union and so was not within the scope of the Whitley scheme.

Dr. E. Halford Ross, Home Office medical officer, mentioned that some three or four years ago, when Mr. Walter Hazell and Mr. Isaacs asked his assistance in improving the health of printing workers, he had emphasised the need for research with regard to the tuberculosis difficulty. He had since been able to make many observations. One thing he had noticed was that there was a very considerably increased incidence amongst the children of men and women employed in printing, and this amongst children who had not themselves so worked. This showed hereditary pre-disposition. It was true there were bad printing works, as another speaker had pointed out, but they had vastly im-proved of late years. The question of health in industry was a most important matter, and he was sure that with improved health the problem of conciliation would become a much easier one.

Mr. Unwin, who began by referring to the present negotiations in regard to a "very large demand" for an increase of wages, hoped that the existing council would early find some solution to the problem which had as yet baffled them—the representation of unorganised labour. They could not expect to dragoon every employer and every man into one organisation. He spoke as a very old worker on the non-union side, and he thought he was justified in saying that something like 50 per cent. of the labour of this country is

not organised.

Mr. Robert Young, M.P., ex-General Secretary of the Amalgamated Society of Engineers, who had accompanied his friend Mr. Tootill from the House of Commons, made a short speech proposing a vote of thanks to Mr. Goodwin. He said that one of the difficulties with regard to Industrial Councils in the engineering industry was the large num-ber of unions involved. His hopes had been increased by learning that in spite of there being 23 unions in the printing industry, headway was being made. He was specially delighted to hear of the instance of cross-voting in the Council, as one sometimes feared a reversion to the old system of "keeping ends 'whereas the central idea of the Whitley Scheme was to bring out a new spirit. went into the war," he said, "not so much to save ourselves as our fellows and our country. I think that is the sort of ideal we have got to carry into industry." Referring next to the problem of unemployment, he said that this above all other questions will have to be settled in the very near future. One of two

methods must be ultimately adopted: either each industry taking responsibility for itsown unemployment; or all industries uniting to protect every industry in the country. Men had no sound argument, he said, against increased production, but there remained the dread suspicion that it meant for them or their Increased fellows increased unemployment. production could not be expected until the men were satisfied that adequate provision against unemployment had been made. After speaking of his own personal experiences as a worker on strike, he said that as a trade union official he was convinced that in the interest both of the men and of the employers strikes must be avoided; and the best way of avoiding them was that masters and men should meet and place their cards on the table so that an agreement could be come to.

This vote, and a vote of thanks to the Chairman, were carried unanimously.

Paper Prices.

Paper and Progress, the house organ of Messrs. Strong, Hanbury and Co., Ltd., celebrates its third anniversary with the last issue, a fact upon which we congratulate its producers. Although the publication was started owing to the war making such a demand upon the services of the firm's travel-

lers, it will continue quarterly. On the course of prices of paper, the following comments appear in the current issue: -" In July we stated the opinion that, providing there was a cessation of labour disturbances, which had so far proved such a hindrance to the industrial recovery of the country, there was every hope of healthful conditions being speedily restored. Indeed, actually up to a few days ago it seemed that in all directions the various sections of the community were settling down in real earnest to the task of building up their impaired resources, from the combined success of which the nation will eventually resume its wonted vitality. And then, almost twelve months after the signing of the armistice, we found ourselves suddenly and without warning in the stranglehold of a strike so paralysing and so far-reaching in its probable expansion that it was well nigh impossible to over-estimate the enormity of the misfortune. Thanks, however, to a splendid spirit of general determination and resolution, the effect was far less disastrous than had been counted upon by the extremists, and after a week's struggle saner counsels have prevailed. The effect upon the papermaking industry has been as bad as upon any in the country, having in view coal and transport difficulties, and as a consequence, until such time as leeway has been made up and output increased, paper will increase somewhat in cost and be less readily obtainable than even during the last few weeks, when facilities for rapid supply from the mills have been few owing to the rush of orders."

"The Care of the Printer's Eyesight."

Optician Gives Practical Advice to Printers in a Lecture at St. Bride's.

Few people have so much cause to value, and to take the best possible care of the inestimable gift of eyesight as have the many workers connected with the printing craft. Were the importance of the subject fully realised, Mr. J. H. Sutcliffe, F.B.O.A., would have had a vastly larger audience than the small but interested gathering that attended his lecture at the St. Bride Foundation Printing School, on the 5th instant, when he dealt with "The Care of the Printer's Eyesight."

ing School, on the 5th instant, when he dealt with "The Care of the Printer's Eyesight."
MR. T. W. McAra. J.P., who acted as chairman, introduced Mr. Sutcliffe, mentioning the fact that he is Director of Examinations to the British Optical Association and is also Superintendent of the Army Spectacle Depot.

THE LECTURER, who mentioned that he did not speak as a printer, said that as an optician, he had been struck with the great possibilities of improvement in the composing-room. He had at first felt a strong desire to lecture the father of the chapel on the subject, but now he knew enough not to do that, and he sympathised with the composing-room staff in the difficulties under which they struggle.

Overstraining the Eyesight.

To the question of how to care for the printer's eyesight, said Mr. Sutcliffe, one answer could be made very simply, namely that one must avoid overstraining it. Yet that was what was done by apparently every printer he had seen; and even the sub-editors, the readers, and everyone connected with a printing office seemed out to strain their eyes and abuse them. They might lose an arm, or a leg, or their hair, and yet remain printers; but if they lost their eyesight, the only con-

nection they could have with the printing trade would be through the benevolent fund.

Then they ought not to put into the printing trade people who because of bad eyesight could only be bad printers, or those who would eventually damage their eyes and become bad printers as they grew older.

come bad printers as they grew older.

He would recommend that when a boy came to the institute for printing training, they should have his eyesight carefully examined, so as to discover any slight defect which might develop and prevent his ever becoming a good printer.

Forms of Paulty Eyesight.

The lecturer proceeded to describe in nontechnical language some of the forms of faulty sight that might interfere with good printing. With the aid of blackboard sketches he explained the symptoms and malformations associated with the several troubles, and indicated the optical remedies available. He dealt first with myopia, or "short sight," distinguishing the "sick" variety, anyone afflicted with which would be well advised to leave the composing-room for some less eyetaxing occupation. Next was mentioned hypermetropia, or "long sight," which also if serious would be sufficient cause for dissuading a boy from entering the composing-room. Astigmatism was next dealt with, and characterised as interfering with the seeing of things in a particular plane—perhaps the vertical plane, perhaps the horizontal, or sometimes an oblique plane. The lecturer pointed out that we are used to seeing things mostly vertically or horizontally, and that we see comparatively few oblique lines in a room or elsewhere. The cubists, he admitted, emphasise oblique lines in some of their pictures, but these cause a certain amount of

distress. (Laughter).

He suggested that astigmatism, which was present more or less with most people, and commonest in the vertical and horizontal forms, provided an explanation of the fact that the average compositor does not like to set, nor the average reader to read, italics or sloping caps. Astigmatism, he said, was sometimes responsible for good effects as well as bad, producing the tidy habits of the man who must have everything arranged exactly on the square, and helping the architect to put his lines in the proper places. matism might explain why a good compositor may be inclined in making-up a page or setting a display ad., to get everything a little on the skew, so that a touch was needed to pull everything together. This might occur with the work of a very good printer with a little astigmatism.

Speaking next of colour perception, the flecturer mentioned that a great many people who are slightly colour-blind can yet accurately match shades of colour. He thought that a boy, before entering upon a course of printing including colour work, should certainly undergo some examination in colour percep-

tion and colour matching.

Proceeding to treat of optical aids for printers, the lecturer said it was the normal thing for a man at the age of about 35 to become old in an optical sense, and at about 45 to begin to have sight difficulties owing to the reduced elasticity of the lens of the eye. He mentioned the different lens arrangements possible in spectacles, to remedy this difficulty, and to meet the requirements of different occupations. As to the focus of vision at which most of the printer's work is done, and the requirements that spectacles were expected to meet in this particular craft, he hoped to learn something from his audience.

Spectacles and Eye-Shades.

Displaying several specimens of eye-glasses and spectacles, the lecturer said that the pince-nez type was not a good one for the workman. Spectacles were the proper thing. They could be rimless or with metal rims; but the very best type were "tortoiseshell," which were very comfortable and light, had no metal touching the skin and were not liable to set up galvanic action. Though it might not be advisable to wear them in the street, these spectacles could be strongly recommended to the man at work. They were much worn in America, even out of doors.

Another thing very much used in composing offices in America, wonderfully useful, not only to compositors, but also to readers and sub-editors, was the eye-shade. A simple cardboard shade gave surprising relief to the eyes, counteracted bad lighting, and made the illumination of work in hand appear almost double. Here again there was the difficulty of fear of ridicule, present in every trade in England, but not found in America.

Type Faces and Eye-sight.

The lecturer next explained the use of "test types" by oculists, and indicated the capa-

bilities and limitations of normal sight in the reading of printed matter. He proceeded then to speak of newspaper types in this connection, and said there had lately been great improvements in the readableness of newspaper print. In this respect he gave special praise to his favourite daily paper, The Times. He mentioned, however, the recent introduction by The Times of sloping capitals in conjunction with vertical letters; this had caused him great distress. He felt sure printers would not use sloping letters if they knew that the average person could read best vertically or horizontally. The best form was a vertical letter of fairly broad face. He thought that many newspaper proprietors would find their circulation increased if they had a little more sympathy for the eyes of their readers.

In conclusion, he added that coloured paper was an abomination from an optical point of view. Strong contrast was required, the intensest black ink on the whitest non-glossy

paper.

Points from the Discussion.

Mr. McAra opened the discussion with some racy comments. As to the compositor getting his page a little askew, it was not astigmatism that was to blame, but page cord! He emphasised the necessity of going to a qualified optician when glasses were required, and testified to the great benefit he himself had received from the use of spectacles, also to the value of the eye-shade, but felt that a printer was not only afraid of ridicule for adopting the latter, but feared the overseer would think it time to get someone to take his place. (Laughter.)

Mr. Riddell, who brought out several interesting points, also spoke to the value of the eyeshade, which he had seen worn in America, and found very beneficial himself. He saw no reason why compositors should not wear these shades at case, and machine minders when making ready. He raised the question of the superior legibility of lower-case as

compared with capitals.

To this the lecturer replied that he thought the difference was partly due to the fact that readers are more accustomed to lower case; he said also that a printers' reader is able, instead of spelling out words, to take in a word, or even a line, at a glance as a picture, and this is easier in the case of the more com-

pact lower-case type.

Mr. F. Collis, speaking of the best focus for compositors' glasses, said he thought this would not be the "stick" focus—as the lecturer had suggested-as the comp. ought not to manipulate his "stick" by sight so much as by touch. He thought the most important point to focus upon was the place of the "copy," usually on the bottom part of the upper case or the top of the lower. He also raised the subject of lighting, which it had been expected Mr. Sutcliffe would deal with. He concluded by moving a very hearty vote of thanks to the lecturer.

Mr. Geddes mentioned, among other points, that he thought the eye reads the top half of a letter more easily than the bottom. thought this had something to do with the success of "Cheltenham." He spoke of a 40 per cent. depreciation of the sight of school children in Alsace-Lorraine since the introduction there of German Gothic type. He seconded the vote of thanks, which was heartily carried.

The lecturer, responding, added a few words on the subject of lighting, which, he said, he had not attempted to deal with in the course of his address, as it required an evening to

South-West London M.P.A.

Dinner and Annual Meeting.

The members of the S.W. District Association of the L.M.P.A. were present in good force at the dinner and second annual meeting of the Association which took place at the Albert Tavern, Victoria-street, on the evening of Monday, the 8th inst. The items on the agenda were (1) the report of the year's work, (2) the treasurer's report and balance sheet, and (3) the election of officers.

The reports showed that the S.W. District Association has accomplished a good year's work, and that it is a live and growing branch of the L.M.P.A. Nineteen new members have been made during the year, bringing the total membership up to 62. The balance-sheet indicated finances in a healthy condition, the balance carried forward being over thirty-one pounds.

On the retirement of the first president, Mr. T. J. Mountain, who was heartily thanked for valuable services during the past two years, Mr. A. Spring was unanimously elected president for the coming year. The other elections were as follows:—Vice-president, Mr. J. D. Wise; hon. treasurer, Mr. R. Kent; hon. secretary, Mr. C. V. Mold; committee, Messrs. H. Bottomley, H. A. Chivers, E. G. Cole, H. Drewett, W. G. Mead, T. J. Mountain, R.

Kent, G. W. Young, E. Trim, and Major Low. Major Fordyce Birch, secretary of the L.M.P.A., on being asked to speak, met with a very hearty reception. He brought from Mr. Keliher a message of regret at being himself unable to attend, and remarked that members owed a great debt to Mr. Keliher for conducting the recent negotiations with ex-

Speaking of the labour committee, Major Birch said he had been struck with the fact that it was possible to get a body of men not paid for their duties who would get up at a minute's notice and come away from their own offices to act as members' spokesmen and representatives. He told how, the previous week, he had received notice at 10.0 a.m. that a lightning strike had occurred at a certain printing house. In a quarter of an hour an emergency committee had been brought together; in two hours' time work at the house in question had been resumed.

Referring to missionary effort in the gaining of new members, he emphasised the value of the Costing System in this connection. He added that the Association would be pleased to have suggestions as to any manner in which the services of the M.P.A. could be bettered, and so far as finances and staff made it possible, any workable improvements would be put into operation.

Mr. F. A. Perry, president of the W. & N.W. Association, who said he had been present at the birth of the S.W. branch, emphasised the value of membership of the L.M.P.A., claiming that it more than repaid its small cost. He urged also the inclusion in the rules of local associations a rule according to which every member undertook not to canvass another member's customers.

After some discussion as to the best day and hour for the monthly meeting of the association, it was decided that it be held on the second Wednesday of each month to begin

at 7 o'clock.

The meeting ended with a vote of thanks to the new president, Mr. Spring.

Photographic Paper Developments.

Under the style of Rajar, Ltd., a private company has been registered with a capital of £200,000, in £1 shares, to take over the business of Rajar, Ltd. (incorporated in 1907) and to carry on the business of manufacturers of and dealers in photographic materials and apparatus, advertising specialities and novelties, showcards and almanacs, chemicals, etc.

The first directors are :-

A. E. Parker, Wadhurst, Sussex, paper-maker (director of Wiggins, Teape and Co., 1919, Ltd., and Rotary Photographic Co., 1917, Ltd.).

T. L. Parker, Withnell Fold, Chorley,

Lancs, papermaker (director of Wiggins, Teape and Co., 1919, Ltd.).
C. F. S. Rothwell, Thornedge, Spring-road, Hale, Ches., chemist (managing director of Rotary Photographic Co., 1917, Ltd., and director of Lilywhite, Ltd.).

Registered office, Rajar Works, Town-lane,

Mobberley, Ches.

Winterbottom Book Gloth Co., Ltd.

The chairman and directors of the Winterbottom Book Cloth Co., Ltd., gave a generous entertainment to their friends in the London bookbinding trade on Thursday night at the Savoy Hotel. Mr. G. H. Winterbottom presided over a large gathering, and the whole proceedings were most enjoyable. Indeed, it was quite a unique assembly. A report of the proceedings will appear in our next issue.

Trade Notes.

An exhibition of English books is taking place at Zurich from December 10th to 28th,

THERE were increased imports of books and printed matter into Canada during the year ended October 31st.

MESSRS. HAZELL, WATSON AND VINEY are the printers of the new sixpenny fiction monthly, the "Sovereign Magazine.

THE Kingdom of Jugo-Slavia permits the export of books and printed matter in any quantity and without payment of export duty.

THE late Mr. Benjamin Alfred Rayworth, for over 37 years a member of the staff of Engineering, and for the last 13 years joint editor, left £9,791.

According to an Italian news agency, the New York Herald is endeavouring to buy a building in the centre of Rome as offices for a Rome edition of that paper.

The death has occurred in a local infirmary of Mr. James B. Plumpton, a well-known journalist in the North of England, at the age of about 56.

THE Co-operative Newspaper Society, Manchester, has published a new monthly magazine dealing mainly with the co-operative movement. Its title is "Woman's Outlook," and the subscription price 2s. a year.

As THE result of a quarrel between two printers' assistants engaged at Bouverie street, Thomas Wm. Smith, 40 (whose true name is Whitfield Lucian Romilly), of Championgrove, Denmark-hill, charged with assaulting William Thos. Anderson, of Kinsale-road, Peckham-rye, was at the Mansion House, sentenced to two months' imprisonment with hard labour.

SWEDEN AND COPYRIGHT. - Seeing that Sweden has ratified the Berne Copyright Convention of 1908-except in regard to newspaper and magazine articles—an Order in Council on November 25th extends the protection in this country of the Copyright Act, 1911, to works, other than newspaper and magazine articles, of which the country of origin is Sweden. The Order takes effect on January 1st next.

THE Printing Trades' War Memorial Committee having considered tenders from six building firms for the erection of the Memorial Wing to the Caxton Convalescent Home, Limpsfield, have accepted that of Messrs. Strange and Sons, of Tunbridge Wells, for £6,100. The work will be proceeded with at once, with a view to the wing being opened for the reception of patients next summer. A further £2,500 is required to complete the scheme.

New Monthly.—The Churchman's Hackney Monthly and Review (price 3d.) is an octavo brochure of 32 pages and wrapper, and, though unpretentiously produced, contains much of general interest, especially to Hackney residents. Besides articles on miscellaneous subjects, the contents include local railway time tables and tram and 'bus services, and local and general news items. The publishers are Messrs. H. Churchman and Co., 7, Wilsonstreet, E.C.2.

THE death is announced of Mr. Walter J. Moody, a partner in the firm of Messrs. Cooper and Co, printers and stationers, Huntingdon.

For stirring up strife and circulating false statements about British troops, the editor of the Egyptian Circular has been arrested in London for deportation to Egypt.

AT Saturday's meeting of the Institute of Journalists' Orphan Fund, it was decided to increase the annual grant to each child by £8. and to make a special two-guinea grant for the holidays.

MESSRS. ALFRED ALLDEN AND Co., papermakers' agents, have removed from 31, Eastcheap, to 118, Queen Victoria-street, E.C.4. Mr. Allden has had experience in the paper trade for over ten years.

We understand that Messrs. Spottiswoode, Ballantyne and Co., Ltd., of 1, New-streetsquare, London, E.C., have acquired the goodwill of the book printing section of the business of the Complete Press, Ltd., Norwood,

IMPORTANT matters are down for discussion at the annual general meeting of the London Master Printers' Association to be held today (Thursday), at the Stationers' Hall. Items on the agenda include the basis of future subscriptions and the new rules.

The Press report of an outbreak of fire on the premises of Messrs. Odhams, Long-acre, on Friday, appears to have been incorrect. We understand that an automatic fire alarm on the firm's premises was accidentally actuated, thus calling the brigade, but that there was no fire to be extinguished.

A PRINTERS' Whist League, or Printing and Kindred Trades' League, has been inaugurated in Birmingham and the district. The rated in Birmingham and the district. idea is to bring the jobbing and news sections more closely together. Mr. H. Harverson (Birmingham printers) is the President, and Mr. A. W. King, hon. sec. The League will commence matches early in January.

PRINTERS' WAR MEMORIAL.—A successful matinée was given at Kingsway Hall on Saturday in connection with the Lloyd Memorial (Caxton) Seaside Home for Men and Women, at Deal. The proceeds will be applied to the building of the Printers' Peace Memorial Wing, dedicated to the officers and men of the printing and allied trades who fell in the war. An enjoyable musical programme was presented, many popular artists having lent their services. Mr. W. E. Berry and Mr. J. Gomer Berry, proprietors of the Sunday Times, have presented a bed to the Home.

Personal

LORD BURNHAM, as president of the Newspaper Proprietors' Association, has accepted the invitation to the annual dinner of the Papermakers' Association on February 5th. Acceptances have also come in from the presidents of other kindred organisations.

MR. FRANK LLOYD is unfortunately unable to attend as his health does not permit him to be out at night.

MR. THOMAS MARLOWE is leaving the editorial chair of the Daily Mail. His successor is said to be Sir Campbell Stuart, who has recently been connected with Carmelite House, but whose association with Lord Northcliffe extends from the beginning of the British mission to the United States. He is 34 years of age.

MR. MARLOWE, it is understood, remains vice chairman of the Associated Newspapers. He has been editor of the Daily Mail for twenty years.

MR. HILL, for many years a member of the staff of the Financial Times, has been appointed by the Board to the position of advertising manager, in succession to Mr. H. Bridgewater, who has resigned.

SIR JOHN ELLERMAN, BART., having acquired the ordinary shares of the Ingram family in the *Illustrated London News and Sketch*, Ltd., has informed the holders of ordinary shares that he is willing to acquire all or part of their holdings at par value—namely, 5s. per share.

MR. JAMES MUSGRAVE, who for a number of years has been a member of the composing-room staff of the Leeds Mercury, has been elected secretary of the Leeds Typographical Society, in succession to Mr. R. M. Lancaster, who is retiring at the end of the year.

LIEUTENANT R. S. ECKERSLEY, a member of the literary staff of the Bolton Evening News, has been presented with the Military Cross at the hands of the King at an investiture at Buckingham Palace.

MR. WILLIAM HOWARD, for 17 years caseroom overseer for Messrs. McCorquodale and Co., Leeds, and subsequently for 22 years overseer at Messrs. Chorley and Pickersgill, Leeds, has retired from active work. He has been the recipient of several gifts, including a gold watch from the directors, a gold albert from the office staff, and an ebony walkingstick and an amber pipe from the case-room companionship.

MR. J. W. Bibby, secretary of the Leigh Branch of the "T.A.," has been made a

magistrate. A similar honour has been paid to Mr. P. Prescott, a lino operator on the Wigan Observer.

MR. GEORGE A. ISAACS, general secretary of the National Society of Operative Printers and Assistants, was in happiest vein as chairman at the free-and-easy dinner and re-union of old-time members of the Society, held at London Bridge Hotel on Monday evening.

AMONG the distinguished visitors was "Charlie" Bowerman, M.P., who was one of the speakers. Want of space prevents further mention in this week's issue—just going to press—but room will be found for a report in the following number.

Reel Paper on Fire.

Serious damage was done by fire to the stock of reeled news-print which the proprietors of the Daily Express had stored in the South Western Railway arches, off Hercules road, Lambeth, London. Four hundred tons of the paper were stored in the arches, representing 41 million copies of the Express, and a total length of 16,000 miles—the distance between London and Wellington (New Zealand). Enormous quantities of water were poured on the danger area, but despite this the paper continued to smoulder. Large quantities became pulp, but it is hoped that an appreciable amount will be salved. The four hundred tons were only a small portion of the reserve stock of the Daily Express, and the Hercules arches fire, although a serious one, did not handicap the usual issue of the paper.

New Paper Box Machine.

Big claims are made for a paper box machine which is to be turned out at De Pere, Wis. Mr. Geo. Diamond, the inventor, has organised a corporation with a capital of £500,000. It is claimed that the machine will do the work formerly done by seventeen machines and will save the manufacturer storage space of 15,000 to 20,000 square feet. The Diamond machine in a single operation, it is asserted, will transform a cardboard blank into any sized box, from the smallest cigarette container to the largest shirt box. The Diamond corporation are to erect a paper mill.

THE fifth edition of "Papermaking," by Messrs. C. F. Cross and E. J. Bevan, is now in page proof and may be expected early in the new year. This useful text book has been considerably developed, thus becoming more than ever valuable to the student.

THURSDAY, DECEMBER 18, 1919.

Current Topics.

The London Wages Agreement,

Since our last issue the new agreement between the London Master Printers' Association and the London Printing and Kindred Trades Federation has been confirmed, and the terms published. As regards the application of the 7s. 6d. advance in respect of night work, the agreement provides that in the case of a regular night shift or 'ship, the advance is restricted to 7s. 6d. per week, but overtime is to be charged at night time rate and a quarter, including the 7s. 6d. The members of the Amalgamated Typefounders' Society who are employed as typefounders or mono-casters in general printing offices are included in the award. Male junior members are to receive

the same increase as women, viz., 3s. 6d., while learners get 1s. 9d. Women and junior members engaged on agreed men's work are to receive the same advance as men. In the case of piece workers, the 7s. 6d. advance is to be added to that given in June, 1919, except in the cases where its equivalent has been merged in the piece scale by agreement with the L.M.P.A. Piece-workers' overtime ismen, 10 d. per hour; women, 7d.; learners. 31d., for the hours worked, in addition to the agreed overtime rates for time-workers. Wilfully lost time is to be deducted from the advance, with a minimum of one day. Workers casually employed are to receive 2dper hour extra. In working out the new wage for regular night work of a man hitherto receiving £3 17s. 6d. a week, there is first to be added the usual 50 per cent., i.e., £1 18s. 9d., and afterwards the 7s. 6d. This gives a total of £6 3s. 9d,, as the new minimum weekly rate for regular night work in such a case. In notifying employers just before the week-end of the new rates, Mr. Woodgate Stevens, the secretary of the men's federation, expresses regret at the shortness of the notice given, which, he explains, is due to the agreement not having been signed until last Thursday. He also expresses the hope that the change brought about by the agreement will not have the effect of disturbing the friendly relationship hitherto existing between employing firms and the societies included in the federation.

Increased Cost of Printing.

THE London Master Printers' Association states that it has been ascertained by careful investigation in a number of offices principally engaged in printing weekly newspapers and periodicals that the increase in cost which the new wages advance will entail, coupled with corresponding increases in rates, light, heat, power, and particularly all repairs to machinery, and the heavy resultant increases in overtime rates, will mean that the cost of printing is advanced a further 10 per cent. As workers in the printing trade are now paid for all statutory holidays, the Royal proclamation regarding December 27th makes it obligatory for this holiday to be paid for in every printing office in the country.

Paper Exports and Imports.

ALTHOUGH a laudable attempt has been made by British mills to approach without loss of time a full output, the demand is so enormous that a large proportion of the

orders placed are subject to many weeks delay before delivery is possible. Naturally attention is directed to foreign and colonial sources of supply, but in these channels buyers find considerable difficulty in getting their demands executed. Prices show a strong upward movement; in fact mills prefer not to quote just at present. Notwithstanding the obstacles in the way of prompt execution of orders, the imports of paper, etc., at British ports continue to show a big expansion, the arrivals during November indicating an increase of 715 per cent. compared with the corresponding month of last year. Our home mills are greatly handicapped in actively cultivating an export trade, but, notwithstanding, the shipments last month were 248 per cent. better than during November of last year. The imports and exports during November and for the eleven months ended November were as under:-

NOVEMBER.

Imports · ... 951,899 cwts. £1,580,133 Exports 110,867 407,143 Re-Exports... ... 3,254 17,056 JANUARY-NOVEMBER. Imports6,453,519 cwts. £10,983,621 Exports ... 793,845 " 3,753,765 Re-Exports... 18,240 85,304 Last month's imports show an increase of £1,303,708, and for the eleven months ended November an increase of £6,256,274, compared with the corresponding periods of last year, and the exports increases of £191,246

Newfoundland "News."

and £833.669 respectively.

In November of last year only 2,446 cwts. of reel paper were imported as against 320,708 cwts. last month. Of this quantity Newfoundland was responsible for 60 per cent. Norway comes next with 8.9 per cent., followed by Sweden with nearly 4.7 per cent., the contribution of the United States amounting to a little over 1.4 per cent., and supplies from other countries to 24 per cent. It is to be regretted there is no specific reference to Canada, in view of the strong efforts now being made to develop trade within the Out of a total importation of printings and writings not on reels, amounting to 31,990 cwts., Norway supplied 17,418 cwts. and Sweden only 3,351 cwts. Very small quantities of printings and writings not on reels were received from the United States and Belgium, but other countries (chiefly Canada it may be inferred) supplied 10,223 cwts. Belgium is now taking a prominent part in supplying this market with hangings and other printed or coated papers, being responsible for 2,775 cwts. out of a total importation of 3,529 cwts. Packings and wrappings were imported last month to the extent of 226,595 cwts. as against only 33,009 cwts. in November of last year. Over 50 per cent. of last month's supplies of packings and wrappings came from Sweden, 26.5 per cent. from Norway, 3.3 per cent. from Finland, and 3 per cent. from Belgium. Strawboard is a prominent item in the list of imports, last month's total representing 286,353 cwts., compared with November last year (55,696). The imports of mill and wood pulp boards were 106,583 cwts. and under the heading of unenumerated 6,141 cwts.

Strikes Injure Trade.

How strikes and industrial unrest injure British trade in indicated in a striking manner by an incidental reference which Sir William Price, President of Price Brothers. and Co., Quebec, makes to the delay in erecting the English papermaking machine which the company is setting up at their Kenogami Mill. This machine is being supplied by Messrs. Charles Walmsley and Co., of Bury, and the significant remark which Sir William Price makes is as follows: "This machine would have been working now had it not been for the strikes in England." The pity of it! But the injury thus inflicted may not end. with the delay in a specific instance. It may extend far beyond that. It has to be remembered that our engineering firms have severecompetition to face, and that competition is. growing. Although it is true that other countries have also their strikes and unrest in a more aggravated form than we experiencethem, still a check to development such as is hinted at by Sir William Price may have farreaching effects, and for the sake of the working men of this country it is wise to point out where hasty action leads. The workmen of the United Kingdom are the best in the world, and the products of their skill are still spreading the fame of the old country all over the globe. It is to their credit as well as to that of the directors and staff of our leading engineering firms that British papermaking machines, for instance, are in such favour, not only in this country, but elsewhere. And just now paper mills everywhere are expanding and increasing, while there is a very special need for news-print machines. In America many plants are being switched from wrappings to "news," such is the demand for that: class of printing paper. So there are opportunities opening out for the products of British papermaking engineers, and it would be disastrous if hasty or unwise action on the part of the workpeople jeopardised the chances of British firms in extending their connections, itized by

Commercial Intelligence.

DIVIDENDS AND REPORTS.

Argus Printing Co.—The report to October 31st last states that after making ample provision for depreciation, the accounts show a net profit of £11,582, and £2,903 was brought forward, making £14,485. A divided at the rate of 6 per cent. is recommended, leaving £8,643 to be carried forward, subject to directors' fees.

EYRE AND SPOTTISWOODE, LTD. — The accounts for the year ended March 31st, 1919, show that after writing off £1,000 for cost of issue of mortgage debenture stock, £10,691 for depreciation of plant, type, fittings, etc., £943 for war allowances, £1,200 for debenture stock redemption fund, and £862 for leaseholds sinking fund, there remains a profit of £26,082, from which must be deducted the debit balance of £20,826 brought forward, leaving a credit balance of £5,256 to be carried forward.

AMALGAMATED PRESS.—The report for the year ended October 31st, 1919, states that the profits, after transferring £75,000 to the reserve fund and writing off depreciation of plant and buildings, etc., amount to £363,254. The directors recommend a final dividend of 5s. a share on the ordinary shares, free of incometax. The sales and advertisement revenue of the company's publications has shown a gratifying increase during the past year. Several new publications have been launched with complete success. In order to meet the growing business large new printing works are to be erected on the site which was purchased for this purpose prior to the war.

WATERLOW AND SONS.—The accounts for the past year show a net profit, including £15,907 brought forward, of £197,087. The directors recommend a final dividend of 10 per cent. on the deferred ordinary shares, making £2½ per cent. for the year, placing to reserve £40,000 and carrying forward £32,887.

SUN PAPER MILL COMPANY, LTD.—The directors announce that the balance on the year's working is £23,158 and that the reserve fund stands at £50,000. The declaration of bonus and demand will be decided at the annual meeting on December 17th. An extraordinary general meeting of the company has been convened to be held on the same day for the purposes of subdividing the existing preference and ordinary shares and increasing the capital from £92,000 to £120,000 by the creation of 28,000 additional ordinary shares of £1 each.

NEW COMPANIES.

HEATH BROS., LTD — Registered with a capital of £5,000, in £1 shares, to take over the business of printers, stationers and lithographers carried on at St. George's Mill, Macclesfield, as "Heath Bros." The subscribers (each with one share) are G. Heath and H. Heath. Private company. The first directors are G. Heath, H. Heath, W. Pimblott, and T. Bury. Registered office, St. George's Mill, St. George's street, Macclesfield.

MORRIS AND BOLTON, LTD. — Registered with a capital of £100, in £1 shares, to carry on the business of printing ink and varnish makers, oil distillers and refiners, black, bronze and fine colour manufacturers, etc The subscribers are Γ . J. Woods and E. C. Elsmore. Private company. The first directors are to be appointed by the subscribers.

NULEAF, LTD.—Registered with a capital of £2,000, in £1 shares (1,250 preference), to carry on the business of manufacturers of and dealers in gold, silver, and metal foil, decorative paper, chemicals, etc. The subscribers are J. S. Allen and W. Parker. Private company. The first directors are W. Parker and J. S. Allen. Registered office, 2a, Gladstoneroad, Croydon, Surrey.

GEM POSTER PROCESS Co., LTD.—Registered with a capital of £600, in £1 shares. to take over the business of C. Palmer and J. Sholman carried on as the "Gem Poster Process Co., at 171c, Battersea park-road, S.W.8, and to carry on the business of printers, etc. The first directors are C. A. Palmer, J. Scholman and W. C. Page. Private company. Registered office, 171c, Battersea-park-road, S.W.8.

ISON BROTHERS, LTD.—Registered with a capital of £4,000, in £1 shares, to take over the business of a cardboard or paper box manufacturer carried on as "Ison Brothers," at 66, York-road, Bedminster, Bristol. The subscribers are E. L. Atherton, Mrs. A. Ware and J. Corrigan. Private company. The first directors are Mrs. A. Ware, J. Corrigan, G. Atherton and W. Corrigan. Registered office, Narrow Lewins Mead, Bristol.

WALTON ADAMS AND SON, LTD.—Registered with a capital of £3,000, in £1 shares (1,000 6½ per cent. preference), to take over the business carried on at 29, Blagrave-street, Reading, by A. W. Adams as "Walton Adams and

Digitized by GOOGLE

Sons," and to earry on the business of photographers, printers, stationers, photographic artists, picture dealers, etc. The subscribers are P. P. Crowe and T. W. Alderman. Private company. The first directors are P. P. Crowe and T. W. Alderman (both permanent). Registered office, 29, Blagrave-street, Reading.

W. J. SAVILLE AND Co., LTD.—Registered with a capital of £40,000, in £1 shares, to earry on the business of wholesale and manufacturing stationers and card makers carried on by W. J. Schmalz as "W. J. Schmalz," at 21-23, Featherstone-street and 33, Emmott-street, London. The subscribers are W. J. Schmalz, H. P. A. Saville and J. E. Saville. First directors: W. J. Schmalz, H. P. A. Saville and J. E. Saville. Registered office: .21-23, Featherstone-street, E.C.1.

FARMERS' JOURNAL, LTD.—Registered with a capital of £10,000, in 40,000 shares of 5s. shares, to carry on business as publishers, printers, etc. The first directors are Mrs. E. Robertson, R. J. McCormack, D. Johnston, J. Barry, F. W. Pollock, A. J. McPilkington, J. Small, W. R. Morrow and Rev. R. J. McIlmoyle. Private company. Registered office: 7, Wellington-place, Belfast.

EDMONTON MANUFACTURING Co., LTD.—Registered with a capital of £20,000, in £1 shares, to carry on the business of printing, toy making, etc., formerly carried on by the Edmonton Munitions Co., Ltd., at Edmonton. The subscribers are H. H. Stockfeld and E. S. Warmington. Private company. The first directors are E. S. Warmington, H. H. Stockfeld and J. P. Tilley. Registered office: Tile Kiln-lane, Upper Edmonton.

WILLIAM JOHNSON AND SONS (LONDON), LTD.—Registered with a capital of £50,000, to acquire the business of manufacturers of albums, leather goods, fancy stationery, etc., carried on at 18, Union-street and 42, Southwark-street, S.E., 16, Regent-street, S.W., and elsewhere, as "Wm. Johnson and Sons." The first directors are W. A. Johnson, A. F. Johnson, M. G. Deacon, S. L. Servante, F. Hirst and H. Howl. Private company. Registered office: 18, Union-street, Southwark, S.E.

LEVERIDGE BROS., LTD.—Registered with a capital of £5,000, to carry on the business of warehousemen, paper and paper bag merchants, etc. The subscribers are E. W. Leveridge and S. Leveridge. Private company. The first directors are E. W. Leveridge and S. Leveridge. Registered office: 24, Timberhill, Norwich.

WILLOVBY MANUFACTURING Co., LTD.—Registered with a capital of £500, to manufacture from paper pulp or other materials, advertisement signs and decorative articles for office and household utility. The subscribers are B. H. Willcox and H. W. Povey. Private company. The first directors are B. H. Willcox and H. W. Povey. Registered office: 1, Newman street, Oxford-street, W.1.

ALFRED TURNER (MANCHESTER), LTD.—Registered with a capital of £3,000, in £1 shares, to take over the business of manufacturers and repairers of and dealers in typewriters,

duplicators, ribbons, carbons, stapling, time stamping and numbering machines, manufacturing stationers, etc., carried on by A. Turner and W. H. Phillips, as "Alfred Turner," at 54. Corporation street, Manchester. The subscribers are A. Turner and W. H. Phillips. Private company. The first directors are A. Turner (managing director) and W. H. Phillips. Registered office: 18, Cannon-street, Manchester.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership between Frederick James Gilbert and James Arthur Gilbert, carrying on business as printers, stationers, publishers and booksellers, at Glastonbury, under the style of the Central Somerset Gazette Printing and Publishing Co., has been dissolved by mutual consent as and from December 8th. All debts due and owing by the late firm will be received and paid by James Arthur Gilbert, the continuing partner.

The partnership between James Horace Collings and Norman Read, carrying on business as printers and stationers, at 115, Nunhead-lane, Nunhead, London, S.E.15, under the style of Collings and Read, has been dissolved by mutual consent as from November 20th, 1919. All debts due and owing to or by the late firm will be received or paid by Norman Read.

The partnership between Arthur Henton and Charles Hole, carrying on business as printers and paper merchants, at St. Mary'sgate, Nottingham, under the style of Henton and Hole, has been dissolved by mutual consent as and from September 30th last. All debts due to and owing by the said firm will be received and paid respectively by Arthur Henton, who will continue to carry on the said business alone under the style of Henton and Hole.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

Gibbon, Perceval, formerly of 122, Beaufort Mansions, London, S.W., journalist. Date of order, December 10th, 1919. Made on creditor's petition.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Cornforth, Joseph, Express Printing Works, Chestergate, Macclesfield, letterpress printer.

Digitized by GOGLE

HEECOLONIAL DECEMBER 18, 1919.

Date of order, November 6th, 1919. Bankrupt discharged on payment of £7 10s., which has been made.

FIRST MEETING AND PUBLIC EXAMINATION.

Thompson, A. (male), carrying on business as Thompson and Co., at Trevelyan Buildings, 52, Corporation-street, Manchester, papermakers' agent. First meeting, December 17th, 1919, official receiver's offices, Byrom-street, Manchester. Public examination, January 16th, 1920, 10 a.m., Court House, Quay-street, Manchester.

NOTICES OF DIVIDENDS.

Haworth, Lawrence Edward (carrying on business as Haworth and Son), 60, Carnarvonroad, Blackburn, carrying on business at 10, Lord-street West, Blackburn, paper merchant. First and final dividend of 6s. 8d. in the f; payable at 27, Richmond-terrace, Blackburn,

December 27th, 1919.
Comforth, Joseph, Express Printing Works,
Chestergate, Macclesfield, letterpress printer. Supplemental dividend of rod. in the \mathcal{L} ; payable at official receiver's office, 9, Brookstreet, Stoke-upon Trent, December 18th,

1919.

NOTICE OF INTENDED DIVIDEND.

Brawn, Wilfred John, carrying on business at 112A, Highcross-street, Leicester, printer and stationer. Trustee, John Hunt Burton, 1, Berridge-street, Leicester. Last day for receiving proofs, December 24th, 1919.

Foreign Duties on Paper, etc.

The Danish Ministry of Justice has announced the abolition of export prohibition in respect of paper waste and old paper, also of tar dyes and organic by-products of tar dye production, including aniline and aniline compounds, benzol, cresol and meta-cresol.

Among the goods now placed on the Finnish "Import Free List"—importable into Finland free of all restrictions—are: Bookbinders' cloth, pasted, also strengthened with paper; label cloth; vulcan fibre, board and cardboard; paper waste and waste paper; paper (not including news-print paper); wall paper; perforated or stitched jacquard cards and tubes of paper, pasteboard or pulp; common household or kitchen utensils, such as pails, buckets, etc., of paper, pasteboard or pulp, even if combined with other materials; printed books, maps and charts; printed music; printing plates, etched, engraved, or punched, electro-galvano and stereotypes, types, matrices, printing stamps and brass rules for book printers and bookbinders; also "filling material" of lead and lead alloys, such as squares, reglets, etc.; printing machines; lithographic stones; printers' ink; book, lithographic and copperplate printing colours.

The Netherlands Government has raised the prohibition on the export of paper yarns and fabrics woven thereof.

New British Patents.

The Swedish Printers' Strike.

The following comment appears in the Anglo Swedish Trade Journal in a review of industrial conditions:—The most serious and prolonged dispute of the year was that of the compositors, who signally failed to achieve the results which they anticipated when they went on strike. After a few days, the newspapers began to appear again regularly, and the difficulties and inconveniences of the situation became daily less, so that after some weeks the strikers were compelled to abandon their exaggerated demands.

Cheques for Paper Worker.

Amalgamated Society's Successful Effort.

Recently a successful smoking concert was held at the Stork Hotel, Nechells, Birmingham. It was arranged by the members of the Amalgamated Society of Papermakers for the purpose of handing over to Mr. J. R. Carney (who up to the time of his accident in November, 1916, was employed as a finisher at Aston Paper Mills, Birmingham), two cheques. One cheque was of the value of £550, and was obtained by the Amalgamated Society of Papermakers from the insurance company in commutation of the weekly payments of 25s. per week which Mr. Carney had been receiving as a result of the successful action taken on his behalf by the The other cheque, value £15 15s., was obtained from the insurance company towards the costs of the society, but the executive committee very generously decided to also hand this over to Mr. Carney. In addition to these cheques he had already received £50, which is paid to any member of the society who is totally incapacitated by accident from following his employment. Thus Mr. Carney has received the sum of £615 158., exclusive of weekly payments of 25s.

The concert was open to all paper mill workers, and there was a crowded attendance. Very capable artistes had been secured.

During the evening the cheques were handed over to Mr. Carney by Mr. Wm. Dyson, the general secretary, who, on behalf of the executive committee and the members of the society, wished him and Mrs. Carney, who was also present, every success in the future. At the same time Mr. Dyson also pointed out to those present how important it was that each and every one of them should be trade unionists, as it would have been practically impossible for an individual to have obtained the compensation without the assistance of his society.

Mr. Carney very suitably returned thanks.

The proceedings were kept up until a late hour in the evening, and were brought to a close by the usual votes of thanks and the

singing of the National Anthem.

The accident to Mr. Carney was met with on November 17th, 1916, when he fell off a lurry which he was mounting to load with reels of paper. Alighting on his head, he was picked up unconscious, and was conveyed to hospital in an ambulance. Two operations were performed upon him, but he continued to suffer from deafness and dizziness. He resumed work for a short time, but in December, 1917, acting on the advice of his doctor, he ceased. The Amalgamated Society took the matter up, with a view to obtaining compensation from the insurance company, and after various medical consultations the case eventually went to the courts, with the result that the injured man was awarded all the arrears of compensation from the time he ceased work and the sum of £1 5s. per week so long as he remains totally incapacitated.

Carron Grove Paper Co., Ltd.

The report of the Carron Grove Paper Co., for the year ended October 25th last states that, after maintaining the mill and machinery in thorough efficiency and providing for depreciation and excess profits duty, the net profit for the year amounts to £60,534. The balance brought forward from previous year, after deduction of allowances voted by the shareholders, was £8,479, leaving £69,013, which the directors propose to deal with as follows:-To provide for the 6 per cent. preference share dividends for year to December 31st, 1919-First preference dividend £1,800, second preference dividend £3,000 (the halfyear's dividends, less tax, which fell due as at June 30th last were then paid, and the remainder will become payable on December 31st); to carry to reserve fund £10,000; to provide for the interim dividend of 10s. per share on the ordinary shares, paid in June last, £15,000; to pay on December 11th, 1919, a final dividend for the year on the ordinary shares of £1 per share, amounting to £30,000; leaving to be carried forward to next year £9,213. All the papermaking machines in the mill have now been restarted. As the working hours of the shift workers have been reduced from a 12-hour spell to 8 hours by arrangement with the unions, it entails the employment of a large number of additional hands and a corresponding increased demand for housing accommodation. The company has acquired suitable land in the vicinity of the works, and is proceeding to erect thereon a number of additional houses for their employees, fitted with all modern conveniences and of a suitable design.

German Paper Industry.

Earlier in the year German paper mills were able to book rather considerable orders in neighbouring neutral countries, including Switzerland, says the Geneva correspondent of The Times (Trade Supplement). Germany is known to have sufficient wood and coal for the purpose of the production of paper. The time has now come for the fulfilment of the orders, and quite unexpected difficulties have The German production of glue is arisen. only able to cover about 40 per cent. of the needs of the German industry. Of course, the calculation of the German paper mills who booked contracts with neutral customers was based on the prices of German glue. Now the German authorities distributing the glue in the country compel them to import 60 per cent. of the glue consumed. That is spoiling their whole calculation. The prices of glue are very high in the world market, and especially high for those countries who pay with a currency at one-eighth of its normal value.

Paper Standardisation.

Printers' Complaint of Delay.

H. A. M., in the World's Paper Trade Review, writing on this subject, says:—

We are going to make no apology for devoting the bulk of our space this week to a continuance of the fight for standardising paper. Since 1912 the subject has cropped up intermittently, and at one time it appeared almost as though success had at last attended our efforts. In May, 1917, the master printers of the British Isles unanimously adopted a scheme which had as its basis the 1,000 sheet ream, standard inch dimensions for name sizes, the elimination of unnecessary sizes and names, and the specification of board thicknesses in thousandths of an inch. From that time onward to the end of the war, it was repeatedly insisted upon in these paragraphs that the position of the paper trade as a result of war conditions made it absolutely imperative that some form of standardising should be adopted for the sake of output and conservation of energy and material. actual fact, something was done, for several mills parcelled their paper in 1,000 sheet reams (or milles); others adopted the 500sheet ream, and almost all mills deleted a number of unnecessary substances.

Opportune Time Passing.

Still greater insistence was made upon the fact that the war-time condition of the mill routine and the chaotic condition of paper generally (with all the old standards of quality and brand gone to the wall) and with stocks alike at the mill, the warehouse and the printing house entirely depleted, produced a peculiar and absolutely unparalelled opportunity of commencing post-war business anew on regular and standard methods. On November 15th. 1918, we said: "The time is ripe for effecting a useful reformation and the present opportunity is the best that has ever occurred or ever will; but the consideration of the problem has been left perilously late. The task of demobilisation and reinstatement of labour will possibly overshadow the minor issues of reconstruction." On April 18th this year we remarked that "Delay is prejudicing the prospects of a successful inauguration of the scheme and every week sees a diminution in the appropriateness of the period." Now we have arrived at the close of 1919, with printers and wholesalers reverting to the pre-war grades of stock and the old conglomeration of sizes, substances and ream contents. Meantime we are entitled to ask: "What has been done in the matter of standardising, and who is it that bars the practical application of the scheme?"

The Printer's Scheme.

In May, 1917, the printers of the country (who are the most important body concerned

in paper) devised, revised and approved the first scheme as mentioned at the outset. For close upon two years, the proposed scheme was discussed and thrashed out in other circles concerned. In November, 1918, the scheme was provisionally approved by a special conference composed of representatives of the wholesale stationers, the manufacturing stationers, the printers and the papermakers. A committee was appointed comprising the following members: - Mr. W. Howard Hazell (printers), Mr. H. Bradly wholesale stationers), Mr. F. G. Hawdon stationers and envelope (manufacturing makers) and Mr. A. W. Foster (papermakers). This committee set to work, and that is the last we know of it. In January this year the Master Printers' Federation issued a revised draft of suggestions which carried standardisation to its logical conclusion as affecting substance numbers, based on grammes per square metre. In this state the scheme was thoroughly practical and ready for immediate application. Later, in May, a full and representative congress of master printers approved the scheme wholeheartedly and pressed for it to be put into immediate use. Nothing has since been done, owing to red tape on the part of the papermakers and wholesale stationers.

Who is at Fault?

For our own part, we resolutely refuse to believe (until proof appears) that the paper mills refuse to adopt the scheme for the home What we are quite ready to believe is that the wholesale stationers (of which body a small number of papermakers form a part) are unwilling to take their part in the new scheme until forced. The whole of the arguments for standardising paper have been set forth fully and frankly. If there is good argument against the proposition, why do not the exponents state clearly their views in the trade press, so that the other and more important body of paper interests may at least know the obstacles to progress? Failing an open and candid discussion, there is one way in which the scheme will be put into motion. The mills and the wholesalers are dependent in the end upon the printing trade. The printers' customers have no interest in the subject of standarisation either way. That leaves the printer free to take his own stand The mills, almost on his own principles. without exception, realise the appreciable economy of standardisation, in that it will enable them to secure increased production and more regular quality. The old condition of things under which the printer was almost forced to buy from the wholesale house has changed, and mills all over the country are now catering direct to the printer. Without exception almost, the mills will fall in with printers' requirements if printers decide on a plan. That is the view point on which we ourselves will now work, assuming that the wholesaler has taken up a hostile attitude against a scheme which is calculated to ease and improve the conditions of working in the paper-using trades.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STA-TIONER," 58, SHOE LANE, LONDON, E.C.4.

SPECIAL PREPAID ADVERTISEMENTS

SITUATIONS VACANT, REPRESEN LATIVES OF MANA-GERS REQUIRING POSITIONS, AGENCIES, BUSI-NESSES WANTED OF FOR DISPOSAL, MACHINERY and MISCELLANEOUS.—Charges for Advertisements of the above class are Three Shillings for 21 Words or under; One Shilling extra for every line or portion after. Seven Words to be reckoned for each line.

EVERY THURSDAY.

Bookbinders at Dinner.

Generous Entertainment by the Winterbottom Book Cloth Company.

A representative gathering of the bookbinders of London assembled at the Savoy Hotel, London, on Thursday, December 11th, as the guests of the chairman and directors of the Winterbottom Book Cloth Co., Ltd., whose products are held in such high estimation in the binding trade. The entertainment was of an elaborate character, and the 50 guests spent an exceedingly enjoyable evening. The Savoy Orchestra provided musical selections during the assembly of the guests and also while the dinner was being served. The menu itself was of a very high order, and nothing was omitted to complete the comfort and contentment of those present, while there was a kindly thought for the ladies at home.

Mr. G. H. Winterbottom was a very genial chairman and those present were: Mr. M. Brickhill, Mr. C. Dodd, Mr. A. W. Bentley, Mr. A. F. Bentley, Capt. O. D. Winterbottom, Sir. C. R. Harrison, K.B.E. (Harrison and Sons); Mr. A. F. Blades (Chairman, Master Printers' Federation); Messrs. F. Grey (Chairman, Master Bookbinders' Association); E. Straker, E. Turner, S. Tomson and H. A. Harnett (A. Straker and Sons, Smith Bros.); Major Leighton (Leighton Son and Hodge); B. J. Mercer and Capt. J. L. Mercer (J. Burn and Co., Ltd.); F. E. Bailey and F. D. Bailey (Bailey Bros.); J. L. Kitcat, L. G. Kitcat (J. and G. Kitcat); H. Mills (Ship Binding Works); James Webb and Arthur Webb (Webb Son and Co.); E. P. Woodman (Fisher Bookbinding Co.); E. B. Judd and F. Russell (Nevett Bookbinding Co.); H. K. Judd and H. Grey (The Greycaine Book Manufacturing Co.); P. H. Whiting and C. O. Carter (Hey and Whiting); J. A. Gower (J. Dickinson and Co.); H. F. Vines (Oxford University Press): Albert Bennett (Sir J.

Truscott and Sons, Ltd.); Hugh R. Dent (J. M. Dent and Co.); F. Wallace-Whitlock (J. Walker and Co., Ltd.); H. Hirst (W. Nicholson and Sons); W. Thompson (W. H. Smith and Son); F. W. Cheney and W. O. P. Gibb (Kelly's Directories); A. Budd and J. A. Speller (Eyre and Spottiswoode); H. C. Hodgman (Novello and Co.); J. J. Evans (Frickett, Westleys and Co.); C. H. Smith (Suttley and Soilverlock); A. E. Calkin (R. Riviers and Son); E. A. Holland and H. Masters (J. and H. Masters); H. G. Kelly (Kelly and Sons); A. Knibb (A. Knibb and Son); F. Willmott (Willmott and Sons); G. Bell, senr., A. C. Nevett (formerly Nevett Bros.), and G. Bell, iunr.

Following the dinner a number of interesting and entertaining speeches were made.

Mr. J. Brown proposed the toast of the chairman and directors of the company, and spoke of the high esteem in which the firm and the products of the Winterbottom Book Cloth Co. were held throughout the binding trade The speaker mentioned that his own firm (Messrs. Leighton, Son and Hodge) introduced cloth bookbinding to the world. He was asked to express on behalf of the company their thanks to their hosts for the enjoyable evening they were spending. The interests of the clothmaker and the bookbinder were akin, and to meet in that agreeable manner was bound to place the business on a better footing. They were looking forward to a new era and under very promising auspices. The toast was drunk with great enthusiam.

The Chairman, who was cordially received on rising to respond, read a telegram from his brother, Colonel Winterbottom, expressing

his regret at being unable to join the assembly.

A New Generation.

After cordially thanking the gathering for the reception they accorded him, the speaker glanced over the years which had intervened since he first went into business. He proceeded to say that it was a very great pleasure and a great privilege to the directors of the company to meet their friends that night, and to welcome the young men whom he had not had the pleasure of meeting. His own son was there that night, and he was trying to win his spurs. He (the speaker) hoped that one day he would succeed him as chairman of the Winterbottom Book Cloth Co. Mentioning that he came to the business now over 40 years ago, the Chairman gave some diverting reminiscences of his early days. He claimed the Winterbottom Book Cloth Co as his baby, because the idea originated with him, and he was very proud of it. (Applause.) The enterprise had grown steadily, and they were able not only to earn dividends for their shareholders, but to reduce the price of book cloth to a figure it had never known before. spite of the large dividends which the company had paid, however, they had only been earning practically 8 per cent. on the capital employed, the directors being wise men, at the inception of the company, put back a certain amount of profit into the concern, while they also branched out in other directions.

With the war came the great proposition of their lives, and as chairman of the company he thought he could claim that in spite of all the difficulties they had to face, and in spite of Government control, the Winterbottom Book Cloth Co. had been able to serve its customers well during the whole period. (Loud applause.) Owing to some judicious purchases made in 1915, and in spite of the recent advance in price, purchasers were getting their goods at a lower rate than the cost would be if the company had to go into the market now for the materials. In the matter of colours, during the war red had risen from 9d. per lb. until it was now 15s., oils were three times the pre-war price, while wages had gone up three times and cloth six times. Yet, in spite of these advances, the bookbinders were buying goods a long way under While there was such disorganisation in the cotton trade of Lancashire, prices must be a matter of uncertainty.

In conclusion, Mr. Winterbottom expressed the hope that the courtesy he had received for over 40 years from the members of the trade might be extended to those who would suc--ceed him, and that his successors in their turn might be worthy of the confidence reposed in them. (Cheers.)

Cause for Congratulation.

Mr. Brickhill proposed the toast of the "London Master Bookbinders." He referred not only to the high price of materials, but to their doubtful quality during the war. Further, hundreds of their best craftsmen had been taken to fight so that they, old fogies, might continue to live in a free England.

(Applause). When they looked back over the past five years, he thought they were all entitled to congratulate themselves upon having come out so well. As "in the making of many books there is no end," so the Winterbottom Book Cloth Co. had planned to make book cloth without end, and he hoped that bookbinders would go on binding books without end. He coupled with the toast the name of Mr. F. Grey, Chairman of the London Master Bookbinders' Association.

The toast was accorded musical honours.

Era of Prosperity.

Mr. Grey, in responding to the toast, referred to the recent rapid advance in wages. In the bookbinding industry they had been forced to combine through circumstances over which they had no control. Like the Winterbottom Book Cloth Co., they had been obliged to make advances in their charges, and they felt that they were justified in doing so. Times were difficult, but he believed they were entering into an era of prosperity for the bookbinding trade. The speaker went on to show that in America and in Germany things were even more difficult. Prices of material and labour had advanced much more rapidly in America than in this country, so they need not fear competition from that quarter in With regard to their particular business. Germany, he had recently had a conversation with Mr. R. Horne, who had lately returned from that country. Among the many interesting things which he told him was the fact that book cloth in Germany was at a very much higher price than book cloth in this country. The binding business in Germany was in the same state as was the industry in this country. It seemed to be prosperous. All the binderies were well employed in spite of all their difficulties, but their machinery was in a very bad condition and required considerable overhauling. So the British bookbinder need have no lear of competition from the German binderies. Therefore they could prophesy for the bookbinding trade in this country during the next few years a period of prosperity it had never enjoyed before. speaker concluded by remarking that their gathering that night would have happy results, because it enabled them to together and discuss their little troubles. (Applause).

Sir Cecil Harrison submitted the toast of the "London Chamber of Commerce (Bookbinding Section)," and dwelt upon the need for organisation among employers. This was especially important in view of the complete organisation which existed on the other side

Coming Into Their Own.

Mr. Woodman delivered a thoroughly entertaining oration in responding to the toast, also touching upon more serious topics. He paid a tribute to the value of Mr. Grey's services as chairman of the London Master Bookbinders' Association. He held that previously there had not been sufficient return for the large sums of money which had been invested in the bookbinding business. It was only now, however, that they were coming into their own. The speaker expressed his pleasure at seeing Mr. Bell, senior, present that night, and acknowledged the courtesy he extended to everyone with whom he came in contact. Mr. Woodman mentioned the value derived from the weekly meetings of the section, and intimated that the President would extend a hearty welcome to any members of the trade who were not already associated with their organisation.

Mr. A. F. Blades spoke of the new outlook which employers were taking with regard to their workpeople. The war had taught all of them lessons, and he believed the more they met the demands from the workers in a reasonable spirit, the better it would be for

their work.

Mr. Mercer expressed agreement with the views which had been voiced with regard to

to the payment of labour.

Col. Bentley, in proposing the toast of "The Visitors," mentioned that it was 57 years since he entered into the business.

Mr. A. C. Nevett, who responded, expressed the pleasure which all the guests had derived from that pleasant gathering, observing that he had no more pleasant relations than those with the Winterbottom Book Cloth Co.

Mr. Bell, senior, who was cordially received. spoke of the growth of the Winterbottom Book Cloth Co. from comparatively small beginnings until it had attained its present high standard. The products of the com-pany, he mentioned, went to many distant lands, where they exercised good influence.

The proceedings terminated with a hearty vote of thanks to the chairman, which was proposed by Mr. Woodman, who made the suggestion that that dinner might very usefully be an annual event, a suggestion which the chairman described as a very good one.

Messrs. lliffe and Sons, Ltd.

An enjoyable social evening was spent by the employees of Messrs. Iliffe and Sons, Ltd., at their Quinton Works, Coventry, on December 13th, when over 400 sat down to dinner as the guests of the firm. All Coventry departments were fully represented, including the employees of the Midland Daily Telegraph and the Coventry Herald.

In the course of his speech, Mr. M. Coker Hiffe, who presided, paid a tribute to those employees who had taken their part in the great war. The total number of men who joined the services from all departments of the firm was 233. Of these 34 laid down their lives, and more than 40 others were wounded, several of them two or three times.

More than 80 of the men with the colours obtained promotion. The D.S.O. was awarded to Mr. Burchall, of the London offices, and the Military Medal was awarded to Gunner H. Fowler, of the Midland Daily Telegraph, who was also mentioned in despatches

The above-mentioned works dinner was followed by a similar function for the female

staffs, when nearly 200 of the women and girls employed in the various departments and offices of the firm participated. An interesting event of the evening was the presentation of a suitably inscribed smoking cabinet, by Mr.]. Griffiths, on behalf of the girls employed in the binding department, to Mr. George Horlor, who has held the position of overseer of that department for the past seventeen years.

These enjoyable gatherings testify to the happy relations which exist between the employers and the workpeople.

Printers' Managers and Overseers A880CIATION.

MANCHESTER & DISTRICT CENTRE.

The fifteenth annual general meeting was held at the Old Swan Restaurant, Manchester, on December 13th.

Mr. John Winstanley, lithographic overseer, Messrs. Norbury, Natzis and Co., Ltd., was

admitted to membership.

The executive's annual report and balance sheet showed an increase in members of two on the year, the number being 74. The balance of cash to carry forward was £11

The officers for session 1919-20 are as follow:—President, Mr. J. H. Nuttall; Vice-President, Mr. Thos. Rignall: Trustees. Messrs. Thos. Kirkwood, G. W. W. Paterson; Treasurer, Mr. Jas. F. Mayo; Secretary, Mr. F. J. Hughes, 424, Moston-lane, Manchester; Executive Council, Messrs. F. Burnett, F. J. Crabb, W. E. Dalby, C. Goat, E. Murphy, F. Robinson, F. Scouler and R. F. Singleton.

The recommendation from the Council "that the salaries of the Secretary and Treasurer be raised to £4 10s. and £2 5s. respectively" was amended to read £5 and

£2 10s.

On the same day the Liverpool Centre were holding a special meeting with reference to salaries of managers and overseers, and a wire giving the result of that meeting was read as follows: "Demand 120 per cent. advance on pre-war salaries for managers and overseers. All Centres combine." The particulars having been placed before the Manchester members, a vote was taken, and it was decided to support Liverpool.

The recommendations from London with reference to the appointment of Mr. Berryman as editor of the Association's journal were

approved.

In this connection Mr. J. E. Howarth moved. Mr. W. E. Dalby seconded, and it was carried "That this Centre requests the Parent Centre to take into consideration the remuneration for work done by the local secretaries.

Then came the bombshell of the evening, the resignation of Mr. G. Phillips, general secretary. Numerous members spoke highly of Mr. Phillips' work during his short reign,

Digitized by GOGIC

and all regretted his leave-taking. They wish him every success in his new undertakings. As it was impossible to suggest a successor to take up duties in the New Year, it was decided to support whatever choice was made by the Parent Centre.

Mr. Joseph Orrell made his debût during the evening, and he was soon made to feel at home amongst the friends round the table.

Everyone expressed regret at losing the valuable services of Mr. Leonard J. Taylor (Oldham), who had accepted an appointment in China and was taking up duties there early in the New Year. He had the sincere wishes of the members to carry with him. Mr. G. W. W. Paterson, manager of the firm in Oldham, spoke highly of Mr. Taylor's abilities.

Mr. Taylor having suitably replied, the Secretary (Mr. F. J. Hughes) commenced the next business, "Reminiscences: Humorous and Otherwise." He was followed by Messrs. Jos. Orrell, J. H. Nuttall, Thos. Rignall, F. E. Robinson, A. Hellewell, L. J. Taylor, G. W. W. Paterson, and several others.

Paterson and several others.

WEE MACGREGOR.

Furiher Wages Movements.

A conference between the Master Printers' Federation and the Amalgamated Society of Lithographic Printers has resulted in a uniform increase of 7s. 6d. a week to all members of the lithographers' society, the increase to become operative on the first pay-day in January.

All night workers, members of the T.A., are to receive a 4s. increase as the result of a conference between the Newspaper Proprietors and the men's organisations. The increase is to become operative from January 10th. A claim for a reduction of hours on behalf of day and night linotype operators was not successful, it being agreed that no variation of the national agreement could be made except through the original parties to the contract, viz., the Printing and Kindred Trades Federation and the Master Printers' Federation.

In Edinburgh a conference between representatives of the Scottish Alliance and the Scottish District Council of the Bookbinders' Union resulted in an offer of an increase of 7s. 6d. per week to journeymen and of 3s. 6d. per week to journeywomen, the increase to come into force as from the first pay day in the week commencing January 5th, 1920. The operatives' representatives agreed to recommend acceptance of the offer to their members.

Employees of the Shield-hall Bindery, Glasgow, are claiming repayment of 2s. of weekly wages in respect of the recent award of increase. They contend that 2s. of the bonus previously paid has been merged into wages, and that the actual increase granted is 2s. less than that agreed upon.

The new wage advances in London have been agreed to by the National Union of Bookbinders, and thus apply now to all the

London Unions.

Bookbinding Increase.

Notice has been given by the Bookbinding Section of the London Chamber of Commerce that they have decided to award substantial increases in wages and piece-rates, in order to come into line with similar advances given by other branches of the printing and kindred trades, and that the higher rates will be paid from the present week. Necessarily this implies an increase in the cost of binding.

Rising Printing Costs.

In intimating that it is necessary to add 10 per cent. to present printing charges, in addition to any further adjustments that may be due to increases in the cost of materials, the London Master Printers Association state that it has been ascertained by the London Costing Committee that the average manufacturing costs alone have gone up about 150 per cent. since 1914. The cost of materials has increased by percentages varying from 100 per cent. to 600 per cent. since 1914, and there has been a serious advance in the price of paper in the last few weeks. The London Costing Committee is investigating the cost of printing in a number of printing offices, and new hourly rates will shortly be issued. All printers who have not installed the Federation Cost System are strongly urged to do so.

Newspapers and the Imprint.

In the case of Beauchamp v. Attorney-General, on Friday, a Divisional Court—Mr. Justice Coleridge, Mr. Justice Rowlatt, and Mr. Justice McCardie—allowed an appeal from Quarter Sessions on the question whether a person who published a newspaper on which the name and address of the printer was not printed could be convicted under the Newspaper Act (2 and 3 Vict., cap. 12). The respondent was convicted at Bow-street Police Court of publishing the Tribunal without the name and abode of the printer upon it. The conviction was quashed at Quarter Sessions, and a case was stated.

The respondent contended that no penalty could be imposed for publishing unless the person who published also printed the news-

The Court declined to take that view, Mr. Justice Coleridge holding that it was clear that two classes of persons were involved, the persons publishing and the persons printing, both of whom were liable to forfeit a sum of money for each copy so published or printed.

The appeal was allowed without costs.

Trade Notes.

MADRID newspapers are gradually reappearing, most of them printed by nonunionists.

Mr. R. W. Dawson, a retired letterpress printer, of Bridgeton, has died at Glagow in his ooth year.

A BODY of armed men raided the offices of the Irish Independent in Dublin on Sunday night, and smashed the machines with crowbars.

THE printing deadlock that has existed in New York since October 1st ended the last week in November, when the union printers voted to return to work at \$6 weekly increase in pay and to arbitrate their 44-hour week demand.

CHILD NEWSVENDORS.—At a meeting of the Newspaper Society Executive it was reported that Clause 13 of the Education Act, which affects the employment of children, including the delivery and street sale of papers, which was to have become operative in January and has been postponed till April, may be further postponed.

The students of the St. Bride Foundation Printing School have produced a very attractive calendar for 1920. The three panels (30-in. by 6-in.), each representing four months, are embellished with etchings by Mr. J. A. Ness, A.R.E., which have been made up and photo-lithographically printed on a rotary offset machine by the students. The work has been thoroughly well done and is a credit to the instruction given at St. Bride's.

Tenders Wanted.—For printing and stationery for one year, from January 10th, for the Oxford Corporation; printed schedules, etc., at the Town Clerk's Office, Town Hall, Oxford; tenders by December 29th.—For supply of books (Part 1), printing (Part 2), and stationery (Part 3), required by the several departments of the South Shields Corporation during period commencing February 1st, 1920, and ending alternatively on January 31st, 1921, 1922, or 1923. Specifications, etc., from Mr. J. Hayton, Town Clerk, Town Hall, South Shields; tenders by 12 noon, December 31st.

NORTHCLIFFE ON NEWSPAPER COMPETITION.—In a message congratulating the Sheffield Independent on the attainment of its hundredth anniversary, Lord Northcliffe says:—"I should like to add my testimony to the revived energy and enterprise of the old Independent and my congratulations to Sir Charles Starmer (its managing director) on his skill in balancing 17 different Liberal journals at one time. He is a Cinquevalli of the Press. The Independent has a fine record. I am glad to see that one of its tribe is coming to London, where stagnation in Fleet-street, owing to insufficient competition, renders our morning papers duller than they otherwise would be."

THE West Thurrock Parochial Committee recommends the Orsett R.D.C. to pass plans for 12 concrete cottages for the Thames Paper Co.

Most of the daily and evening newspapers will not publish on Christmas Day or Boxing Day, which will mean a substantial saving in news-print.

The Spanish Royal Order of November 30th reducing the Customs duties payable on mineral oils does not affect the rate of duty on "tarred cardboard, felts and tissues, sanded or not," which remains at $8\frac{1}{4}$ pesetas per 100 kilogs.

In Lancashire and Cheshire unemployment in the paper manufacturing and printing trades (males) decreased from 547 on November 21st to 534 on November 28th. Unemployed women workers fell from 102 to 82.

THREE thousand six hundred acres of the Laverstoke estate, between Basingstoke and Andover, are to be sold soon. This is the place owned by the Portal family, and it has a peculiar interest because in the old mill, not far from the house, the paper is made which is used for Bank of England notes.

MESSRS. FREDK. TREMLETT AND Co., LTD., Stoke Canon, near Exeter, have opened a London sales office at 19, Godliman-street, E.C., under the charge of Mr. H. B. Gedye. The London office will have samples of the mill's various makes. As hitherto, business will be confined to the wholesale stationery trade, and all paper will be invoiced and statements sent direct by the mill.

ST. CLEMENTS PRESS, LTD., has been reconstructed under the new proprietors. Mr. J. Gomer Berry is now chairman, Mr. W. E. Berry, deputy-chairman, and Mr. George Eaton Hart has been appointed managing director, while Mr. W. H. Eyre and Mr. Fred G. Hart, so long associated in the management of the business, have joined the Board. Mr. R. Service, accountant, has been appointed secretary to the company.

PRESENTATION TO A PAPER COATER.—Mr. James Boyle, who has been leading colour mixer to Messrs. Geo. Stark and Sons, Ltd, Grove Park Paper Mills, Glasgow, was the recipient of a handsome present, in the form of a travelling dressing case, from the employees of the above firm on the occasion of his leaving to taking up an important position with Messrs. Ritchie and Ramsey, Ltd., coated paper and cardboard manufacturers, Toronto, Canada.

Paper Table Covers.—The price charged for a paper table cover came before the Coventry Profiteering Committee, 3\frac{1}{2}d. having been charged instead of 2a, which was admitted to be the proper price. The Committee came to the conclusion that a bona-fide mistake had been made by the shop proprietor's wife in the absence of her husband, and a refund of 1\frac{1}{2}d. was advised. The owner of the shop said they had never sold any of these articles before, but had made use of them in the shop.

Current Topics.

A Merry Christmas.

WITH the second Peace Christmas season upon us, we can contemplate a cessation from labour with a little more satisfaction than was the case even twelve months ago. We are so much further into the period which, it is hoped, will bring greater contentment and happiness to mankind. True, there is still considerable progress to be made before that complete consummation is reached. But a big step has been made. When the stages which have been passed during the past year are recalled, there is much reason to be satisfied with the position which our particular trade occupies. Industrial crises have been

passed here in a much less disturbing fashion than has been the case abroad. To British common sense is to be given the credit. Altogether we are on much firmer ground than we were twelve months ago, and in spite of certain reverberations, with continued exercise of tact, reason and sympathy, we can enter the New Year confident that the united efforts of employers and employed will achieve new laurels for British trade and commerce. As this issue will be in the hands of our readers during the festive season, we take the opportunity of offering them the old yet ever timely wish of a Happy Christmas and a Prosperous New Year.

The Special Paper Offers.

THE reports of low prices and special offers made in one of our paragraphs on December 6th seemed to whet the appetite of certain buyers; but we are afraid that by now very few of the offers stand good, because, in the first place, they were exceptional, and some of them clearances; and in the second place the hardening process has spread its influence everywhere in the paper world in recent days. The normal prices of paper level up on the following lines: E.S. esparto writings, 81d. and 9d. per lb.; esparto printings, 72d. and 8d. per lb.; seconds E.S. writings, 71d. per lb.; printings, 61d. to 71d. per lb.; English common banks, 81d. to 9d. per lb.; T.S. banks. 10 d. to 1s. 3d. Swedish banks are quoted 8½d. to 9d. for stock supplies and 7½d. to 8d. for forward delivery. S.C. lithos are offered at from 61d. to 71d. per lb., with occasional special lots at 6d. to 61d. Art papers are quoted 10d. to 1s. per lb., the latter as good as pre-war No. 1 grade. Pure foreign kraft has gone up to £58 to £60 per ton for M.G.; unglazed parcels can be secured at £56. English kraft of very fine appearance and strength is being made and sold below the price of the foreign grade, and customers have now no special preference for what the wholesale houses call genuine kraft. Rope browns are booked at £30 per ton, dark browns at £27. Dutch strawboards for instant delivery are based on £18 per ton, and for forward delivery, free of charges, at £15 10s. per ton.

Another Paper Handicap.

THERE is a prospect that at least two railway companies may place an additional obstacle in the way of carrying on the paper trade of the country. These particular concerns are, we understand, trying to insist upon

all paper being packed in wooden frames. They go so far as to threaten to refuse to accept any paper unless it is packed in this way. At a time like the present, when means of transport are so limited and when the need is so great to get business moving, it is particularly unfortunate that the companies concerned should adopt this attitude. If their threat is put into force, it will at least cause great inconvenience and may hold up trade to a considerable extent by reason of the difficulty in obtaining the necessary frames. Any such hindrance would be little short of disastrous. Already there are abundant complaints as to delay both in the movement of raw materials and in the fulfilment of orders. What we want is not more interference with trading conditions, but much less. After all, papermakers ought to be the best judges as to how their goods should be sent out, and in any case the railway companies might have consulted them upon a matter of such concern. We understand that the Papermakers' Association is taking up the matter with the Railway Executive, who, it is to be hoped, will exercise reason in the matter.

How Export Orders are Lost.

UNDER this heading a South American merchant emphasises in The Times (Trade Supplement) the dangers of low production. He is dealing with cotton, but his remarks might as well apply to paper. "There is danger in low production," says the writer, "and the danger becomes greater as time goes on." Then he describes how an order was lost to English engineers, who, owing to strikes and the uncertainty of increase of wages, etc., could neither quote price nor give any idea when they could make delivery. Accordingly the manufacturer in South America placed the order in the United States with a maker who promised delivery in four months. "I would have put in English machines as you well know," he intimated to the writer, "but you could not execute my order, and as I must have the machines, I ordered them where I could get them." It is very truly pointed out that the point is not the loss of one order, but the introduction of another country's machinery. It is probably more difficult to recover custom than it is to make a new connection. This is a matter which vitally affects the British workpeople, because the orders which a firm obtains keep them employed and provide them with wages. Loss of orders is a direct menace to the British working man and woman. Hence it is that we would so

strongly urge all employed in the paper industry to take a pride in its success, and this can only be attained by consolidating output.

Personal.

BOTH Mr. W. H. Eyre and Mr. Fred Hart, who have joined the board of the St. Clement's Press, Ltd., hold honours in printing technology, the former being the silver medallist of his year at St. Bride's—the blue ribbon of the printing craft.

A COMPLIMENTARY dinner to Mr. W. E. Hebditch was arranged at the Cafe Monico on Monday night, December 22nd, by his many friends in the printing trade.

ME. HEBDITCH, who is going into retirement, has been for 57 years with Messrs. Eyre and Spottiswoode, Ltd., starting there as a boy. He has been closely identified with printing trade charities, and is a popular Freemason.

The committee who arranged the gathering, which was a brilliant success, were Messrs. A. F. Blades (Blades, East and Blades), Mr. Jas. Thompson (Wm. Clowes and Son, Ltd.), Mr. T. Atkinson (Lanston Monotype-Corporation), Mr. C. W. Iveson (Williams, Lea and Co.), who acted as hon secretary, and Mr. Herbert C. Bolton (Lorilleux and, Bolton), who was the hon treasurer.

SIR G ROWLAND BLADES, M.P., kindly consented to act as chairman. A report of the proceedings will appear in our next issue.

KING'S

Christmas Message to Printers.

The Printers' Pension Corporation on Saturday evening entertained about 50 of the inmates of the Printers' Almshouses at Wood Green to a Christmas tea and concert. Mr. G. R. Collingridge presided, and distributed gifts from the Lord Mayor and Sheriffs, and other prominent City men, including Sir Horace Marshall and Sir Charles Wakefield. In response to a message sent to the King, the following telegram from His Majesty was read:—"Sandringham.—The King sincerely thanks the inmates of the Printers' Alms houses for their loyal greetings, and wishes them a happy Christmas and New Year."

CANADA imported in the fiscal year 1918-19 type-setting and type-casting machines of the value of \$748,801, the share of the United Kingdom being \$2,265.

DIVIDENDS AND REPORTS.

MERGENTHALBR LINOTYPE Co.—The report of the Mergenthaler Linotype Co. for the year ended September 30th, 1919, states that the net gain from all sources, and after making proper allowance for depreciation and taxes, was \$1,663,139. There has been a steady increase in wages and in all expenses connected with the business, and many difficulties and interruptions in securing labour and material, and delays in making foreign shipments, due to the dislocation of transportation.

NEW COMPANIES.

JUDAIC PUBLISHING Co., LTD.—Registered with a capital of £2,000, in £1 shares, to take over the business of printers and publishers carried on by T. Suffolk, at 28, Milkwood-road, Herne Hill, as "Stanley H. Suffolk." The subscribers are H. H. Beamish and B. E. Greig. Private company. H. H. Beamish is permanent director. Registered office, 28, Milkwood-road, Herne Hill.

HODDER AND STOUGHTON, LTD.—Registered with a capital of £220,000, in 50,000 first pref., 45,000 second pref., and 125,000 ordinary shares, all of £1 each, to take over the business carried on by Sir Ernest Hodder-Williams, A. C. Stoughton, and R. P. Hodder-Williams, as "Hodder and Stoughton," and to carry on the business of publishers, etc. The subscribers are Sir Ernest Hodder-Williams, A. C. Stoughton, and R. P. Hodder-Williams. Private company. The first directors are Sir Ernest Hodder-Williams, A. C. Stoughton, and R. P. Hodder-Williams

JOHNSON, ENGRAVERS (LEEDS), LTD. Registered with a capital of £3,000, in £1 shares, to carry on the business of workers of and dealers in wood, metal, rubber and other

materials, of which it is possible to make letters, name plates, dies and stamps for advertising, printing, etc. The subscribers are H. J. Johnson, A. E. Elliott, and C. Hoyle. Private company. The first directors are H. J. Johnson, A. E. Elliot, and C. Hoyle. Registered office, 12, Trinity-street, Leeds.

"LANCASTER GUARDIAN", LTD.—Registered with a capital of £10,000, in £1 shares, to take over the business of the Lancaster Guardian newspaper, etc. The subscribers are C. Starmer, and J. F. Latimer. Private company. The subscribers are to appoint the first directors. Registered office, 38, Church street, Lancaster.

PICTORIAL NEWSPAPERS (1919) SUNDAY LTD.—Registered with a capital of £900,000, in £1 shares (50,000 8 per cent. cum. pref.), to acquire the business of a company of similar name, and to carry on the business of newspaper proprietors, printers, publishers, etc. The subscribers are A. H. Hawthorn and H. C. Sims, and five other clerks. The first directors are to be appointed by the subscribers.

FREEMAN'S JOURNAL, LTD.—Registered with a capital of £100,000, in 97,500 shares of £1 each and 50,000 shares of is. each, to take over the undertaking and all or any of the assets and liabilities of a company of similar name. The subscribers are M. Fitzgerald and B. H. Edwards. Private company. The first directors are M. Fitzgerald and B. H. Edwards. Registered office, 6-7, Townsend-street, Dub-

STUBBS' DIRECTORIES, LTD. - Registered with a capital of £10,000, in 10s. shares, to take over the business of Stubbs' Publishing Co., Ltd., and to carry on the business of directory publishers, etc. Private company. The permanent governing directors are G. W. Pole and W. R. Pole. Registered office, Dashwood House, E.C.

BUVINGTON PRESS, LTD. — Registered with a capital of £2,000, in £1 shares, to take over the business of a printer, stationer, engraver, bookbinder and lithographer carried on by H. Buvington at 34, Monmouth-street, Bath. The subscribers are H. Buvington and Mrs. E. J. Buvington. Private company. The first directors are H. Buvington, G. F. J. Buvington, F. W. R. Deverall and R. C. Gerrish. Registered office, 34, Monmouth-street, Bath.

T.O. ELWORTHY AND SON, LTD.—Registered with a capital of £1,500, in £1 shares, to carry on the business of printers, stationers and paper dealers, etc. The subscribers are T. O. Elworthy and F. O. Elworthy. Private company. The first directors are T. O. Elworthy pany. The first directors are I. O. Elworthy and F. O. Elworthy. Registered office, Newmarket-row, Broad-street, Bristol.

W. H. Beers and Son, Ltd.—Registered • with a capital of £20,000, in £1 shares, to carry on the business of engineers and manufacturers, agents and factors and general merchants, manufacturers of, and dealers in, glues, machinery, waxed or unwaxed paper, plain or reinforced foil, fibre and cardboard cases, etc. The subscribers are W. H. Beers and F. J.

Halfhide. Private company. The first directors are W. H. Beers and A. H. W. Beers (permanent joint governing directors), F. J. Halfhide and S. Risbey. Registered office, Empire House, Piccadilly, W.

COMPANY NOTICES, etc.

STUBBS PUBLISHING Co., LTD.—At a meeting of the company held on November 21st, the following resolution was passed, and at a subsequent meeting on December 8th was duly confirmed:—"That it is desirable to reconstruct the company, and accordingly that the company be wound up voluntarily, and that Mr. George Pole, of Dashwood House, New Broad-street, E.C., be appointed liquidator for the purpose of such winding up; and that the said liquidator be authorised to consent to the registration of a new company, to be named Stubbs' Directories, Ltd.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

A. H. Skinner and Co., Ltd.—Mortgage on factory in Leicester, registered October 31st, 1919, to secure £2,500. Holders—Leicester Permanent Building Society, Leicester.

SIR ISAAC PITMAN AND SONS, LTD.-Particulars filed October 30th, 1919, of £50,000 debentures, charged on the company's undertaking and property, present and future, including uncalled capital, amount of present issue being £21,600.

"CLIQUE," LTD. - Second debentures for £1,000, registered October 29th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital.

Gazette.

A WORD OF CAUTION.

(In giving the official Gazette information, it must be distinctly understood that we take official records as we distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records. - Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership between Robert Fell and John Munford, carrying on business as label printers, at Newcomen-street, Borough, London, under the style or firm of "Fell and Briant," has been dissolved by mutual consent as and from December 11th, 1919. All debts due to and owing by the late firm will be received and paid by John Munford, who will continue to carry on the business on his own account under the same style.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

Middleton, Thomas Elleray, printer, residing at North-road, Ambleside, Westmoreland. Date of receiving order, December 13th, 1919. Made on debtor's petition.

ADJUDICATIONS.

Paterson, William Ajax (alias William Ajax Maygrove, trading as Maygrove and Co.), bookseller, late of South Embankment, Dartmouth, Devon. Date of order, December 11th, 1919. Date of filing petition, October 6th, 1919.

Middleton, Thomas Elleray, printer, Northroad, Ambleside. Date of order, December 13th, 1919. Date of filing petition, December 13th.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Cass, Charles Ernest, printer and publisher (carrying on business under the name or style of Charles E. Cass and Co.), Ventnor Works, Ventnor-street, Leeds. Date of order, October 13th, 1919. Bankrupt discharged subject to certain conditions.

The "Natsopa" Reunion.

A Jolly Gathering of Old-Timers.

Some 90 veterans of the National Society of Operative Printers and Assistants attended the reunion dinner held on the evening of the 13th inst, at the London Bridge Hotel; and right heartily did they enjoy the entertainment, the good fare, and the good fellowship that the occasion provided. The visitors included several whose names are prominent in trades union history. Not only were the "Natsopa" executive and branch committee represented, and the Manchester branch of the Society, but there were present also the Right Hon. C. W. Bowerman, P.C., M.P. (secretary of the Trades Union Congress), Mr. A. E. Holmes (secretary, National Printing and Kindred Trades Federation), Mr. Arthur O'Connor (secretary of the Printers' Medical Aid and Sanatoria Association), Mr. T. E. Naylor (secretary of the L.S.C.), also Councillor Weaver of Southwark, and the Town Clerk of Southwark, Mr. P. Gray. The president's chair was, of course, occupied by the popular "Natsopa" general secretary, Mr. George A. Isaacs - His Worship the Mayor of Southwark who proved himself just the free and easy, somewhat obstreperous chairman that was required to make the gathering a complete success.

When the time for toasts was come, and glasses filled, the company was provided with honest British "clays" and generous bowls of shag, and the chairman commanded—with a hoarse and hefty motor car hooter to supplement the authority of his voice—that everybody must "put a pipe on." "The token of approval or disapproval," he said, is to be given by the pipe. If it's 'Pipes up, it's a good 'un: if it's 'Pipes down,' it's a bad 'un."

It being primarily an old-timers' evening, the first toast drunk—after an introductory one to the prosperity of the Society—was that to "Old Pike," the veteran who had the honour of being enrolled, 30 years ago, as No. 1 on the list of members. This proved a distinctly "pipes-uppish" toast, a very hearty response being forthcoming, as was also the case with toasts to Mr. W. Cromer and other veterans.

The toast of "The L.S.C.," with which was coupled the name of Mr. T. E. Naylor, was another that roused enthusiasm, the chairman congratulating the "London comps" on their freedom from craftstandoffishness, and heartily thanking them for practical support in the hardships of early days.

In calling upon Mr. Bowerman to speak, the chairman mentioned that the Society had paid Mr. Bowerman the highest compliment possible by making him the first honorary "Natsopa" member. To this Mr. Isaacs added a word of personal thanks for Mr. Bowerman's help in days gone by.

Mr. Bowerman, who received a general

"Pipes up!" greeting, commented upon his position at table, between Mr. Isaacs and Mr. Gray, apologising for separating the Clerk from his "guardian angel" the Mayor. Just returned from America, he had only that evening learned of Mr. Isaacs' mayoralty, and he very heartily congratulated him upon the dignity conferred upon him. No man had worked harder or achieved more for printing trades unionism than he. He called for a "Pipes up" toast to Mr. Isaacs, which was enthusiastically responded to, and thanked them all for the opportunity of gathering with the "Natsopa" veterans.

Mr. T. E. Naylor, who began "My Lord Isaacs and Gentlemen"—(laughter)—paid a tribute to Mr. George Evans, who, he regretted. was not present to speak for the L.S.C. He thanked Mr. Isaacs for his remark about the compositors' freedom from "side," and said the L.S.C. were willing to recognise all workers as fellow-craftsmen. He advised them all to insist upon their right to be called The L.S.C., at every wages concrastsmen. ference during the last five years, had insisted that printers' assistants and warehousemen's assistants should receive the same increases as skilled craftsmen. He congratulated the "Natsopa" veterans upon having played a most important part in the trade unionism of the country. He hoped their aged members might benefit by the Memorial Home, now in the making. "When that day comes," he said, "may I be there to see!" (Applause.)

Mr. A. E. Holmes mentioned that he was not only a member of the L.S.C., but also and he heartily appreciated it - an honorary "Natsopa" member. He referred to the hard struggle of printers' labourers to obtain recognition as craftsmen, and he acknowledged in this connection the very valuable services of the late Mr. Edward Smith. (Applause.) He congratulated them on the success of their Society, but said that as yet they had only touched the fringe of possibilities in the way of organisation. If they retained the services of their present officials, progress in the next 30 years would be even greater than in the 30 years past. They were met to do honour to the "Old Contemptibles" of the printing trades unions. The "Natsopa" veterans had laid the foundations of present success, and had conferred immense benefit upon everyone connected with the craft. (Applause.)

Mr. Arthur O'Connor, who followed with a few reminiscences of the early "P.N.U." days, was warmly welcomed Hishonorary membership he regarded as a higher honour than the O B.E.

"Old Mike" Vaughan received a "Pipes up" ovation on rising to speak. He spoke of the days when printers' labourers had to live on 12s. a week, and recalled the great difficulties encountered in the earliest attempts at organisation.

An enjoyable musical programme added to the success of the evening, a notable feature being the clever singing of Miss Hutchinson, the daughter of a "Natsopa" member. A gift of cigars for all the company, sent by the Daily Herald staff, was heartily appreciated.

Bookbinding Notes and News.

As was anticipated in last month's notes, the workers in the binding trades and women's unions, etc., rejected all idea of wages on a sliding scale basis, and settled ultimately on an immediate and substantial advance, with an appendage in the shape of a further small concession at the commencement of the New Year. Whether this will mark the end of the wage advance movement depends entirely upon the cost of living. The long hoped-for decline in food and clothing prices shows no sign of coming to maturity, and, in fact, all the tendency for the last few weeks has been upward. The sudden rise in value of certain goods (not excluding paper and boards) holds out inducements for the vicious circle type of merchanting, a form of doing business that was mainly responsible for the awful prices ultimately paid by the user for most commodities during the war. If this sort of thing sets in again there will be created a sure opportunity for industrial unrest which will not be left unseized.

The concession made by the binders' executive in regard to the introduction and use of time dockets marks a distinct step forward in the cost-finding movement. The time is not far distant when cost-finding on a uniform principle will be as essential to the control of anestablishment as the administrative books of the office are at the present time. The upsetting of all the old approved ideas of the value of work and of money has brought the manufacturing trades of the country face to face with the hard fact that costs are not known until the expenses of the establishment are calculated and allocated and the labour expense in time accurately recorded against the individual job. The manufacturer of a set and single line of goods may strike an average to work to that will ensure an annual profit, but the manufacturer whose business it is to produce varying quantities of varying grades and types of goods can only conduct his business rationally by ascertaining the cost of every item of production. Granted an accurate realisation of the cost, there is always the possibility of absolute profit. The factors of cost in the bindery are time and material, the latter of which is always open to be known, whereas the former is never known if it is never told. The binders' executive have now accepted the principle that to help the managements of binding establishments to charge their work correctly they are prepared to make it possible for the worker to tell how long the work occupies.

It is to be hoped that whatever is done in regard to dockets will be done with uniformity. Half the value of a cost-finding system goes when its routine or principle differs from that adopted elsewhere. Different systems

produce different findings and cause different charges to be made. There can only be one right way, and as there is no system in any industry which has undergone so much searching, discrimination and practical test of efficiency as that developed by the Master Printers' Federation, the conclusion can only be that that system is the right one. The reservation made in the agreement with the binders appeared to point to an inclination on the part of the workers to construct a time docket which would suit their ideas. So long as the ideas comprise a sound knowledge of costfinding, there can be nothing but good in having help from practical men. More than this we need not say at this stage.

The Manchester College of Technology is one of the very few technical institutions in the country catering for commercial (or stationery) bookbinding. There has always been ample accommodation for the letterpress side of the craft, and the desires of the amateur bookbinders have perhaps been met to a fuller extent than the needs of the future craftsmen. No such reproach can be levelled against the Manchester College, for the commercial bookbinding department is planned and equipped to reproduce the conditions of a model account-book bindery. In addition to binding, machine ruling is taught, and the plant comprises a machine and all fittings of the best and latest type. The teachers and lecturers are craftsmen of a high standard, and the atmosphere is congenial to the bringing out of the best that is in the many students now attending.

All the information to hand points to the fact that bookbinding leathers are going to become both scarcer and dearer. The feature of the situation is the heavy demand in all countries and the high prices bid by American All the leather tanners and bootmakers. fancy leathers are being sought after for a multitude of purposes other than bookbinding, and the boot people in particular are in a position to offer prices which would debar the use of leather in the binding trade. Generally speaking, calfs are still beyond the reach of the trade, and rough basils, goats and fleshers are taking their place. Rough Persians. have been offered at 3s. 9d. per square foot. Anglo-Russias are in good demand, but the supply is small and slow to emerge. Contracts are booking at 2s. 9d. per square foot, an exceptionally cheap price. Basils are obtainable in buff, red and purple, but some other colours have to be made to order, stocks being impossible to accumulate. Prices vary considerably, as low as is. old. per foot being asked for small skins. The average price for good sound skins is nearer 1s. 5d., and even more for stout grades. Pigskin is difficult to secure and prices are hardening considerably, reaching from 4s. per foot upwards. Skivers are keeping round about 10d. to 1s. per square foot, and supplies are not by any means adequate to fulfil the demand without delay.

Book cloths have had their advance, and it may be presumed that no further increase will be made. Calicoes are in the same position, except that fluctuation is likely to be more frequent. The top price has probably yet to come. Linen threads and tapes have about touched the high water mark, and some stability may be looked for. There are a few houses outside the big combine offering standard lines of thread, made up for hand or machine sewing, at very reasonable figures. Imitation leathers of the rexine and pluvinsin brands are finding wider application than ever owing to the price and inconvenience of leather. Considering the tremendous advance in price of other types of material, the makers of these fabric leathers are to be commended for the way in which they have resisted the inducement to make corresponding increases in their selling prices. Many bank and corporation contracts for binding are now based on imitation leather as a substitute for full leather. Buckram, too, has in many places given way to the better looking embossed surface of rexine, etc., a fact appreciated by most binders owing to the comparative ease of working the material.

The Late Sir Joseph Lawrence.

At the adjourned general meeting of Linotype and Machinery, Ltd., on Friday, Mr. Arthur H. Walker (the deputy chairman), who presided, opened the meeting by proposing a resolution expressing the sympathy of the meeting with the widow and family of the late Sir Joseph Lawrence, Baronet, for many years chairman of the present company and its predecessors, who passed away very suddenly on October 24th last. He said that each of them had to mourn the loss of a valued colleague and a sincere friend. The chairman, in the course of a personal tribute to Sir Joseph, said: "The linotype machine is now more than an article of commerce—it is a necessity to the existence of the printing trade of the world. We here know that the energy, the consistent optimism and the exceptional driving force of Sir Joseph were the predominant factors of success in the linotype's fight in Europe for the supreme position it now holds." The shareholders stood in silence while the chairman read a resolution expressing the shareholders' profound sorrow at the death of Sir John Lawrence, and their sympathy with his family. The resolution concluded: 'It is now 30 years since Sir Joseph Lawrence brought the linotype industry to Great Britain and to Europe, and it was owing to his foresight, his courage and his energy that the initial success of the machine was secured, and largely to his perseverance that its business has grown to its present proportions.'

Linotype and Machinery, Ltd.

In the course of his speech at the adjourned general meeting on Friday of Linotype and Machinery, Ltd., Mr. Arthur H. Walker, in the chair, said the directors had been fortunate in securing the consent of Mr. Philip Tell Dodge, of New York, to act as chairman of the company, and he had been duly elected chairman of the Board at their meeting on Monday, December 8th. With regard to the company's war work, the chairman said that on the Monday that war was declared-August 4th, 1914-their late chairman, Sir Joseph Lawrence, and their present chairman, Mr. Philip T. Dodge, of New York, who happened to be in London at the time, met at their office, and Mr. Dodge insisted that the whole resources of their works should be tendered at once to the Government for the manufacture of munitions of precision, for which they were particularly adapted. Sir Joseph Lawrence at once sent off this offer, and it was promptly accepted. This offer was made although ninety eight per cent. of the share capital of the company was held by Mr. Dodge and his associates in America. Work was begun at once, and proceeded during the whole period of the war, most of the time occupying the full twenty-four hours of each day. In the first year of the war they were engaged mainly upon the manufacture of gauges for the Government; later they made large quantities of Vickers' quick-firing gun parts, other gun parts, aero-engine parts, Their employees had numbered 1,200 men and 1,100 women. He went on to say that the company had contributed their quota to the allied forces. Many of their men were required to remain to provide the more important work, yet 462 of the employees of the Linotype industry in Europe joined the allied forces. Of these 434 went into various armies and 28 into the British Navy. They had provided for the wives and families of the married men, and helped those parents of single men who were dependent on their sons. More than 10 percent, of their men would never return, for upon their Roll of Honour there are 47 names marked with the cross denoting that they gave their lives for their country. He was proud to be able to state also that their men received twenty three distinctions for bravery and good service.

RECORD PRICE FOR A GUTENBERG.—At Sotheby's, on Friday, a fine copy of the first edition of the celebrated Balbi "Catholicon," printed by Gutenberg at Maintz, 1460, the fourth book printed with a date, in an elaborate Russia binding in the style of Roger Payne, was purchased by Mr. G. D. Smith, of New York, at £960, which is believed to be a record price for this book. A fine large copy of the second edition, from the Strassburg press of the "R" printer, 1460, also went to the same buyer at £330.

Compositors' War Memorial.

Mr. C. W. Bowerman, M.P., unveiled on Saturday, in the hall of the London Society of Compositors, a beautifully worked tablet in memory of members of the L.S.C. who were killed during the war. There was a large assembly of all the trade unions in the newspaper industry, and the employers were also represented.

Afterwards a Memorial Service was held in St. Bride's Church, conducted by the Vicar.

Out of 3,767 members who joined the fighting forces, 383 were killed and 1,250 wounded

British Coated Paper.

Printed or coated papers, other than printed paper hangings, and excepting sensitised photographic paper, were exported during the past five years to the following extent:—

1918		14,977 cwts.	£187,500
1917	•••	18,233 ,,	161,396

THE Council of the Metropolitan Borough of Woolwich invite alternative TENDERS for the PRINTING, for three or five years of

ABSTRACTS OF ACCOUNTS.

The person or firm whose tender is accepted will be required to pay trades union rates of wages and to observe trades union hours of labour, and to enter into a formal contract.

Sample Abstract, together with form of contract, can be seen and forms of Tender obtained on application to me at the Town Hall, Woolwich.

Tenders must be delivered to me at the Town Hall, Woolwich, not later than twelve noon on Wednesday, 14th January, 1920, in sealed envelope endorsed "Tender for Printing Abstracts of Accounts."

The Council do not bind themselves to accept the lowest or any tender.

By Order,

ARTHUR B. BRYCESON,

Town Clerk,

Town Hall, Woolwich, S.E. 18. 17th December, 1919.

Our vast stocks of all kinds of paper enable us to quote bed rock prices, and to ensure prompt delivery.

We have the right to use this seal.

We Specialise in

NEWS, PRINTINGS, BROWNS, CAPS, SKIPS, TISSUE PAPER (white and coloured), MACHINE GLAZED CAPS, KRAFTS and NATURE BROWNS, WRAPPING PAPER, TELEGRAM PAPER, COUNTER and TOILET ROLLS, SMALL REELS and ALL KINDS OF CREPE; BAGS for all Trades.

We shall have pleasure in sending you our Stock Lists on receipt of your request.

Do not place your orders until you have compared our prices with what you are at present paying.

Digitized by GOOST

Winding Apparatus.

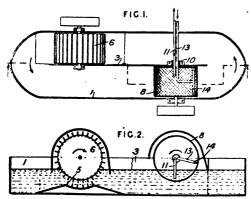

The sketch herewith refers to a British patent for winding paper, etc., granted to F. Schade, Jutland, Holland. A winding apparatus for a folded or unfolded web of paper or other material comprises a spindle 3, to which the end of the web from the supply roll

4 is secured, and a pair of discs 8 secured to the spindle, and carrying removable rods or bars 6, on which the web is first wound, the rods, etc., being then removed to permit the web to be rolled tightly from within on to the spindle 3 by continuing to turn the latter. The spindle 2 of the roll 4 is driven by a belt and pulley 14, and drives by a rope 12 a hub 10 receiving the squared end of the spindle 3. The disc 8 are adjustably secured to the spindle 3 by screws 9, and the end of the web is secured in a groove in the spindle 3 by a bar 5.

Cotton Hull Fibres

A British patent has been granted to Mr. F. W. Stockton relating to the purification of cotton-seed hull fibre, that is to say, the crude fibre obtained from ground cotton seed hulls after decortication, and containing about 25

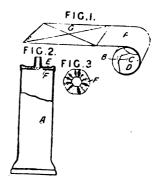

per cent. of crushed hulls, the object being essentially to remove the hull particles from the fibre. The hull particles are softened by boiling for about 5 hours in a 4 per cent. solution of caustic soda, or by other suitable

means, after which the material is mashed by passing several times between powerful steel rolls, by which the fibre is detached from the hull particles, and the latter are finely disintegrated. The material is then washed in an apparatus shown in Figs. 1 and 2, consisting of a tank 1, having a central partition 3, incomplete at the ends, a beating drum 6, with longitudinal blades working in conjunction with an elevated and toothed bedplate 5, and a revolving strainer 8 of wiregauze, having about 60 meshes to the linear inch. Through the hollow bearing 10 of the straining drum pass outlet and inlet pipes II, I3, the former being connected to a suction pump for removing water and hull particles from the interior of the drum, and the latter to a force pump for spraying water on to the interior of the drum through nozzles 14. The fibres may be subsequently filtered from the water and dried. The fibre may be subjected to further known purification processes, such as further boiling with lye and bleaching with chlorine, hypochlorite, etc.; or treatment with benzine, etc., to remove waxy matter,

Collapsible Paper Tubes.

In an invention by Mr. G. H. Bennett, a collapsible tube or container is formed by winding paper in a number of convolutions around a mandrel. The ends only of the strip are covered with adhesive, so that considerable flexibility of the tube is obtained, or the outer end only may be so covered, the

inner end being formed as a tongue B to engage a slot C. The inner convolution may be coated with a veneer of metal foil or the like D, and the outer convolution G may have a label, etc., printed thereon before winding. The head E is held in position by a waved washer F which is pressed, when in position, thus gripping the body A. According to provisional specification 13395, 1918, the tube may be made of metal foil instead of paper.

THE average man is a good nurse when it comes to nursing a grievance.

The Demand for Paper.

THE arrival of the stocktaking season may cause printers and users of paper to temporarily slacken the demand. Such relief would be welcomed by the mill people, for the strain of constantly working against the clock is not conducive to that contented feeling which should typify the last weeks of the year. As a general rule, in pre war years, printers and others have looked upon December as a month in which the purchases should be at the lowest ebb, preferring to have their capital in cash at the bank rather than as stock in hand. Under the conditions of today the old policy has not the same value, for the demand is greater than the supply and stock is a better asset than money. All the money in the world will not make business if there is no material; but, given the material, there is no end to the business that can be done.

Wholesale houses are finding it difficult to get mills to entertain new business, owing to the volume of orders still waiting on the books. Despite the three shift system (which is not yet in thoroughly smooth working order), orders are coming to hand far more quickly than the old orders are being turned out. Very little attention is being paid to foreign papers, because they are no better and no cheaper than those made in our own mills, while delivery is far more uncertain. At one time it appeared tolerably certain that the import of foreign stuff would greatly relieve, if not endanger, the demand upon the home-made product; but any hopes that may have been entertained on this score can now be discounted. The foreign papermaker can pick and choose his market as he pleases, for every country in the world is shouting out for paper. Consequently he picks the market in which the demand is keenest and the price best. So long as he has this opportunity, there will be no cheap paper for this country, and even without the opportunity, foreign labour and wage conditions have undergone such a change that the Continental papermaker has no great and outstanding advantage over our own mills.

Trade Better in Norway.

Signs of improvement in the position of the paper trade in Norway have appeared lately, says the journal of the Norwegian Chamber of Commerce, London. Factories, which for a long period have worked with reduced force, begin now to put more machines in movement, especially those mills which produce easily saleable paper as sulphite paper. The Skotfos, Klosterfossen, Skien's Paper Factory and Union Mills, all in or near Skien, work at full force already. The position of mills producing special paper brands is still somewhat unsettled; the Ranheim Mills, near Trondhjem, which make kraft paper, hope, however, to take up full work in the near future.

Free Imporis to Bulgaria.

According to an order published in the Bulgarian Official Gazette, the following are among the articles which may be imported into Bulgaria without the previous consent of the Department of Social Insurance:

Paper: Ordinary, writing, drawing, printing, registration, copy books, white, coloured and lined, glazed or otherwise; packing paper, blotting paper, filtering paper, test paper (litmus and turmeric); tarred paper (paper covered with bitumen and plumbago); paper bags including envelopes.

Cardboard of one or more sheets, weight from 200 grammes per square metre, coloured

or not in the composition.

All publications printed in the Bulgarian language, sewn or bound, excepting maps and atlases.

Books and other printed matter in foreign languages, also musical works (printed or

lithographed).

in printing.

Scientific maps, mechanical and architectural designs, white in sheets, sewn or bound (as atlases), fixed to cloth or in frames; geographical or astronomical globes, fixed on wood or combined with ordinary metals.

Rags for the paper industry. Type letters in lead and antimony, stereotype plate, blocks and all movable signs used
